### STEAM RAILWAY AND GENERAL MATTER

#### A

Alaska,—Railway development and surveys 56, 85, *224, 372	Officers ..... 338	Locomotive headlights ..... 247
Alaska Northern Ry. .... 265	American Association of Travelling Passenger Agents ..... 424	Locomotive stokers ..... 248
Alberta and Great Waterways Ry.,— Development .... 10, 56, 94, 136, 212, 255, 341, 392, 437, 469	American Express Co. .... 72	Maintenance and operation of electrical equipment ..... 243
Rolling stock ..... 137, 181, 262	American Railway Bridge and Building Association ..... 472	Master mechanics' subjects ..... 252
Alberta Public Utilities Commission .... 220, 433, 474	American Railway Engineering Association ..... 62, 138	Next convention ..... 468
Algoma Central and Hudson Bay Ry.,— Appointments ..... 99, 177	American Railway Master Mechanics' Association, — Boiler washing ..... 250	Officials ..... 253
Bellevue bridge ..... *224	Counterbalancing ..... *246	Reports, disposition of ..... 253
Finance, meetings, Etc. .... 15, 139, 345, 397	Exhibits ..... 253	Revision of standards and recommended practice ..... 249
Algoma Eastern Ry. .... 222	Flange and screw couplings for injectors. .... 252	Smoke prevention ..... *247
Alma and Jonquieres Ry. .... 136, 170, 341	Forging specifications ..... 251	Superheater locomotives ..... 253
American Association of General Baggage Agents ..... 381, 436	Fuel economy ..... 243	Train resistance and tonnage rating .... 252
American Association of Passenger Traffic	Letter ballots ..... 455	American Society of Mechanical Engineers. 459
	Locomotive boiler construction and inspection ..... 245	Appointments, Transportation .... 22, 63, 99, 142, 210, 222, 263, 310, 350, 390, 434, 475
		Asbestos and Danville Ry. .... 100
		Association of Railway Telegraph Superintendents ..... 200

Athabasca and Fort Vermillion Ry. ....	136,	437
Athabasca and Grande Prairie Ry. ....	170, 255, 304, 341, 392,	437
Athabasca, Grande Prairie and Peace River Ry. ....	56	
Athabasca Northern Ry. ....	10	
Atlantic, Quebec and Western Ry. ....	9	
<b>B</b>		
Baggage rules .....	462	
Bassano and Bow Valley Ry. ....	136, 170,	212
Banff Incline Ry. ....	137	
Bazore, W.S.—Air hammer in blacksmith shop .....	*375	
Belgian State Railways.—Freight cars built in Canada .....	*339	
Bethune, J. J., Rail creeping .....	218	
Birthdays of Transportation Men .....	6, 47,	
Board of Railway Commissioners.—		
Baggage rules .....	462	
Cartage service at Fort William .....	120	
Emergency valve location on Passenger cars .....	388	
Express rates from London .....	436	
Fire guards on prairie railways .....	258	
Freight rates on gravel and roadmaking in Western Ontario .....	244	
Grade crossing expenditures .....	47	
Locomotive men's complaints .....	182	
Orders by, summaries of .....	8, 48, 126, 181,	
Refund on unused railway tickets .....	208, 295, 337, 394, 420,	460
Rates on asbestos sand, Quebec to Ohio .....	216	
Rates on steel, U.S. to Saskatchewan and Alberta .....	464	
Spark arrestors for locomotives .....	87, 91,	96, 169
Traffic orders .....	14, 51, 100, 138, 172, 224,	
Transmission lines across railways .....	258, 300, 341, 396, 438,	471
Boiler code .....	303	
Borden, H. P.—Quebec bridge progress .....	125	
Boston and Maine Rd. ....	*52	
Bradshaw, G.—Consideration of railway operating rules .....	95, 176	
Development and effect of railway operating standards .....	*164	
Bridge repairs in the South African war .....	119	
British Columbia and White River Ry. ....	43	
Brule, Grand Prairie and Peace River Ry. ....	56, 136,	170
Brule Lake Ry. ....	94, 170	
Buffalo and Fort Erie Ry. and Ferry Co. ....	345	
Burrard Inlet Tunnel and Bridge Co. ....	10,	
Calgary and Fernie Ry. ....	56, 170	
Canada Southern Ry. ....	263	
Canadian Express Co. ....	30, 72, 200, 328,	
Canadian Freight Association .....	412, 438, 493	
Canadian Government Railways.—Appointments .....	176, 348	
Branch lines acquirement .....	63, 99, 222, 263, 310, 350, 390	
Rolling stock .....	435, 474	
Canadian Local Freight Agents' Association .....	221	
Canadian Northern Express Co. ....	262, 302, 398, 422	
Canadian Northern Ontario Ry. ....	395	
Canadian Northern Pacific Ry.—Construction .....	200, 328,	
Contract suit .....	412, 493	
Sighting tunnel .....	23, 60, 134, 180, 218,	
Stations .....	134, 180, 257, 348, 424,	474
Canadian Northern Quebec Ry.—Development .....	23, 102, 180, 218, 257, 311, 348,	
Tool list .....	424, 474	
Canadian Northern Ry.—Appointments .....	308	
63, 99, 142, 177, 222, 310, 350, 351, 390,	*2	
Bridges .....	370	
C.P.R. locomotives compared .....	60, 180, 218,	257
Coaling plants .....	*4	
Contractors' suits .....	63, 99, 142, 177, 222, 310, 350, 351, 390,	435, 475
Development .....	*453, 474	
Earnings .....	7	
Finance, meetings, etc. ....	23, 60, 102, 134, 180, 218,	257, 311, 348, 395, 424, 474
Government advances .....	15, 52, 90, 132, 179, 225, 258,	311, 347, 395, 421, 461
Locomotive men's wages .....	55, 95, 137, 176,	264, 345, 426, 477
Port Mann terminals .....	124	
Report .....	262	
Rolling stock .....	*44	
Sale of tickets at Union Station, Toronto .....	88	
Sydenham-Harrowsmith service .....	62, 96, 180, 218, 343, 398,	422
Transcontinental train service .....	465	
Use of Toronto Union Station .....	425	
Canadian Overseas Railway Construction Corps .....	351,	
Canadian Pacific Ry.—Annual meeting .....	386, 433, 473	
Appointments .....	22, 63, 99, 142, 177, 222,	263, 310, 350, 391, 435, 475
Bridge repairs .....	*459	
C.N.R. Locomotives compared .....	7	
Concrete decoration at Hamilton .....	*57	
Development .....	15, 52, 96, 101, *135, 176,	220, 258, 303, 349, 393, 437, 469
Double track and alternative routes .....	43	
Earnings .....	15, 52, 90, 132, 179, 225, 258,	311, 347, 395, 421, 461
Employees and the war .....	255	
Employees' Medical Association of British Columbia .....	54, 300	
Finance, meetings, Etc. ....	15, 62, 264, 477	
Grade separation, North Toronto .....	*329	
Hotels .....	49, 52	
Lachine Canal bridge .....	*203	
Locomotive ash pans .....	256	
Locomotives, mountain type .....	*44	
Maintenance labor on Western Lines .....	342	
North Toronto Union Station .....	257, *298, 349	
Ottawa-Toronto service .....	*423	
Passenger car steps .....	*459	
Quebec Station .....	338	
Quebec terminal improvements .....	*371	
Report .....	340	
Rogers Pass tunnel .....	7, 59, 101, 135,	176, 256, 304, 341, 389, 433, 461
Rolling stock .....	9, 62, 96, 137, 180, 262, 472	
Roll of honor .....	427, 454	
St. Croix River Bridge, attempt to destroy .....	93	
Standard ballast section changes .....	*434	
Stockholders .....	381	
Suggestions invited .....	122	
Telegraphs .....	30, 451, 493	
Track section prize competition .....	4	
Veneered steel interior finish for Passenger cars .....	*20	
Winnipeg passenger terminal improvements .....	*413	
Canadian Railway Club .....	121, 178, 384, 440	
Canadian Society of Civil Engineers .....	14,	
47, 96, 113, 130, 254, 265, 274, 308, 433		
Canadian Terminal Ry. ....	94, 170	
Canadian Ticket Agents' Association .....	61,	309, 341
Canadian Transfer Co. ....	92	
Canadian Western Ry. ....	56, 170	
Cape Breton Coal, Iron and Ry. Co. ....	56	
Caracquet and Gulf Shore Ry. ....	180	
Cariboo, Barkerville and Willow River Ry. ....	170	
Carroll, F.—Drill press tool in Intercolonial Ry. Shops .....	*292	
Cascade Scenic Ry. ....	348	
Central Canada Express Co. ....	493	
Central Canada Ry. ....	56, 94, 136, 170, 212,	255, 392, 469
Central Railway and Engineering Club of Canada .....	100, 455	
Central Vermont Ry.—Appointments .....	22,	
63, 99, 177, 222, 263, 310		
Rolling stock .....	9	
Chicago Great Western Rd. ....	350	
Chicago, Milwaukee and St. Paul Rd. ....	9,	222, 350
Chilled car wheels .....	430	
Clough, A. M.—System in railway track work .....	*46	
Coleman, D. C.—Maintenance labor on Western Lines, C.P.R. ....	342	
Commercial Cable Co. ....	451	
Concrete and reinforced concrete, standard general specifications .....	61	
Contract specifications, general clauses .....	47	
<b>D</b>		
Davidson, G. E.—Rubber tensile testing machine .....	*207	
Delaware and Hudson Co. ....	63, 223, 476	
Detroit, Grand Haven and Milwaukee Ry. ....	15, 52, 90, 132, 179, 225, 258, 311, 347, 395,	421, 461
Detroit River tunnel, reported settlement .....	42	
Disinfectant system for trains and lake steamships .....	47	
Dominion Atlantic Ry.—Appointments .....	222, 310, 435	
Development .....	56, 212, 304	
Dominion Express Co. ....	92, 328, 412, 438, 493	
Dominion Government Telegraphs .....	200, 328, 493	
Draft gear problem .....	54	
Draughting table for field work .....	*262	
<b>E</b>		
Eastern Canadian Passenger Association .....	62, 331, 436	
Edmonton, Dunvegan and British Columbia Ry.—Appointments .....	142, 223, 310	
Development .....	10, 56, 94, 136, 170, 212,	255, 304, 392, 437, 469
Freight tariffs .....	343	
Rolling stock .....	262, 343, 376	
Electric vs. steam operation of tunnel railways .....	124	
Emergency valve location on passenger cars .....	388	
Enginemens wage arbitration .....	216	
Entwistle and Alberta Southern Ry. ....	94,	136, 170
Erie and Ontario Ry. ....	10, 56	
Erie Rd. ....	22	
Esquimalt and Nanaimo Ry. ....	10	
Essex Terminal Ry. ....	170	
Express Companies, Among the .....	30, 72,	200, 328, 412, 438, 493
Express merchandise receipts, changes in .....	30	
Express rates from London, Ont. ....	436	
<b>F</b>		
Farnham and Granby Ry. ....	437	
Fire Guards on prairie railways .....	258	
Flag protection of track under repairs .....	463	
Flynn, W. H.—Compounding superheater locomotives .....	253	
Fraser Valley Terminal Ry. ....	170, 341	
Fredericton and Grand Lake Coal and Ry. Co. ....	137	
Freight Claim Association .....	301	
<b>G</b>		
Glengarry and Stormont Ry. ....	10, 171, 255, 345	
Grain in store at terminal elevators .....	19,	
60, 93, 158, 182, 397, 427, 465		
Grand Trunk Pacific Ry.—Annual meeting .....	424	
Appointments .....	22, 63, 99, 177, 223, 263,	310, 350, 391, 425, 476
Construction .....	19, 130, 224, 256, 307, 437,	468
Divisional facilities .....	*43	
Earnings .....	15, 52, 90, 132, 179, 225, 258,	311, 347, 395, 421, 461
Finance, meetings, etc. ....	176	
Fuel oil installations .....	*159	
Government advances .....	124	
Rolling stock .....	96, 218, 262, 302, 343	
Telegraphs .....	412, 493	
Grand Trunk Ry.—Appointments .....	22, 63,	
99, 142, 177, 223, 263, 310, 359, 391, 435,		476
Apprentices' dinner .....	135	
Development .....	14, 64, 100, 134, 176, 223,	257, 312, 345, 392, 437, 469
Discrimination in favor of, Prohibited .....	220	
Earnings .....	15, 52, 90, 132, 179, 225, 258,	311, 347, 395, 421, 461
Employees and the war .....	351	
Finance, meetings, etc. ....	15, 51, 62, 95,	137, 176, 264, 426, 477
Fire brigade competitions .....	465	
General inspection car .....	*121	
Locomotives, suburban type .....	*130	
Locomotive men's wages .....	335	
Passenger car steps .....	*459	
Rolling stock .....	9, 62, 96, 137, 343, 422	
Telegraphs .....	412	
Track inspection .....	417	
Grand Trunk Western Ry.—Earnings, Etc. ....	15, 52, 90, 132, 179, 225, 258, 311, 312, 347,	395, 421, 461
Greater Winnipeg Water District Ry. ....	1,	57, 94, 170, 254, 470
Great Northern Express Co. ....	200	
Great Northern Mining and Ry. Co. ....	95	
Great Northern Ry. of Canada .....	15, 417, 472	
Great Northern Ry. (U.S.A.)—Appointments .....	476	
Lines in Canada .....	14, 61, 102, 135, 179,	225, 257, 308, 349, 392, 469
Great North Western Telegraph Co.'s merger .....	18, 64	
Notes .....	68, 200, 328, 347, 451, 495	
<b>H</b>		
Halifax and South Western Ry. ....	304	
Hand rails and foot rests on locomotives .....	167, 203	
Hardy Bay and Quatsino Sound Ry. ....	212	
Hickey, T.—Outline of a year's work for roadmasters .....	432	
Hose couplings, reclamation of .....	291	
Hudson, T. C.—Fuel consumption on locomotives .....	373	
Hudson Bay, Peace River and Pacific Ry. ....	10, 136, 171	
Hudson Bay Railway, Dominion Government's—Appointments .....	22	
Construction .....	10, 56, 94, 130, 183, 225,	304, 348, 392, 437, 469
Huntingdon and Hemmingford Ry. ....	10, 136, 171	
<b>I</b>		
Intercolonial Ry.—Appointments .....	23, 63,	
99, 223, 263, 350, 391, 435, 477		
Ballast trimmer .....	*294	
Block signaling .....	45	
Cab and tender diaphragm .....	4	
Coal importations .....	139	
Development .....	10, 56, 94, 136, 183, 212,	255, 304, 341, 392, 437, 470
Efficiency Association .....	100	
Finance, Etc. ....	176	
Reinforcing wooden frame freight cars .....	308	
Rolling stock .....	9, 62, 96, 180, 218, 262,	302, 343, 398
Stores handling .....	182	
International Engineering Congress .....	383	
International Railway Fuel Association .....	209	
International Ry. of New Brunswick .....	95	
International Union Terminals Co. ....	392	
Interstate Commerce Commission and baggage rules .....	307	
Inverness Ry. and Coal Co. ....	209, 256, 310,	312, 423
Irondale, Bancroft and Ottawa Ry. ....	99	
<b>J</b>		
James Bay and Eastern Ry. ....	60	
<b>K</b>		
Kent Coal and Ry. Co. ....	136, 212, 255	
Kent Northern Ry. ....	476	
Kettle Valley Ry. ....	56, 94, 171, 212, 255,	303, 304, 341, 392, 437, 470
Klondike Mines Ry. ....	10, 397	
Kootenai Valley Ry. ....	349	
Kootenay Central Ry. ....	15, 62, 258	
<b>L</b>		
Lachine, Jacques Cartier and Maisonneuve Ry. ....	100, 134, 397	
Lake Huron and Northern Ontario Ry. ....	136, 304, 341	
Lake Superior Corporation .....	63, 426	
Lehigh Valley Rd. ....	23, 63, 310, 350	
Locomotive men's complaints .....	182	
Locomotives.—Compounding superheater locomotives .....	253	
Enlarged filling hole for tender tanks .....	*455	
Feed water heating .....	93	
Fuel consumption .....	373	

<b>M</b>			
McVeigh, E. J.—Reclamation of hose couplings	291	Railway development in British Columbia	220
Mail carrying, compensation for	124	Railway earnings	15, 52, 90, 132, 179, 225, 258, 311, 395, 421, 461
Marconi Wireless Telegraph Co.	30, 124	Railway expenditure in Alberta	129
Master Car Builders' Association,—		Railway expenditure in British Columbia	130
Arbitration	250	Railway expenditures, Dominion	164
Brake shoe and brake beam equipment	245	Railway features in Ottawa city planning problem	23
Car construction	244	Railway finance, meetings, etc.	15, 62, 95, 137, 176, 203, 264, 312, 345, 397, 426, 477
Car trucks	248	Railway lands patented	13, 91, 133, 163, 212, 262, 265, 339, 376, 389, 421, 483
Car wheels	247	Railway line, single track, capacity of	*81
Compensation for car repairs	251	Railway, mountain location at Rogers Pass, B.C., a problem in economics	*50
Convention, next	468	Railway mechanical methods and devices.—	
Couplers	249	Air hammer	*375
Draft equipment	243	Air hose connecting box	*332
Exhibits	253	Air motor, small	*3
Letter ballots	456	Air operated shearing machine	*206
Loading rules	247	Air pump lifting yoke	*332
Officials	253	Automatic wire staple bending device	*375
Prices for labor and materials	251	Battery charging installation	*3
Reports, disposition of	253	Bending copper pipes	44
Revisions of standards and recommended practice	252	Caliper driving wheel boxes	*86
Settlement prices on reinforced wooden box cars	247	Carbon brush diagrams	123
Specification and tests of materials	252	Centre drilling device	*45
Train brake and signal equipment	245	Chamfering tool for safe ends	*86
Train lighting	252	Cleaning car trucks	*332
Michigan Central Rd.	95, 99, 310	Cutting crosshead keyways in piston rods	*457
Midland Ry. of Manitoba	64	Cutting off tube ends	*333
Moncton and Buctouche Ry.	10	Drill holder	*458
Moncton and Northumberland Strait Ry.	10, 171	Drilling cotter holes in pins	*169
Montreal Ammunition Co.	132	Drilling cotter holes	*457
Montreal and South Western Ry. and Power Co.	94, 136	Drilling slide rod holes	*333
Montreal Telegraph Co.	68, 451	Drilling speeds	*87
Montreal Tunnel and Terminal Co.	102, 180, 424	Drill press tool	*292
Montreal Warehousing Co.	132, 142	Drills for rod oil cup holes	*207
Montreal and Vermont Jct. Ry.	264	Expansion joint in heater coil	123
Morrissey, Fernie and Michel Ry.	137	File substitute for triple valve work	*87
Murphy, C.—Flag protection of track under repairs	463	Fixture for drilling holes on a diameter	*168
<b>N</b>		Flange lubricator	3
National Transcontinental Ry.—Appointments	63, 99, 210, 223, 263, 310, 350, 391, 435, 476	Flue rattler	*169
Champlain Market Station, Quebec	*1	Gauges for tapered plugs	*45
Construction	19, 102, 128, 137, 183, 437, 470	Handy eccentric vise	*46
Construction suit	434	Heavy boring bar head	*457
Finance	176	High speed twist drills	*292
Operation of	*210, 256, 262, 307, 338	Increasing drill holding capacity of small drill bars	*169
Rolling stock	343	Jig for holding valve stem packing rings in vise	*168
New Brunswick and Prince Edward Island Ry.	92	Machinery protection	*293
New York Central Rd.	64, 177, 345, 391	Milling out keys	*45
Niagara Frontier Summer Rate Committee	92, 465	Milling shoes and wedges	*418
Northern Alberta, Transportation routes	*302	Milling slots in crown stays	*457
Northern Pacific and British Columbia Ry.	57, 136, 171	Milling slots in piston valve bushings	*207
Northern Pacific Ry., New coast line	161	Milling valve strips	*418
North Pacific Coast Passenger Agents' Association	157	Planer stop	*86
North Ry.	171	Planing carline grooves	*333
North Vancouver Island Ry.	171	Planing shoes and wedges	*86
<b>O</b>		Portable cylinder boring machine	*458
Ontario-Niagara Connecting Bridge Co.	102	Portable shop scaffold	*419
Ottawa and New York Ry.	137, 426	Quick shifting indexing fixture	*45
Ottawa Terminals Ry.	426	Rubber tensile testing machine	*207
<b>P</b>		Radius attachment for shaper	*419
Pacific Cable Board	200	Removing air hose couplings	*418
Pacific Great Eastern Equipment Co.	167	Repairs on bridge bearing box	*458
Pacific Great Eastern Ry.	10, 57, 95, 136, 171, 255, 341, 392	Shaper tool	*293
Pacific, Peace River and Athabasca Ry.	11, 95, 137, 171	Staybolt boring tool	*207
Panama Canal and transcontinental railways	2	Staybolt driver	*207
Passenger rate meeting at Toronto	92	Superheater tube nesting clips	*292
Peace River Tramway and Navigation Co.	11, 255, 341	Superheater tube sheet borer	*87
Pere Marquette Rd.—Appointments	64, 177, 264, 476	Tap and reamer holder	123
Finance, meetings, etc.	62, 176, 312, 426	Tender truck, assembling of	*206
Personal	16, 58, 97, 140, 173, 213, 259, 305, 346, 385, 428, 466	Tool for drilling long deep holes	*45
Poles purchased in 1914	456	Triple valve bushing roller	*333
Price, A.—Some maximums and minimums in train operation	41, *125	Tube expander	*418
Prince Edward Island Ry.	11, 95, 171, 176, 392	Twin tell-tale hole driller	*374
<b>Q</b>		Wheel lathe driver	*375
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co., Land grants	304	Wheel lathe features	*374
Quebec and Lake St. John Ry.	474	Wheel mounting and checking gauge	*458

# Canadian Railway AND Marine World

ESTABLISHED 1898.

Number 203

TORONTO, CANADA, JANUARY, 1915

Subscription Rates, Page 21

When you are depending upon a locomotive crane for handling your coal, you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHOIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

*Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.*

**THE BROWN HOISTING MACHINERY CO.**  
**CLEVELAND, OHIO**

MONTREAL OFFICE, 145 St. James Street

**Handy Compressor**  
**Simple Compressor**  
**Strong Compressor**

## *Westinghouse* **Steam-Driven Air Compressor**

**Handy,** because being compact it can be readily moved about and set up almost anywhere. No prepared foundation is required. It can be attached to a wall, a post, a trunk of a tree, the boiler of a hoisting engine, or a movable stand can be provided.

**Simple,** because of its few parts, and the ease with which it is operated. No expert attendance is required.

**Strong,** because of its self-contained mechanical construction. It will withstand very rough handling without injury.

Westinghouse Steam-Driven Air Compressor made in both simple and cross-compound types.

Send for our Compressor Book 9012.

## A New Year's Resolution for You

"Resolved that, during 1915 and thereafter I will give preference, in my purchases of rubber goods and all other material, to such as are made in Canada."

So far as rubber goods are concerned, you run no risk in making this patriotic resolution, as we manufacture a complete line and the price, quality and style are right.

When in the market for tires, hose, belting, packing, etc., let us show you what we can do.

It is our desire to serve you.

# Why Dynamic Indication is the always-safe principle in G R S Electric Interlocking

The fundamental safety first principle of **G R S Electric Interlocking Dynamic Indication** remains as it was invented 13 years ago. This test of years is the most convincing evidence in the unfailing integrity of Dynamic Indication.

This indication is not secured from energy existent at the function prior to the movement of that function and dependent only on closing of a single break in the indication circuit, as is the case in A. C. and battery indication systems; but being a dynamic current generated by the momentum of the motor, it can be secured only after actual operation of the function. Since it is impossible to obtain an indication upon the lever controlling the function in any other way than by this generated current pro-

duced by the motor after the completed movement of the function, this system is **always safe**. Furthermore, dynamic indication is solely and **only a G R S principle**.

This **only — always — safe** principle of Dynamic Indication with several other features has brought this system into marked favor with the result that 80% of the power interlocking in use to-day is **G R S Electric**.

This system is equally suited to the 8 and 24 lever plant as it is to the Grand Central Terminal which is the largest interlocking in the world.

Why not install the **only — always — safe — system**, the **G R S Electric Interlocking** employing Dynamic Indication?

# What Do You Really *Know* About The Simmen System of Signaling

Did you ever talk about it to any responsible official of any of the high-speed interurban roads using the Simmen System?

Did you ever ride on a car protected by this System? And see the cab signal constantly staring the motorman in the face—see it change from green to red and back to green again?

Have you ever sat at a Simmen Dispatcher's Table and watched the automatic recording of the movements of every train? Seen the dispatcher stop a train at a given point by simply pushing a lever?

Have you ever examined the interlocking feature on the dispatcher's levers which prevents him from giving clear signals to opposing trains?

Have you ever had definite authoritative figures on the cost of installation and operation of the Simmen System?

How can you judge of the value of the Simmen System without thoroughly investigating its workings and cost?

You can make such an investigation easily and conveniently. Do it.

## To Parties Manufacturing, or Intending to Manufacture in Canada:

We are prepared to produce, upon a large scale, articles of metal and wood.

Our facilities are those necessary for the extensive and economical manufacture of the heaviest freight cars and the highest class of passenger cars. These facilities include plants for the manufacture of steel, malleable and grey iron castings—rolled steel and iron products—frogs, switches and track work for electric and steam railways—coil and elliptic springs—forgings—cabinet and other wood work—and all preparatory and finishing adjuncts.

The various plants are distributed from Amherst, N.S. to Fort William, Ont.

Correspondence invited.

## “Industrial Works” Locomotive Cranes

Especially designed to handle Sand, Gravel, Stone, Scrap, Coke, Pig Iron, Etc.

Industrial Works Cranes have reduced handling expenses for others to an absolute minimum. Why not investigate the matter yourself. Let us send you proposition on a crane designed for your requirements.

LET US SEND YOU CATALOGUE NO. 107.

Capacities from 5 to 60 Tons.

Cranes furnished mounted on any style truck of the latest design with all new features.

Industrial Cranes are the most efficient manufactured. If you wish “Reliability”—install an “Industrial Works.”

When purchasing a Crane—no matter what style or size you need—you are sure to find exactly the right one in the Industrial Works line. For this line includes every style and size, with every attachment, each of which has proven its efficiency and economy.

## DEARBORN WATER TREATMENT METHODS COMPRISE

Knowledge of the Water Conditions  
Application of the **CORRECT REACENTS**

Careful Supervision as to Quantity and Regularity of Treatment

Such thorough, scientific handling of bad water propositions alone insures constant and uniform results in the prevention of scale, corrosion, pitting and foaming.

The manner of applying Dearborn Treatment is simple, and calls for no outlay of capital for equipment. We require gallon samples of the waters for analysis. After completing the analyses we are ready to prepare treatment and will send an expert engineer to instruct in the proper handling of the material.

## Difficult Frame Welding Made Easy with Thermit

Finished Thermit Weld on Engine No. 802 of the  
Grand Trunk Pacific, Transcona, Man.

Frame Welded with Thermit by the Illinois Central,  
Centralia, Ill.

You can weld a frame quickly and economically with Thermit, whether it is broken in the splice, under the fire box, close up to the cylinder, or at any other point. It is not necessary to take the frame down, as all welds can be made with the frame in place.

No other process of welding is so quick and uniformly efficient and economical in operation as the Thermit Process.

The proof is in the fact that to-day 435 railroad shops in North America are using Thermit and returning their engines to service in from 10 to 24 hours.

We have just issued a new pamphlet of instructions for the use of Thermit in railroad shops, known as Pamphlet No. 2144. This should be in the hands of every railroad man, as it tells how and why the Thermit Process of welding will save thousands of dollars every year in repair costs. Write for it to-day.

7300 South Chicago Avenue, Chicago

# Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders,  $23\frac{1}{2}$  x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

**CANADIAN LOCOMOTIVE CO., Limited, Kingston, Ontario**

# The Sign of the Times

Enamelled iron signs are ideal for station name and station door signs.

They are much superior to a painted wooden sign, which has to be repainted at frequent intervals, and they last a lifetime.

There is absolutely no wear to them, and we guarantee that they will not fade or be affected by the weather in any way.

We will be pleased to quote you prices on request.

20 in.	2	1, 1 1/4, 1 1/2, 2 in.	7.50	2.50	1, 1 1/4, 1 1/2 in. 1.00
25 in.	3	1 1/4, 2, 2 1/2, 3 in.	7.50	3.00	1 1/4, 2 in. 1.25
					1 1/2, 2, 2 1/2, 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## Champlain Market Station at Quebec, for the National Transcontinental Railway.

Plans were prepared by N. T. R. engineers in the early part of the year for a station building and platforms in Quebec, and a contract was let to W. J. Gosselin, Levis, Que., for the construction work shown in the accompanying plans. The work is in progress, and is expected to be completed at an early date.

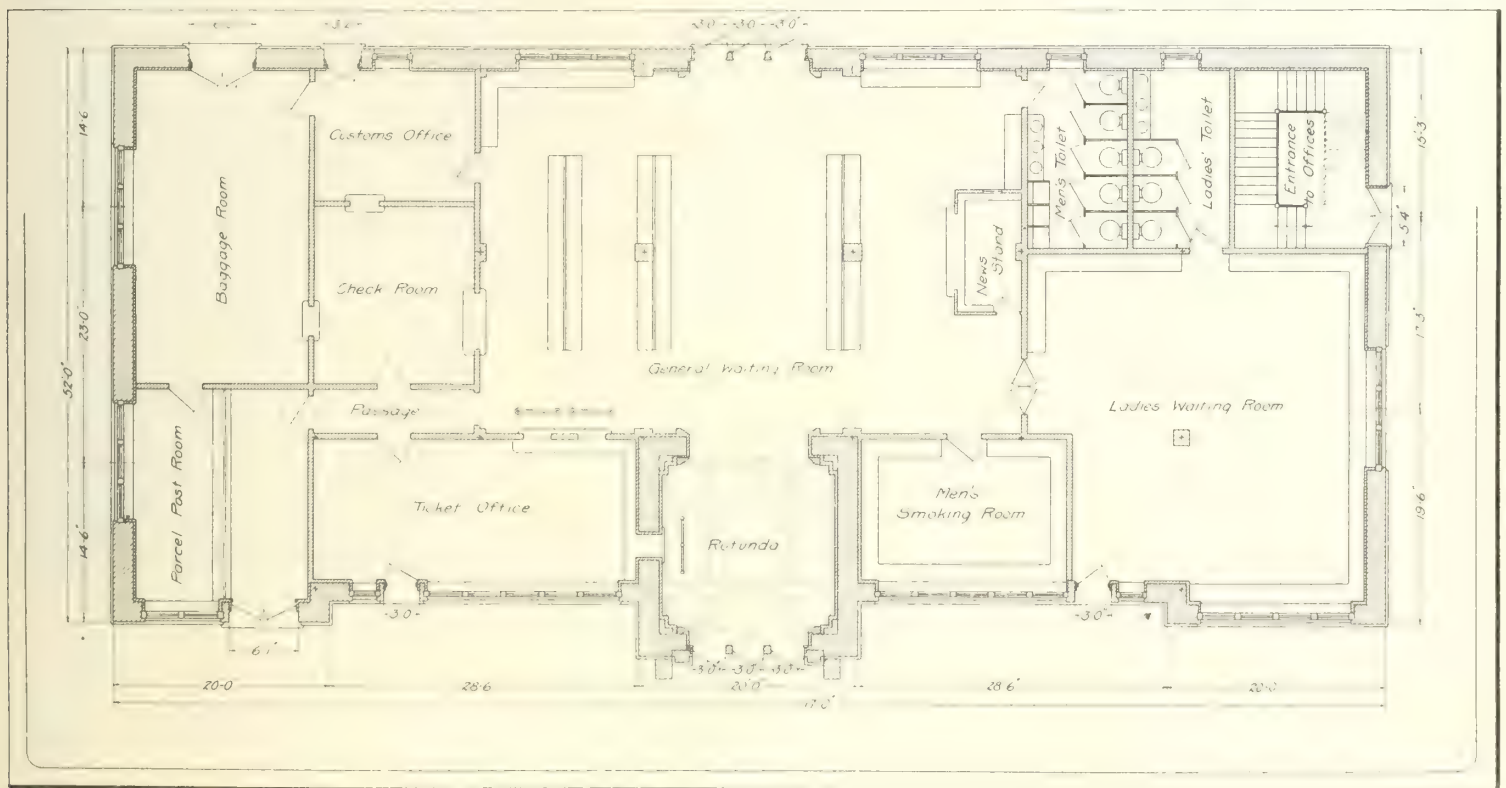

The station is being built on the Champlain Market site, on Champlain St., directly below the Dufferin Terrace, near the Levis ferry, and adjoining King's wharf, and will be reached by a line from the west, which skirts the shore below the cliffs from the Quebec bridge to the station site. It was

of a platform being at 26 ft. 8½ in. centres, with a central distance of 16 ft. between adjoining tracks between platforms. A power house will be located in the north west corner of the site.

The building will be a composite structure of concrete, stone and brick. At each of the corners, at a point midway in each end, at four intermediate points along the back wall, at two points in the front wall, and at the four corners of the rotunda tower, there will be concrete foundation piers, carried down to solid bearing ground. Each of these piers will be 4 ft. thick, varying in length from 6 to 9 ft. The concrete subwall will be

in the front of the building, there will be a chain suspended canopy projecting 8 ft., and 17 ft. wide. It will be of wired glass on a metal frame, with an ornamental iron edging.

The entrance rotunda, 16 ft. square, will lead directly into the general waiting room. Along the left side of the rotunda, there will be a ticket wicket from the ticket office. The general waiting room will be 33 by 50 ft., with a composition floor, and wainscotted to a height of 4 ft. It will contain three double benches, 18 ft. long. To the left of the entrance way in the general waiting room, there will be a double ticket wicket from the

Ground Floor of Station at Quebec, National Transcontinental Railway.

originally intended to build the main station on this site, but it was subsequently decided to utilize the site for the station now being erected, which will be used for local traffic only, and the main freight and passenger terminal will be a joint one with the C. P. R. about the site of the latter's present Palais station.

From the small volume of traffic that it is anticipated will be handled locally through the Champlain Market station, it was not necessary to erect a large building. In consequence, it will measure only 52 by 117 ft., and will be parallel with the river, on the east side of the site, with the front facing the river. Immediately back of the station will be the concourse, with a 40 ft. platform at the rear end of the stub tracks, with four platforms 15½ ft. wide leading off from this back platform, each 250 ft. long. The station will have 7 tracks, 6 of which will come in alongside the platforms, those each side

2 ft. 8 ins. thick, carried by these piers, the wall between the piers being spanned by three 18 in. I beams bedded in the concrete. The concrete wall is to be carried up to the ground level. The principal walls will be built from the top of the concrete foundations to a height of 4 ft. from the ground level, and will be 18 ins. thick. They will be of Beauport, or Chateau Richer, limestone, with headers, and the outer facing of this wall will be Riviere a Pierre granite. Above this line, the walls will be of brick, except for the outside face, which will be of Citadel shale brick. The brick will be entirely kiln run common. All of it will be laid in stretcher courses, with every fifth course a header course. The window sills and caps will be of Deschambault dressed stone. The porch or main entrance, comprising the columns, base blocks and cornice, will also be of Deschambault dressed stone. The inner columns will be false. Over the porch

ticket office, while on the right hand side of the room, there will be a news stand, 6 by 11 ft., entered from the general waiting room. The men's smoking room, entered from the general waiting room, will adjoin the rotunda on the right, and will be 13 by 18 ft. It will have a wall seat extending clear around the room, and will also have a composition floor. The entrance to the women's waiting room will adjoin that of the men's smoking room, which will be approximately 30 ft. square, also with a composition floor, and with a wall seat extending around the room. Back of the women's waiting room, there will be two lavatories for men and women, respectively, each 9 by 16 ft., and tiled with a mosaic floor. The women's will be entered from the women's waiting room, and the men's from the general waiting room.

To the left of the rotunda, will be located the ticket office, 13 by 30 ft., floored in hard-

wood. There will be three ticket windows and two entrances, one from a passageway from the general waiting room, and the other from the front of the building. The passage from the general waiting room will be 4 ft. wide, leading to the parcel post office, which will be 16 by 20 ft. Back of this room, and connecting with it through a door, will be the baggage room, 20 by 29 ft., with

with three windows on the rear, and six on the front sides. There will be a room under the tower, with a stairway leading up into the tower from it. The height of rooms on the three floors will vary, the ground floor rooms being 15 ft., first floor, 12 ft., and the second floor, 9 ft.

The tower will have a total height of 68 ft., surmounted by a flagpole. On the four sides

small is the percentage of the freight traffic which moves from coast to coast. A considerable part of this traffic also will be carried by the railways notwithstanding the existence of the canal route. For certain high class merchandise it will be cheaper to pay a somewhat higher freight rate and have the shipment go through by rail in a week or less, rather than incur the delay of nearly a month required for the voyage from a north Pacific port to a north Atlantic port through the Panama Canal.

### A Small Sighting Tunnel on the Canadian Northern Pacific Ry.

The tunnel interior shown in the accompanying view is that of tunnel 14, 2837 ft. long, under Battle Bluff on Kamloops Lake, on the C. N. P. R. in British Columbia. Near the far portal the centre line is curved for 300 ft., and the daylight seen in the centre of the bore comes through a 4 by 4 ft. sighting tunnel 300 ft. long, driven to check up

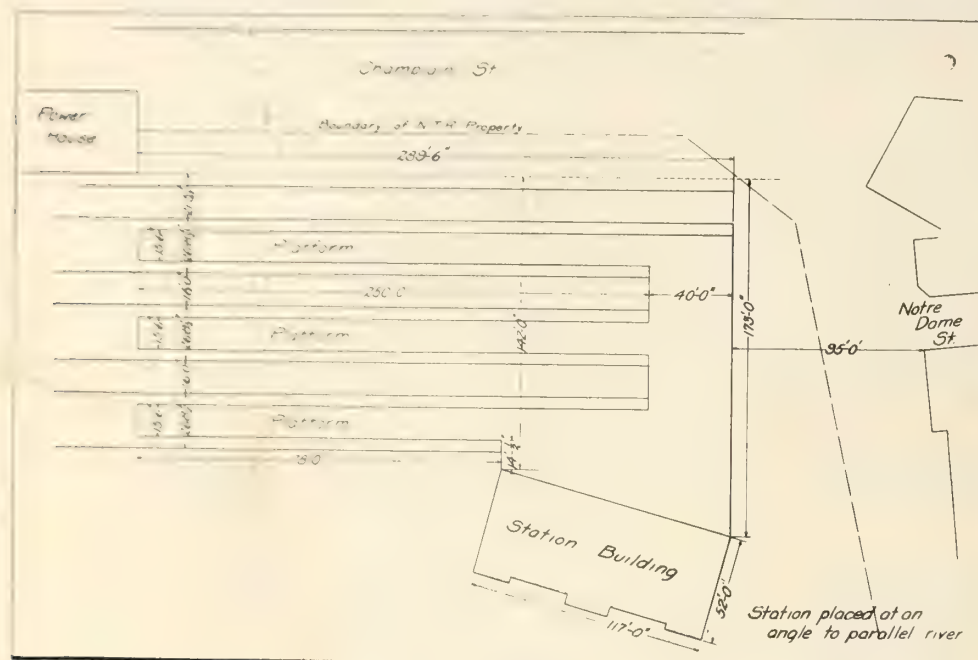

Sighting Tunnel to Check Alignment.

the alignment. By the use of the sighting tunnel it was possible to produce the tangent sight to a point several miles distant across the lake, whence the ridge immediately over the tunnel centre line could be seen clearly. —Engineering Record.

**Valuable Information on an Accident Report Blank.**—On the Baltimore & Ohio Rd., when an accident occurs to an employee, the foreman under whom the employee is working must fill out and send in to headquarters an accident report blank. The Chicago Tribune says that while a gang of carpenters were at work on a bridge over the Chicago River, one of them missed his footing and fell in. The foreman filled out the accident blank and opposite the question "What does the injured person say?" he wrote, "He says it was a damn good thing he could swim."

**Australia imported locomotives in 1912 to the value of £468,572, and in 1913 to the value of £425,395.** Of those imported in 1913 the United Kingdom supplied £409,434 worth, and the United States £1,951. The chief states importing locomotives were New South Wales, Western Australia and Queensland, in which the requirements of the state systems could not be filled by the established railway work shops and some manufacturing companies.

Station and Tracks at Quebec, National Transcontinental Railway.

a mastic floor. This will have a double swing door at the rear, connecting with the outside for the baggage entrance way. There will be a door on the right, leading into the customs room, 12 by 15 ft., which will be floored in hardwood. This room will also connect with the general waiting room. The check room adjoining will be 15 by 16 ft., with hardwood floor. It will be entered from the passage, and will have counter windows on the other three sides into the baggage room, customs office and general waiting room. The rear of the general waiting room will open out on the train concourse through three doors.

The street corner of the main floor will be entered through a door on that side to a stairway, leading to the offices on the first floor. This will lead into a central 8 ft. corridor, extending the full length of the building, with offices on either side. The first room on the right will be a lavatory, 11 by 19 ft., tiled in mosaic. Next in order will be an office, 17 by 19 ft. The next room, in the centre of the rear of the building, will be the train dispatcher's office, 19 by 29½ ft., with a counter extending around the doorway, and an operator's desk along a 10 ft. window at the rear. The remainder of that side of the corridor will be divided off into three offices, two 12 by 19 ft. each, and the third, 17 by 19 ft.

Opposite the stairway on the front side of the building there will be a conductors' and trainmen's room, 17 by 21 ft., followed by two offices, 15 by 19 ft. and 14 by 19 ft. respectively. Under the tower there will also be an office, 15½ by 16 ft., the balance of that side containing three more offices, 14 by 19 ft., 15 by 19 ft., and 17 by 21 ft., respectively.

The second, or top, storey will form one large room, the corner stairway leading directly into it. On account of the sloping sides to the roof, it will be 40 by 105 ft., slightly smaller than the other floor areas,

of the tower, at a height of 57 ft., there will be clock faces. The flat top of the building will be surmounted by an ornamental iron border.

### The Panama Canal and the Transcontinental Railways.

Engineering News, New York, says:—During the quarter century since the construction of a transoceanic canal across the Central American Isthmus became a live issue, a vast deal has been printed regarding the effect of such a canal upon the transcontinental railways. It has been very generally assumed that the canal would be a serious detriment to these railways on the one hand, and on the other that its construction would be particularly advantageous to the states on the Pacific coast to relieve them from the alleged exorbitant freight charges of the railways from the east. In recent years, however, a saner view has gradually gained ground, and it has come to be realized by those closest to the problem that the amount of railway traffic which the canal will affect and which will be diverted to the canal will be, after all, comparatively small. Further, it is seen that the stimulating effect upon certain lines of traffic and business resulting from the canal will have in all probability some compensating benefits for the railways.

Some attention is given to this matter in the annual report of the Northern Pacific Rd. Co., issued recently, which says:—"The bulk of the traffic moving into and out of the ports on either ocean starts from or is destined for the country's great interior. The main lines of the Northern Pacific at the head of Lake Superior to Puget Sound are more than 1,900 miles in length, but the average haul of a ton of freight on the company's railways last year was only 275 miles."

These figures indicate how comparatively

## Methods and Devices in the Timiskaming and Northern Ontario Railway Shops.

### A Small Air Motor.

The oft repeated statement that necessity is the mother of invention is exemplified in a small air motor used in the T. and N.O.R. shops, and which is shown herewith. Occasion arose some time ago to grind out the bore of a damaged air hammer, and as there was no spindle grinding machine in the shop, it became necessary to construct some sort of apparatus that would fulfill requirements. The re-

Power is received from outside sources at high potential, and is stepped down before bringing it to the switchboard shown, which is equipped with all the necessary apparatus for handling the motor and generator, and battery charging. The motor is a 5 h.p., 60 cycle, 104-208 volt, 48-24 amp., 1,750 r.p.m. single phase machine, belt connected to a 7.5 k.w. 125 volt, 60 amp., 1,000 r.p.m. direct current generator, which supplies the storage batteries. The supply to the batteries is controlled through the

stroke, and also acts as a guide for the operator.

### A Flange Lubricator.

On a railway line that has a great many curves, such as the T. and N.O.R., which traverses a very rough and hilly country, where the locating engineers, in order to secure economical gradients, were forced to follow a circuitous route, the flange wear due to the rounding of so many curves, is very great. The amount of tangent is comparatively small on this line, which follows circuitous valleys and along the edges and winding shores of rocky lakes, making the number and degree of curves high as com-

Small Grinder Air Motor, made from Scrap Parts.

Battery Charging Equipment in the T. and N.O. Ry. Shops.

sult was the production of this little motor by E. McGahey, who is employed in the locomotive machine shop.

The end, or bearing members, of the motor, are old heads removed from the ends of disinfectant receptacles in passenger car lavatories, which had been scrapped. From their very nature they proved most serviceable, as they had side flanges, which serve as a base on which to set the motor. Between these two head members, which are about 6 ins. diam., there is secured a ring, about 1 in. thick, by means of bolts passing through both heads and the ring, from side to side as shown. The rotor consists of a set of 12 thin galvanized iron blades set in the central spindle. This spindle extends through the heads, and on one end there is a light flywheel, and on the other the emery grinder. Air enters through a 1/4 in. pipe, and exhausts through a small slit on the opposite side. It is the intention to modify the construction so as to make the size of the exhaust variable as required.

The motor can be bolted on the carriage of a lathe, and with the member to be ground in the chuck, excellent results can be accomplished. A wide range of uses has been found for this motor.

### A Battery Charging Installation.

On some of the more recently acquired equipment of the T. and N.O.R., especially the steel passenger cars received last year, electric lighting is used. To handle the battery charging on these cars, special provision was made at the North Bay shops to take care of this phase of car work, by equipping a charging station in one end of the locomotive house, between a pair of the tracks. The accompanying illustration shows the power apparatus, and the battery charging stand in the background.

switchboard, and a long cable connects up the batteries in series on the stand in the background.

The cars, as received from the builders, are minus the lighting equipment, which is installed in the shops. The set of batteries in the background is for one of the new steel cars, and has just been charged preparatory to placing in the cars.

### Shaper Tool.

In the T. and N.O.R. shops there is in use a shaper tool, the invention of E. McGahey, which has proved useful in certain classes of work, especially the shaping of keyways. It is illustrated herewith. There is no slotter in these shops, so such work

pared to lines more favorably situated in agricultural country. The flange wear on the locomotives became so great that steps had to be taken to minimize it if possible. The method followed has not only materially reduced it, but has the additional advantage of removing most of the oil that is carried out from the air compressor in the exhaust, this oil formerly having an injurious effect in coating the exhaust cavity and corroding the exhaust tip. The

Shaper Tool with Extension End.

as the slotting of keyways, which is usually done on that machine, must be done otherwise.

The tool, as will be noticed, is similar in most particulars to the ordinary screw clamp tool used for a variety of purposes, the essential difference being that instead of a set screw being used in the end of the bar to clamp the tool, there is an extension rod, of the same diameter as the bar, with a threaded end, which fits into the set screw hole, clamping the tool in this manner. The advantage of this arrangement is that it serves as a handle for lifting the tool out of the cut on the return

flange lubricant is this otherwise injurious oil, which, by the means adopted, is put to a useful purpose.

A Westinghouse dust collector, with 1 1/4 in. pipe connection, is placed in the exhaust pipe line from the air compressor to the exhaust, and is attached between the frames on the cross brace just back of the crosshead guides. The exhaust enters through the top, and from the forward side it passes out and thence through the former course to the exhaust cavity, but the passage through the dust collector, changing the direction of flow of the exhaust, causes the heavy oil in the exhaust to be

precipitated to the bottom of the dust collector. From this bottom there is a  $\frac{1}{4}$  in. pipe connection, leading to a T, with a branch pipe leading to each side of the locomotive.

The bottom cap of the dust collector has four 1 1/2 in. holes drilled in it, through which the oil escapes through the T connection to the flanges, with just enough steam passing through the holes to carry the oil to where it is needed. The ends of the pipes leading to the outside of the locomotive are bent around, so that the tip is radial to the flange corner, the tip being about  $\frac{1}{2}$  in. back from the corner.

We are informed by W. Black, General Foreman, by whom these flange lubricators have been applied, that the results obtained have been excellent, and that even in the very severe winter weather to which this line, situated far north and in a comparatively high altitude, is subjected, no trouble has been experienced from the apparatus freezing, enough steam passing through to keep the parts free. Nearly all the road locomotives have been equipped, but it has only been found necessary to pipe them to lubricate the flanges of the front driving wheels, as it is only there that excessive flange wear has been experienced. The flange wear has been materially minimized, as no trouble has been experienced with the oil running on the tread of the tire reducing the adhesion.

### Interesting Shop Kinks.

Among my jobs as machinist once was one of repairing a leaky boiler, in which there were about 700 copper flues of  $\frac{1}{2}$  in. diameter. After having spent four successful hours in order to get out one of the flues that had to be replaced with a new one, I got the idea of threading one end of the flue with a tap, large enough to make sufficient hold for a bolt or screw, but not so large as to cut through the copper flue. When I had the bolt or screw in the one end of the flue, I unloosened the other end of the flue, put a steel rod through the flue, hit the rod with a hammer, and it took only about a minute to get each of the other faulty flues out of the boiler in my new way of doing it.

Once I was reaming out a new wristpin lining for an air compressor. The reamer was  $2\frac{1}{2}$  ins. in diameter, but it was just a trifle too small for making the bore in the lining large enough, so I took a strip of thin copper, such as are used as fuses connected with cables or bars, transmitting electric currents. First I used a strip of the copper, wide enough to cover three of the teeth of the reamer, and let it follow the reamer through the bore, but still the hole was too small. After using another copper strip, covering four of the reamer's teeth, I got a perfect fit for the wristpin.—G. H. Ander, New York.

### Diaphragm Between Cab and Tender on Intercolonial Locomotives.

The Intercolonial Ry. is equipping part of its passenger motive power with a diaphragm between the cab and tender, to protect the enginemen more thoroughly against inclement weather. The arrangement is identical with that in use on some of the C. P. R. locomotives, which was described in detail in Canadian Railway and Marine World for June, 1912.

The rear wall of the cab has a large square opening, around the contour of which there is a diaphragm ring as between vestibuled passenger cars. A corresponding

diaphragm ring on the tender is held in contact with the former by means of four spring plungers in the forward end of the tender. The tender diaphragm has hinged thereto, which bears against a passage wall from the cab, the hinged plates being kept apart by four intermediate coiled springs on each side. This hinged arrangement permits of free movement of the locomotive with regard to the tender, as in passing around curves, the pressure of the connecting plates being always maintained by the springs, so that the cab is at all times closed to the weather in a more effective manner than by the usual canvas curtain method. Coal passes into the cab floor through the usual coal doors.

The sides of the cab are equipped with doors, and entrance is made through them by way of a ladder embodied in the cab structure, and which is slightly forward of its usual position, and of a different design. We are indebted to G. R. Joughins, Superintendent of Rolling Stock, Canadian Government Railways, for this information.

### Tool List on Canadian Northern Quebec Railway.

T. C. Hudson, Division Master Mechanic, C. N. Q. R., Joliette, Que., writes Canadian Railway and Marine World:—"I note your interesting publication frequently publishes methods used to facilitate mechanical work. I am, therefore, sending you a tool list which is used on the C. N. Q. R. lines, which has been found very convenient when transferring locomotives from one division to another, also when locomotives are allotted to contractors.

Messenger in Charge of <input type="checkbox"/> Engine		
Engine and Material received in good condition except as mentioned below <input type="checkbox"/>		

"With the adoption of this list there need be no difference of opinion between the sender and receiver regarding material and tools furnished and returned. The messenger in charge of locomotive is furnished with copies in duplicate of material on it prior to its departure for another divisional point or contractor. On arriving at destination the messenger has the tools checked by the foreman or person authorized to receive them. The list having been checked and signed, one copy is retained and the other returned by the messenger to the headquarters station, thus completing a record which can be referred to any time if needed."

### Track Section Prize Competition on Eastern Lines, Canadian Pacific Ry.

For the past two years an annual track section prize competition has been carried out on the eastern lines, C.P.R., which has aroused a healthy spirit of rivalry and keen competition among the officers and section force of the different divisions and districts. Sixty-two prizes are awarded in the competition, as follows:

A general manager's prize to the foreman having done the best season's work on eastern lines.

Four general superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of the winner of the general manager's prize.

Fourteen district superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of winners of higher prizes.

Forty-three roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section forces, switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grades, alignment, drainage, and character of roadbed being taken into consideration—wins the first prize.

The number of hours of regular labor and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves and ditching done. The amount of track handled, right of way, spikes and bolts is fairly uniform on all sections, so that the condition with respect to these items at the end of the season is usually a criterion of the amount and quality of the work done thereon throughout the season. Where special conditions affect such work they are taken into consideration. Track gauge testing machines are run over each roadmaster's territory periodically during the season and records are kept of the condition of gauge found.

Towards the end of the season each roadmaster, after careful consideration of each section, as above outlined, reports to his superintendent the prize winner on his territory. The superintendent and resident engineer then carefully inspect each roadmaster's prize section, and decide on the winner of the superintendent's prize, reporting same to the general superintendent, who, together with the division engineer, decides which superintendent's prize section is entitled to the general superintendent's prize. Finally the best section on each division is inspected in detail by the General Manager and the Engineer of Maintenance of Way, together with division officers, gauge and surface are checked throughout, bolts, spikes, and every detail of track maintenance examined, and on these observations, taking into account physical, labor and other conditions, the General Manager's prize is awarded.

## The Handling of Snow and Care of Track in Winter.

Canadian Railway and Marine World for December contained two papers on this subject, written in competition for the prize offered by the Canadian Northern Ry. management to roadmasters on its lines east of Port Arthur, viz., the paper by R. J. Munroe, Roadmaster at Joliette, Que., to which the prize was awarded, and a paper by W. M. Jocklin, Track Inspector, Port Arthur, which was highly commended by the judges. Through the courtesy of L. C. Fritch, Assistant to President, C. N. R., we are enabled to publish in this issue four other papers which were submitted in the competition, as follows:—

By H. B. Cassidy, Roadmaster, Quebec.

**Cleaning tracks of ice and snow around frogs, switches and interlockers** is very important, and should be handled promptly, as accumulation of snow in such places forms ice and strains the connecting parts around switches and guard rails. Prompt attention is required during stormy weather by men in charge to see that they are kept clear of snow and ice, and it is the duty of every roadmaster to impress upon foremen the necessity of attending to this work promptly. Where foremen allow carelessness to creep in, it is quickly noticed, switch points become strained and will not close properly, guard rails will turn out of their place and in such cases the track spreads, causing derailments. The only secret to this work is prompt attention and to have the work well done. The same applies to interlocking plants, otherwise the adjustment will be affected, very often doing away with the use of signals at a very particular time, necessitating the use of hand signals in stormy weather.

Leaky locomotives, particularly yard ones, are the worst enemy trackmen have, especially in this part of the country where there is so much snow and cold weather. Every effort should be made on the part of the mechanical department to avoid this, as it often necessitates extra men to keep tracks clear, thus increasing the maintenance of way department's pay roll. If the money expended in this way was applied to the leaky locomotives good results would be obtained.

**Patrolling the Track.**—Track should be patrolled by competent men every day. In the event of a foreman not being able to go over his section every day, it should be patrolled by a competent man, capable of knowing by the look of the track whether it is spreading or not during the winter.

The interested trackman endeavors to educate himself, and it has always been my policy to endeavor to educate every man to know the look of track and what causes it to spread, such as being out of line and surface, and what action the trains are liable to have on such track. Owing to our climate track often becomes very rough in the course of 24 hours; in this case the competent, interested man will be able to see at a glance what is liable to happen and report it to his foreman, who will make every effort, even if other work should suffer, in order to get out and have the track shimmed and put back to proper shape again.

**Shimming Track.**—Every foreman should be carefully instructed in this work, shimming first the rail which is lowest, which is very often the case where track heaves badly, bringing it to surface, shimming joints, centres, and quarter, and having shim spiked to proper line by going back a short distance from the work to see that the line is maintained when the rails are

being spiked, every second tie shimmed and spiked and the other side brought to surface, shimmed in the same way, in all cases using the gauge. The work of finishing the shimming can then be completed quickly. Shims should never be driven in by force but fitted so as to avoid raising or humping the rail. In bad curves or cuts, work of this nature should not be done without first being well protected.

A foreman should never undertake to shim a bad place that he cannot finish before the approach of a regular time card train. Good judgment must be used on his part and on the other hand he must not be so much afraid as to think that he cannot get through with a certain piece of work in the way of shimming before the arrival of a train.

Spikes must be put through all shims over  $\frac{1}{4}$  in. and track well braced. Shimming 3 ins. and up should have a long shim every third tie, all the way underneath both rails, and every second tie as the shim gets greater. In doing heavy shimming such as this, the foreman must keep himself well protected by the use of proper signals.

**Snow ploughs and flangers** should be properly equipped and in readiness for the first storm of the season, and should always have a clawbar, spiking hammer, track gauge, two track wrenches, some track spikes and bolts ready in the event of a derailment. A competent foreman should be in readiness and should have the privileges of going over the road a few times before it is necessary to run the plough, in order to be acquainted with the different changes along the line, such as sidings which have been put in and other changes made during the summer. Ploughs should only be run when really necessary, as it is known that there is no revenue from running them when they are not necessary, in this case good judgment must be used, as in many cases ploughs and flangers are not put over the road at the proper time. For example there may not be much of a storm and trains may get through with probably very slight delay. If the storm ends at that, the line should be cleaned out immediately, as locomotives team much better hauling trains, they are not picking up snow from the centre of the track nor bothered with side drifts, and it also gives section men an opportunity to get over their sections and see the conditions of their track and to perform the work required. If it is possible to keep trains running until the storm is over it is always better to do so and then make one run of the plough and clean the road. In extremely bad storms and where it is not advisable to cancel trains, ploughs should be kept running as often as possible to keep the road open.

It is an easy matter to throw 2 ft. or even more of snow out of a cut where a plough can be run at a fairly good rate of speed, in order to throw the snow far enough from the track, but if 2 ft. or more of snow gets into cuts and is allowed to remain there during a storm, it does not take long to fill the cut level, so that the running of ploughs frequently is necessary where cuts are bad and storms heavy. Great care should be taken when ploughs stall in the snow, to see that after being pulled out of the snow bank that there is no ice on the flange along the rails, and that the face of the snow bank where the plough backed out is broken with shovels, so as to avoid breaking the front of the plough or causing derailment from the ice in the flange when taking the second run into the bank.

By E. Meyers, Roadmaster, Toronto.

**Drainage** is an important matter in connection with maintenance of track. The track should be well drained at all seasons. All cuts and ditches should be well cleaned out in the autumn before the wet season sets in, and ditches well opened at the mouth of cuts, so that water may get away freely. Culverts should also be well cleaned out in the autumn, and during the early part of the spring, ice and snow should be removed from culverts and mouths of ditches before the snow melts in the spring, so that the water can be freely drained off from the right of way.

**Snow fences** for cut protection should be erected 25 or 30 ft. outside of the right of way fence, according to the condition of the cutting. For instance, if it is a deep cut it will occupy a larger part of the right of way, whereas a small cut will not be nearly the width and not so open as a larger cut; therefore one has to use judgment as to the distance for setting up snow fence. All snow fencing should be erected before the frost sets deeply in the ground, and two stakes should be driven in, one at each end of fence panel, and the leg of snow fence nailed to the stake with one nail at each end, so as to prevent fencing being blown down by wind and broken. When taking down snow fencing in the spring it should be piled in small piles and on two old ties in a level spot, so as to not to warp the snow panels. The piles should be 200 ft. or more apart, as a protection in case of one pile taking fire.

**Handling of Snow Ploughs and Flangers.**—It is not advisable to have the same man assigned to operate both snow plough and flanger, as in the event of a heavy storm coming up while the flanger is out on the line with the snow plough man in charge, there might not be an experienced man available to take charge of the plough. Another reason is that a cheaper man can be obtained to run the flanger; for instance a section laborer should be taught to perform this work at laborer's rate which is much lower rate than that paid to a man competent to run a snow plough. The flanger should be run over the line often, as it is very cheaply handled and a great benefit to the track. Even if the flange is not very heavy, the flanger should be run in order to keep the flange free from accumulating hard snow and ice. With a bad flange it is difficult for trains to operate over the road with a heavy tonnage and it is also dangerous. Running the flanger quite frequently often saves the necessity of running the snow plough, and avoids a good deal of expense. Dispatchers should be kept posted in regard to storms by trainmen on the line, also by agents at different points, and should order out snow plough when necessary. During a heavy storm freight trains should be side tracked at once, until the snow plough has cleared the track and the storm has ceased. Freight trains which are left running on the main line during a storm often tie up the road for a long time, whereas if freight trains are side tracked and snow plough is kept running immediately ahead of passenger trains, the passenger service can be kept moving with little or no detention. For each division there should be two snow ploughs. From the Ottawa Division there should be a snow plough at Rosedale and one at Trenton, also one at Ottawa, and one at Trenton, for Ottawa Division. One flanger at Trenton and one at Ottawa is quite sufficient.

**Shimming** is also an important feature of track maintenance. A track poorly shimmed is dangerous, and is often the cause of rails breaking and track spreading. Shim-

ming should only be done where positively necessary. In many cases section foremen will shim along a sag perhaps 100 ft. or more whereas 25 to 30 ft. would answer the purpose and would make just as good riding track as though the whole sag had been taken out and the rails set up on high shims, which, as previously stated, is dangerous. A section foreman should always use a level board when shimming, the same as when surfacing, and should be very careful about spiking the track to line and gauge. All shims should be bored and spiked through the shim holes. Where spikes have been pulled ties should be plugged, and long spikes used on outside of rail, and also on every other tie on inside of rail where shimming is done. The balance of the ties should be spiked with 6 in. spikes inside. Each shim that is placed under the rail should have an equal bearing. At each end of where shimming is done very thin shims should be used; shingles may be found very useful for this. The track should be well braced where high shimming is done, with a shim 2 ins. thick and both edges of the end of shim bevelled off so as to fit under the ball of the rail, with three spikes in the shim on the end of the tie and one through the hole of the shim and the other two at the end of the shim. This should be done on every three or four ties, according to the height of the shimming. Where shimming is done on the track, particular attention should be given to it, when sectionmen are going over the section each day, to see that the track is staying in good condition and that shims are all in place and not split. Care should be taken to see that the track is not heaved any more at a point where shimming is done, not by merely looking at it, but by testing it with the level board.

Switches and interlocking plants require a great deal of attention. In case of a heavy storm there should be a man stationed at the plant. All switches should be kept free from snow and ice and should be examined by the foreman the first thing in the morning when coming on duty, and the switches should be tested by throwing them to and fro to see that they are in good working order. During a heavy storm a man should also be kept on duty in the yard over night. The very best grade of oil should be used for switch lights.

All Spikes over the entire section should be tapped down tight to the rails in the autumn, so as to keep the rails firm in place; spikes should be tapped down carefully so as not to break off the heads. All bolts in track should be well tightened before frost sets in. Tightening bolts in frosty weather tends to break them. Track walking should not be allowed in winter except when impossible to run a hand car, so that the men may have the proper material and tools to work with. When it is necessary for a man to walk track, he should be an experienced man, and should start walking the first thing when he comes on duty in the morning.

By O. Ogden, Supervisor of Track, Ottawa.

After ties are all in and track surfaced, the foreman should start to get ready for winter, and the first and most important thing is to keep the water away from the track. All ditches and water courses must be properly cleaned out, then the ballast trimmed, and trimming ballast has a lot to do with the heaving by frost or making rough track. It should be trimmed very even, as heaps in the ballast will make humps in the track, especially, where the track is through cuttings or wet places. The centres of track must be kept well filled so

that water will not lie on the track, and switches and frogs must be trimmed so snow can be got away easily. All low places must be tamped up to surface, leaving the track in good surface when frost comes; bolts kept tight, and spikes driven down, and the inside spikes put down first to avoid as much as possible the canting out of the rail.

A thing all trackmen find hard to do is to keep the rail up to proper level, especially on curves. Track must be kept in good gauge and line and shimmed up to good surface, as very little in the surface makes a track ride rough when it is frozen hard; all ice and snow to be kept cleaned away from frogs and switches, and when frost comes, and before heaving or snow comes, the foreman should get snow plough and flanger markers up in the proper places.

All crossing plank should be removed that can be, cut all brush, have all rubbish piled up, and in the spring have it and all grass burned, all fences repaired, station yards cleaned and raked up, making the right of way have a neat and clean appearance.

By D. Macdonald, Supervisor of Track, Trenton, Ont.

To ensure a good winter track, all surfacing, lining, and spiking to gauge should be done not later than Nov. 15. The bolts and joints should be gone over and tightened and made secure.

## Birthdays of Transportation Men in January.

Many happy returns of the day to:—

J. Abrams, Wharf Freight Agent, C. P. R., Vancouver, B. C., born at Manchester, Eng., Jan. 24, 1870.

W. U. Appleton, General Master Mechanic, Intercolonial Ry., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, District 4, Manitoba Division, C. P. R., Souris, born at Kingston, Ont., Jan. 27, 1865.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, General Agent, Canadian Northern Ry., Chicago, Ill., born at Toronto, Jan. 13, 1865.

E. Bower, Travelling Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Nottingham, Eng., Jan. 17, 1889.

G. McL. Brown, European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

R. F. Chapman, Chief Dispatcher, District 1, Saskatchewan Division, C. P. R., Regina, born at Coal Branch, N.B., Jan. 21, 1874.

W. A. Cowan, Resident Engineer, Canadian Government Railways, Truro, N.S., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there, Jan. 1, 1869.

A. Davidson, General Agent, G. T. Pacific Ry., Prince Rupert, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, born at Cap Rouge, Que., Jan. 1, 1863.

Sir Sandford Fleming, K.C.M.G., director, C.P.R., born at Kirkcaldy, Scotland, Jan. 7, 1827.

J. Gordon, Foreman Electrical Engineer, Car Department, Grand Trunk Pacific Ry., Transcona, Man., born at Forres, Scotland, Jan. 1884.

Gordon Grant, Chief Engineer, National

Where rails creep, they should be bunted back, so as to avoid joints breaking away in extreme cold weather.

Points of switches should have the ballast lowered so that the gravel would not heave and interfere with the working of the switch.

Ditches, drains, and culverts should be cleaned and opened out before it freezes up.

In cuts where there are stones or rock projecting out, these should be tried, and if loose should be taken out, if not they should be carefully watched as the frost goes out in the spring.

Snow gates should be placed before it freezes up, and set in the ground so the frost will help hold them to their place.

As soon as the first snow comes all switches and sidings should be shoveled out and snow cleared back, to prepare for another storm.

Before snow gets too deep, the snow plough and flanger should be run and track opened out, cuts and snow banks to be widened by shovelling.

Track surface should be kept level by shimming, as soon as track begins to heave with frost. Where shimming has been done on curves, it should be braced.

As winter advances, snow ditches and culverts should be opened, to prepare for thaw. As frost is going out care should be taken to keep the surface level, by lowering the shims, and shimming should be done where frost is going out unevenly.

Transcontinental Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

Carl Howe, Manager, New York Central Fast Freight Lines, Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

W. C. Hunter, ex-Manager, New Brunswick Coal and Ry. Co., Moncton, N.B., born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, Vice President, G. T. R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

James Kent, Manager, C.P.R. Telegraphs, Montreal, born Jan. 15, 1854.

A. J. McGee, Secretary-Treasurer, Timiskaming and Northern Ontario Ry., Toronto, born at Lachine, Que., Jan. 24, 1876.

G. C. Martin, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

J. J. Nelligan, Division Freight Agent, Canada Steamship Lines, Ltd., Montreal, born at Hamilton, Ont., Jan. 20, 1876.

G. Pepall, Assistant Division Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Toronto, born at High Wycombe, Bucks, Eng., Jan. 15, 1849.

W. Phillips, European Railway and Steamship Manager, Canadian Northern Ry., London, Eng., born at Toronto, Jan. 31, 1870.

W. Pratt, Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Montreal, born there, Jan. 6, 1879.

B. G. F. Rutley, ticket agent, C.N.R. and G.T.P.R., Fort Garry Union Station, Winni-

peg, born at Chatham, Ont., Jan. 25, 1879.

S. J. Shannon, Comptroller and Treasurer, Intercolonial Ry., Moncton, N.B., born at Halifax, N.S., Jan. 18, 1865.

J. G. Sullivan, Chief Engineer, C.P.R. Western Lines, Winnipeg, born at Bushnell's Basin, N.Y., Jan. 11, 1863.

Ross Thompson, Chief Engineer, St. John and Quebec Ry., Fredericton, N.B., born at Newry, Ireland, Jan. 1, 1865.

O. C. Walker, Inspector, Refrigerator Service, C.P.R. Western Lines, Winnipeg, born at Newport, Mon., Eng., Jan. 31, 1877.

## Comparison of Canadian Pacific and Canadian Northern Locomotives.

A subscriber at Winnipeg wrote Canadian Railway and Marine World recently as follows: "To decide a bet will you kindly answer the following question: Are the 2,400 class, 2-8-0 type, locomotives on the C.N.R. more powerful, and can they in all conditions haul more than the 5,000 class 2-8-2 type locomotives on the C.P.R.?"

**Data.**—Following are the data of the two types of locomotives referred to:

Class	C.P.R.	C.N.R.
	2-8-2	2-8-0
Weight of locomotive	255,500 lbs.	232,000 lbs.
Weight on drivers	197,300 lbs.	208,000 lbs.
Cylinders	23½x32 ins.	24x32 ins.
Boiler pressure	180 lbs.	200 lbs.
Diameter of drivers	63 ins.	63 ins.
Capacity rating	210% or 42,000 lbs.	50% or 50,000 lbs.

C.P.R. and C.N.R. capacity ratings differ in the unit, the C.P.R. unit being 20,000 lbs. for 100%, and the C.N.R. unit 1,000 lbs. for 1%. Hence the wide difference in the percentage capacity rating.

**Computation.**—The tractive effort of a locomotive is the average maximum tractive force at the tread of the driving wheels, assuming a 100% cutoff in the cylinder. It is given by the following equation:

$$F = \frac{d^2 p s}{D}$$

F is the tractive effort at the driving wheels in lbs.; p, the average maximum pressure in the cylinder in lbs. per sq. in., usually taken as 85% of the boiler pressure; s, the piston stroke in ins.; d, the diameter of the cylinder in ins.; and D, the diameter of the drivers in ins. Hence,

for C.P.R. locos.,

$$F = \frac{(23\frac{1}{2})^2 \times (180 \times 0.85) \times 32}{63} = 42,918 \text{ lbs.}$$

for C.N.R. locos.,

$$F = \frac{(24)^2 \times (200 \times 0.85) \times 32}{63} = 49,737 \text{ lbs.}$$

However, the available tractive effort of the locomotive is limited by the grip of the drivers on the rails, which is only about 23% of the weight of the locomotive on the drivers. Hence, the maximum gripping effect of these locomotives is:

for C.P.R. locos.,  $197,300 \times 0.23 = 45,379$  lbs.

for C.N.R. locos.,  $208,000 \times 0.23 = 47,840$  lbs.

**Conclusions.**—From the above, it will be seen that the C.N.R. locomotives have a greater gripping effect on the rails than the C.P.R. ones. They also have a greater tractive effort; in both types the tractive effort exceeds the gripping effect. It will, therefore, be seen that the C.N.R. locomotive can start a heavier train load under similar conditions than the C.P.R. ones, and maintain a heavier load at low speed.

However, the principal reason for the introduction of the mikado locomotive, with its reduced proportional weight on the drivers, was the demand for a locomotive with greater boiler capacity, which is possible by lengthening it over the trailing wheels, as at higher speeds the tractive effort is limited

F. J. Watson, Assistant General Freight Agent, G.T.R., Montreal, born at Toronto, Jan. 12, 1866.

G. H. Webster, M. Can. Soc. C.E., Vancouver, B.C., born at Creemore, Ont., Jan. 31, 1858.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central Division, C.N.R., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

by the capacity of the boiler to supply the cylinders with steam, falling much below the gripping effect of the tires on the rails, so that the full extent of the latter cannot be realized. Hence, the C.P.R. locomotives, having a larger boiler capacity, can supply a greater volume of steam, and in consequence, under similar loadings, can maintain higher speeds than the C.N.R. locomotives.

It will thus be seen that for low speeds, the C.N.R. locomotives are more powerful, but as the speed increases beyond the point where the tractive effort and gripping effect lose their balance, the C.P.R. locomotives, on account of their greater boiler capacity, have a greater capacity.

After the foregoing answer had been prepared in Canadian Railway and Marine World's office, copies of it were sent to H. H. Vaughan, Assistant to Vice President, C.P.R., Montreal, and to S. J. Hungerford, Superintendent of Rolling Stock, C.N.R., Winnipeg for criticism or suggestions. Mr. Vaughan replied that it was satisfactory to him, and that he had no suggestions to make. Mr. Hungerford has written as follows: "In general our locomotive was designed to haul bulk freight at a maximum running speed of 25 miles an hour, as experience has shown the economy of handling ordinary freight traffic in heavy trains at moderate speed. We believe that this statement is true in relation to the coal consumption, but it is also true in respect to wear and tear on equipment and track. Beside this there is the important advantage of greatly reducing the element of danger; the ordinary type of freight car truck not being safe at high speeds.

"I take exception to the assumption that the gripping effort upon the rails is 23% of the weight thereon, as experience has shown a great diversity of results. The factor of adhesion of the Canadian Northern locomotive is practically 4.16 (24%, Editor C. R. and M. W.), admittedly low, but the results in service have been entirely satisfactory, and on a dry rail the full tractive effort can be employed without slipping. The actual adhesion upon slightly wet, muddy or greasy rails varies so widely that no factor can be safely assumed, but with modern sanding appliances this trouble is almost entirely overcome and the employment of the highest possible tractive effort is undoubtedly justified.

"The boilers of the Canadian Northern locomotives have proved their ability to supply all the steam required by the cylinders when working at maximum cut off at speeds under 10 miles an hour, and also when working at the speed limit at an economical cut off.

"It should be borne in mind that nearly all railways are more or less undulating, and only a few lines have very long continuous grades of maximum rise. The result of this is that under usual conditions a locomotive

in freight service is only required to supply the maximum amount of steam for a comparatively short period, and the average consumption of steam over a subdivision is greatly below the maximum requirements.

"A careful consideration of the above facts led us to the decision that it would be unwise to adopt the mikado type with its greater gross weight, higher initial cost and subsequent maintenance while the consolidation type was amply capable of performing the work under our conditions, particularly as the question of employing longer and stronger turntables and increasing the size of roundhouses had to be considered. It is freely admitted that for very high speed service approximating passenger service the mikado type is preferable, on account of greater ultimate boiler pressure, but we do not believe that any considerable portion of the freight in this country is handled under such conditions.

"On the whole our locomotives have shown their ability to furnish all the steam required under all ordinary conditions, and in addition have shown a high efficiency in connection with the consumption of fuel. Reducing the whole proposition to its simplest terms, why should large additional expense be incurred to provide abnormal power that is not required by the service, as conclusively shown by extensive experience?"

## Rogers Pass Tunnel Construction, Canadian Pacific Railway.

Canadian Railway and Marine World for December had, on pg. 537, a progress diagram of the work on this tunnel in the Selkirk Mountains up to Oct. 9, and also particulars of the work up to Oct. 31. Following is the record for construction for November:

East and centre heading, 588 ft., schist with some quartzite.

East and pioneer heading, 529 ft., quartzite with some schist.

West end pioneer heading, 817 ft., slate with small quartzite bands.

West end centre heading 654 ft., slate with small quartzite bands.

The west end pioneer heading footage is believed to be the American record, and was driven down grade through rock that could not be broken over 6 ft. per round. The greatest footage in one day was 37 ft.

The work is in charge, for the contractors, Foley Bros., Welch and Stewart, of A. C. Dennis, M. Can. Soc. C.E., Superintendent, Jos. Murphy, Assistant Superintendent, east end, and Jos. Fowler, Assistant Superintendent, west end.

A notable bridge replacement has been carried out on the Victorian Government Railways, in Australia, at Maribyrnong River bridge, between South Kensington and Footscray, Melbourne. The old bridge consisted of three girders, one heavy middle span and two lighter outside ones; the total length being 216 ft. In 1911 it was determined to do away entirely with the old box girder bridge, by replacing it with a modern lattice girder bridge. There were special reasons which made it necessary to exercise the utmost care in doing the work, the main one being that the bridge carried over 320 trains a day during ordinary traffic conditions. The stoppage of running over the bridge would have meant the cutting off of all the Victorian Railways traffic to the west of the Bendigo lines. No attempt was made to provide any temporary diversion; and, in addition to the total renewal of girders, the line at the bridge had to be lifted 5½ ft. during the progress of the work.

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

22864. Nov. 12.—Approving Bell Telephone Co.'s agreement with La Compagnie Telephone, St. Paul de Chester, Oct. 27.

22865. Nov. 14.—Authorizing Saskatchewan Highway Commissioners to build highway over G.T. Pacific Branch Lines Co.'s line in Lajord rural municipality 128, and rescinding orders 20402, Sept. 24, 1913, and 20521, Oct. 8, 1913.

22866. Nov. 14.—Authorizing C.P.R. to use bridge 19.5 across Napier St., Iberville, Que.

22867. Nov. 18.—Authorizing C.P.R. to build siding for Gunns, Ltd., West Toronto, Ont.

22868. Nov. 14.—Authorizing C.P.R. and Quebec, Montreal and Southern Ry. to operate over crossing at Iberville Jct., Que., without stopping train.

22869. Nov. 18.—Approving revised location C.P.R. Moose Jaw South Westerly Branch from mileage 37.85 to C.P.R. Weyburn-Stirling Branch at mileage 64.59, Sask.

22870. Nov. 14.—Authorizing G.T.R. to use bridge over public road near C.P.R. station at Ste. Anne de Bellevue, Que.

22871. Nov. 16.—Relieving, until further order, the G.T. Pacific Ry. from erecting fences along right of way at Jarrow station, between Irma and Kinsella, Man.

22872. Nov. 6.—Authorizing G.T.R. to make changes in turntable on Wabash Rd. at St. Thomas, Ont., and approving clearance at turntable; and rescinding order 21544, March 24.

22873. Nov. 16.—Approving Montreal and Southern Counties Ry. standard tariff of rates for carriage of express freight, C.R.C. 3, between Montreal and Longueuil and intermediate points, and rescinding order 15236, Oct. 27, 1911.

22874. Nov. 16.—Approving Bell Telephone Co.'s agreement with La Compagnie de Telephones Electriques de L'Abitibi.

22875. Nov. 14.—Ordering New York Central and Hudson River Rd. to stop three eastern trains at specified times at Highlands and Adirondack Jct., Ont., until further order, and to submit statement of passengers handled to and from these points up to Jan. 31, 1915.

22877. Nov. 17.—Authorizing C.P.R. to use bridges 68.2, 109.26, 24.20 and 117.42, British Columbia Division.

22878. Nov. 20.—Approving C.P.R. plan G-142, Aug. 12, showing minimum clearance for all structures except bridges and those for which special approval of the Board is obtained.

22879. Nov. 19.—Approving location and details of G.T.R. station to be built at St. Lawrence, Ont.

22880. Nov. 16.—Dismissing application of Standard Paint Co. of Canada for reduced rating on prepared roofing in Canadian Freight Classification.

22881. Nov. 14.—Authorizing Lake Erie and Northern Ry., pending installation of interlocking plant, to operate for construction purposes only, between 6 a.m. and 7 p.m., over crossing of G.T.R., Brantford, Ont., interlocking plant to be completed by June 30, 1915, and crossing to be protected by flagmen appointed by G.T.R. at expense of L.E. & N.R.

22882. Nov. 19.—Authorizing C.N. Ontario Ry. to build spur from Lot 3, Con. 4, Darlington Tp., for S.E. Marchmont.

22883. Nov. 20.—Authorizing C.P.R. to operate over crossing of Kingston and Pembroke Ry. by its Glen Tay to Cobourg line, at mileage 24.8.

22884. Nov. 20.—Relieving Windsor, Essex and Lake Shore Rapid Ry. from providing further protection at crossing of Ruthven side road between Lots 10 and 9, Con. 1, Gosfield South, near Ruthven, Ont.

22885. Nov. 20.—Relieving G.T.R. from providing further protection at crossing of highway in Con. 3, King Tp., Ont.

22886. Nov. 20.—Authorizing C.P.R. to use bridge 109.7 over Pitt River, B.C.

22887. Nov. 31.—Authorizing Glengarry and Stormont Ry. (C.P.R.) to operate for construction purposes only for 60 days after installation of diamond, over crossing of G.T.R. near Cornwall, Ont.; trains to be stopped and flagged over by a watchman appointed by G.T.R., at applicant's expense.

22888. Nov. 21.—Approving C.P.R. plan showing interlocking signals to be installed at swing bridge over Chambly Canal, St. John's, Que., mileage 19.9, Farnham subdivision, and authorizing C.P.R. to operate northbound trains over

bridge without first stopping, provided signals are clear.

22889. Nov. 23.—Extending to June 30, 1915, time within which C.P.R. shall complete sidings in Bala, Ont.

22890. Nov. 23.—Authorizing C.P.R. to open for traffic its Swift Current Northwest branch from Westerham, mileage 94 to mileage 110.8, Sask.

22891. Nov. 23.—Extending for two months from Nov. 29, time within which C.N. Ontario Ry. was authorized to use temporary grade on its Montreal-Hawkesbury line, from mileage 46.69 to 48.62, for construction purposes only.

22892. Nov. 21.—Authorizing G.T.R. to build two sidings for the Jencks Machine Co., St. Catharines, Ont.

22893. Nov. 17.—Dismissing complaint of W. J. Guest Fish Co., Winnipeg, Man., in regard to express rate charged on fresh fish, carload lots, Vancouver, B.C., to Winnipeg.

22894. Nov. 21.—Ordering G.T.R. by June 1, 1915, to install improved type of automatic bell at crossing between lots 10 and 11, con. 3, North Orillia, west of Uthoff, Ont., 20% to be paid out of railway grade crossing fund.

22895. Nov. 25.—Approving supplement 4 to Canadian Freight Classification 16, as amended, revised, and resubmitted for approval by G. C. Ransom, Chairman Canadian Freight Association, Nov. 18, to become effective not later than Jan. 2, 1915.

22896. Nov. 25.—Authorizing City of Montreal to open up Park Ave., across C.P.R.; crossing to be protected by gates, operated by day and night watchmen appointed by C.P.R.; company to install gates upon plans prepared and submitted within 30 days from date, 20% of cost to be paid out of railway grade crossing fund, remainder by city, city also to pay cost of maintenance and operation.

22897. Nov. 25.—Amending order 22509, Sept. 5, re alteration of C.P.R. spur, Rachel St. East, Winnipeg.

22898. Nov. 24.—Authorizing C.P.R. to move its standard A-2 station building from Reford to Conquest, Sask., and to place in its stead standard portable station building, partitioned off at one end for freight shed purposes; latter to be erected immediately after removal of the former.

22899. Nov. 25.—Amending order 20383, Sept. 23, 1913, re road diversion by C.P.R., near Leon St., Alex, Alta.

22900. Nov. 25.—Authorizing C.P.R. to lower grade of Maple St., Winnipeg, company to pay for all damage to immigration building and inconvenience to its use resulting from lowering the grade.

22901 to 22904. Nov. 25.—Extending to July 1, 1915, time for approval of C.P.R., Great North Western Telegraph Co., G.T. Pacific Telegraph Co., and White Pass and Yukon Route telegraph tolls.

22905. Nov. 25.—Ordering that all Canadian Northern Ry. passenger trains be flagged over Central Ave., Prince Albert, Sask., two thirds of cost to be paid by C.N.R., balance by city, and rescinding order 19555, June 11, 1913.

22906. Nov. 25.—Relieving Canadian Northern Ry. from speed restrictions on trains from Drumheller to Calgary, Alta., mileage 314.7 to 399.5, from Saskatoon, Sask.

22907. Nov. 25.—Amending order 21571, Mar. 30, 1914, re Canadian Northern Ry. extension to gravel pit spur in McIrvine Tp., Ont.

22908. Nov. 25.—Authorizing C.P.R. to operate over crossing of Calgary Municipal Ry. at Eleventh St. East, without first stopping.

22909. Nov. 25.—Authorizing Town of Tuxedo, Man., to build highway over Canadian Northern Ry., and G. T. Pacific Ry. at Kennaston Boulevard, Winnipeg, and Tuxedo, Man.

22910. Nov. 24.—Authorizing Kettle Valley Ry. to build across public roads, mileage 67.59 and 67.65, west of Penticton, B.C.

22911. Nov. 25.—Approving Dominion Atlantic Ry. revision at Sissiboo River Bridge, Weymouth, N.S.

22912. Nov. 24.—Amending order 22751, Oct. 23, re opening up of certain streets in Montreal across C.N. Quebec Ry.

22913. Nov. 24.—Authorizing C.P.R. and Canadian Northern Ry. to operate over crossing near Rosetown, Sask., mileage 41.4, of C.P.R. Kerobert subdivision, without first stopping.

22914. Nov. 24.—Relieving C.P.R. from speed restrictions on trains over its Bassano-Empress and Swift Current Northwestly branches.

22915. Nov. 25.—Ordering C.P.R., within 30 days, to build transfer track with G.T.R. at Coldwater, Ont., to provide reasonable facilities, and to keep detailed account of expense of putting tracks; C.P.R. to supply bond to cover half cost of construction; such sum, or so much as board may deem proper, to be paid over according to board's direction, and for determination of such sum C.P.R., G.T.R., and Village of Coldwater shall keep account of cars received and shipped over transfer for 12 months following completion.

22916. Nov. 24.—Authorizing C.N. Ontario Ry.

to use bridge over White Creek, mileage 64.9 from Toronto.

22917. Nov. 24.—Authorizing Canadian Northern Ry. to build a spur for T. Jackson & Sons, Marchand, Man.

22918. Nov. 26.—Recommending to Governor in Council for sanction lease of Lake Erie and Northern Ry. by C.P.R., dated Oct. 8.

22919. Nov. 25.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to operate over crossing of Toronto Eastern Ry. at Scugog and Wellington Sts., Bowmanville, Ont., mileage 149.2 from Glen Tay, without first stopping trains.

22920. Nov. 28.—Authorizing C.P.R. to operate bridges, 1.9, 19.1 and 18.8, Eastern Division.

22921. Nov. 26.—Approving Kettle Valley Ry. standard freight mileage tariff, C.R.C. 27, to apply between stations in British Columbia.

22922. Nov. 27.—Authorizing City of Winnipeg to build highway over C.P.R., at Midwinter Ave., Winnipeg.

22923. Nov. 24.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to divert road across its line at mileage 54.99, to take certain lands, to build across road allowance at mileage 54.88, and divert road, Richmond Tp., and rescinding orders 19296, 19360, 21046 and 21158.

22924. Nov. 30.—Authorizing C.P.R. to build its Swift Current Northwesterly Branch at grade across road allowance at mileage 35.33, Cabri, Sask.

22925. Nov. 28.—Approving Erie and Ontario Ry. (T.H. & B.R.) bylaw 3, authorizing F. F. Backus, General Traffic Manager, and Geo. C. Martin, General Freight and Passenger Agent, to prepare and issue tariffs of tolls.

22926. Nov. 30.—Approving plan and specifications of Loughlin Ditch, to be built under G.T.R. in Lots 15 and 16, Con. 5, North Dorchester Tp., Ont.

22927. Dec. 1.—Authorizing C.N. Ontario Ry. to operate trains over crossing of C.P.R. Stobie Branch in Lot 4, Con. 5, McKim Tp., without first stopping, and authorizing C.P.R. to operate its trains at 15 miles an hour.

22928. Nov. 30.—Authorizing C.P.R. to open for traffic its line between Govanlock and Altawan, mileage 307.3 to 314.2, and relieving it from speed limitation of 18 miles an hour from Shaunovan, mileage 230.8, to Govanlock.

22929, 22930. Nov. 28.—Authorizing G.T.R. to build a siding to opposite Stratford Chair Co. premises, Stratford, Ont., and one for Thos. Davidson Manufacturing Co., Montreal.

22931. Nov. 25.—Authorizing Canadian Northern Ry. to build spur for Slocum Howland Coal Properties, Secs. 9, 8 and 7, Tp. 29, R. 20, w. 4 m., Alta.

22932. Nov. 30.—Approving location of G.T.R. station in Norwich, Ont., and authorizing it to build additional track across Main St.

22933. Nov. 30.—Authorizing Bank of Hochelaga, Winnipeg, to repay to Local Treasurer C.P.R. at Winnipeg \$750 deposited to credit of Board, with accrued bank interest, if any, in connection with spur for the B. Shragge Iron and Metal Co., Ltd.

22934. Nov. 30.—Ordering Quebec Oriental Ry. and Atlantic, Quebec and Western Ry. to provide separate lavatory accommodation on each of their first class cars; work to be completed by May 1, 1915.

22935. Nov. 30.—Relieving G.T.R. from providing further protection at crossing of public highway near Highborough, Ont.

22936. Dec. 2.—Ordering Great Northern Ry. to build pedestrian subway at Cox St., Fernie, B.C., with headroom 7½ ft., width 8 ft.; cost to be paid equally by G.N.R. and the city.

22937. Dec. 2.—Amending order 22826, Nov. 4, re Sudbury-Connor Cliff Suburban Electric Ry. crossings of C.P.R. in Sudbury, Ont.

22938. Dec. 1.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R., in S.E. ¼ Sec. 12-8-5, w. 5 m.

22939. Dec. 2.—Authorizing C.N. Ontario Ry. to use bridge over diverted road in Lot 12, Con. 4, Scarborough Tp., Ont.

22940. Dec. 2.—Extending to June 1, 1915, time within which G.T. Pacific Ry. shall complete standard 1A station, with 60 ft. platform at point between Tofield and Deville, Alta., at milepost 759, and spur to hold at least 4 freight cars, provided it immediately place temporary shelter there to protect those waiting for trains.

22941. Dec. 2.—Authorizing C.N. Ontario Ry. to carry passenger traffic between North Bay and Capreol, Ont., until July 1, 1915.

22942. Nov. 30.—Approving location of G.T. Pacific Ry. standard no. 1 station at Hansard, B.C., mileage 1233.3 west of Winnipeg.

22943. Dec. 2.—Authorizing C.P.R. to build its Weyburn-Stirling Branch at grade across 46 highways, mileage 316.77 to 361.61, and to divert highways at mileage 356.10 and 360.53.

22944. Nov. 28.—Approving location of Esquimalt and Nanaimo Ry. station at Palmer, B.C., without prejudice to any rights British Columbia Government may have in Island highway.

22945. Dec. 2.—Amending order 22751, Oct. 23, 1914, re opening up of certain streets in Montreal across C.N. Quebec Ry., and rescinding order 22912, Nov. 24.

22946. Nov. 20.—Apportioning cost of main-

taining watchman at G.T.R. crossing, Windsor Mills, Que., as provided for by order 12917.

22947. Dec. 3.—Rescinding orders 22058 and 22254, June 25 and July 16 respectively, and authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build its Trenton business spur across Sopina and Marmora Sts., and diverting Bodge, Eugenia, Louisiana, Elizabeth and Leopold Sts., Trenton, Ont.

22948. Dec. 1.—Amending order 22741, Oct. 21, re highway over Canadian Northern Ry. north of Sec. 3, Tp. 29, R. 29, w. 3 m., Sask.

22949. Dec. 3.—Approving Canadian Northern Ry. Standard Passenger Tariff, C.R.C., no. E. 488, between stations east of and including Port Arthur, Ont., in Ontario and Quebec, on basis of 3c a mile.

22950. Dec. 4.—Ordering Canadian Northern Ry. to complete work of diverting Rue la Verandrye, St. Boniface, Man., as authorized under order 20808, Nov. 13, 1913, by June 1, 1915.

22951. Dec. 2.—Authorizing Alberta Public Works Department to construct highway over Canadian Northern Ry. in n $\frac{1}{2}$  Sec. 19-53-16, w. 4 m.

22952. Nov. 17.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to take certain lands in Belleville, Ont., in connection with team yard; to close Dundas St. between Norfolk and King Sts., and divert it to Brock St. by way of Norfolk and Willard Sts.; Willard St. be widened to 66 ft.; to close Mary and James Sts., between Dundas St. and C.N. Ontario Ry. right of way, and divert traffic by grade level highway crossing near King and Water Sts.; question of providing protection at crossings reserved.

22953. Dec. 2.—Approving agreement between Bell Telephone Co., and La Compagnie Telephone Local de Ham Nor, Nov. 8.

22954. Dec. 2.—Approving C.N. Ontario Ry. plan, Montreal, Aug. 29, showing revision in grades on its line and C.P.R. between Dufferin Road and Dufferin St., North Toronto, Ont.

22955. Dec. 4.—Approving Halifax and South Western Ry. standard freight mileage tariff, C.R.C. no. F-1, on general merchandise in absence of special or other tariffs giving lower rates.

22956. Dec. 1.—Approving Lake Erie and Northern Ry. plan showing proposed protection fences at crossing of River Road, mileage 1.02.

22957. Dec. 5.—Authorizing Hamilton St. Ry. to build across G.T.R., on Kenilworth Ave., Barton Tp., Ont., by subway, having clear headroom of 14 ft.; authorizing City of Hamilton to cut grade of street to 3%, instead of 5%; extra cost to be paid by city; G.T.R. to pay extra cost of widening subway to accommodate any greater number of tracks than 4 it may desire to build; provided total right of way of G.T.R. shall not exceed 100 ft.; 20% of cost, not exceeding \$5,000, of subway to be paid out of railway grade crossing fund; balance, 7 $\frac{1}{2}$ % by Barton Tp., 32 $\frac{1}{2}$ % by G.T.R., 25% by city, and 35% by Hamilton St. Ry.

22958. Dec. 2.—Amending order 22624, Nov. 4, re G.T. Pacific Ry. crossing of Fort William Electric Ry. on Empire Ave., Fort William, Ont.

22959. Dec. 5.—Authorizing C.P.R. to operate bridges 113.1, 0.16 and 49.8, Sherbrooke, Farnham and Orford Subdivisions, Que.

22960. Dec. 5.—Authorizing C.P.R. to operate bridge 19.8 over Chambly Canal, at St. Johns, Que.

22961. Nov. 30.—Approving proposed deviation of G.T.R. through Thorold, Ont.; and authorizing G.T.R. to build along and across 15 highways; and under Niagara, St. Catharines and Toronto Ry., near Welland and Richmond Sts., latter to be carried over G.T.R. by overhead bridge, now building by Railways and Canals Department; and approving location of G.T.R. station at Welland, Ont.

22962. Dec. 4.—Approving Halifax and South Western Ry. Standard Passenger Tariff, on uniform basis of 3c per mile, C.R.C. P-1.

22963. Dec. 4.—Re freight tariffs on building brick. This order is given fully under "Traffic Orders by Board of Railway Commissioners" on another page of this issue.

22964 to 22968. Dec. 3.—Authorizing Ontario Hydro Electric Power Commission to erect wires across railways at Welland, Paris, Embro, Fergus and Etobicoke Tps., Ont.

22969. Dec. 7.—Approving location of G.T. Pacific Branch Lines Co. station at Domremy, Sask.

22970. Dec. 5.—Ordering that G.T. Pacific Ry. stations to be built at Engen, Otway, McCall, Sheraton, Hulatt, Bednost, Miworth and Tintagel, B.C., locations of which were approved by order 22769, Oct. 27, be of standard no. 1 plan.

22971. Dec. 4.—Ordering C.P.R. by June 1, 1915, to install improved type of automatic bell at crossing of highway, mileage 60.09, Eldon Tp., Ont.

22972. Dec. 7.—Approving location of G.T. Pacific Ry. station at Nichol, mileage 438.3, Prince Rupert East, B.C.

22973. Dec. 7.—Ordering changes in express merchandise receipts, relating to shipments of specie, valuable documents, letters for mailing from other points, and relating to limitation of liability. This is given fully on another page under "Among the Express Companies."

22974. Dec. 7.—Ordering C.P.R. forthwith to cancel embargo placed against traffic for delivery on its team tracks at Mile End, Montreal.

22975. Dec. 10.—Dismissing application of American Coal and Coke Co.'s, Detroit, Mich., for order disallowing note 3 to rule 1, page 7, of M.C.R. Tariff C.R.C. 2171.

22976. Dec. 10.—Establishing Dominion Ex. Co.'s collection and delivery limits in Jerome, Que.

22977. Dec. 5.—Authorizing C.P.R. to build its Moose Jaw Southwesterly Branch, at grade, across street at Reycrest, Sask.

22978. Dec. 10.—Approving C.P.R. Plan B-1-1417, Oct. 8, showing details of bridge to be built over Muskrat River at Meath, Ont.

22979. Dec. 9.—Authorizing C.P.R. to close its station at Clanwilliam, B. C.

22980. Dec. 9.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build branch or Y at mileage 15.41, Havelock Subdivision, Ont., per T. R. Sharpe.

22981. Dec. 10.—Authorizing G.T.R. to build siding for Horn Bros., Lindsay, Ont.

22982. Dec. 7.—Approving plan and specifications of Jewell award drain along G.T.R. lands in Harwich Tp., Ont.

22983. Dec. 10.—Authorizing C.P.R. to remove its agent at Bonheur station, Ont., and ordering C.P.R. to have waiting room kept heated for arrival of local trains, and shipment of package freight.

22984. Dec. 5.—Authorizing C.P.R. to build extension to siding for Wallace and Robinson, Waterloo, Que.

22985. Dec. 15.—Recommending to Governor in Council for sanction, amalgamation agreement between Toronto, Hamilton and Buffalo Ry. and Erie and Ontario Ry., Nov. 11.

22986. Dec. 15.—Ordering C.P.R. to appoint watchman at crossing of Twelfth St. East, Calgary, Alta., to be on duty between 8 a. m. and 7 p. m., city to have right at any time to submit any further scheme of protection, if it so desires; after watchman has been installed, C. P.R. to be relieved from speed limitation of 10 miles an hour over crossing.

22987. Dec. 15.—Extending for 30 days from date, time within which G.T.R. shall build siding for Chatham Bridge Co., Chatham, Ont.

22988. Dec. 14.—Ordering C.P.R. to continue station agent at Mazeppa, Alta.

22989. Dec. 17.—Suspending, pending hearing and determination by Board, Supplement 2 to C.P.R. Joint Tariff C.R.C. no. W. 1890, to take effect Jan. 1, 1915.

22990. Dec. 16.—Authorizing G.T.R. to take certain additional lands in Callander, Ont., for widening Main St.

22991. Dec. 17.—Establishing express delivery limits in Lacombe, Alta.

22992. Dec. 17.—Authorizing Saskatchewan Highway Commissioners to build, highway crossing over Canadian Northern Ry. right of way at Brock, Sask.

22993. Dec. 14.—Authorizing Canadian Northern Ry. to cross and divert road between Secs. 12-6-20, and 7-6-19, w. 2 m., Sask.

22994. Dec. 18.—Approving revised location of Kettle Valley Ry. through Hope, B.C., from station 1920 to 2010, west of Coquihalla Summit.

22995. Nov. 23.—Ordering G.T. Pacific Ry. to maintain station on south side of main line, opposite land between Oak St. and Ash St., shown on plan of townsite of Prince George, B.C.; and to file with board by Jan. 15, 1915, detail plans for approval; station to be built by June 1, 1915; and rescinding orders 18902, March 20, 1913, and 19347, May 14, 1913.

22996. Dec. 15.—Approving C.P.R. clearances of telegraph poles along South Bank Branch of Lachine Canal, on St. Patrick St., Montreal.

22997. Dec. 17.—Approving location of C.P.R. station at Kaslo, B.C.

22998. Dec. 15.—Approving C.P.R. plan of interlocking plant at swing bridge over Lachine Canal, mileage 43.1, Farnham Subdivision, Que.

22999. Dec. 15.—Relieving C.P.R. from providing further protection at crossing of highway, mileage 76, east of Leduc, Alta.

23000. Dec. 14.—Relieving C.P.R. from speed limitation of 18 miles an hour over its Weyburn Westerly Branch from Assiniboia, mileage 112, to Woodrow, mileage 145.7; and of 25 miles an hour from Woodrow to Shaunavon, mileage 145.7 to 230.8.

23001. Dec. 14.—Authorizing Canadian Northern Ry. to carry traffic over its line from Inwood to Hodgson, Man., until July 15, 1915; speed of trains to be limited to 12 miles an hour.

23002. Dec. 15.—Authorizing C.P.R. to open for traffic its Moose Jaw Southwesterly Branch from Expanse, mileage 35.0 to mileage 50.0, Sask.; and relieving company from speed limitation of 15 miles an hour from Moose Jaw to Expanse, mileage 0 to 35.0.

23003. Dec. 11.—Authorizing C.N. Manitoba Ry. to open for traffic its line from Deerfield Jct. to Steel Rock, Man., 12 $\frac{1}{2}$  miles; speed of trains limited to 20 miles an hour.

George Higgs, switchman in the C.P.R. service at Toronto, was fined \$50 and costs or 6 months in jail for being drunk on duty recently.

## Railway Rolling Stock Notes.

The G.T.R. has received 7 first class cars from Canadian Car and Foundry Co.

The Acadia Coal Co. has ordered 250 all steel mine cars from Eastern Car Co., New Glasgow, N.S.

The Central Vermont Ry. has ordered 3 ten wheel locomotives from American Locomotive Co.

The Russian Government is reported to be ordering locomotives on this continent for prompt delivery. It is stated that an order for 30 has been secured by the Lima Locomotive Co., Lima, Ohio.

The National Steel Car Co., Hamilton, Ont., has, according to press reports, received orders for a number of cars for a French railway, and also orders from the British and French war offices.

The Board of Railway Commissioners has issued an order directing the Quebec Oriental Ry. and Atlantic, Quebec and Western Ry. to provide separate lavatory accommodation on each of their first class cars.

The C.P.R., between Nov. 15 and Dec. 15, ordered 8 all steel second class cars, 6 all steel 60 ft. mail cars, and 8 class D4 locomotives, from its Angus shops, Montreal.

The New Ladysmith Lumber Co., Nanaimo, B.C., has received a 2-4-2 saddle tank locomotive, details of which were given in our last issue, from Canadian Locomotive Co.

The Greater Winnipeg Water District Commissioners have invited tenders to Jan. 20, for gravel pit excavation, screening, elevating and crushing machinery, and for locomotives and cars for pit and other railway service.

The Chicago, Milwaukee and St. Paul Ry. has ordered 12 260 ton double unit, 4-4-4-0-0-4-4 electric locomotives from the General Electric Co., for delivery by Oct. 1, for use on the Rocky Mountain Division, which is to be electrified.

With reference to rolling stock orders placed for the Intercolonial Ry., mentioned in our last issue, we have been officially advised that 250 steel gondola cars, 50 tons capacity, have been ordered from Eastern Car Co., and 200 steel frame flat cars from Nova Scotia Car Works.

The Quebec Central Railway is not building 2 American (4-4-0) locomotives in its shops at Sherbrooke, as mentioned in a press report quoted in our December issue. We are officially advised that the report may have arisen from the fact that the company equipped 2 of its existing locomotives with superheaters some little time ago.

The C.P.R., between Nov. 15 and Dec. 15, received the following additions to rolling stock:—52 steel frame box cars, 35 refrigerator cars, 2 single track flangers, 9 flat cars, from its Angus shops, Montreal; 19 ore cars from National Steel Car Co., and 1 double track snow plough and 3 single track snow ploughs from Canadian Car and Foundry Co.

Locomotive men have, according to an Ottawa press dispatch, asked the Minister of Labor for legislation limiting the time they can be kept continuously on duty to 16 hours, and for a Dominion workmen's compensation law applicable to all railway employees.

The Lehigh Valley Rd.'s new freight terminal at Buffalo, N.Y., requires the demolition of 30 buildings on the quarter mile square purchased recently by the railway for \$1,200,000. Most of the buildings are small frame stores and dwellings, and their demolition is under way.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—Tracklaying was reported completed to mileage 65, Nov. 30. (Dec., 1914, pg. 544.)

**Burrard Inlet Tunnel and Bridge Co.**—The directors had a conference with the Provincial Government at Victoria, B.C., Dec. 2. R. Modjeski, the Consulting Engineer, whose report on the bridge designs, was referred to in our last issue, had a consultation with the directors previously and strongly emphasized the necessity for having new plans made and new tenders invited. The directors will take no action pending the decision of the Government, which it is expected will be announced early in February. The directors desire to complete arrangements for the immediate construction of the bridge. (Dec., 1914, pg. 542 and pg. 544.)

**Athabasca Northern Ry. Co.**—The Dominion Parliament is being asked to authorize the continuance of this company's corporate existence, and to grant an extension of time for building the projected line from Edmonton to Athabasca Landing, Alberta. The provisional directors named in the act of incorporation, chap. 57, statutes of 1905, were F. H. Markey, Montreal; J. K. McKenzie, Selkirk, Man.; O. E. Fleming, Windsor, Ont.; M. Burton, Barrie, Ont. (May, 1913, pg. 219.)

**Dominion Government Railway to Hudson Bay.**—We are officially advised that up to Dec. 4 165 miles of track had been laid on the railway under construction from Pas to Port Nelson, Man., and that tracklaying was being continued. Grading has been carried on during the season as far as mile 293, and it was expected to have all the grading connected up as far as mile 242 by Dec. 31, 1914. The telegraph line has been finished to mile 175, and standard water tanks erected to mile 159. The first crossing of the Nelson River is at mile 242, and will be a steel structure of over 500 ft. long. The second crossing of Nelson River will be at mile 332, and will be a steel structure of over 600 ft. long. Very little work has been done in the terminal yard at Pas, or at the first divisional point, mile 157, on account of all energies having been devoted to getting grading and tracklaying advanced. The general progress made, however, has been good. J. W. Porter, Winnipeg, is Chief Engineer. (Dec., 1914, pg. 544.)

**Edmonton, Dunvegan and British Columbia Ry.**—Tracklaying was reported to have been completed to mile 230, Dec. 1, and was expected to reach Big Smoky River, mile 290, by Dec. 31. Press dispatches, Dec. 12, stated that tracklaying would not reach beyond McLennan, mile 260, by the end of the year. W. J. Pace, Superintendent of Construction, left Edmonton, Alta., Nov. 30, to look after the starting of work on the 65 mile section from Big Smoky River to Spirit River. Surveys are being made for the extension of the line from Spirit River to the Alberta-British Columbia boundary, 64 miles, where a junction is to be effected with the Pacific Great Eastern Ry. (Dec., 1914, pg. 544.)

**Erie and Ontario Ry.**—Tracklaying has been completed from Smithville, on the Toronto, Hamilton and Buffalo Ry., to Dunnville, Ont., 14.9 miles. It is intended to continue the line from Dunnville to Port Maitland, Ont., 3.12 miles. Construction on this extension will, it is expected, be started early in the spring. Surveys have been completed, and it is reported that the right

of way has been acquired. The company has been amalgamated with the Toronto, Hamilton and Buffalo Ry., and the line will be operated by that company. R. L. Latham, Hamilton, Ont., is Chief Engineer. (Dec., 1914, pg. 544.)

**Esquimalt and Nanaimo Ry.**—The Esquimalt, B.C., City Council is applying to the Board of Railway Commissioners for an order directing the company to extend its line from the present station to the centre of the town. The present station is a considerable distance from the business centre, and this is claimed to be a great inconvenience, owing to the increasing trade. (Sept., 1914, pg. 418.)

**Glengarry and Stormont Ry.**—Tracklaying on this line from the C.P.R. at St. Polycarpe Station, Que., with Cornwall, Ont., was completed Nov. 30, and the event was celebrated by a dinner in Williamstown, Dec. 2, at which C. L. Hervey, the principal promoter of the railway, was the chief guest. The line is 28 miles long, and passes through St. Telesphore, Bridgend and Williamstown. The contractor for the grading, tracklaying, etc., was the Glengarry Construction Co., Montreal, and A. A. Mellor was the Chief Engineer. The C.P.R. financed the construction of the line and will operate it. (Dec., 1914, pg. 544.)

**Hudson Bay, Peace River and Pacific Ry.**—The Dominion Parliament is being asked for an extension of time for the building of this projected railway from Winnipeg to Hudson Bay and thence westerly to the Pacific Coast, and to change the name to Winnipeg and Hudson Bay Ry. Lewis and Smellie, Winnipeg, Man., solicitors for company.

A deputation from the company waited on the Transcona, Man., Town Council, Nov. 28, to discuss the erection of shops for the projected line. Two routes were, it was stated, under consideration, and before deciding which to adopt, the company desired to know if Transcona would assist the company by voting a bonus. The company suggested a grant of 120 acres, on which to erect shops. Messrs. Brown and Armstrong, in stating the case for the company, said it was proposed, if arrangements could be completed, to build 65 miles of line during 1915, and that the first unit of the shops would involve the expenditure of \$100,000. The matter is under consideration. (Mar., 1914, pg. 121.)

**Huntingdon and Hemmingford Ry.**—Application is being made to the Quebec Legislature for an extension of time for building the authorized line from Huntingdon to Hemmingford, and to the International boundary line between Lacolle, Que., and Rouse's Point, N. Y., where the Delaware and Hudson Ry. crosses. (Feb., 1913, pg. 83.)

**Intercolonial Ry.**—The Minister of Railways, who was in Levis, Que., on his way back to Ottawa from a brief inspection over the line, accompanied by F. P. Gutelius, General Manager, is reported to have stated that a new and enlarged station will be built there to restore the one destroyed by fire, Nov. 24. It is proposed to build the new station on the town side of the tracks, and to connect it by a viaduct with the ferry landing, so that passengers may pass between the station and the ferry without having to cross the tracks as at present.

The City Council of Truro, N.S., is asking the Government to build a subway at the station to permit citizens to reach the park

without having to cross the tracks. The Minister during his inspection suggested that the subway be built at Yonge St., and that the city pay a part of the cost.

Questions concerning the reduction of gradients, and the building of second track at various points were looked into during the inspection, and the Minister stated that these matters would be fully considered before any decisions were arrived at. (Dec., 1914, pg. 531 and pg. 544.)

**Klondike Mines Ry.**—The Yukon Gold Mining Co. is applying to the Board of Railway Commissioners for an order directing the K. M. Ry. to elevate its tracks over several creeks, so as to allow hydraulic mining operations to be carried on. The K. M. Ry. contends that to do this would be detrimental to mining business further north, and that it might as well go out of business. The matter came before the board Dec. 1, and is under consideration. (July, 1912, pg. 339.)

**Moncton and Buctouche Ry.**—Press reports state that surveys have been made for an extension of the line from the present terminus at Buctouche to the Intercolonial Ry. at Loggieville, N.B., 65 miles. We stated in our issue of Jan., 1914, on official advice, that the preliminary surveys for this line were being made by the Moncton and Northumberland Strait Ry., which had been incorporated under a Dominion charter to build this and other lines, and to take over the M. and B. Ry. Although the same interests, to a large extent, own the two companies, we were advised in May, 1914, that the amalgamation had not taken place. E. G. Evans, Hampton, N.B., is associated with both companies. [See also Moncton and Northumberland Straits Ry.] (Dec., 1914, pg. 544.)

**Moncton and Northumberland Strait Ry.**—The Dominion Parliament is being asked to extend the time within which the projected railways from Buctouche to Richibucto Harbor, N.B., from Richibucto to Chatham or Loggieville, N.B.; from Painsec Jct. to Cape Tormentine, N.B., and from Westport to Coleman, P.E.I., may be built. The company has power to operate a car ferry from Cape Tormentine to Westport, and is authorized to amalgamate with the Moncton and Buctouche Ry. (Dec., 1914, pg. 544.)

**Pacific Great Eastern Ry.**—It was reported, Dec. 5, that a train service would be put in operation on the line from Squamish, B.C., to the head of Anderson Lake, 85 miles, Dec. 15, an extension of 27 miles beyond Pemberton, to which point a train service had previously been operated. Track is reported to have been laid to Lillooet 120 miles from Squamish, and it is expected to have this additional 35 miles ready for operation in February. Between Lillooet and Fort George, 317 miles, grading is reported to be approaching completion. Grading of one section has been completed to Horse Lake Summit, 250 miles from Squamish, and another section of 30 miles has been completed south of Fort George. On the intervening section of 167 miles, about 78% of the grading has been completed. With the exception of one section, on which there is some heavy work to be done, the grading is expected to be completed by the end of February and the last section in June.

J. W. Stewart, President, after completing a trip of inspection over the line, is reported to have said that surveys had been completed for the extension of the line from Fort George to the Peace River Valley, where connection would be made with the Edmonton, Dunvegan and British Columbia Ry. and the Canadian Northern Ry. The company, however, was not yet ready

to proceed with construction on this section of the line.

F. G. Gamble, Chief Engineer of the British Columbia Railways Department, in a report on the progress of construction, confirms the figures mentioned above, and gives the following additional details:—A temporary bridge has been erected at Anderson's Creek on the Lillooet River, which will be replaced by a steel one, when the Dominion Government has decided whether it will contain a movable or a fixed span. Between Lillooet River and Anderson Lake there will be two truss bridges, one over Oriole Creek, with a 100 ft. span, and the other over Birkenhead River, with a 125 ft. span, between trestle work. Temporary bridges are being erected. There are several small bridges to be built between Anderson Lake and the Fraser River. Between Squamish and Pemberton Meadows, 39,877 lineal feet of side tracks and sidings have been put in, and ballasting is being carried on. The track laid is in excellent shape. (Dec., 1914, pg. 544.)

**Pacific, Peace River, and Athabasca Ry.**—C. F. Law, Vancouver, B.C., who is the local representative of this British company, is reported to have stated that the location survey for the first section of this projected railway from the Pacific coast at the Maas River to the Groundhog coal district, B.C., had been completed. He went to London, Eng., early in December to report progress to the company, and possibly to make arrangements for starting construction in the spring. [See also Peace River Tramway and Navigation Co.] (Dec., 1914, pg. 544.)

**Peace River Tramway and Navigation Co.**—This undertaking is part of the plan of the company proposing to build the Pacific, Peace River, and Athabasca Ry. C. F. Law, Vancouver, B.C., the local representative of the company, is reported to have said the railway and tramway companies would open up for navigation about 2,500 miles of waterways, by way of Slave Lake and Mackenzie River to the Arctic Ocean. Plans for the boats have been prepared. They are of the shallow draft Mississippi River type, and will cost about \$50,000 each. Tramway boats will give connection at certain points on the route where rapids intervene. (Sept., 1914, pg. 419.)

**Prince Edward Island Ry.**—Press reports state that owing to the Armstrong, Whitworth plant at Elswick-on-Tyne, England, having been taken over by the British Government for war purposes, it is doubtful whether the car ferry under construction for the Carleton Point-Cape Tormentine route will be completed according to contract. The terminals on the island and in New Brunswick are approaching completion. In connection with the ferry it is proposed to standardize the gauge of the railway on the island, on work which it is expected to put in hand this year. No decision will be rendered on this matter until the railway estimates are prepared for Parliament. (Dec., 1914, pg. 544.)

**Winnipeg.**—The commissioners of the Greater Winnipeg Water District have authorized the Northern Construction Co. to build a spur line to a gravel pit, for construction and other purposes, and the purchase by tender of rolling stock for the operation of the line.

The Fire, Water, and Light Committee of the Winnipeg City Council has authorized the preparation of plans for the building of an overhead bridge over the Lee River, seven miles from Lac du Bonnet, on the railway to the city's power plant. The estimated cost is \$20,000. The bridge is to replace an old structure, which is not strong enough for the present traffic. (Dec., 1914, pg. 545.)

## The West's Great Tribute to George Bury.

Shortly before leaving Winnipeg for Montreal to take up his new duties as Vice President of the Canadian Pacific Ry., with jurisdiction over the entire system, George Bury, who for several years past has been Vice President at Winnipeg, in charge of Western Lines, was entertained at dinner at the Royal Alexandra Hotel, on Dec. 4, the gathering being representative of the whole of Western Canada, and embracing over 400 of its leading citizens. Mayor Deacon, of Winnipeg, was in the chair, and the other speakers, all of whom paid high tributes to the great work Mr. Bury has accomplished in the west, and of the public confidence in him, were Hon. R. Rogers, Minister of Public Works; Sir Rodmond Roblin, Premier of Manitoba; Premier Scott, of Saskatchewan, and Premier Sifton, of Alberta; D'Arcy Scott, Assistant Chief Railway Commissioner; D. B. Hanna, 3rd Vice President Canadian Northern Ry.; Morley Donaldson, Vice President and General Manager, Grand Trunk Pacific Ry.; the Mayors of Fort William, Regina and Calgary; the Presidents of the Winnipeg, Medicine Hat and Lethbridge Boards of Trade, and Grant Hall, who succeeds Mr. Bury at Winnipeg.

In responding to the welcome given him, Mr. Bury, as reported, expressed appreciation of the reception, which he took to be an indication of the friends the railway had made, stating that to be successful a railway must be so managed as to be fair to the three great interests involved—the public, the employees and the owners. He attributed his advancement to having started under that master railway executive, Sir Thos. Shaughnessy, and always having his sympathetic guidance, also to capable, loyal, zealous men working with and for him, the friendship of the patrons of the road and the consideration given his efforts by the press. He paid a fitting tribute to the memory of the late Sir William Whyte, and announced that Grant Hall would be his successor in Winnipeg, stating the large part that official had had in the operations of the road. He referred to the progress the west had made, and begged that they should be not carried away by the high prices of grain that are certain to obtain for at least the next two years, pointing out that conservation of the soil through mixed farming is all that is necessary for a permanent, continued progress. The new start of this he predicted, would be not later than next fall. He pointed out that exclusive grain growing, with the consequent marketing, in a few months depressed the price, while the moving of a vast traffic, in so short a time, necessarily threw many men out of employment for long periods. Prosperity and unemployment did not go hand in hand. He advised the well to do to take up scientific farming, saying, "There may not be as much fun in it as in playing golf, but there is at least as much exercise, and that is the reason generally given for the game." He made a plea for closer relations between the east and the west, asking that we think as Canadians instead of sectionally. To this end he advocated that the governments should subsidize a telegraphic news service, and thus enable western papers to print more news of the empire and Canada generally. In conclusion, he made a feeling reference to Winnipeg and the west, and said that both he and Mrs. Bury would look forward to their periodical visits to Winnipeg as visits home.

Grant Hall was the last speaker of the evening, and made a decided impression by his clear cut businesslike remarks. He said it would take more eloquence than he possessed to show his appreciation for the

friendly spirit in which they had received the announcement with regard to himself. Vice President Bury had set a very hard pace for him, and would still be the pace maker—still hold the watch. However, he would personally leave nothing undone in his efforts to make things go as smoothly as they had done in the past. He said that he felt it an honor that the chief executive of the railway in the west should receive such a compliment as had been tendered to Mr. Bury, by such a magnificent dinner. It was a compliment such as no railway man had ever received in Western Canada. He was proud of the fact that the company had selected Mr. Bury to fill such an important position. If he undertook to say what he proposed to do in the future he would be like the man in a story he quoted who purchased a fine yacht, the main attraction of which was its unusually loud whistle. When the engineer was ordered to proceed he could not do so because all the steam was exhausted in blowing the whistle.

## Canadian Northern Railway Contractors Suits.

A lien of claim has been filed in the registry office at Sudbury, Ont., by Foley, Welch and Stewart and the Northern Construction Co., against the Canadian Northern Ontario Ry.'s lands, the claim being \$4,276,000, for work done and material supplied up to Dec. 3, 1914, for Mackenzie, Mann & Co., Toronto, and the British Empire Trust Co., London, Eng. The lien is filed under the Mechanics' Lien Act of Ontario on behalf of the contractors for the section of the line from Port Arthur easterly to Ruel, Ont. It is stated that differences have arisen between Mackenzie, Mann & Co., who were the general contractors for building the line, and the plaintiffs who actually did the work, as to the classification of materials, and that in order to bring about a settlement the plaintiffs have filed a general lien on the company's property and lands. Mackenzie, Mann & Co. claim that Foley, Welch and Stewart have been paid in full and that there is nothing owing to them.

Action has been taken at Calgary, Alta., against Mackenzie, Mann & Co., the Northern Construction Co., and the Canadian Northern Ry., by Phalen, Shirley and Co., who claim between \$300,000 and \$400,000 and interest. The plaintiffs had subcontracts on the main transcontinental line west of Edmonton, and allege that the various sums were not paid as they became due under the agreements.

**The Safety First Propaganda.**—G. Bradshaw, who is in charge of the safety first work on the G.T.R. and G.T. Pacific Ry., has issued a booklet entitled "Fred Warren," which contains the personal narrative of a boy of that name who lost a leg through "hopping" cars in a freight yard. To this narrative is added a few words by a school teacher, Miss Hudson, showing how safety first facts can be taught in connection with the regular history and geography lessons in school. The booklet can be had at a special price for distribution, and at 30 cents a single copy, from G. Bradshaw, Highland, N. Y.

**The Northern Pacific Ry.** has paid the New Westminster, B.C., city council \$25,000 as the first instalment on account of rentals for the water front property leased for terminal purposes. The company may take possession of the property any time up to July 1, 1916, when a further payment of \$27,000 is to be made.

## Interstate Commerce Commission Authorizes Increased Freight Rates in Eastern Territory.

The Interstate Commerce Commission of the United States gave a decision on Dec. 18, which is of the greatest importance to railways in eastern U. S. territory and through them to the business community generally. The decision, from which Chairman Harlan and Commissioner Clements dissented grant increases as explained below:

With the exception of lake and rail traffic, coal, coke, iron ore and certain other traffic, upon which the commission has affixed rates adjudicated reasonable all the railway systems operating between the Atlantic seaboard and the Mississippi, north of Potomac and Ohio rivers, were allowed the flat 6% increase for which they have been asking during the last four years. The roads hoped to get increases which would add to the annual revenue some \$50,000,000. The commission's decision is expected to give them additional revenue approximating \$30,000,000.

The roads east of a north and south line drawn through Buffalo, Pittsburg and Charleston, W. Va., won by the decision, the increases, other than upon the traffic excepted, which were denied them in the commission's decision last August. The roads west of this line, which got partial advances in the August decision, received further advances, so that now, all the roads in what is described as official classification territory will enjoy uniform advances in both class and commodity rates.

In administration circles at Washington the outcome of the case was welcomed as a development which would hasten and support the expected general business revival. President Wilson issued no formal statement, but White House officials said he was greatly pleased and expected the decision to have an immediate effect upon the country's economic situation. The President had made no secret of his belief that improvement of conditions generally was dependent, to an extent, at least, upon additional revenue being provided in some way for the railroads.

Traffic on which no increase was allowed by the commission represents about 55% of the entire volume of freight handled by the roads. Coal, coke and iron ore, however, are bulky commodities, taking low rates. Consequently the amount of revenue derived from them is relatively small. In the eastern district 10% of the entire volume of freight is anthracite, 31% bituminous coal, 6% coke and 5% ores. The coal roads, in the opinion of the commission, are already profitable.

In its decision the majority held that the roads had established in the latest hearings a greater need of additional net income than ever before. This was due, in part, to the war in Europe and, in part, to the already existing necessity, in the judgment of the commission, for additional revenues to maintain the railroad properties.

### Text of the Decision.

Following is the decision of the majority of the commission: "These cases were originally submitted in May, 1914, and decided on July 29, 1914. Upon petition of the carriers filed Sept. 15 the Commission, on Sept. 19, ordered that further hearing in said cases be granted; the hearing to be limited to presentation of facts disclosed and occurrences originating subsequently to the date upon which the records previously made in these cases were closed. Under these limitations hearing was had before the Commission continuously for five days, ended Oct. 23. Evidence was introduced by car-

riers, investment bankers, and various protestants. Some of the exhibits supplemented those offered at the original hearing. The cases were argued before the Commission on Oct. 29 and 30, and thereupon submitted.

"It is not necessary to make any extended summary of the conclusions contained in the Commission's original report. Among other things, it found that in view of a tendency toward a diminishing net operating income, as shown by the facts described, we are of opinion that the net operating income of the railways in official classification territory, taken as a whole, is smaller than is demanded in the interests of both the general public and the railroads; and it is our duty and our purpose to aid, so far as we legally may, in the solution of the problem as to the course that the carriers may pursue to meet the situation.

"The Commission did not acquiesce in the carriers' proposal of a general increase as indicated in the tariffs filed by them, but suggested various methods by which they might properly conserve their revenue. In central freight association territory, however, by reason of the low general level of rates there found to prevail and also by reason of the financial necessities of the carriers in that territory, intraterritorial increases of approximately 5% were permitted, except on certain articles, mainly heavy lowgrade commodities. It was suggested in view of the modifications required in the tariffs that the central freight association lines might find it more desirable to undertake at once the tariff readjustment asserted by them to be necessary. Save as above indicated, the proposed increases were denied and the tariffs carrying them were ordered canceled.

"The facts disclosed and occurrences originating subsequent to May 29, 1914, as presented at the further hearing may be summarized under three heads—first, completed returns for the fiscal year ended June 30, 1914, and returns for succeeding months; second, the war in Europe; and third, results of the original order.

When these cases were originally submitted, as also when the original report was prepared, the revenue and expenditure account for June, 1914, and the property investment account for that fiscal year, were not available, the war was unforeseen, and the results of our order were, of course, yet to come. Collectively they present a new situation. The carriers offered further evidence of their financial condition during the fiscal year ended June 30, 1914, including returns for that year completed by addition of the revenue and expenditure account for June and the capital investment account for the year. They also introduced revenue and expenditure accounts for July and August of the current fiscal year. Reports to the Commission for Sept., 1914, have since made possible a similar statistical statement for that month also. These figures serve to emphasize our previous finding of the need of carriers in official classification territory, taken as a whole, for increased net revenue.

"For the fiscal year just ended the net operating revenues as shown by the carriers are lower than was estimated or anticipated when the original report was issued. Not since 1908 have the net operating revenues of the carriers been so low as in the fiscal year ended June last. In 1908, moreover, the property investment account of the carriers was \$1,309,000,000 less than in this last fiscal year. The surplus for 1908, after deducting \$102,000,00 paid in dividends, was

\$47,000,000, whereas for the last fiscal year the dividends paid, amounting to \$118,000,000, drew on the accrued surplus to the extent of \$8,200,000. Of this amount the New England roads contributed over \$4,000,000. It is not to be inferred from these figures that the total surplus in 1913-14 decreased by \$8,200,000. From reports made by the carriers to this Commission the appropriated surplus for class I roads, eastern district, was \$343,508,201 on June 30, 1914. This was an increase over appropriated surplus existing on June 30, 1913, of \$19,378,945. During the same year there was, however, a shrinkage in the excess of credit over debit balances to profit and loss of \$53,957,233, indicating for the last fiscal year a shrinkage in total surplus of \$34,578,288.

"From whatever comparative standpoint viewed, the net operating revenues of the last fiscal year must be regarded as unduly low. Operating costs and operating revenues fail to show the tendency to such concomitant variation as should prevail in the transportation industry. While the gross revenue in that year declined only about 3.4%, the net revenue shrank approximately 17.7% as against the previous fiscal year. The indication is that some important items of cost have become relatively inelastic, and that a fall in gross revenue leaves an increasingly narrow margin of net revenue. The situation is different when an attempt is made to estimate the decline in the rate of return. The property investment accounts as now standing on the books of the carriers cannot be accepted as accurately representing the fair value of their property devoted to serving the public.

"Objection was raised to the increasing amounts charged in recent years to additions and betterments, particularly because the carriers in presenting a financial review of their operations for a series of years failed to indicate separately the relative effect upon their accounts of outlay for additions and betterments as compared with allowance for depreciation, it being contended that this caused an unwarranted diminution in the resulting net income from operation. The fact nevertheless remains that if the increase in depreciation and betterment accounts in the last fiscal year over the average of similar allowances for the five year period were added to their net operating income for the last fiscal year the results of operation would still fall below a fair return upon the amounts carried upon roadway. We cannot view with favor while there has been recently an enlarged expenditure for maintenance of equipment. It is clear that it has not been sufficient to restrict to proper limits the number of cars and locomotives needing repairs. The carriers in the past have not known how large an expenditure to figure upon for the maintenance of the newer type of steel freight cars, and appear now to have discovered that such expenditure must be greater than was anticipated. The like may be said as to the recent enlargement of expenditure upon roadway. We can not view with favor any attempt to obtain an increase in net revenue through unduly restricted expenditures upon maintenance. To whatever extent recent increased provision for depreciation or expenditure for maintenance may militate against a fair comparison of supposedly comparable statistical items for various years, we cannot say on this record that such charges as at present returned by the carriers are excessive, viewed either from the standpoint of power accounting or of safety of operation. The testimony shows that while some maintenance is being deferred, other maintenance deferred during the last fiscal year is now being made, and that the expenditure therefor during July

and August measured up to the level of recent years. The testimony also shows that transportation expense is being reduced through the laying off of employes and cancellation of train service.

"It was urged on behalf of the carriers and the investment bankers who appeared at the hearing that the war in Europe has created a condition which renders the diminution of the carriers' net income a menace to the prosperity of the country; that the war has placed an added strain upon the credit of carriers; that rates of interest will rise; that a large volume of railroad securities is held abroad; that the denial of the increase in freight rates would, in view of the diminished net income, be followed by a dumping of foreign securities upon the American markets; that our markets would not be able to absorb these securities—at least, without great fall in price; that disaster would result not only to our railways, but to insurance, banking and industrial concerns; and that for these and other reasons, extending far beyond the direct needs of the carriers themselves, we should now allow the proposed increase in rates. With some of these considerations we have, as a commission, nothing to do. Our powers and functions are those, and only those, conferred by Congress. As was said in *Advances in Rates*, Western Case, 20 I.C.C. 307, at page 317: 'We must not regard too seriously, however, the effort of railway counsel to establish this Commission in loco parentis towards the railways. We must be conscious in our consideration of these rate questions of their effect upon the policy of the railways and, ultimately upon the welfare of the state. This country cannot afford to have poor railways, insufficiently equipped, unsubstantially built, carelessly operated. We need the best of service. Our railway management should be the most progressive. It should have wide latitude for experiment. It should have such encouragement as would attract the imagination of both the engineer and the investor. Nevertheless, it is likewise to be remembered that the Government has not undertaken to become the directing mind in railway management. We are not the managers of the railways. And no matter what the revenue they may receive there can be no control placed by us upon its expenditure, no improvements directed, no economies enforced.'

"The conflict in Europe will doubtless create an unusual demand upon the world's loan fund of free capital, and may be expected to check the flow of foreign investment funds to American railways. It appears that our railways represent the bulk of European investment in this country. The rate of interest—the hire of capital—has risen during the last decade, and may rise still further. It is computed that in 1915, 1916, and 1917 the carriers in official classification territory must arrange for the payment or refunding of securities aggregating over \$500,000,000. True, the representations of the carriers in the 1910 cases, that without the increases then sought their credit must totally vanish, proved strangely at variance with their subsequent experience in the borrowing of many hundreds of millions. But we do not doubt that the financial problems of the carriers have been made much more acute by reason of the war, and if we are to set rates that will afford reasonable remuneration to these carriers, we must give consideration to the increased hire of capital as well as to other increased costs. The suggestions, made in our original report, of methods whereby to increase net revenue were not susceptible of being put into immediate operation or calculated to produce immediate financial results. This was recognized in our original

report. The period which has since elapsed has, of course, been entirely too short for either purpose. Some testimony was offered at the further hearing bearing on what had been done or undertaken in line with these suggestions, and estimates were made by the traffic officials of several carriers as to the annual yield to be expected. These estimates were not based on any accounting computation and can afford little guide as to what the results will prove to be.

"While we differ as to the relative importance to be attached to the various considerations presented, we agree in the conclusion that, by virtue of the conditions obtaining at present, it is necessary that the carriers' revenues be supplemented by increases throughout official classification territory. Whatever the consequences of the war may prove to be, we must recognize the fact that it exists, the fact that it is a calamity without precedent, and the fact that by it the commerce of the world has been disarranged and thrown into confusion. The means of transportation are fundamental and indispensable agencies in our industrial life and for the common weal should be kept abreast of public requirements. The original report, besides approving a rate increase in central freight association territory, suggested 10 sources of additional revenue for all carriers throughout official classification territory; the present report, recognizing the existence of the relief granted to the central freight association lines by permitting the carriers to file tariffs providing, with certain exceptions specified herein, for horizontal rate increases in official classification territory. It is expected that the constructive work suggested in the original report for the purpose of conserving and augmenting the net revenues of the carriers generally will be carried forward without interruption. Carriers will be required to keep an account of the additions to their revenues from increases in rates subsequent to July 29, 1914, and from new charges, and to report separately thereon to the Commission at the end of 12 and 24 months, respectively. For various reasons we shall expect from the proposed increase the following rates:

"1. Rail-lake-and-rail, lake-and-rail, and rail-and-lake rates. It is shown on the record that since the rail carriers acquired ownership and control of the lake lines successive increases have been made in the rates via lake tending to lessen the differences between them and the all-rail rates.

"2. Rates on bituminous coal and coke. Not long since these rates were investigated and maximum rates were prescribed by the Commission. The key rates upon bituminous coal—the rate from the Pittsburgh district to Youngstown, and the rate on lake cargo coal to Ashtabula—have been fixed in the light of the various factors which enter into the transportation of such coal. The prevailing rates are remunerative, and the financial condition of the principal bituminous coal—the rate from the Pittsburgh district of many of the other carriers in official classification territory. Twice in the not distant past the rates on bituminous coal have been increased 5c. a ton, and would seem now to be as high as may fairly be allowed. It must be remembered also that the carriers are not seeking general increases in rates on anthracite coal, and both kinds of coal are used in competitive markets. As to coke, the rates controlling the greater volume of traffic now moving in official classification territory have recently been set by the Commission upon a basis which was specifically designed to guard against shrinking the carrier's revenue therefrom, and which really resulted in substantial additions to their earnings on that traffic.

"3. Rates on anthracite coal and iron ore,

largely because they are before us for review in other proceedings.

"4. Rates held by unexpired orders of the Commission.

"In our original report we declined, for reasons there stated, to allow increased rates in central freight association territory on cement, starch, brick, tile, clay, and plaster. On further consideration, in the light of the existing situation, these rates may be increased throughout official classification territory under the limitations herein set forth.

Joint rates between official classification territory on the one hand, and southeastern territory, the southwest and points on or east of the Missouri River on the other, may be increased not to exceed 5% of the division of the rate accruing to the carriers in official classification territory. If these increases involve a change in the relationship under the long-and-short-haul rule between intermediate points and more distant points outside of official classification territory relief from the fourth section of the act must first be secured on regular application.

"Interstate rates to and from New England from and to points in trunk line or central freight association territory, where necessary to preserve established relationships between points or ports in New England and points or ports in trunk line territory, may be increased not to exceed 5%.

"Subject to the maintenance of the established Atlantic port differentials, rates to and from New York may be increased not to exceed 5%, and rates to and from Portland, Boston, Philadelphia, and Baltimore may be increased to the extent necessary to maintain said differentials.

"Except as otherwise above specified rates in official classification territory may be increased by not more than 5%; but rates increased since July 29, 1914, may not now be again increased so as to exceed those then in effect by an aggregate of more than 5% of the intraterritorial rate, or of the portion or division of the intraterritorial rate accruing to the road or roads in official classification territory, as the case may be.

"If fractions in excess of one-half a mill are rounded upward, fractions less than one-half a mill are to be discarded.

"In some instances, and in part because of the pendency of this proceeding, we have recently suspended proposed increased rates in this territory. Carriers may, if they so elect, now cancel such tariffs so suspended and file in lieu thereof tariffs which conform to the limitations above specified. If that is done such suspensions will be vacated.

"To the extent above indicated we now modify our previous findings, and carriers affected may file, effective or not less than 10 days notice, such tariffs as do not offend against the restrictions above stated.

Chairman Harlan and Commissioner Clements gave dissenting judgments.

**Railway Lands Patented.**—Letters patent were issued during October, in respect of railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry.	2,724.97
Canadian Northern Ry.	24,816.67
Canadian Pacific Ry.	18.58
Qu'Appelle, Lake, Lake and Saskatchewan Rd. and Steamboat Co.	2,245.10
Total	30,803.32

**When hardening springs in oil,** the oil should be watched, and a little fresh oil added every day or so. When the whole mass has become pretty well burned, it should be thrown out, the tank cleaned and filled with fresh oil, as worn out oil loses its power, and will not harden plate steel as it should be hardened.

## Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

### Interswitching at Listowel.

22819. Nov. 4. Re application of Town of Listowel, for an order directing the G. T. R. and the C. P. R. to establish interswitching facilities between their lines at Listowel. It is ordered that a transfer track for the interchange of traffic between the G. T. R. and the C. P. R. at Listowel, be constructed near Reserve St.; the work to be done by the C. P. R.; a plan showing the proposed transfer track to be filed by the C. P. R. for the approval of an engineer of the Board; and such track to be constructed and completed within one month after the erection of Libby, McNeill & Libby Co.'s factory. That the Town of Listowel pay one third of the cost of installing the interchange track, the remainder to be divided equally between the two railway companies; and that when the interchange is established, the Board's general interswitching order apply to all movements to or from the industrial tracks of the two railway companies.

### Classification of Prepared Roofing.

22880. Nov. 16, re application of Standard Paint Co. of Canada, Ltd., for a reduced rating on prepared roofing in the Canadian Freight Classification. It is ordered that the application be dismissed.

### Express Rates on Fish from Vancouver.

22893. Nov. 17.—The complaint of W. J. Guest Fish Co., Ltd., of Winnipeg, in regard to express rate charged on fresh fish, in carload lots, from Vancouver to Winnipeg. Upon hearing the matter at Winnipeg, May 28, 1914, in the presence of a representative of the complainant company, no one appearing for the Dominion Express Co., and upon reading the arguments of the parties thereafter filed, it is ordered that the complaint be dismissed.

### Supplement 4 to Canadian Freight Classification 16.

22895. Nov. 25, re application of Canadian Freight Association, behalf of railway companies subject to the Board's jurisdiction, under sec. 321 of the Railway Act, for an order approving the proposed Supplement 4 to Canadian Freight Classification 16, containing certain increased, reduced, and additional ratings. Notice of the proposed increased ratings having been given in The Canada Gazette, and the Board having invited consideration thereof by the Canadian Manufacturers' Association, the Montreal Chamber of Commerce, the Ontario Wholesale Grocers' Guild, and the Boards of Trade of Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, Brantford, London, Winnipeg, Brandon, Regina, Saskatoon, Calgary, Edmonton, Vancouver, and Victoria; It is ordered that the said supplement as amended and revised and resubmitted for approval by the Canadian Freight Association, be approved, to become effective not later than January 2, 1915.

### Interswitching at Coldwater.

22915. Nov. 25, Re application of Village of Coldwater, Ont., for an order directing the G.T.R. and the C.P.R. to provide interswitching facilities there it is ordered that 30 days from date the C.P.R. construct a transfer track between its railway and the G.T.R. at Coldwater, so as to provide for the reasonable receiving, forwarding, delivering, and interswitching of traffic between their respective railways; the C.P.R. to file, within 15 days from date, plans showing the proposed interchange tracks, for the

approval of an engineer of the Board; the C.P.R. to keep an accurate and detailed account of the expense of putting in the tracks. That the Applicant supply a bond, to cover one-half of the cost of the work of constructing the interchange tracks; such sum, or so much thereof as the Board may later, and after investigation, deem proper, to be paid over on and according to the Board's direction; and for the determination of such sum to be so paid over, the applicant, and the C.P.R. and G.T.R., shall keep an account of the cars received and shipped over the transfer track during 12 months following its completion.

### Kettle Valley Railway Tariff.

22921. Nov. 26.—Re application of the Kettle Valley Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff of Maximum Tolls, C.R.C. 27, applying between stations in British Columbia, whereas, in accordance with the judgment of the Board in the Western Rates Case, the lawful effective date of the said tariff should have been Sept. 1, 1914; and upon the company undertaking to refund all freight charges exceeding the said Standard Tariff, C.R.C. 27, collected upon shipments made since and including Sept. 1, it is ordered that the tariff C.R.C. 27.

### Halifax & South Western Ry. Freight Tariff.

22955. Dec. 4.—Granting application of the Halifax & South Western Ry. for approval of its Standard Mileage Freight Traffic, C. R. C. no. F-1, applying on general merchandise in the absence of special or other tariffs giving lower rates.

### Freight Rates on Brick, Etc.

22963. Re complaints of Milton Pressed Brick Co. and Hagersville Contracting Co. against certain minimum carload tariffs of the railway companies, applicable to the carriage of brick, crushed stone, and other construction materials. It is ordered, with respect to the tariffs of railway companies operating in Eastern Canada, as follows, namely: That wherever it occurs, the provision of a minimum weight of 50,000 lbs. a carload of building brick, other than enamelled or glazed brick, be supplemented to provide that should a car of the loading capacity of 40,000 lbs. be ordered which the carrier is unable to furnish within a reasonable time, a car of greater capacity shall be furnished and charged for on the basis of the actual weight of the brick loaded therein, subject to a minimum of 40,000 lbs.; but that should such car so furnished be loaded in excess of 45,000 lbs. the minimum weight assessable for freight charges shall be 50,000 lbs. That wherever it occurs in the special tariffs applicable to brick, stone, and other commodities commonly described in the tariffs as "building material," the provision for an increase of 5% per foot to the tariff minimum weight, in the case of cars longer than those covered thereby, be withdrawn and cancelled. That effect be given to this order not later than Dec. 21, 1914.

### C. P. R. Embargo at Mile End, Que.

22974. Dec. 7.—Re embargo placed by C. P. R. upon all traffic originating on the Canadian Northern, Grand Trunk, and Intercolonial Railways, consigned for delivery on its team tracks at Mile End, Montreal, it is ordered that the C. P. R. be required forthwith to cancel the said embargo.

### Holding Cars for Consignees' Orders.

22975. Dec. 10.—The application of American Coal and Coke Co., of Detroit, Mich., for an order disallowing note 3 to rule 1, pg. 7, of Michigan Central Rd., C.R.C. 2171, which reserves the right to the com-

pany to hold cars for consignees located within the Detroit switching limits at Windsor, Ont., awaiting final delivery orders, or when delivery cannot be effected due to inability of consignee to receive the same; also for an order requiring the company to refund, with interest, sums paid under protest by the applicant under the said tariff rule. It is ordered that the applications be refused.

### Mixed Carload Rates on Groceries, Etc.

General Order 133. Dec. 19.—Re proposed cancellation on Jan. 1, 1915, of arrangements whereby mixed carloads of foreign and native liquors, and mixed carloads of groceries, classified 5th class in straight carloads, and dried fruits, classified 4th class in straight carloads, are carried at their respective carload rates between points west of and including Port Arthur, and thereto from eastern shipping points. Upon hearing the matter at Toronto, Dec. 12, 1914, the Toronto, Montreal and Hamilton Boards of Trade, and other parties interested being represented, it is ordered that the proposed cancellation of the said arrangements be, and it is hereby suspended until further order of the board.

### Grand Trunk Railway Betterments, Construction, Etc.

London, Ont.—The city freight sheds, York St., London, Ont., were destroyed by fire, Dec. 6, the offices and the bonded warehouse alone escaping. The shed was about 200 ft. long.

Port Huron Shops.—The residents of Port Huron, Mich., have voluntarily raised \$100,000 for the purpose of buying the Huron Thresher Co.'s plant, in order that the site may be utilized for the new G.T.R. shops. Nothing has yet been announced as to when construction will be started.

### Great Northern Railway Lines in Canada.

Vancouver Terminals.—The Board of Railway Commissioners has made a new order respecting the three viaducts which were planned to span the G.N.R. tracks in the east end of Vancouver, connecting the False Creek terminal grounds with the inlet. Under the original order a viaduct has been erected at Hastings St. at a cost of \$100,000. The new order cancels for the present the necessity of building the viaducts at Pender, Keefer and Harris Streets. This is the outcome of the recent decision of the Imperial Privy Council relieving the British Columbia Electric Ry. of the payment of 20% of the cost of these viaducts. (Dec., 1914, pg. 545.)

Canadian Society of Civil Engineers in B.C.—The officers of the Victoria, B.C., branch were elected at the annual meeting Dec. 9, as follows:—Chairman, D. O. Lewis. Canadian Northern Pacific Ry.; Vice Chairman, H. W. E. Cavanau; Secretary, E. W. McIntyre; Executive Committee, A. W. Wilby, A. E. Foreman; Auditors, E. H. Harrison, H. A. Icke. The retiring chairman was F. C. Gamble, Chief Engineer of the B. C. Department of Railways. On Dec. 10 and 11, the members of the Vancouver branch met with the Victoria branch. A paper on harbors was read by J. S. McLaughlin, engineer in charge of harbor works in Vancouver, and G. R. G. Conway, Chief Engineer, British Columbia Electric Ry., and chairman of the Vancouver branch, read a paper on legislation and the engineering profession. On the afternoon of the 11th the party made a trip to Albert Head, and in the evening attended the annual dinner.

## Canadian Pacific Railway Construction, Betterments, Etc.

**Eastern Division.**—Construction was reported to have been started on the new double track bridge over the Lachine Canal at Montreal, Dec. 9. This is the last piece of work necessary to complete the building of the second track between Montreal and eastward. The cost of widening the approaches and erecting the bridge is estimated at \$1,000,000.

**Ontario Division.**—The Campbellford, Lake Ontario, and Western Ry. has a joint terminal with the Canadian Northern Ontario Ry. at Belleville, Ont., and a section of joint track and terminals with the Georgian Bay & Seaboard Ry. at Orillia, Ont. The Dominion Parliament is being asked to confirm the agreements between the two companies with respect to the same.

The C.P.R. is applying to the Dominion Parliament for the confirmation of an agreement with the Canadian Northern Ontario Ry. respecting the use of terminals at North Toronto, Ont.

The new double track bridge over the Humber River, near Toronto, on the Toronto-Windsor line is completed. Trains commenced to run over the southerly, as well as the northerly, track Dec. 1.

The C.P.R. is applying to the Dominion Parliament for an extension of time for the construction of its projected line from between Bolton Jct. and Palgrave, on the Toronto-Sudbury line, and Campbellville, Ont., on the Toronto-Windsor line.

The South Ontario Pacific Ry. is applying to the Dominion Parliament for an extension of time for the building of its projected railway from Hamilton to the Niagara River at Niagara Falls, Ont.

**Manitoba Division.**—An agreement has been reached between the Winnipeg City Council and the company providing for the settlement of various matters which were the subject of difference between the two corporations. There were 31 matters on which the city is asked for a settlement with the company, and 12 of which the company asked for a settlement with the city.

As a result of a deputation which waited on the company's officials at Winnipeg, Dec. 5, the Mayor of Souris announced on his return that the direction for the transfer of the present divisional point at Souris to Brandon was withdrawn.

**Saskatchewan Division.**—The Manitoba and Northwestern Ry. is asking the Dominion Parliament for an extension of time for the building of the projected line from Theodore to some undecided point on the line running from Govan to Lanigan, Sask.

The Expanse subdivision has been extended to Vantage, Sask., by the opening for traffic of the line from Rycroft, mile 41.2, to Vantage, mile 49.6 from Moose Jaw. The line is being extended to Vanguard, which was expected to be reached by the tracklaying gang by Dec. 31.

**Alberta Division.**—The Alberta Central Ry. is applying to the Dominion Parliament for an extension of time for the building of the following lines:—From Rocky Mountain House to the G.T. Pacific Ry., near Yellowhead Pass; three branch lines of 30 miles each, and two of 35 each into the Big Horse Range and along the Brazeau River.

**Kootenay Central Ry.**—The line which connects the Crownsnest Pass line at Coal-mountain with the main transcontinental line at Golden, B.C., 160 miles, is reported to have been opened for traffic, Dec. 8. It has been under construction for several years, and has been in operation for some

time between Golden and Spillimacheen, 40 miles. Although about 40 miles of track had been laid at the southern end of the line for some time, no regular train service had been operated over it.

**British Columbia Division.**—The British Columbia Southern Ry. is applying to the Dominion Parliament for an extension of time within which it may build the projected line from Michel to Kananaskis, B.C.

The new double track bridge over the Pitt River at Coquitlam, B.C., has been completed and opened for traffic.

The viaduct at Granville St., Vancouver, which is part of the new terminal works, was finally completed and opened for general traffic, Nov. 30. It had been opened for pedestrian traffic nearly two weeks previously. (Dec., 1914, pg. 543.)

## Railway Finance, Meetings, Etc.

**Algoma Central and Hudson Bay Ry.**—It was announced in Toronto, Dec. 1, that on account of depressed traffic conditions, the railway was unable to meet the half yearly bond interest coupons due that day. The board proposes to place before the bondholders at an early date a plan to redeem the indebtedness. This railway, together with the Algoma Eastern Ry., is controlled by the Lake Superior Corporation.

**Canadian Pacific Ry.**—The Guaranty Trust Co. of New York, in association with a number of other New York financiers, has purchased an issue of \$12,690,000 of 4½% equipment trust certificates, maturing in semi annual instalments of \$470,000 each from July 1, 1915. These are the balance of the Victoria Rolling Stock and Realty Co.'s securities, the amount of which was shown in the annual report as \$13,630,000, of which \$940,000 has since been paid. They are called C.P.R. 4½% equipment trust certificates to designate them on what is called the Philadelphia plan.

**Grand Trunk Ry.**—A London, Eng., press cablegram, Dec. 17, says:—"The G.T.R.'s new issue of 5½% three year notes is put forward under burdensome conditions, the company offering 1% commission to the underwriters, and apart from general expenses the issue will cost it 7%. The company during the summer sold £2,000,000 one year bills on a 4% basis, which, like the latest offer, were secured on debenture stock."

**Great Northern Ry. (Canada).**—The construction of this railway, which now forms a section of the Canadian Northern Quebec Ry., was undertaken by the Great Northern Construction Co., payment being made partly in bonds, partly in stock and partly in cash. Portions of the work were sublet to Ross, Barry and McCrae, who were to be similarly paid, the contract being entered into in 1899. After the contracts were completed the subcontractors and the general contractors failed to agree as to the price for certain portions of the work, and suit was entered, the Bank of Ottawa taking up the subcontractors' interests. The action has dragged on for over 10 years, judgment being given, Nov. 25, by Justice Guerin for \$426,886, of which \$63,000 is to be paid in cash, and the remainder in stock and bonds.

**Temiscouata Ry.**—Net earnings for September, 1914, \$4,755, against \$2,500 for October, 1913.

**Toronto, Hamilton and Buffalo Ry.**—The Dominion Parliament is being asked to confirm the agreement amalgamating the Erie and Ontario Ry. with the T.H. and B. Ry.;

to authorize the amalgamated company to issue bonds to the same extent as the E. and O. Ry. is authorized, and to secure the same by a mortgage of that railway and by a third mortgage of the T.H. and B. Ry.; to authorize the amalgamated company to issue bonds or other securities to the amount of \$15,000,000 to provide for the retirement of all existing bonds and securities of the amalgamated company, and to secure the same by a mortgage upon the entire undertaking of the amalgamated company.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,394,300	\$1,163,800	\$230,500	x \$85,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,109,400	1,519,000	590,700	65,800
Oct.	1,895,300	1,332,100	563,200	x440,900
Nov.	1,670,200	1,123,100	547,100	x417,700
	\$8,647,400	\$6,261,200	\$2,386,200	x\$1,040,500
Dec.	\$2,471,500	\$1,431,000	\$1,040,500	.....

x Decrease.  
Approximate earnings for three weeks ended Dec. 21, \$1,019,700, against \$1,602,100 for same period 1913.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$10,481,971.72	\$6,713,525.89	\$3,778,445.83	x\$398,347.35
Aug.	8,917,764.33	6,554,666.68	3,373,157.70	x 597,981.54
Sept.	10,754,139.67	6,387,091.28	4,367,048.39	x 48,530.30
Oct.	9,282,928.49	5,361,600.13	3,921,328.36	x2,281,529.48
	\$40,436,804.26	\$25,606,823.98	\$14,829,980.28	x\$3,266,388.62
Dec.	\$9,628,016.79	\$6,361,628.17	\$3,266,388.62	.....

x Decrease.  
Approximate earnings for Nov., \$7,823,000, against \$13,270,000 for Nov., 1913; and for three weeks ended Dec. 21, \$5,077,000 against \$8,382,000 for same period 1913.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., G.T.W.R., and D.G.H. & M.R. for Sept. and Oct.:

Grand Trunk Railway (Including Canada Atlantic Ry.)			
	September.	October.	
Earnings .....	\$3,838,250	\$3,609,350	
Expenses .....	2,858,900	2,533,100	
Net earnings .....	\$979,350	\$976,250	
Grand Trunk Western Railway.			
Earnings .....	\$611,450	\$639,900	
Expenses .....	553,450	602,000	
Net earnings .....	\$58,000	\$37,900	
Detroit, Grand Haven & Milwaukee Ry.			
Earnings .....	\$221,800	\$255,100	
Expenses .....	233,750	224,800	
Net earnings .....	\$11,850	\$30,300	

## TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate traffic receipts from July 1 to Nov. 30, 1914:				
	1914	1913	Inc.	Dec.
G.T.R. ....	\$18,147,042	\$20,434,612	.....	\$2,287,570
G.T.W.R. ....	3,122,020	3,106,466	\$15,554	.....
D.G.H. & M.R. ..	1,170,392	1,134,443	36,349	.....

Approximate earnings for three weeks ended Dec. 21, \$2,576,361, against \$3,039,297 for same period 1913.

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for November were \$1,000,000, against \$1,000,000 for Nov., 1913. Approximate earnings for the same period Nov. 30, \$1,000,000, against \$1,000,000 for the same period 1913.

## Mainly About Railway People.

SIR WM VAN HORNE returned from Cuba to Montreal, just before Christmas.

SIR THOMAS, Lady, and Miss TAIT, will spend part of the Winter in Florida.

JOHN WATSON, who died at Battle Creek, Mich., recently, aged 79, was at one time Superintendent of Dining Cars, G.T.R.

C. G. HIRT, Eastbound Agent, C.P.R., St. Louis, Mo., was married on December 2, to Miss F. M. Pendergast.

SIR THOMAS SKINNER, director, C.P.R., London, Eng., has been elected a director of Laurentide, Ltd., Montreal.

A. W. WHEATLEY, Vice President and General Manager, Canadian Locomotive Co., Kingston, Ont., has been in Europe for a short trip.

R. SMITH, a dispatcher on the Temiskaming and Northern Ontario Ry. at North Bay, Ont., was drowned there while skating, Dec. 6.

T. RODGERS, Travelling Car Inspector, G.T.R., London, Ont., has, after 48 years of continuous service with the company, retired under the pension fund.

E. S. HART, Chairman of the Board of Directors of the Rodger Ballast Car Co., Chicago, Ill., died Nov. 23. He was one of the founders of the Rodger Ballast Car Co.

C. T. SELWAY, heretofore Assistant Superintendent Great Northern Ry., England, has been appointed Superintendent of the Line, succeeding the late W. H. Hills.

M. J. BUTLER, C.M.G., M.Can.Soc.C.E., of Montreal, has been appointed a valuation expert to examine into the physical aspects of the Montreal Water & Power Co., to succeed E. Belanger, M.Can.Soc.C.E.

Hon. N. Curry, President, Canadian Car & Foundry Co., Montreal, sailed from Halifax, N.S., Nov. 29, on the s.s. Franconia for England and is expected to return early in January.

JOHN NUGENT, who died at Moncton, N.B., Nov. 29, aged 69, was, until his retirement on the pension fund about three years ago, Foreman of the Erecting Shop, Intercolonial Ry.

F. C. ELLIOTT, who has been elected President, White Pass & Yukon Route, is a lawyer, with office at Chicago, and has been counsel for and identified with the W. P. & Y. R. since its inception.

E. F. L. STURDEE, Assistant District Passenger Agent, C.P.R., Toronto, is a second cousin of Admiral Sir F. C. D. Sturdee, who destroyed the German Pacific squadron off the Falkland Islands, Dec. 9.

R. O. SWEEZEY, B.Sc., A.M. Can. Soc. C. E. formerly General Manager, Montreal Engineering Co. Ltd., has been appointed Professor of Civil Surveying and Astronomy, Royal Military College of Canada, Kingston, Ont.

F. H. PHIPPEN, K.C., General Counsel Canadian Northern Ry., who was operated on in New York, Nov. 25, and subsequently spent a short time at Atlantic City returned to Toronto for Christmas, thoroughly convalescent.

F. C. SALTER, European Traffic Manager, G.T.R., returned to London, Eng., Dec. 10, after a business trip to Holland. He stated that further help was urgently required to enable the Belgian refugee problem to be adequately dealt with.

C. L. HERVEY, M.Can.Soc.C.E., Chief Engineer of the Glengarry and Stormont Ry., which has been leased to the C.P.R., was entertained to a luncheon early in December, to celebrate the completion of the laying of steel on the line.

CAPT. T. C. IRVING, JR., Vice President of Robert W. Hunt & Co., Ltd., Bureau of Inspection, Tests, and Consultation, who is in England with the Canadian Engineers, sent a cablegram of Christmas greeting to the Mayor of Toronto, on behalf of his men.

JAMES MANSON, Assistant to the Vice President, C.P.R., Winnipeg, spent a part of December in California, on a vacation, prior to removing to Montreal, where he accompanies George Bury, who has been appointed Vice President there.

H. WHEELER, who has been appointed General Manager, White Pass & Yukon Route, at White Horse, Yukon, has been in the company's service for 14 years, his last position having been Superintendent of the Mail Service Department and River Division.

S. B. CARTER, heretofore District Superintendent, London and North Western Ry., (England) at Manchester, has been appointed District Superintendent at Liverpool, vice, W. M. Turnbull appointed Assistant Superintendent of the Line.

LT. COL. E. WALTER RATHBUN, President, Bay of Quinte Ry., Thousand Islands

P403  
E. W. Beatty,  
Vice President and General Counsel, Canadian Pacific Railway.

Ry. and Oshawa Ry., Deseronto, Ont., has been appointed to command the 6th brigade of field artillery, which is to be sent as part of the Canadian overseas force.

F. J. HOLMAN, who retired recently from the position of Bridge and Building Foreman, G.T.R., Stratford, Ont., was entertained by the employees of the department there, Nov. 28, and presented with a pair of rocking chairs.

N. P. TRACY, Division Storekeeper, Quebec Grand Division, Canadian Northern Ry., Limoilu Jct., was presented with a silver fitted club bag, and a toilet set for Mrs. Tracy, Dec. 8, on their leaving for a holiday in England. They sailed from St. John, N.B., Dec. 12, on the s.s. Hesperian.

JOHN GALBRAITH, Dean of the Faculty of Applied Science, Toronto University, who died July 22, left an estate of \$33,404, in

which his wife has a life interest. At her death it is to be divided equally among the daughter and two sons. He also left \$6,262 life insurance in favor of his wife.

H. C. OVIATT, recently Superintendent of the old Colony division of the New York, New Haven, and Hartford Rd., has been appointed Assistant Mechanical Superintendent in charge of a new bureau, known as the Bureau of Fuel Economy, with office at New Haven, Conn.

Major A. H. TYLER, R.E. who was killed in action in France in November, was a son of the late SIR HENRY TYLER, a former President of the Grand Trunk Ry., and Lieut. A. Tyler, R.E., who was also killed in action at the same place a day later, was a nephew of Major Tyler.

ANGUS GORDON, who has been appointed Manager, Chatau Laurier, G.T.R., Ottawa, Ont., was born in Scotland, and was for several years, from the opening, Assistant Manager, King Edward Hotel, Toronto, and afterwards Manager of the Victoria Hotel, New York.

E. ROBB, who has been appointed Traveling Freight Agent, Intercolonial Ry., Montreal, was presented with a pipe, pouch and umbrella, by his associates in the General Freight Agent's office, and some other friends in Moncton, N.B., on his leaving there recently, to enter on his new duties.

A. F. ZIPF, who has been appointed Traffic Manager, White Pass & Yukon Route, at Seattle, Wash., was formerly in the Alaska Commercial Co. and the Northern Navigation Co.'s service, and while the latter company operated its steamboat on the Yukon River he was its Traffic Manager.

Lieut. A. Lacey Johnson, of the Montreal Heavy Brigade, who has been appointed Lieutenant, No. 4 Section, Divisional Ammunition Column, 6th Field Artillery Brigade, Canadian Expeditionary Force, is a son of Lieut.-Col. LACEY R. JOHNSON, of the Montreal Heavy Brigade, and General Superintendent, Angus Ships District, C.P.R.

J. M. RAPELJE, who was appointed General Manager, Lines East of Paradise, Mont., Northern Pacific Ry., recently, was born at Chippewa, Ont., Jan. 22, 1857, and entered railway service in 1879, as brakeman, G.T.R., and was later a conductor on the C.P.R. All his railway service since 1888 has been in the United States.

A. E. WILKINSON, Division Freight Agent, Intercolonial Ry., Halifax, N.S., who died there Nov. 26, aged 45, was born at Hawkesbury, Ont., June 3, 1870. He entered I.R.C. service, June 1, 1890, as a clerk at Moncton, N.B. In Dec. 1909 he was appointed chief clerk, General Freight Agent's Office, Moncton, N.B., and on May 1, 1912, Division Freight Agent, Halifax.

JOHN WILLIAM PUGSLEY, who has been appointed Secretary, Railways and Canals Department, Ottawa, was born at Amherst, N.S., Mar. 12, 1861, and first entered the civil service Feb. 14, 1880. From 1889 to 1896 he was Assistant Accountant, from 1896 to 1903 Clerk of the Railway Committee of the Privy Council and from 1903 to Dec., 1914, Assistant Secretary, Railways and Canals Department.

M. FRANK TOMPKINS, who has been appointed Division Freight Agent, Intercolonial Ry., Halifax, N.S., was born at Margaree, N.S., Dec. 6, 1878, and entered I.R.C. service Nov. 23, 1896, since when he has been, to Mar. 31, 1900, telegraph operator at various points; Apr. 1 to May 1, 1900, freight clerk, Truro, N.S.; May 1, 1900, to Sept. 2, 1902, freight clerk, Sydney, N.S.; Sept. 1, 1902, to July 1, 1903, division time keeper, New Glasgow, N.S.; July 1, 1903, to July 1, 1904, telegraph operator, New Glasgow, N.S.; July 1, 1904, to Jan. 1, 1911, relieving agent;

Jan. 1, 1911, to Nov. 30, 1914, chief clerk, Division Freight Agent's office, Halifax, N.S.

GEORGE BURY, who took over the position of Vice President, C.P.R., at Montreal, Jan. 1, was described recently in an Ottawa paper as "Mr. David Bury, New Zealand Manager of the Canadian Pacific Railway."

JOSEPH S. CARTER, who was appointed District Passenger Agent, C.P.R., Nelson, recently, was born at Aurora, Ill., Aug. 14, 1864, and entered C.P.R. service, Aug. 1, 1883, since when he has been, to Oct. 1889, in Passenger Department, Toronto; Oct. 1889 to Jan. 1901, ticket agent, Winnipeg; Jan. 1901 to May 1907, District Passenger Agent, Nelson, B.C.; May 1907 to Mar. 1910, General Agent Passenger Department, Spokane, Wash.; Mar. 1910 to Dec. 1913, General Agent, Atlantic Steamships, Winnipeg. During 1914 he was on extended leave of absence.

A. F. HAWKINS, who has been appointed Trainmaster, Moose Jaw Terminals, C.P.R., was born in Kent, England, Aug. 9, 1884, and entered C.P.R. service, Oct. 23, 1903, since when he has been, to May 15, 1906, in various positions in yard office, Winnipeg; May 15, 1906, to Aug. 1, 1908, chief clerk, Fort William, Ont.; Aug. 1, 1908, to July 1, 1909, Assistant Yardmaster, Fort William, Ont.; July 1, 1909, to Apr. 1, 1911, General Yardmaster, Fort William, Ont.; Apr. 1 to Oct. 1, 1911, Night Yardmaster, Winnipeg; Oct. 1, 1911, to Aug. 15, 1914, General Yardmaster, Winnipeg; Aug. 15 to Dec. 31, 1914, Trainmaster, Medicine Hat, Alta.

GEORGE W. HAY, who has been appointed General Passenger Agent, Lehigh Valley Rd., New York, was born at Woodstock, Ont., May 29, 1869, and entered railway service, Oct. 13, 1888, since when he has been, to April, 1897, in train service, G.T.R., Detroit, Mich.; April to July, 1897, baggage inspector, G.T.R., Toronto; July, 1897, to July, 1902, chief clerk, General Baggage Agent, G.T.R., Toronto; July, 1902, to December, 1906, Assistant to General Baggage Agent, G.T.R., Toronto; January, 1907, to Nov. 24, 1914, General Baggage Agent and District Passenger Agent, Lehigh Valley Rd., South Bethlehem, Pa.

HENRY BEATTY, at one time Manager, Upper Lake Steamship, C.P.T., Toronto, who died there April 10, 1914, left an estate of \$707,734.78. Within a year prior to his death he had transferred \$106,605 to relatives, including Dr. H. A. Beatty, Chief Surgeon, Ontario Division, C.P.R., Toronto, son, \$27,750, E. W. Beatty, Vice President and General Counsel, C.P.R., Montreal, son, \$37,250, G. M. Beatty, son, \$18,236, M. H. Beatty, daughter, \$21,869. The widow is left an income for life on \$40,000. The three sons and the daughter each receive \$171,933.71, and \$40,000 is to be divided among them at their mother's death. Four nephews receive \$5,000 each.

C. H. BUELL, who has been appointed Staff Registrar, and Secretary of the Pension Fund, C.P.R., Montreal, was born at Jacksonville, Ill., Nov. 21, 1873, and entered C.P.R. service Sept. 1, 1895, since when he has been, to Oct. 1, 1896, secretary to General Passenger Agent; Oct. 1, 1896 to July 1, 1899, secretary to Passenger Traffic Manager; July 1, 1899 to Sept. 1, 1900, clerk to Assistant General Manager; Sept. 1, 1900 to Aug. 1, 1901, clerk to Second Vice President and General Manager; Aug. 1, 1901 to Nov. 1, 1906, chief clerk to Assistant to the Vice President; Nov. 1, 1906 to Mar. 1, 1907, clerk to Vice President McNicoll; Mar. 1, 1907 to Nov. 27, 1914, chief clerk to Vice President McNicoll.

OTTO H. BECKER, who was appointed District Freight Agent, C.P.R., Portland, Ore., recently, was born in Norfolk County, Ont., Nov. 19, 1873, and entered railway ser-

vice in April 1893, since when he has been, to July 1899, telegraph operator at various points, Canada Division, Michigan Central Rd.; Sept. 1899 to July 1901, telegraph operator and agent, Fort William, Ont., and Columbia and Western Division, C.P.R., at various points in British Columbia; July 1901 to Apr. 1906, Traveling Freight Agent, C.P.R., Nelson, B.C.; Apr. to Oct 1906, Travelling Freight Agent, C.P.R., Seattle, Wash.; Oct. 1906 to July 1914, General Agent, Freight Department, C.P.R., Tacoma, Wash.

E. W. BEATTY, who has been appointed Vice President and General Counsel, C.P.R., Montreal, was born at Thorold, Ont., Oct. 16, 1877. He was educated at the Model School and Harbord Collegiate, Toronto, and the University of Toronto, graduating in 1898. He served his articles with the late D'Alton McCarthy, of McCarthy, Osler, Hoskin and Creelman, Toronto, and was admitted to the bar in 1901. On the appointment of A. R. Creelman as Chief Solicitor C.P.R., in July 1901, he accompanied him to Montreal, and was appointed Assistant Solicitor, Jan. 1, 1905, General Solicitor,

P 314 Grant Hall,  
Vice President and General Manager, Western  
Lines, Canadian Pacific Railway.

Mar. 1, 1910, and General Counsel, June, 1913. He is a son of the late Henry Beatty, at one time Manager of the Upper Lakes Steamships, C.P.R., Toronto, and is a brother of Dr. H. A. Beatty, Chief Surgeon, Ontario Division, C.P.R., Toronto.

SIR WILLIAM VAN HORNE, SIR THOS. SHAUGHNESSY, and Hon. G. S. Perley, who were born in the United States, will, according to an Ottawa press dispatch, be the first to secure the full status of imperial citizenship under the provisions of the new naturalization act, which comes into effect in Canada. They will be the first to take out their papers, having already applied for naturalization. Under the present naturalization laws a person born in the United States and naturalized in Canada becomes a Canadian, but is not recognized as a British subject in the British Isles. British naturalization, however, is recognized in Canada. The new act removes this anomaly. Any persons who have lived in Canada five out of the past eight years may, after Jan. 1, become entitled to full imperial citizenship.

CHARLES ERNEST STOCKDILL, who has been appointed Assistant to Vice President and General Manager, C.P.R., Winnipeg, was born at London, Ont., Oct. 25, 1881, and entered C.P.R. service July 1, 1899, since when he has been, to Feb. 1, 1900, clerk, Roadmaster's office, London, Ont.; Feb. 1, 1900, to Apr. 30, 1901, clerk in Superintendent's office, London, Ont.; May 1, 1901, to June 15, 1903, secretary to General Superintendent, North Bay, Ont.; June 15, 1903, to Sept. 23, 1904, chief clerk to Master Mechanic, North Bay, Ont.; Sept. 24, 1904, to July 12, 1905, chief clerk to Superintendent, Winnipeg; July 12, 1905, to Feb. 28, 1907, chief clerk to General Superintendent, Calgary, Alta.; Mar. 1 to Dec. 1, 1907, assistant chief clerk to Assistant General Manager, Winnipeg; Dec. 1, 1907, to Sept. 30, 1908, assistant chief clerk to Second Vice President, Winnipeg; Oct. 1, 1908, to Aug. 9, 1910, chief clerk to Second Vice President, Winnipeg; Aug. 9, 1910, to Oct. 1, 1911, chief clerk to General Manager, Winnipeg; Oct. 1, 1911, to Dec. 31, 1914, chief clerk to Vice President and General Manager, and then to Vice President, Winnipeg.

LUCIUS TUTTLE, who died of angina pectoris, at Brookline, Mass., Nov. 30, was born at Hartford, Conn., Mar. 11, 1846, and entered railway service Aug. 1865, since when he was, to 1866, ticket clerk, and from 1866 to Oct. 1, 1878, General Ticket Agent, Hartford, Providence and Fishkill Rd.; Oct. 1, 1878 to Feb. 11, 1879, Assistant General Passenger Agent, New York and New England Rd.; Feb. 11, 1879 to Jan. 1885, successively, General Passenger and Ticket Agent, and Assistant to General Manager, Eastern Ry.; Jan. 1885 to Jan. 1887, General Passenger and Ticket Agent, Boston and Lowell Rd.; Jan. 1887 to 1889, Passenger Traffic Manager, C.P.R., Montreal; 1889 to May 1890, Commissioner, Trunk Line Association Passenger Department; May 1890 to Feb. 1892, General Manager, New York, New Haven and Hartford Rd.; Feb. 1892 to Sept. 1893, Vice President, same road; Oct. 1893 to Oct. 1910, President, Boston and Maine Rd.; 1910 to 1913, Chairman of the Board, same company. Mr. Tuttle had not been in good health since the amputation of a leg about three years ago, but he continued quite active until within about a week of his death.

D'ALTON CORRY COLEMAN, who has been appointed Assistant General Manager, Western Lines, C.P.R., Winnipeg, was born at Carleton Place, Ont., July 9, 1879, and entered C.P.R. service Nov. 4, 1899, since when he has been, to Jan. 11, 1900, stenographer in Assistant Engineer's office, Fort William, Ont.; Jan. 11 to July 1, 1900, secretary to Superintendent, Fort William, Ont.; July 1 to Sept. 20, 1900, secretary to General Superintendent, Winnipeg; Sept. 22, 1900 to Feb. 1, 1901, secretary to Superintendent, Fort William, Ont.; Feb. 1, 1901 to June 1, 1902, chief clerk, Superintendent's office, Cranbrook, B.C.; June 1, 1902 to Feb. 15, 1904, chief clerk and accountant, General Superintendent's office, North Bay, Ont.; Feb. 15, 1904 to Mar. 1, 1907, chief clerk, General Superintendent's office, Winnipeg; Mar. 1, to June 1, 1907, chief clerk, Assistant General Manager's office, Winnipeg; June 1, 1907 to Dec. 1, 1908, Superintendent, Nelson, B.C.; Dec. 1, 1908 to Apr. 1, 1912, Superintendent Car Service Western Lines, Winnipeg; Apr. 1, 1912 to July 15, 1913, General Superintendent, Manitoba Division, Winnipeg; July 15, 1913 to Jan. 1, 1915, General Superintendent, Alberta Division, Calgary.

G. H. WEBSTER, M. Can. Soc. C.E., who died at Vancouver, B.C., Dec. 27, 1914, was born at Creemore, Ont., Jan. 31, 1858, and entered railway service in May, 1872, since when he was, to Jan. 31, 1879, articulated pupil.

Northern Ry., Toronto; Jan. 31, 1879, to Apr., 1882, Assistant Engineer, Northern, and Hamilton and Northwestern Rys.; Apr., 1882, to Apr., 1883, in private practice in Winnipeg; June, 1883, to June, 1885, Assistant Engineer, Manitoba and North Western Ry.; June, 1885, to July, 1900, Engineer in charge, same road; July, 1900, to Oct., 1901, Resident Engineer, Main Line and Branches, Western Division, C.P.R., east of Moose Jaw, Sask.; Oct., 1901, to May, 1903, General Tie Agent, C.P.R., Montreal; May, 1903, to Jan., 1904, Right of Way and Lease Agent, C.P.R., Montreal; Jan., 1904, to Jan. 25, 1905, Division Engineer, C.P.R., Vancouver, B.C. In Jan., 1905, he retired from railway service to become President and Engineer of the British Columbia General Contract Co., Vancouver, from which he retired toward the end of 1908, after which he practised as a civil engineer and carried on contracting work on his own account. His name appears in "Birthdays of Transportation Men in January" on page 7 of this issue, which was printed before the news of his death reached us.

SENATOR ROBT. JAFFRAY, who died at Toronto, Dec. 16, aged 82, was at different times prominently connected with a number of transportation interests. In 1874, during the Mackenzie government's regime, he was appointed as the Dominion Government director of the old Northern Ry. of Canada, and on his representations a royal commission was appointed to investigate its affairs. With the late Senator G. A. Cox, he purchased the Midland Ry. of Canada, originally the Port Hope, Lindsay and Beaverton Ry., which they reorganized and sold to the Grand Trunk. He was a strong supporter of the late Geo. Laidlaw's projects, which did so much to make Toronto a railway centre. He was appointed a commissioner of the Timiskaming and Northern Ontario Ry. early in 1914, and on the retirement of the first chairman, A. E. Ames he succeeded him, retaining that office for about a year, until the Whitney Government came into power, when he resigned. He was one of the organizers of and among the first directors of the Crowsnest Pass Coal Co., which built the Morrissey, Fernie and Michel Ry. in British Columbia. He was one of the spectators when the first locomotive built in Toronto was taken from Good's foundry to the Northern Ry. tracks on the Bay front. Among the many directorates of which he was a member up to the time of his death were those of the Canadian General Electric Co., the Nova Scotia Steel and Coal Co., the Imperial Bank and the Globe Printing Co., Toronto.

**Free Transport for Hosmer People.**—Application was made to the Board of Railway Commissioners at Victoria, B.C., Dec. 2, for an order authorizing the C.P.R. to carry free of charge such of the residents of Hosmer as desired to remove to some other place. Hosmer was a C.P.R. mining town, but with the abandonment of the collieries a large number of people were left stranded and without employment. The C.P.R. was willing to carry them elsewhere free. The Commissioners said there would be no objection made to the carrying out of any arrangement which the C.P.R. and the B.C. Government might make in the matter. A suggestion was made that a special 5c. tariff should be issued to meet the necessity, but it was pointed out that any such rate would be open to anyone at Hosmer who applied. A further suggestion was made that the C.P.R. could carry persons free under sec. 41 of the Railway Act, but it was pointed out that while the people to be benefitted in Hosmer were practically without money, they were neither the destitute nor homeless persons contemplated in the act.

## Great North-Western Telegraph and Canadian Northern Telegraph Companies Merge.

The Great North Western Telegraph Co. of Canada and the Canadian Northern Telegraph Co. have been merged, and from Jan. 1 will be operated under one system as the Great North Western Telegraph Co. of Canada. Under the arrangement the Western Union Telegraph Co.'s lines in New Brunswick, from Moncton east, and in the United States, will in the near future become part of the G.N.W. system, except the direct lines from the International Boundary between Maine and New Brunswick to the Atlantic cable landing stations at Canso and North Sydney, N.S., which will be retained by the W.U.

This means that the G.N.W.T. Co., heretofore controlled, if not entirely owned by the Western Union, a U.S. organization, has passed under Canadian ownership. While neither the Canadian Northern, nor the G.N.W. managements have made any official statement to that effect, Canadian Railway and Marine World is in a position to state that the W.U. holdings in the G.N.W. have been bought by Canadian Northern Ry. interests.

Z. A. Lash, K.C., who is a director and Senior Counsel of the C.N.R. and who, since the death of H. P. Dwight in 1912, has been President of the G.N.W.T. Co., remains in that position, and G. D. Perry continues as General Manager, the executive officers remaining at Toronto. W. C. Muir, now General Superintendent, Canadian Northern Telegraph Co. and Canadian Northern Express Co., at Winnipeg, will in future confine himself to the General Superintendency of the latter company.

The following appointments of district superintendents of the G.N.W.T. Co. have been made:

L. S. Humes, Superintendent 2nd district, and will continue to act as Manager, Montreal office.

W. G. Barber, Toronto, heretofore Assistant Manager, local office, Toronto, to be Superintendent 3rd district. Office, Toronto.

J. Paddington, to be Superintendent 4th district, and will continue as Manager, Winnipeg office.

G. H. Stead, heretofore Superintendent at Winnipeg, Canadian Northern Telegraph Co., to be Superintendent 5th district, G.N.W.T. Co. Office, Saskatoon.

The merger will give the G.N.W.T. connection, through Canadian territory, with Manitoba, Saskatchewan, Alberta and British Columbia, which it has had to reach hitherto from Eastern Canada via W.U. lines through the U.S., and will give the Canadian Northern Telegraph access to places served by the G.N.W. and W.U. throughout Ontario, Quebec and the Maritime Provinces. The combination will have over 1,700 offices in Canada. There will be a friendly alliance with the Western Union, which will give the Canadian combination access to some 22,000 W.U. offices in the U.S. and with 8 trans-Atlantic cables, 6 of which land in Canada.

The principal lines hitherto operated by the G.N.W.T. Co. are owned by the Montreal Telegraph Co. and the Dominion Telegraph Co. The Montreal Telegraph Co. was incorporated by the Legislature of Canada in 1847, to build lines in Canada and the U.S. Its lines are maintained and operated by the G.N.W.T. Co. under a lease for 97 years, from July 1, 1881. Its capital stock, authorized and issued, is \$2,000,000. Dividends of 8% are paid under guarantee from the G.N.W.T. and the W.U. companies.

The Dominion Telegraph Co. was organ-

ized in 1868, and its lines are leased for 99 years, from July 1, 1879, to the W.U.C., which sublets the lines west of Moncton, N.B., to the G.N.W.T. Co., and operates those in N.B., east of Moncton and in Nova Scotia, under its own name. Its capital authorized and paid is \$1,000,000. Dividends of 6% a year are paid quarterly, the rental paid by the W.U. under the lease being equivalent to the dividends.

The Great North Western Telegraph Co. of Canada was incorporated by the Dominion Parliament in 1880, one of its principal promoters being E. P. Leacock, an Englishman, who a year previously went from Ontario to Manitoba, where he had a meteoric career as a real estate speculator, member of the Legislature, etc., for a few years, after which he returned to England. He interested a number of Winnipeg and Toronto people in the project, and one of the incorporators was the late Hon. John Norquay, then Premier of Manitoba.

Following is a copy of the original notice of application for incorporation of the company which appeared in the Canada Gazette:

"Notice is hereby given that an application will be made to the Parliament of Canada at its next session for an act to incorporate the Great Western Telegraph Co. of Canada and to confer on such company corporate rights with powers to build, lease and purchase lines, and to maintain lines for others, and to carry on the business of telegraphing in the provinces of Manitoba, British Columbia and Ontario, the district of Keewayden, the Northwest Territories and elsewhere, with power to amalgamate with any other company or companies.

"Acton Burrows, agent for applicants.

"Winnipeg, Dec. 3, 1879."

It was subsequently decided to change the name to the Great North Western Telegraph Co. of Canada, and the act of incorporation was passed accordingly.

The company, which had its first headquarters in Winnipeg, built and operated a few local lines in Manitoba. Its act of incorporation was a comprehensive one, giving very wide powers, and in 1881, when the Western Union wanted to amalgamate the Montreal and Dominion Telegraph Companies' properties, it bought out the G.N.W.T. Co.'s shareholders' interests and acquired the charter. Its operations hitherto have been confined to New Brunswick, Quebec and Ontario, with a small mileage in Manitoba connecting with the W.U. lines at the International Boundary, and also a small mileage at different points near the border in the United States.

The Canadian Northern Telegraph Co., a subsidiary of the Canadian Northern Ry. Co., was organized June 30, 1902. It has an issue of \$800,000 first mortgage bonds and \$500,000 common stock. Its operations follow more or less closely the C.N.R. lines in Ontario, Manitoba, Saskatchewan and Alberta.

Following are statistics of the merged companies as at June 30, 1913:—

	Great North Western.	Canadian Northern
Capital stock .....	\$500,000.00	\$500,000.00
Funded debt .....	.....	\$800,000.00
Revenue from operation .....	\$1,244,302.67	\$276,739.70
Operating expenses ..	\$911,884.98	\$141,742.68
Net earnings ...	\$332,417.69	\$134,997.02
Pole mileage .....	9,409.00	5,013.10
Wire mileage .....	32,858.00	16,343.50
No. of land messages ..	4,225,219	554,393
No. of cablegrams ...	301,147	1,970
No. of operators .....	1,632	46
Other officers and employees .....	375	127
Salaries and wages ..	\$546,382.82	\$105,993.31

Inverness Ry. and Coal Co.'s October statement is the best since war was declared. The production was 26,140 tons of coal, against 27,520 in October, 1913.

### National Transcontinental Railway Construction.

The Minister of Railways made an inspection of the N.T.R. from Quebec to Lake Superior Jct., Ont., early in December. The section of the line from Moncton to Levis is being operated under the Canadian Government Railway's management, and the section between Lake Superior Jct. and Winnipeg is being operated by the G.T. Pacific Ry., under an arrangement with the Department. The intervening mileage from Quebec to Lake Superior Jct. is practically completed, and local services are being given over the various sections. It is expected that arrangements will be completed for the operation of through traffic in the spring. (Dec., 1914, pg. 548.)

### Grand Trunk Pacific Railway Construction.

We are officially advised that during 1914 grading was practically confined to the main line, and even this was completed by the spring of the year. Tracklaying was continued on the main line and several of the branches, and in all about 190 miles were laid, exclusive of second track, sidings, ballast pits, etc. A short resurvey of a portion of the Wattsvie Boundary Branch was made.

**Main Line.**—The entire grade was completed in the early part of the year. Track was laid westerly from mile 1265 to 1374. On April 7 connection was made with track laid easterly from mile 324 east of Prince Rupert to mile 372. The entire line was also ballasted, and is in operation throughout. The grading for Prince Rupert terminals has been practically completed, and the construction of roundhouse and divisional point facilities is under way at Prince George, Endako, Smithers and Pacific. The divisional point at McBride has been installed with a very modern equipment. This completes the terminals on the line, with the exception of Prince Rupert, for which immediate plans are under consideration. Fuel oil facilities in lieu of coal are being prepared for at the divisional points in British Columbia. The following steel bridges were completed during the year:—  
Little Shuswap crossing, mile 1101—one span.  
3rd crossing Fraser River, mile 1231—950 ft.  
Willow River, mile 1262—450 ft.  
4th crossing Fraser River at Prince George (combination railway and highway bridge—2650 ft.)  
Mud River, mile 1292—160 ft.  
Upper Nechaco crossing, mile 1373—675 ft.  
Endako River crossing, mile 1386—one span.  
Endako River crossing, mile 1403—one span.  
Bulkley River crossing, mile 1481—one span.  
Bulkley River crossing, mile 1486—350 ft.  
Also 12 bridges each consisting of one span over fast mountain streams running into the Skeena River east of Prince Rupert.

**Harte-Brandon Branch**—Length 25 miles. No work was done during the year. Grading is completed to mile 21.85. The substructure for the steel bridge, consisting of two spans (450 ft.) was completed, but steel not yet erected, although on the ground.

**Talmage-Weyburn Branch**—Length 15 miles. Track was laid during the year, and the branch put in operation.

**Prince Albert Branch**—Length 111.5 miles. Grade is completed throughout, and track laid to mile 87.2, this being at the southern approach to the bridge over the South Saskatchewan River, which will be 1,200 ft. long and will consist of six spans. The substructure has recently been completed, ready for erection of steel. The branch is in operation to mile 87.2.

**Cutknife Branch**—Length 50 miles. Tracklaying was completed from mile 33

during the year. The line is in operation from mile 0 to 33.

**Moose Jaw North West Branch**—Length 67.86 miles. This branch is completed for 67 miles northwest of Moose Jaw and is in operation. A steel under crossing with the C.P.R. at the western boundary of Moose Jaw was built during the year.

The question of the terminals in Moose Jaw, Sask., came before the Board of Railway Commissioners, Dec. 11, when an extension of time was granted for the deposit of plans for the laying out of the exhibition ground site for terminal purposes. This site is being acquired from the city upon liberal terms.

The Board also had before it on the same day the question of spur tracks to the government grain elevator at Moose Jaw. The C.P.R. is the only line at present connected with the elevator, and plans were submitted showing a spur which would enable the G.T.P.R. and the Canadian Northern Ry. to have connection. The commissioners took the plans under consideration.

A contract has been let to Nettleton-Bruce-Eshbach Co., Seattle, Wash., for the erection of a dock at Seattle, to replace the one destroyed by fire, June 30, 1914. A full description of it is given in the Marine Department, further on in this issue. (Dec., 1913, pg. 548.)

## Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East

The following figures have been compiled by the Trade and Commerce Departments, from official reports received by it:—

Week ended Dec. 17, 1914.					
	Wheat.	Oats.	Barley.	Flax.	Totals.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.

*Grain afloat in vessels. †Corn.					

**Kettle Valley Lines.**—Press reports state that construction is so far advanced that it is expected to have the line ready for operation through to the Fraser River, where connection will be made with the C.P.R., by the end of next summer. (Dec., 1914, pg. 544.)

**The Intercolonial Ry. Efficiency Association** of Cape Breton has been formed by I.R.C. employees in that portion of Nova Scotia, its officers being W. A. Fitch, Assistant Superintendent, Sydney, President; A. S. Prowse, Vice President; D. McGillivray, Secretary; R. J. McNeil, C. Scothorn, N.

McKinnon and N. Johnston, executive committee.

**Grain and Dried Beans Tariffs on Michigan Central Rd.**—The Interstate Commerce Commission has decided that increased rates on dried beans and grain from points on the Detroit and Mackinac Ry., to points on the Michigan Central Rd. and its connections, which would result from the cancellation by the M.C.R. of transit rules and charges applicable to such traffic, are not justified.

## Veneered Steel Interior Finish for Passenger Cars on the Canadian Pacific Railway.

A suitable interior finish for passenger cars has been one of the problems which railways and car builders have been endeavoring to solve for some time and more especially since the advent of steel car construction. A suitable finish should in a general way possess the following qualities: Lightness, strength, durability, pleasing to the eye, poor conductor of heat, occupy a

very cold and noisy, and corrodes on the unexposed side.

It seems that the question of a suitable interior finish has been solved by the C.P.R. use of veneered steel. The veneer is of varying dimensions, from 1-18th of an inch up, depending on the severity of service which is governed by the location in car and class of car.

deteriorate and is now in service on about 60 cars and its use has been arranged for on dining, sleeping, and all passenger carrying cars.

In the construction of doors, bulkheads, panels, etc., the veneer is used on each side of the steel and in this way oak can be used on one side and mahogany on the other, or any other class of wood that is desired.

In the accompanying illustration, all of the wood in sight in the bulkhead, smoking room partition, etc., is of thin veneer, except the casings for the door frame and the moulding. This veneered steel finish is the

Mahogany Veneered Steel Bulkhead on C.P.R. Cars.

Mahogany Veneered Steel End Door.

minimum of space and be fire resisting.

An all wood interior finish is bulky, and does not seem to be in harmony with modern car construction. While it is possible by using great care to make a clever imitation of wood by using steel interior finish, the mere fact that wood is imitated would seem to indicate that it is the desirable finish, but with the use of steel there are many disadvantages that do not seem to be much nearer solution than when steel was first used. The steel surface is often wavy, even when new, particularly on flat surfaces, it is easily dented and the dents or buckles cannot be easily removed. It is

This veneered steel is used in the construction of doors, panels, wainscot, bulkheads, sleeping car berths, sleeping car seat ends, etc., and is of approximately the same cost as steel or wood. It is claimed that it has the insulating effect of wood, is not subject to corrosion the same as steel alone, does not splinter in wrecks, is fire resisting and can be made attractive to the extent that one cares to go into the use of beautiful veneers, and that it combines all the good points of wood and steel with none of the disadvantages of either. It is not an experiment, as it has been used sufficiently long to know that it does not

invention of R. W. Burnett, General Master Car Builder, C.P.R., Montreal.

**C.P.R. Montreal-Chicago Service.**—The C. P.R., on Dec. 14, started the operation of its through trains between Montreal and Chicago, over the Lake Shore route east of Toronto, which became available with the opening of the Campbellford, Lake Ontario and Western Ry. Sir Thos. G. Shaughnessy and a party of directors, made a trip over the line the same day.

An all steel caboose has been built by the Pennsylvania Rd., and is being tried experimentally on various divisions.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C. E.,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editor - JOHN KEIR  
Associate Editor - DONALD F. KEIR  
Mechanical Editor - FREDERICK H. MOODY, B.A.Sc.

Canadian Business Representative - W. H. HEWITT  
70 Bond Street, Toronto

United States Business Representative, A. FENTON WALKER  
143 Liberty Street, New York, N.Y.

European Business Representative - J. MEREDITH MCKIM  
3 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class matter.

Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the Act  
of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage  
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## Steam Railway Track Laid in 1914.

In pursuance of its annual practice Cana-  
dian Railway and Marine World issued cir-  
culars on Dec. 1, to all railway companies  
in Canada, asking information as to new  
track laid during 1914. The following  
table gives a preliminary statement of the  
new track laid. In a number of cases the  
figures given have been estimated either  
by the railway companies, or in our own  
offices, pending the receipt of the final fig-  
ures for the year. Estimated figures are  
distinguished by an asterisk.

The total new single track laid during 1914,  
so far as can be ascertained and estimated,  
is 2,088.09 miles. This is less by 1,180.46  
miles than the final corrected total mileage  
of track laid in 1913, and less by 141.38  
miles than the corrected figures of track  
laid in 1912. This is entirely to be account-  
ed for by the fact that the National Trans-  
continental Ry. and the Grand Trunk Paci-  
fic Ry. main line from Moncton, N.B., to  
Prince Rupert, B.C., 3,552 miles, have been  
completed, and that the only big trunk line  
construction in progress is the Canadian  
Northern Ry., which is now practically  
completed across the continent. The con-  
struction of branch lines by the C.P.R., the  
Canadian Northern Ry., and the G.T. Pacific  
Ry. maintains the average of recent years.  
Outside these lines the largest construction  
in progress are the lines under construc-  
tion largely on the initiative of the British  
Columbia and Alberta Governments, which  
are to be operated under agreements with  
the G.T. Pacific Ry. These are the Pacific  
Great Eastern Ry., from Vancouver to the  
B.C.-Alberta boundary; the Edmonton, Dun-  
vegan and British Columbia Ry., from Ed-  
monton to a junction with the last railway;  
the Alberta and Great Waterways Ry., and  
the Central Canada Ry. On the first three of  
these lines 351 miles of track were laid in  
1914, and 30 miles of grading is ready for  
tracklaying on the last named.

Following are the details of track laid on  
the several lines:—

	Miles.	Miles
<b>Alberta and Great Waterways Ry.</b>		
Carbondale to Lac La Biche	114.00	
<b>Canadian Northern Ontario Ry.</b>		
Between Montreal and Gren- ville	39.00	
Between Ottawa and Capreol	130.00	
		169.00
<b>Canadian Northern Ry.</b>		
Birds Hill to Pt. Grand		
Marias, Man.	50.77	
Chatfield northerly	27.08	
Laird northerly	8.67	
C. N. A. Ry., Yellowhead easterly	2.48	
C. N. Western, Stolberg- Brazeau	17.44	
		106.11
<b>Canadian Northern Pacific Ry.</b>		
Various sections between Port Mann and Yellowhead Pass, in B.C.		248.00
<b>Canadian Pacific Ry.</b>		
Quebec

Woodstock to Centreville	1.50	
		29.99
<b>Vancouver, Victoria and Eastern Ry.</b>		
Coalmount to Brooks, B.C.	25.56	
<b>Winnipeg Water District.</b>		
St. Boniface to Shoal Lake, Man.	85.00	

In connection with the figures for the Grand  
Trunk Pacific Ry., we were advised, Dec. 18,  
that track was actually laid in 1913 to mile-  
age 1,265 west of Winnipeg, and to mileage  
324 east of Prince Rupert, making 14 miles  
more than was covered in the figures pub-  
lished in our issue of Feb., 1914, as having  
been laid in 1913. The information that  
this mileage was laid was received at the  
company's office too late to be used at the  
date the figures published were supplied us.  
The track laid as reported this year, 157.3  
miles, and the 14 miles referred to, totals  
171.3 miles, which makes the difference  
between mileage 1,260 west of Winnipeg,  
and mileage 315 east of Prince Rupert, the  
points reported to have been reached in  
our report of February last.

The Great Northern Ry., during 1914, laid  
track on 23 miles of the line from Wenet-  
chee to Oroville, Wash., where it connects  
with one of the U.S. links of the Van-  
couver, Victoria and Eastern Ry. The re-  
maining 112.88 miles of the line were laid  
in 1912 and 1913.

The Reid Newfoundland Co. laid the fol-  
lowing mileage of track on its branch  
lines under construction:—Fortune Bay  
branch, 27 miles; to complete Bay-de-Verde  
branch, 6 miles; total, 33 miles.

## Index to Canadian Railway and Marine World for 1914.

At the end of this issue is a very complete  
index to the contents of the volume for 1914,  
which, as in former years, will doubtless be  
fully appreciated by the large number of  
subscribers who bind Canadian Railway and  
Marine World for reference purposes.

Even a casual glance over the six pages  
of closely printed matter will show the tre-  
mendous range of subjects covered and the  
thorough manner in which this paper repre-  
sents the entire transportation interests of  
the whole Dominion, steam railway, electric  
railway and marine, as well as the subsidi-  
ary express and telegraph interests, and  
railway and canal contracting work.

## Transportation Appointments Throughout Canada.

All notices under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure accuracy. Anyone who may call any error in our announcements will confer a favor by advising us.

**Canadian Northern Ry.**—J. BARBOUR has been appointed Chief Claim Agent in charge of personal injury, property damage, fire and stock claims, for Eastern Lines, reporting to L. C. Fritch, Assistant to President. Office, Toronto.

THOMAS HOWELL, Immigration Commissioner, Toronto, has resigned.

**Canadian Pacific Ry.**—GEORGE BURY, heretofore Vice President, at Winnipeg, in charge of Western Lines, has been elected a director and Vice President of the company, succeeding D. McNicoll, senior Vice President, resigned. His jurisdiction extends over the whole system.

E. W. BEATTY, heretofore General Counsel, has been appointed Vice President and General Counsel. Office, Montreal.

JAMES MANSON, heretofore Assistant to Vice President Bury at Winnipeg, will, it is stated, be his Assistant at Montreal.

C. H. BUELL, heretofore chief clerk to Vice President McNicoll, Montreal, has been appointed Staff Registrar, and in addition to acting as Secretary of the Pension Department, will have charge of the company's staff records. Office, Montreal.

B. A. POTTER, heretofore dispatcher, Woodstock, N.B., has been appointed acting Chief Dispatcher, there, vice I. B. Merriman, promoted.

I. B. MERRIMAN, heretofore Chief Dispatcher, Woodstock, N.B., has been appointed Assistant Superintendent, District 1, Atlantic Division. Office, Brownville Jct., Me.

C. A. MURDOCK, heretofore Car Inspector, Outremont, Que., has been appointed Car Foreman, Three Rivers, Que., vice R. Lilly transferred.

G. H. MCCLELLAND, heretofore Car Foreman, Ottawa, Ont., has been appointed Car Foreman, Place Viger, Montreal, vice G. H. Turner, transferred.

R. LILLY, heretofore Car Foreman, Three Rivers, Que., has been appointed Night Car Foreman, Place Viger, Montreal, vice E. Minshell, assigned to other duties.

G. H. TURNER, heretofore Car Foreman, Place Viger, Montreal, has been appointed Assistant Car Foreman, Outremont, Que., vice R. D. C. Weldon, transferred.

R. D. C. WELDON, heretofore Assistant Car Foreman, Outremont, Que., has been appointed Car Foreman, Sortin Yard, Montreal, vice M. I. Miller, assigned to other duties.

S. GORDON has been appointed Foreman Locomotive Store Orders, Angus Shops Montreal, vice F. G. Goddard.

A. KEYWORTH, heretofore Assistant Foreman, Ottawa, Ont., has been appointed Night Foreman, there, vice H. Hymers, assigned to other duties.

T. G. GALLAGHER, heretofore a fitter, has been appointed Assistant Foreman, Ottawa, Ont., vice A. Keyworth, promoted.

GRANT HALL, heretofore General Manager, Western Lines, has been appointed Vice President and General Manager, vice George Bury, whose new appointment is referred to above. He reports to Mr. Bury.

D'ALTON C. COLEMAN, heretofore General Superintendent, Alberta Division, Calgary, has been appointed Assistant General Manager, Western Lines. Office, Winnipeg.

C. E. STOCKDILL, heretofore chief clerk to Vice President, has been appointed Assistant to the Vice President and General Manager. Office, Winnipeg.

J. A. DeWOLFE, heretofore chief clerk, Engineering Department, has been appointed chief clerk to Vice President and General Manager. Office, Winnipeg.

A. HALKETT, heretofore Trainmaster, Moose Jaw Terminals, has been appointed Superintendent, District 1, Manitoba Division, vice W. A. Mather, transferred. Office, Kenora, Ont.

E. ASHWORTH, heretofore Storekeeper, Minnedosa, Man., has been appointed night clerk, Winnipeg.

T. W. COOKE has been appointed Storekeeper and Timekeeper, Minnedosa, Man., vice E. Ashworth, Storekeeper, transferred.

H. A. SEWELL has been appointed Storekeeper, Broadview, Sask., vice P. J. Murphy, transferred.

A. F. HAWKINS, heretofore Trainmaster, District 1, Alberta Division, Medicine Hat, has been appointed Trainmaster, Moose Jaw Terminals, vice A. Halkett, promoted.

P364 D'Alton C. Coleman,  
Assistant General Manager, Western Lines,  
Canadian Pacific Railway.

F. REID, heretofore charge hand, has been appointed Car Foreman, Weyburn Sask., vice C. H. Zerbach, dismissed.

J. M. COLES has been appointed Storekeeper, Swift Current, Sask., temporarily, vice G. O. Jackson, who has enlisted for active military service.

J. B. A. DESALEUX, heretofore Storekeeper, Wilkie, Sask., has been appointed Storekeeper, Assiniboia, Sask., and his former position has been abolished.

A. E. STEVENS, heretofore Assistant General Superintendent, British Columbia Division, Vancouver, has been appointed General Superintendent Alberta Division, vice D'Alton C. Coleman, promoted. Office, Calgary.

A. MALLINSON, heretofore District Master Mechanic, Cranbrook, B.C., has returned to Ogden shops, Calgary, Alta., as machinist.

W. A. MATHER, heretofore Superintendent, District 1, Manitoba Division, Kenora, Ont., has been appointed Superintendent, District 1, Alberta Division, vice J. M. Cameron, promoted. Office, Medicine Hat.

J. N. MURPHY, heretofore engineer on construction, has been appointed Trainmas-

ter, District 1, Alberta Division, vice A. F. Hawkins, transferred. Office, Medicine Hat.

G. M. LANG has been appointed Roadmaster in charge of Coronation Subdivision, vice W. E. Lissiman. Office, Coronation, Alta.

P. J. MURPHY, heretofore Storekeeper, Broadview, Man., has been appointed Storekeeper, Crowsnest, B.C., vice E. J. Burke who has left the service.

W. J. MANLEY, heretofore Chief Dispatcher, Lethbridge, Alta., has been appointed Chief Dispatcher, Cranbrook, B.C., vice W. E. Cline.

W. McINNIS, heretofore General Yardmaster, Vancouver, B.C., has been appointed Yardmaster, Kamloops, B.C.

A. P. HUNTER has been appointed Storekeeper, Coquitlam, B.C., vice C. Bradley, resigned.

J. EDWARDS, heretofore Night Yardmaster, Coquitlam, B.C., has been appointed Yardmaster, there, vice D. Nicks, promoted.

D. NICKS, heretofore Yardmaster, Coquitlam, B.C., has been appointed General Yardmaster, Vancouver and Coquitlam, B.C.

J. M. CAMERON, heretofore Superintendent, District 1, Alberta Division, Medicine Hat, has been appointed Assistant General Superintendent, British Columbia Division, vice A. E. Stevens, promoted. Office, Vancouver.

E. RALSTON, heretofore Assistant Yardmaster, Vancouver, B.C., has been appointed Yardmaster, there, and his former position has been abolished.

**Canada Steamship Lines, Ltd.**—See under "Changes in Organization, Canada Steamship Lines, Ltd.," in Marine Department on page 34.

**Central Vermont Ry.**—W. GILLESPIE heretofore Master Car Builder, has been appointed Mechanical Superintendent in charge of Motive Power and Car Departments, reporting to the President, and his former position has been abolished. The position of Superintendent of Motive Power and Master Mechanic, heretofore held by T. A. Summerskill and J. E. Fitzsimons, respectively, have also been abolished, and the holders have been assigned to other duties. Office, St. Albans, Vt.

J. DUGUID has been appointed Assistant Mechanical Superintendent (Motive Power Department). Office, St. Albans, Vt.

J. E. MAUN has been appointed acting Assistant Superintendent, Montpelier, Barre and Williamstown Lines including Montpelier Jct., in charge of transportation. Office, Montpelier, Vt.

**Erie Rd.**—S. J. SHARP, who has been appointed Canadian Passenger Agent, at Toronto, as announced in our last issue, has been assigned the Province of Ontario as territory.

**Grand Trunk Pacific Ry.**—E. HACKING, heretofore General Car Foreman on the line, has been appointed General Foreman, Transcona Shops, Man., vice L. E. Burnsville, resigned to enter other service.

W. MILLS has been appointed General Car Foreman on the line, vice E. Hacking promoted.

G. I. ROOT has been appointed Inspector of Track, with jurisdiction from Fort William, Ont., to Prince Rupert, B.C., including branch lines.

The following station agents have been appointed,—Juniata, Sask., F. H. Keefe; Reford, Sask., E. D. Young; Ryley, Alta., G. S. Bass; Stoney Plain, Alta.; J. W. McCulla; Three Hills, Alta., J. R. McKeegan.

**Grand Trunk Ry.**—The Freight Claim Agent's office has been placed under the jurisdiction of the Controller, W. H. ARDLEY. All loss and damage claims and correspondence relating thereto, should, as heretofore, be addressed to the Freight Claim Agent, E. ARNOLD, Montreal.

J. W. CROOKS, heretofore in Michigan Central Rd. service, has been appointed Night Yardmaster, London, Ont., vice J. Munnings.

F. W. WARREN, heretofore Locomotive Foreman, Coteau, Que., is reported to have been appointed Locomotive Foreman, Southwark, Montreal, vice D. Ross, transferred to Western Lines.

ANGUS GORDON, formerly Assistant Manager, King Edward Hotel, Toronto, has been appointed Manager, Chateau Laurier, Ottawa.

E. S. COOPER has been appointed Trainmaster, District 5, Belleville Division, Eastern Lines, vice W. J. Nixon, assigned to other duties. Office, Montreal. Brockville station and yard will hereafter be under the jurisdiction of the Trainmaster of District 6.

M. LEINWEBER, heretofore in the Bridge and Building Department, has been appointed Bridge and Building Foreman, Stratford, Ont., vice F. J. Holman, retired under pension rules.

JOHN A. FICKEL has been appointed Car Foreman, Fort Erie, Ont., vice D. C. Messeroll, assigned to other duties.

D. C. MESSEROLL, heretofore Car Foreman, Fort Erie, Ont., has been appointed General Travelling Car Inspector, Ontario Lines, and including Districts 8, 9 and 10 Eastern Lines, vice T. Rogers, retired under pension rules. Office, London, Ont.

The following station agents have been appointed,—Uthoff, Ont., J. A. Payne; Beamsville, Ont., J. Butler; Burgessville, Ont., C. W. Vail; Rose Point, Ont., C. Arnold; Suspension Bridge, N.Y., J. S. Chenial; outside agencies,—Montreal, M. O. Dafoe; Sherbrooke, Que., C. A. Harrison.

**Hudson Bay Ry.** (Dominion Government).—J. W. PORTER'S title has been changed from acting Chief Engineer to Chief Engineer. Office, Winnipeg.

**Intercolonial Ry.**—M. F. TOMPKINS, heretofore Chief Clerk, Division Freight Agent's Office, Halifax, N.S., has been appointed Division Freight Agent, there, vice A. E. Wilkinson, deceased.

C. L. BURGESS, heretofore clerk to Mechanical Foreman, Gibson, N.B., has been appointed Storekeeper there, vice F. Dunbar.

**Lehigh Valley Rd.**—C. S. LEE, heretofore General Passenger Agent, has been appointed Passenger Traffic Manager. Office, New York, N.Y.

GEO. W. HAY, heretofore General Baggage Agent and District Passenger Agent, South Bethlehem, Pa., has been appointed General Passenger Agent, Office, New York, N.Y.

A. J. SIMMONS, heretofore General Eastern Passenger Agent, New York, has been appointed Assistant General Passenger Agent. Office, 1460 Broadway, New York, N.Y.

P. S. MILLSAUGH, heretofore General Agent Passenger Department, Ithaca, N.Y., has been appointed Assistant General Passenger Agent. Office, 369 Main St., Buffalo, N.Y.

W. B. WHEELER, heretofore General Western Passenger Agent, Buffalo, N.Y., has resigned and has been appointed General Agent, Passenger Department, United Fruit Co., at Havana, Cuba.

**Railways and Canals Department.**—L. K. JONES, I.S.O., heretofore Assistant Deputy Minister and Secretary, has been appointed Assistant Deputy Minister.

J. W. PUGSLEY, heretofore Assistant Secretary, has been appointed Secretary.

**Toronto, Hamilton and Buffalo, Ry.**—The position of Auditor of Freight Accounts and Freight Claim Agent, heretofore held by Thos. Eedson, now deceased, has been divided, and A. S. DUTTON has been appointed Auditor of Freight Accounts, and J.

M. EEDSON has been appointed Freight Claim Agent. Offices, Detroit, Mich.

**White Pass and Yukon Route.**—F. C. ELLIOTT has been elected President, vice O. L. Dickeson, resigned. Office, Chicago, Ill.

H. WHEELER, heretofore Superintendent River Division, White Horse, Yukon, has been appointed General Manager. Office White Horse, Yukon.

A. F. ZIPF has been appointed Traffic Manager, vice J. E. Dempsey. Office, Seattle, Wash.

### Canadian Northern Railway Construction, Betterments, Etc.

**Montreal, Ottawa, Port Arthur Line.**—It was expected to connect up the several sections of this line by Dec. 31, with the exception of two or three steel bridges, which are not completed. The section of the line from North Bay to Capreol is being operated under a temporary order of the Board of Railway Commissioners, which will run to July, by which time it is expected that the ballasting, etc., on the line between Montreal and North Bay will be completed. The remainder of the line from Capreol to Port Arthur is fully completed, and is being partially operated.

The Canadian Northern Ontario Ry. is applying to the Dominion Parliament for the confirmation of an agreement with the Campbellford, Lake Ontario and Western Ry. (C.P.R.) respecting joint terminals at Belleville, Ont., and also respecting joint tracks and terminals at Orillia, Ont.

The Dominion Parliament is being asked to confirm an agreement made between the company and the C.P.R. respecting the use of joint terminals in North Toronto.

**Canadian Northern Ry.**—The ratepayers of Port Arthur, Ont., will vote on Jan. 1, on a bylaw confirming an agreement made between the City Council and the C.N.R., Nov. 14, adjusting certain differences between the parties respecting terminals. The city agrees to convey to the C.N.R. portions of streets and broken fronts of streets near the water's edge, and to release its interest in certain water lots, and to convey to the C.N.R., its interest in the original road allowance along the water's edge from Arthur St. to the north limit of William St., except a small section of the same which is to be conveyed by the C.N.R. to the city, and to aid the company in obtaining the withdrawal of certain registered plans affecting the streets in question. The C.N.R. agrees to hand over to the city a certain piece of land specifically described, subject to the restrictions that other railway than the C. N.R. is to be permitted to run spur tracks over it, and that the property is not to be leased or sold to any competing railway, but it is to be understood that boats belonging to competing railways may use the dock or the property. Pending the reconstruction of the dock a specific means of access is provided for. The company is also to pay the damages to property by the closing of the streets and to convey to the city a right of way to the present government elevator and certain other rights of way.

Contracts are reported let along the route of the Port Arthur and Duluth Ry., and in the Rainy River District for 250,000 ties.

The Dominion Parliament is being asked to confirm an agreement between the C.N.R. and the G. T. Pacific Ry., for the establishment, control and operation of joint terminals at Edmonton, Alta.

**Canadian Northern Pacific Ry.**—It was reported in Vancouver, Dec. 3, that there remained about 105 miles of track to be laid to connect up the various sections of the line between Port Mann and the Albrecht

Summit, which is the section of the line being built under the Vancouver staff's charge. While the staff looked forward to completing the work early in January it is not unlikely that there will be some delay, as at least two cargoes of rails have been detained on account of the war, and a steamship carrying another cargo went ashore in the Magellan Straits.

Work on the bulkhead at the site of the False Creek terminals, Vancouver, is reported to be progressing satisfactorily. About 1,100,000 cu. yds. of material have already been deposited behind the bulkhead, out of the 3,250,000 necessary to fill in the area to be developed.

### Railway Features in the City Planning Problem at Ottawa.

An illustrated address on the city planning problem of Ottawa, with special reference to the railway features, was delivered by C. N. Cauchon, of Ottawa, before the Canadian Society of Civil Engineers, Toronto branch, Dec. 7. The scheme proposed is the abandonment of the present Rideau Canal through Ottawa, diverting it through a new route which would enter the Ottawa River below, and to the east of the city. At the point where it would enter the river, a large industrial area could be developed, which, in conjunction with a deep water harbor in still water, formed by throwing a dike across from the shore to Duck Island, would form the principal portion of the scheme. As it is said that the prevailing winds are from the west, it is claimed that the smoke from this area would blow away from the city. It is proposed to utilize the present canal prism as a traffic thoroughfare through the central part of the city. Connecting with this new area, there is proposed a common line for all the railways, leading into the area from the east, to the row of docks, along the front. All the lines from the east would enter over this line, crossing the Rideau River on a high level bridge, eliminating all the level crossings. This would eliminate many of the railway lines that now cut through the city, the idea being to utilize some of these rights of way as arterial highways. From a central station at the site of the present central station, the line would proceed through a tunnel to the western exit, to the Broad St. station, the various railways all leaving the city over a common line.

### Great Lakes Vessel Classification.

Marine Engineering of Canada, Toronto, says: "We are pleased to be able to state that to Acton Burrows, proprietor and Editor-in-Chief of Canadian Railway and Marine World, is due the credit for having initiated the discussion on Great Lakes vessel classification, which has appeared in the columns of several old country shipping journals, and from which subscribers have had the benefit of the opinions expressed in our last two issues. We have just passed the anniversary date of the great storm which sent so many of our lake craft, with their crews, to destruction and a watery grave, and therefore again brought to the front this classification question."

It may be added that the letter on the above subject from J. M. Smith, ex-Manager of the Collingwood Shipbuilding Co., which was first published in Canadian Railway and Marine World, and subsequently reproduced in a number of other publications in Canada, Great Britain, and the United States, was written in response to a request from Canadian Railway and Marine World's Editor-in-Chief.

# Electric Railway Department

## All Steel Motor and Trailer Cars for London and Port Stanley Railway.

Canadian Railway and Marine World for November published particulars of the electrical equipment for the London and Port Stanley Ry., and, in the December issue, of orders given for 3 electric locomotives and for the electrical equipment for 5 motor cars and 4 trailers. Specifications were prepared subsequently for the bodies for the motor cars and trailers by the Hydro Electric Power Commission of Ontario's engineering staff, acting for the city of London, which owns the line, and tenders were received early in December. While the work of electrification is going on, the line is still being operated by steam by the Pere Marquette Rd., which has it under lease.

The initial car installation will comprise five motor cars and four trailers, both sets identical in structural details, differing only in the motor equipment. They will

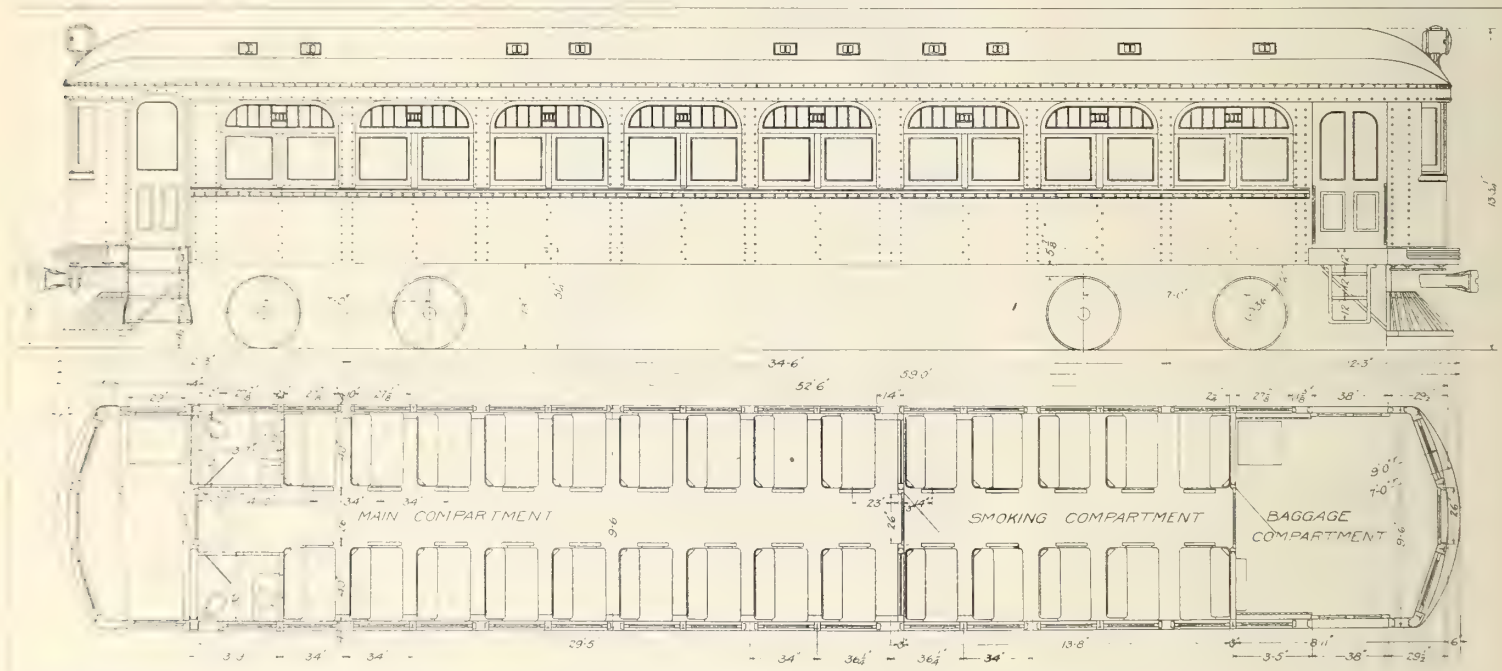

estimated as follows:—

	Motor.	Trailer.
Car body, complete as above...	38,320	38,320
Control equipment .....	9,500	1,856
Air brake equipment .....	2,220	805
Four motors complete at 4,000 lbs. ....	16,000	....
Two 7 ft. wheel base trucks with 36 in. steel wheels .....	26,880	24,080
Total weight in lbs. ....	92,920	65,061

The entire frame of the cars will be of structural steel shapes and plates, with the centre and side sills continuous. The centre sill will consist of two 7 in. 15 lb. I beams at 20 in. centres, with a 3-16 in. cover plate, 24 ins. wide, extending between the diagonal tie plate in each panel. Centrally in each panel there will be a 3-16 in. plate, 9 by 24 ins., on the under side of the centre sill. The side sills will be composite members, with a 6 by 4 by 3-8 in. 12.3 lb. angle as a base. To the

ing to the side angle depth, and will consist of 3-16 in. steel pressings both between the centre sill I beams and between the latter and the side sill angles, flanged to a channel section. At the centre, these will be tied to the centre sill by 3-16 by 12 by 42 in. top plates. Diagonally between these tie plates in each panel there will be two 3 by 3 in. 4.9 lb. angles.

The body end sill will consist of a central 3-16 in. steel pressing between the centre sill I beams, which will extend to the buffer plates, outside of which there are to be two steel castings fitting between the I beams and a 6 in. 10.5 channel 26 ins. from the centre, which will form the end panels diagonal, passing alongside this casting to the end buffer. The top and bottom members of the end sills will be a 4 in. 6.25 lb. channel, the upper one on top of a 1-8 in. plate, 24 ins. wide, the width of the car.

Plan and Elevation of All Steel Motor and Trailer Cars for London and Port Stanley Railway.

be of an all steel construction, of a design approaching that in use for heavy steam railway service, and have been developed as the result of extensive study of existing equipment, profiting by the experience of lines that have had steel equipment in use for years. The general dimensions of the bodies are as follows:—

Length over all .....	59 ft.
Length over end vestibules .....	58 ft.
Length over end of car body .....	48 ft.
Width over all .....	9 ft. 6 ins.
Width over sheathing .....	9 ft. 6 ins.
Width over platform floor, including .....	9 ft. 5 ins.
Height from rail to top of roof, car light .....	13 ft. 5½ ins.
Height from under side of sills to top of roof, car light .....	9 ft. 10¼ ins.
Height from top of rail to top of platform .....	4 ft. 3¾ ins.

The weight of the car body, including heating equipment, seats, light foundations, brake rigging, draught gear, including supports, ready for the installation of the control equipment and air brakes, has been

vertical flange of this angle there will be 1-8 in. steel side plate, 36¾ ins. deep, at the top of which, on the inside, there will be a 1½ by 2 in. 2.77 lb. angle, and on the outside a 3-8 by 3½ in. steel plate, this latter, with the angle and top of the side plate, forming the top section of the side sill girder.

The truck centres will be 34½ ft. The body bolster above the trucks will be 12 ins. deep at the centre, tapering to the depth of the side sill angle at the side. Between the centre sills there will be a 3-16 in. steel pressing, with similar pressings forming the web of the bolster outside the centre sills. Under the centre sills there will be a steel casting for the centre pin connection. A 3-8 by 14 in. steel plate will form the top plate of the body bolster, with a 5-8 by 14 in. steel plate for the bottom plate.

The intermediate space between the bolsters will be divided into six panels by five cross bearers. These cross bearers are to be the same depth as the centre sill, taper-

The buffer will consist of a 7 in. 12.25 lb. channel, bent on a 7 ft. radius, with a cross 6 in. 10.5 lb. channel joining the curved ends. A 1-8 in. plate will cover this end form, being attached to the centre sill I beams and channel braces, the latter carrying the buffer stresses through to the body side sills.

The corner posts will be 4 by 4 by 3-8 in. 9.8 lb. angles. The main side posts will be 3 in. 4 lb. channels, all but the end ones being arranged in pairs at 8½ ins. These pairs are to be placed on each side of the body bolster and cross bearer centres. Intermediate to these, there are to be 2 by 2 by ¼ in. 3.56 lb. tees. Between the pairs of channel side posts at the centre of the car, and at the bolsters, there are to be ¼ in. pressed steel fillers, each side of which will be a diagonal brace, that at the centre of ¼ by 3 in. steel, and at the bolsters of 1 by 4 in. steel. There will be two vestibule posts of 3 in. 4 lb. channels on each side, with four 2½ by 2½ in. 10.5 lb. tees around the end on a 9 ft. radius. The

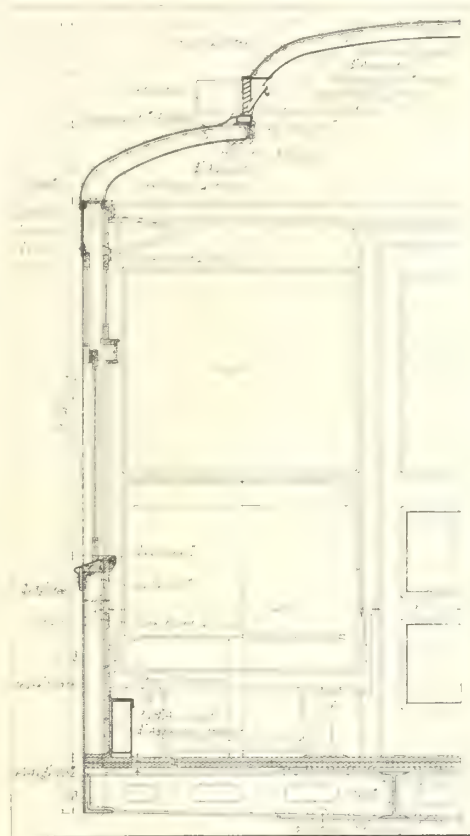

side sheathing of the body will form the main part of the side sill girder, and is to be of 1-8 in. plating, while around the vestibule it is to be of 1-16 in. sheeting.

The top side member will consist of a 3 in. 4 lb. channel, attached to a 1-8 by 8½ in. steel plate, along the inner lower edge of which there is to be a ¾ by 1 in. 1 lb. angle. The roof will be of the compromise deck monitor type, with the deck carlines of no. 14 steel pressing, carried in from the top of the top side channel to a longitudinal 2½ by 2½ in. 5.9 lb. angle, from the top of which the central carline spans of similar pressings to the side carlines will be carried. The roof plating will be of 1-16 in. steel, formed to the carline contour, and carried from the side top plate, which it will overlap, across the car in one stretch. All the roof joints are to be welded to present a smooth surface, with a reinforcing brace under each joint, with additional braces under the pantograph section of the roof. These carlines will be in line with the side posts, with an intermediate one in the side window spaces.

The platform, as mentioned, will be sheathed on the outside with 1-16 in. steel plating. On the inside it will be sheathed with wooden panel frames made of ash, with the windows of mahogany. It will have two drop windows, one either side of the centre, where there will be a 26 in. swinging end door. On each side of the vestibule there will be a 29 in. swinging door. The step openings will have single swing doors, swinging up against the end of the car body. There will be triple steps, of steel construction, the edges of which will be finished with brass stripping.

The inside finish of the cars is to be of the best selected inlaid mahogany, natural sanitary finish, including the doors, linings and mouldings. Rising from the floor to the underside of the window sill, which will be 2 ft. 6 ins. above the floor, there will be a wall of 7/8 in. wood. The body of

of ¼ in. plate glass laid in rubber. These sash will rest on the inner end of the outside sill section, and may be raised into a sash space in the upper part of the car wall. The upper part of the windows, both on the inside and outside of the car, will

Half Section of All Steel Cars for London and Port Stanley Railway.

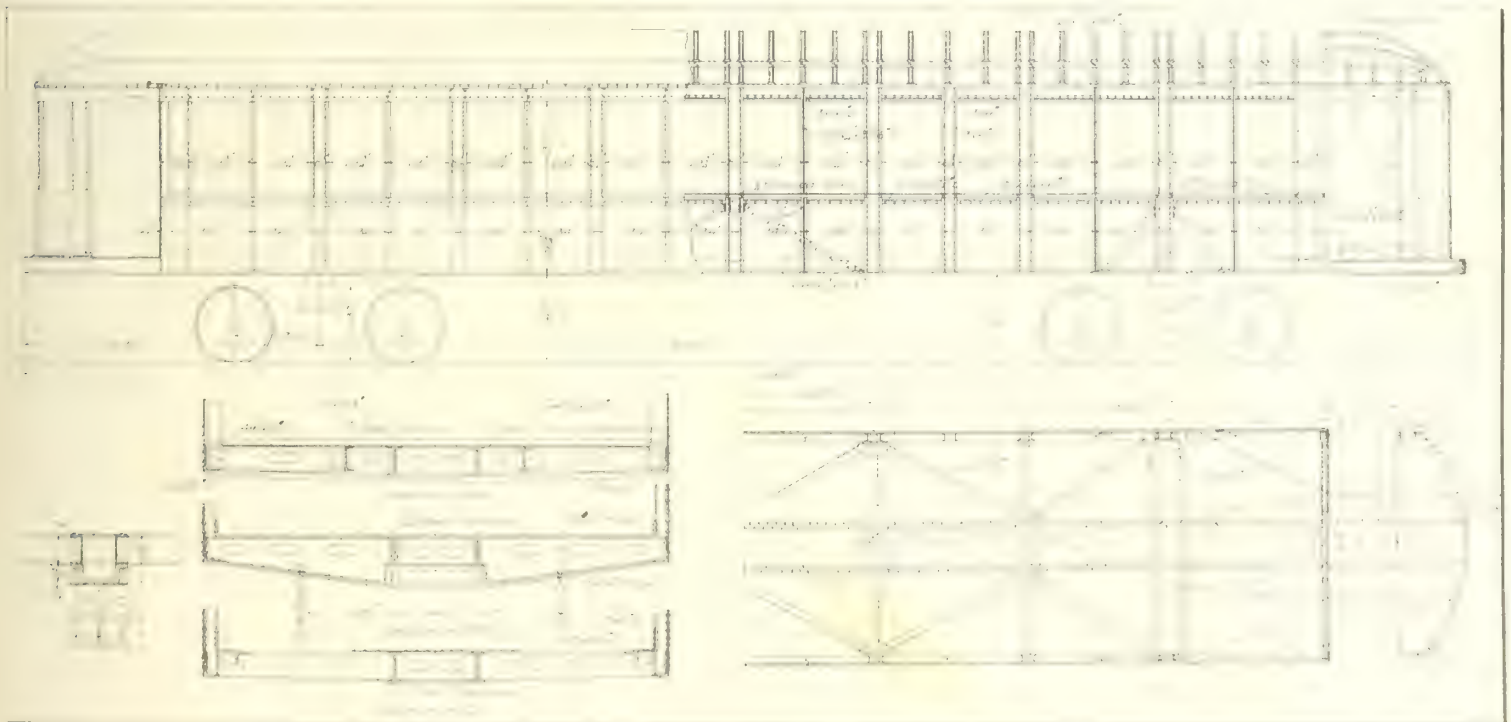

side the agasote line, is to be given a ¼ in. layer of cork paint.

The car trimmings will be of solid bronze, and will include grab handles on the body corner posts and vestibule corner posts, match scratchers between the seats in the smoking compartments, and the hinges, etc. The basket racks will be continuous, to be removable in sections, running the full length of the car, and will be of a bronze finish. The seats will be of a high back design, finished in plush for the main compartments, and in pantasote for the smoking compartments. They will be 40 ins. wide overall, with the seat 19 ins. above the floor, and the back rising to a height of 42 ins. The aisle width will be 26 ins.

The heater is to be of the hot air type, situated at one end of the car, delivering air through a 3 by 8 in. duct of ¼ in. steel along the floor line of the wall. This duct will be insulated from the wall by a ¾ in. asbestos board. The upper face of the duct will have a steel pressing for passenger foot rest. The nature of the heater has not yet been determined, but consideration has been given to one in which electricity is the heating medium, delivering the air through the ducts from a central point, the same as in a coal heater.

Each car will have two lavatories, finished in white, with a sheet steel ceiling metal, giving a tile effect, and will be fully equipped with water closet, washstand, 5 gallon water cooler, and all requisites. The water will be provided from a 50 gallon tank over top of the lavatory, under the roof. Each side of the roof will contain 10 ventilators of the deflector type, automatic in their operation. The lavatories will contain special lavatory room ventilators.

Four of the motor cars are to have the three compartment layout, while the other one, and the four trailer cars, are to have the two compartment layout. In the three compartment layout, the car end is slightly changed so as to incorporate the vestibule

Plan, Elevation and Sections of Steel Frame for All Steel Cars on London and Port Stanley Railway.

the window sill is to be a 1¾ by 2 in. 2.66 lb. angle, while the outside edge of the sill is to be a formed section of thin sheet steel.

The windows are to be in pairs, made of mahogany, and with 22½ by 24 in. windows

be supplied with opalescent cathedral glass, laid in copper. All side windows are to have pantasote curtains.

The headlining will consist of 3-16 in. agasote, secured to the inner flanges of the carlines. The underside of the car roof, in-

into the baggage compartment, 8 ft. 11 ins. long. Adjoining is the smoking compartment, 13 ft. 8 ins. long, with the main compartment 29 ft. 5 ins. long to the other vestibule. The two compartment car has the two vestibules, with the main and smoking

compartments dividing the length into two compartments.

The motor cars will have four 125 h.p. 1,500 volt d.c. motors, with complete electrical control apparatus. There will be two motors on each truck, one to each axle. Power will be brought into the car by either of two pantographs, one at each end of the car.

The lamp fixtures will consist of six clusters of five 40 watt lamps each, in inverted opalescent bowls 17 ins. diam., suspended from a bronze fixture of neat design. This will be the only car lighting. Each car

will have a headlight of requisite strength.

Each car is to be equipped with the G.E. straight and automatic air brake equipment, with signal train line connections, whistles and air gauges. There will also be a steam locomotive type pilot at each end of the car, of iron construction, and arranged to take a snow plough attachment.

We are indebted to F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, for permission to secure the foregoing data from J. G. Baukat, Mechanical Engineer, who is responsible for the design of the cars.

## Answers to Questions on Electric Railway Topics.

Following are the questions submitted to the American Electric Railway Association's question box, with replies thereto by Canadian electric railway officials:—

**Wear of Wheels.**—Can anyone give a good explanation as to why the wheels on the gear side of the axle wear much sharper and quicker than on the opposite end of the axle? Is this the prevailing condition on other roads?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., Montreal, sends a supplementary reply to the one given in our last issue, as follows:—We have completed a test on 200 wheels, taken from performance in pairs. The average useful wear, outside of metal lost by turning, shows reduction in circumference of wheels at free end of axle, of 7.14 ins., and at gear end, of 7.08 ins. What little difference there is shows that there was slightly increased wear at free end of axle. This is contrary to past experience, but we have never found the difference to be serious.

**Standing Room in Open Cars.**—Are passengers permitted to stand on the running board and between seats of open cars, or to sit on the front seat directly behind the motorman? Give arguments pro and con.

F. L. Hubbard, Assistant to General Manager, Toronto Ry., Toronto.—It is contrary to law for passengers to stand on the running board of open cars, or on the steps of any car for a longer time than is necessary to enter or leave the car. Passengers are permitted to stand between the seats in the body of the car, or on the rear platform, but are not permitted to stand on the front platform of open cars. In our open cars half of the seats face forward and the other half backward, so that there is space enough between for one row of standing passengers. Male passengers are permitted to sit on the front seat directly behind the motorman, but not women and children. We consider it advantageous not to have passengers standing on the side steps. First, because it makes for safer and more efficient operation, and secondly, because it gives the conductor a better chance to collect the fares. On account of women and children becoming frightened at the blowing out of a hood switch, and also because of the tendency of their presence to distract the attention of the motorman from his duties, we believe it is in the interests of safety first to allow none but male passengers to ride on the front seat of open cars. No standing is allowed on the front platform because it interferes with the motorman.

**Car Cleaning.**—Is car cleaning done under supervision of transportation or mechanical department? What is the average daily cost per car operated for labor and material for car cleaning?

F. L. Hubbard, Assistant to General Manager, Toronto Ry., Toronto.—Car cleaning is done under the supervision of the transportation department, all cars being swept and

dusted every night. A thorough cleaning and washing with a special compound is given the cars during the daytime.

**Notices to Car Crews.**—(a) What is the best method of issuing notices to car men? (b) What is the best way of insuring the reading of them by car men? (c) Is it advisable to issue notices daily? (d) Is it practical to have men sign for notices

### Canadian Electric Railway Association.

**PRESIDENT**—C. B. King, Manager, London Street Railway Co.

**VICE PRESIDENT**—James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Railway Co.

**SECRETARY-TREASURER**—Acton Burrows, Managing Director, Canadian Railway and Marine World.

**EXECUTIVE COMMITTEE**—The President, Vice President, Secretary-Treasurer and

E. P. Coleman, General Manager, Dominion Power and Transmission Co.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.

A. Eastman, General Manager, Windsor, Essex and Lake Shore Rapid Railway Co.

H. M. Hopper, General Manager and Purchasing Agent, St. John Railway Co.

Wilson Phillips, Superintendent, Winnipeg Electric Railway Co.

C. L. Wilson, Assistant Manager, Toronto and York Radial Railway Co.

**ASSISTANT SECRETARY**—Aubrey Acton Burrows, Business Manager, Canadian Railway and Marine World.

**OFFICIAL ORGAN**—Canadian Railway and Marine World, Toronto.

in a station having 800 men attached to it?

F. L. Hubbard, Assistant to General Manager, Toronto Ry., Toronto.—(a) By issuing short bulletins, dealing briefly with but one subject in each. (b) In the case of important bulletins, we require the men to sign a register, acknowledging having read said bulletins. (c) We do not think it should be necessary to do this, and besides, it would have a tendency to change the method from one intended to emphasize something of a special nature, to that of a common, daily occurrence, and thus create indifference on the part of the men. (d) We do not think it should be necessary for this number of men to sign for every notice issued, but we think it good policy to have all the men sign on special occasions, when it is desired to direct their attention to some particularly important bulletin.

The Great Northern Ry. of Ireland has ordered 5,500 tons of 90 lb. bullhead rails, and 2,500 tons of 85 lbs. flat bottom rails, from the Dominion Iron and Steel Co., Sydney, N.S.

## The Toronto Suburban Railway's Franchise in Toronto.

In response to a request from the City Board of Control, City Solicitor Johnston has given the following opinion:

"The Toronto Suburban Ry. Co., under an agreement with the York Tp., dated Sept. 4, 1899, has the exclusive right to construct, maintain and operate a single and double iron or steel railway on Davenport Road, from the northern limits of the city to the east limit of the Town of Toronto Junction, and in that part of Bathurst St., between Davenport Road and the northerly limits of the City of Toronto. The franchise entitles the company to use its railway for carrying freight, goods, merchandise and passengers. The franchise extends over 30 years and therefore expires on Sept. 4, 1929. Upon the expiration of the 30 years the company is entitled to a renewal for a further term of 20 years upon such terms as may be mutually agreed upon between the township and the company or to be determined by arbitration, and so on at the end of each 20 year period. There is a proviso for the township at the end of any of the periods taking over the railway at a valuation to be determined by agreement or arbitration.

There is a further provision in the agreement that the company "shall grant running rights over the portion of its railway on Bathurst St., from the C.P.R. tracks to Davenport Road, and on Davenport Road, to one other railway company operating a street railway and having ingress to the city, upon such terms as may be mutually agreed upon between the company and the company applying for such running rights, or in case of disagreement to be settled by arbitration under the Municipal Act."

## Edmonton Radial Railway Operating Results.

The following statement of revenue and expenditure for 10 months ended Oct. 31, 1914, has been issued by the City Council:—

Revenue.	
Cash fares .....	\$239,640.10
Ticket sales .....	287,915.50
Advertising .....	4,510.11
Interest on spurs .....	152.87
Special cars .....	789.60
Sprinkling streets .....	3,306.78
Main contract .....	1,233.34
Freight earnings .....	3,585.91
Passes for police and truant officers	1,284.46
Rent of old barns, etc. ....	915.87
Loss on operation of Highlands line paid by Magrath-Holgate Co. ...	258.56
Sale of lost property found on cars	42.85
<b>Total revenue .....</b>	<b>\$543,645.95</b>
<b>Apparent deficit for 10 months ....</b>	<b>190,139.06</b>
	<b>\$733,785.01</b>
Expenditure.	
Maintenance .....	\$ 19,342.67
Equipment .....	44,926.25
Transportation, including power, wages, etc. ....	340,514.73
General, including management, office salaries, damages, etc. ....	38,839.20
Debt interest and redemption	193,344.84
Bank interest .....	11,716.67
Depreciation .....	84,968.80
Miscellaneous .....	131.85
	<b>\$733,785.01</b>
<b>Net revenue account as at Oct. 31, 1914.</b>	
Deficit as at Dec. 31, 1913 .....	\$405,394.07
Apparent deficit for 10 months ending Oct. 31, 1914 .....	190,139.06
	<b>\$595,533.13</b>
<b>Capital account as at Oct. 31, 1914.</b>	
Purchase and construction of land, buildings, track and equipment to Dec. 31, 1913 .....	\$2,841,948.48
Additions during the year .....	217,694.54
	<b>\$3,059,643.00</b>

## An Invisible Rail Joint on the London Street Railway.

A very simple and apparently a very effective device in connection with track joints in paved streets was tried during the past summer by C. B. King, Manager, London St. Ry., London, Ont. The track in which the experiment was made consisted of 80 lb. A.S.C.E. rail, on standard cedar ties, with concrete foundation 6 ins. beneath the ties and up to the top of the tie. When the brick pavement was being laid, instead of using a sand cushion, a mixture of 1 to 8 cement mortar was spread just ahead of the paving, the brick being carefully laid and levelled on top of the soft mortar. Before the mortar became dry, cement grout, in the proportion of 3 to 1 was run in over the bricks, thoroughly filling the joints between them. In forming such a bond with the mortar underneath, the brick pavement, together with the concrete foundation becomes so nearly monolithic that even should the rail be inclined to work loose there is no sand cushion or other soft substance to be washed out, allowing the rail to drop. Molded scoria blocks were laid in alternate courses inside the rail, thus forming the flangeway.

When the track had been concreted but just before the paving was being laid, the opening between the rails at each joint was

tically ran them together, this gradual loosening of the joint plates would not take place. It is therefore believed that where this shim is inserted so that no pounding whatever can take place at the joint, the plates will remain tight and the joint be practically a perfect one. Joint shims inserted in this manner during the ordinary summer weather of June and August, have shown no signs of loosening, due to shrinkage by sufficient cold weather to freeze the ground below the bottom of the rail. It is therefore believed that the joint plates are holding so tightly that the stresses caused by temperature shrinkage are equally distributed throughout the whole rail.

Another experiment was tried recently by putting these shims in the joints of another piece of track laid with the same kind of rail, but in an unpaved street where the gravel is kept close to the top of the rail. This track was laid about two years ago, but the joints were showing very slight signs of working loose back from the ends of the rail as previously mentioned. The shims were put in between the ends of the rail as described and as they soon rolled together so that they became nearly invisible, it is believed that they will continue to hold the joint solid. It was found, when

Invisible Rail Joint, London Street Railway.

widened by sawing out the slot, using two or three hack saw blades placed side by side in a special frame. The width of the slot should be about  $\frac{1}{8}$  in. greater than the space between the rails, so as to provide shoulders for the shims and should extend to a depth a little below the centre of the head. This opening was then filled with a piece of fairly hard sheet steel which was carefully driven into the slot and then filed off level with the top of the rail. Before inserting the steel shim the bottom corners of the slot were slightly nicked under, then when the steel shim had been driven to place, the corresponding corners of the shims were bent into these nicks, thus removing all possibility of the shim getting out. When the car service is put on to a track where the joints have been treated in this manner, the slight cold rolling effect of the wheels on the top of the rail still further tightens the shims, so that in a very short time it is almost impossible to find them, hence the reason for the novel title of an "invisible" joint.

It is almost needless to add that whatever joint is used, whether it be a continuous joint, Atlas joint or ordinary angle bars, it must be perfectly tight, or such a shim inserted between two rails cannot possibly remain tight. It had been found, however, that even if the joint remained tight and there was even the smallest opening between the two rails, the small pound produced by even such a small opening would start a loosening process, which would gradually spread back from the end of the rail and finally loosen the whole joint. It was noticed that where rails butted very tightly together, so that the cold rolling effect prac-

putting the shims in where the track is in constant use, that the shim had to be driven in, and the projecting part cut off with a cold chisel, not over  $\frac{1}{8}$  in. above the rail, before a car was allowed to run over it; otherwise the projecting part of the shim was mashed out over the ends of the rail, badly denting them. Then the mashed out top would break off, leaving a worse depression than ever. By using this care and allowing only  $\frac{1}{8}$  in. projection to be mashed down by the car wheel, the shim is only tightened the more and then, when filed off even, soon becomes invisible, which definitely proves that everything about the joint is solid.

As the joint is undoubtedly the weakest spot in track work, this is certainly a very simple method of helping to hold them tight and since after several months use, including wintry weather, they continue to show up favorably, it is believed the desired effect will continue.

## Acceptance of United States Coins in Canada.

The General Manager of a Canadian electric railway company writes as follows: "While reading over the Canadian Railway and Marine World for December, I noted the paragraph stating that the Montreal Tramways Co. was not refusing to accept U. S. coins for fares on its cars, and shortly afterwards I came across a paragraph in the Electric Railway Journal in connection with the use of Canadian coins in the U. S. It is interesting to note the difference in point of view. The item in the Journal is as follows:

"Tricky Patrons.—A letter was addressed to the editor of the Topeka Capital recently in which the writer expressed the opinion that it would be interesting to know how many people are 'victimized' a week by the Topeka Ry. paying out in change Canadian dimes in place of American dimes. To the letter as published in the Capital the editor appended this note in the usual parentheses: 'Patrons should examine their change. We do not imagine the street railway company imports Canadian money. If it pays such coins out they are coins that tricky patrons have already passed to the Company.'"

## Fares on Lethbridge Municipal Railway.

Commissioner A. Reid presented the following report to the City Council at the middle of November:

"From Jan. 1 to Oct. 31, 1914, the number of street railway fares paid by regular tickets (6 for 25c) was 396,737; number paid by limited tickets (8 for 25c) was 144,194, or nearly 31% of that paid by regular tickets; number paid by cash was 289,907, or 73% of that paid by regular tickets; number of fares paid by limited tickets was about 26% of that paid by cash and regular tickets; returns from children's tickets amount to \$786.39; from limited tickets, \$4,506.08; from regular tickets, \$16,530.70, and from cash fares, \$14,495.34.

"If the number of passengers carried remained the same up to Oct. 31, 1914, and we had charged 5c instead of giving 6 tickets for 25c the revenue would have been increased \$3,300, and if 6 tickets for 25c had been given instead of 8 for 25c the revenue would have been increased \$1,500, making a total of \$4,800.

"After a careful study of above, and considering the small percentage of passengers using limited tickets, I would recommend the following changes, to go into effect on Dec. 1: That the use of the present limited tickets be discontinued, and the regular tickets (6 for 25c) be substituted; these tickets to be good for the following hours: 6 to 8 a.m., 12 noon to 2 p.m., and 5 to 7 p.m. The regular fare to be 5c, and 10c after midnight. Children's tickets (10 for 25c) to be continued. Two children to travel on one 5c fare, but not on one ticket. If children's tickets are used, each child must have a ticket, and the age to be limited to 5 to 14 years. Children under 5 to travel free.

"The present employees' tickets to be discontinued and books of blue tickets substituted (25 for \$1). The carrying of policemen and firemen free to be discontinued, and these departments to purchase blue tickets as required."

The International Ry.'s New Freight Service inaugurated recently between Buffalo and Rochester, N.Y., has been such a decided success that the company contemplates the building of another freight terminal in Buffalo in the very near future. The present terminal, which has been in use only about three months and is located a little north of the heart of the city, has begun to outgrow itself, and in order to facilitate matters for the shippers the company is thinking of building the new terminal in the storage and commission house district, which is south of the heart of the city. With these two terminals the company hopes to be able to handle express freight more efficiently. This, of course, will mean a saving for shippers in cartage.

The question of the appointment of a commission to manage the Edmonton Railway Ry. was one of the issues raised in the December municipal campaign in Edmonton, Alberta.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brandon Municipal Ry.**—During 1914 the city Council has changed 0.734 of a mile of 60 lb. A.S.C.E. rail, on gravel ballast, to 70-lb section steel, with a concrete roadbed. F. Boden, Brandon, Man., is Superintendent. (Dec., 1913, pg. 392.)

**Brantford Municipal Railway-Grand Valley Railway.**—The rotary converter referred to in our last issue is being installed in the Hydro Electric sub station at Paris, Ont., and not at Brantford, as mentioned previously. It was purchased second hand in Phillipsburg, Pa.

The trestle bridge across Blue Lake, on the Grand Valley Ry., which is being considerably strengthened, is 365 ft. long and 22 ft. 8 in. at the centre span, which is one of 53 ft. The other spans vary, according to the nature of the slope of the banks and the soil, from 13 to 26 ft. The structure rests on piles and concrete blocks, 20½ ft. by 1 ft. 5 in. The reconstruction was rendered necessary owing to the expectation of increased traffic since the line passed under public ownership. (Dec., 1914, pg. 553.)

**Hamilton St. Ry.**—The Board of Railway Commissioners has authorized the company to build a subway under the G.T.R. tracks at Kenilworth Ave., Hamilton, Ont., with a headway of 14 ft. The city is to cut the street to a 3% gradient, and the G.T.R. is to pay the cost of widening the subway to carry any greater number than four sets of tracks. The cost of the subway is to be paid as follows: 35% by the H.S. Ry.; 25% by the City Council; 32½% by the G.T.R.; 7½% by Barton Tp., and 25%, not to exceed \$5,000, from the Dominion grade reduction fund. (Sept., 1914, pg. 431.)

**London St. Ry.**—During 1914 the company laid new curves and second track at various points in London, Ont., totalling 1,096 ft. (Oct., 1914, pg. 476.)

**Montreal and Southern Counties Ry.**—The Dominion Parliament is being asked for an extension of time for building this railway from Montreal, via St. Lambert, to Granby and other points south of the St. Lawrence River. The line is being operated from Montreal to St. Césaire, Que., 35 miles, and construction is in progress between St. Césaire and Granby, 15 miles.

**Ottawa and St. Lawrence Electric Ry.**—The Ontario Legislature is being asked to extend the time for the building of the proposed railway from Ottawa to Morrisburg and along the St. Lawrence River to Brockville, then to Braeside, on the Ottawa River, and along the Ottawa River to Ottawa; and for power to build a line westerly from Brockville to Rockport; to build a branch line, or deviate the main line so as to serve Smiths Falls; and to extend the line from the village of Russell to Embreum, and northerly to South Indian. The company is also asking for a change of name, and for authority to use "steam or other motive power," instead of electricity, as in the original charter. (Dec., 1914, pg. 553.)

**Port Arthur Electric Ry.**—The Port Arthur, Ont., City Council has directed a report to be made upon a proposal to build a car line in Mariday Park. (Sept., 1914, pg. 431.)

**Saskatoon Municipal Ry.**—The Saskatoon City Council is constructing a bridge at Twenty-fifth St., at a cost of \$400,000, towards which the Provincial Government is contributing two-thirds. Work was begun Sept. 2, and is reported to be well advanced. The bridge is of concrete, 65 ft. wide, and 1,490 ft. long. There are eight spans, of which four are of 150 ft. each. Provision is made for foot passen-

gers by a cantilever on either side of the bridge. A double track is to be laid on the bridge for the municipal railway. One of the main reasons for building the bridge is the largely increased traffic due to the railway. (July, 1914, pg. 336.)

**Toronto Civic Ry.**—The City Council has under construction a double track line from Dundas St. to Quebec Ave., on Bloor St. W., 0.745 mile. A temporary track has been laid, but the permanent work will not be done until next spring.

The question of the building of a line on Lansdowne Ave., and a line to North Toronto, are to be voted on by the ratepayers, Jan. 1.

The City Council has authorized the erection of a temporary car barn on Dorval Road for the new Bloor St. line. (Dec., 1914, pg. 553.)

**Tramways, Limited.**—An agreement has been made between the company and the Edmonton, Alberta, City Council, under which the company may connect up its projected lines at certain points, and setting out the routes to be followed within the city, by the lines making such connection. The company is to ask the city to build the connecting lines when it is ready to have the connection made, and if the city decides not to build them, or any of them, the company may do so. When the city desires to pave any of the streets on which these connecting lines run, it shall take over any lines that the company has built. The city shall have power to operate its cars over any of the connecting lines on a mileage basis, the principle upon which this is to be calculated being set out. The company is to use any other motive power than steam, but within the city such power must conform to the city bylaws. The company's cars within the city are to be moved by the city, at the company's own expense. The rental to be paid by the company is to be fixed on a car mile basis for passenger cars, and a per car basis for freight and express cars. Statements are to be made monthly. Twenty miles of lines are to be built by Dec. 1, and the agreement is to run for 30 years. All differences are to be settled by arbitration. The bylaw was voted on by the ratepayers at the municipal elections, Dec. 14, 1914.

**Winnipeg Electric Ry.**—We are officially advised that the line from Stony Mountain to Stonewall, Man., 7.50 miles, built by the subsidiary Winnipeg, Selkirk and Lake Winnipeg Ry., was officially opened Dec. 12, 1914, and that a regular car service was put in operation Dec. 14. There was a public celebration in connection with the opening of the extension. (Dec., 1914, pg. 554.)

**Bloor St. Viaduct, Toronto.**—The contract for the erection of a viaduct across the Don River Valley at Bloor St. has been let by the Toronto City Council to Quinlan and Robertson, Montreal, who have ordered the structural steel work from the Hamilton Bridge Co. The viaduct will be 1,539 ft. long and 86 ft. wide. The plans provide for the laying of a double track for an electric railway to be built by the city council, and provision is made for the addition at a subsequent date of a second deck to be utilized in connection with the working out of the rapid transit and radial electric railway problems.

The Toronto civic railway has ordered 3 single truck cars for its Bloor St. west line, from the Preston Car and Coach Co., and a snow plough of U. S. manufacture from the C. E. A. Carr Co.

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry.**—A London, Eng., cable, Dec. 12, says:—"The B.C. E. Ry. records depressing conditions in that province, all new work having been postponed and also a big reduction in the population noted. Stockholders are told they must be prepared for a drastic reduction in future dividends owing to the war."

**British Columbia Electric Ry. and Allied Companies.**—Gross earnings for October, \$661,000; operating expenses, maintenance, etc., \$511,877; net earnings, \$149,123, against \$743,501 gross earnings, \$561,902 operating expenses, maintenance, etc., \$191,599 net earnings for October, 1913. Aggregate gross earnings for four months ended Oct. 31, \$2,676,351; net earnings, \$615,670, against \$3,014,355 aggregate gross earnings, \$775,077 net earnings for the same period 1913.

**Calgary Municipal Ry.**—The Calgary, Alberta, City Council is considering the question of the deficit in the operation of the municipal railway. In the course of a recent discussion it was stated that there was a deficit of about \$50 a day on the line to the C.P.R. Ogden shops, including all fixed and overhead charges, maintenance, depreciation, etc. Commissioner Graves stated that nothing could be done to reduce the deficit on this line. In regard to the other routes, traffic was being checked, and alterations were being made in the schedules as appeared necessary, in order to effect savings in operating expenses.

**Cape Breton Electric Co.**—Gross earnings for October, \$30,751.49; operating expenses, taxes, etc., \$18,524.03; net earnings, \$12,227.46; interest charges, \$5,239.41; balance, \$6,988.05; bond sinking and improvement funds, \$1,273.34; balance for reserves depreciation, etc., \$5,714.71, against \$36,793.71 gross earnings, \$18,751.52 operating expenses, taxes, etc., \$18,042.19 net earnings, \$4,891.67 interest charges, \$13,150.52 balance, \$1,190 bond sinking and improvement funds, \$11,950.62 balance for reserves depreciation, etc., for October, 1913. Aggregate gross earnings for 10 months ended Oct. 31, \$291,466.40; net earnings, \$117,806.70; interest charges, bond sinking, and improvement funds, \$64,939.15; net balance, \$54,229.53, against \$308,522.13 aggregate gross earnings, \$133,449.75 net earnings, \$60,897.82 interest charges, bond sinking, and improvement funds, \$72,551.83 net balance for reserves depreciation, etc., for same period 1913.

**The Dominion Power and Transmission Co., Hamilton, Ont.,** has declared the regular half yearly dividend of 3½% on the preferred stock, payable Jan. 15.

**The Guelph Radial Ry.** during 1914 paid the City of Guelph, Ont., \$1,742 taxes and a dividend of \$8,350, being 5% on \$169,000 of stock held by the city. About \$3,200 was paid on capital account out of earnings and about \$2,800 in track replacements, which are not really chargeable to capital.

**Lacombe and Blindman Valley Electric Ry.**—W. L. McKinnon & Co., Toronto, advise that they have sold the \$206,700 of this company's first mortgage bonds. (Dec., pg. 553.)

**London St. Ry.**—Gross earnings for October, \$30,722.19; expenses, \$22,718.63; net earnings, \$8,003.56; deductions, \$2,760.55; net income, \$5,243.01. Aggregate gross earnings for ten months ended Oct. 31, \$312,914.65; expenses, \$222,752.47; net earnings, \$90,192.18.

Gross earnings for November, \$26,347.73; expenses, \$18,692.06; net earnings, \$7,655.67, against \$29,057.59 gross earnings, \$21,089.50 expenses, \$7,968.09 net earnings, for November, 1913.

The company's franchise has 10 years to

run, but an intimation is said to have been conveyed recently to the London, Ont., City Council, that the company is willing to sell out, and that city debentures might be accepted in payment. The matter came before the City Council incidentally, Dec. 7, when F. A. Gaby, Chief Engineer, Hydro-Electric Power Commission of Ontario, was asked to make a report upon the value of the company's property. Nothing definite will be before the Council until the company's proposition and the report are received.

**Regina Municipal Ry.**—A report presented to the City Council for the ten months ended Oct. 31, 1914, gives the following figures relating to the operations of the municipal railway:—Deficit on operation, \$4,566.65; add capital charges, \$74,765.24; total, \$79,331.89.

**Sherbrooke Ry. and Power Co.**—Aggregate gross earnings for four months ended Oct. 31, \$51,561.42; operating expenses, \$30,011.36; net earnings, \$21,550.06, against \$50,001.63 aggregate gross earnings; \$29,794.16 operating expenses; \$20,207.47 net earnings for same period 1913.

**The Toronto Railway** has sold in New York \$1,500,000 in 6% notes, \$750,000 due on December 1, 1915, and the balance on December 1, 1916, the former being disposed of at 104¼ and the latter at par.

## Electric Railway Notes.

The Calgary Municipal Ry. has put a new schedule in operation for the winter.

The Toronto Suburban Ry. has bought a snow sweeper, of U.S. manufacture, through the C. E. A. Carr Co., Toronto.

The Brantford Municipal Ry. has dismissed three conductors, charged with stealing fares.

The last annual report showed cash on hand and in bank of \$532,140, but the company had a \$600,000 outstanding debenture issue redeemable this year.

Receipts for November, \$465,035.02 against \$501,254 for Nov., 1913. The percentage paid to the city was \$46,503.50 against \$51,533.15 for Nov., 1913. The aggregate gross receipts for 11 months ended Nov. 30 were \$5,537,058, against \$5,502,555 for the same period 1913.

**Toronto Ry., Toronto and York Radial Ry. and Allied Companies.**—Gross earnings for October, \$849,636; operating expenses, maintenance, etc., \$426,536; net earnings, \$423,100, against \$861,235 gross earnings; \$415,021 operating expenses, maintenance, etc., \$446,214 net earnings for October, 1913. Aggregate gross earnings for 10 months ended Oct. 31, \$8,471,743; net earnings, \$4,137,753, against \$8,044,705 aggregate gross earnings, \$3,999,218 net earnings for same period 1913.

**Winnipeg Electric Ry.**—Gross earnings for October, \$330,562; operating expenses, \$197,465; net earnings, \$133,097, against \$357,313 gross earnings, \$196,703 operating expenses, \$160,610 net earnings for October, 1913. Aggregate gross earnings for 10 months ended Oct. 31, \$3,402,502; net earnings, \$1,423,407, against \$3,338,748 aggregate gross earnings, \$1,496,985 net earnings for same period 1913.

and that an effort be made to realize on what is now carried in the accounts as "dead stock," estimated to be worth \$17,000.

The Calgary, Alberta, City Council has directed that all persons over 14 years of age who are classed as scholars, must carry with them identification cards, signed by the superintendent of schools, to enable

Preston Car and Coach Co., has been supplied by the Canadian Westinghouse Co. It consists of 5 double equipments, single end, 101-B-2 railway motors, including one K-10 controller, and one complete equipment, double end, double equipment, 101-B-2, including two K-10 controllers.

The Mannheim Insurance Co. has been nonsuited in an action against the Sandwich, Windsor, and Amherstburg Ry., in a claim for damage arising out of a collision between a street car and an automobile insured with the company, on the ground that the company is organized in Germany by German capitalists, alien enemies of the British Empire, and had no standing in British courts.

The British Columbia Electric Ry. has rerouted the cars on a number of its lines in Vancouver, to allow of more economical operation, while still meeting traffic conditions. The employees have adopted an arrangement amongst themselves whereby certain of them lay off each week, thus enabling a larger number of men to be kept employed than would otherwise be the case during the present slackness.

An application was before the Ontario Railway and Municipal Board, Dec. 10, to compel the Toronto and York Radial Ry. to provide a passenger shelter station at Sunnyside, where the Mimico line passengers transfer to the city lines. The company stated that it had no objection to providing an efficient shelter, but pointed out that construction difficulties prevented its erection until the spring. In the meantime a large heated and lighted car has been provided as a substitute.

The County Court Judge at Ottawa, Dec. 3, gave judgment for \$94 against the Ottawa Electric Ry. for damages sustained by a motor car belonging to the Major Hill Taxi Co. The motor car, in order to pass a standing car, moved out on to the street car tracks, the driver signalling an approaching electric car what he was going to do. The street car failed to stop, and the motor car was damaged. The jury which heard the action found the O.E. Ry. Co.'s motor-man to blame.

The Ontario committee of the Trades Congress has petitioned the Ontario Legislature for legislation establishing a 9 hour day for street railway employees, to be worked within 12 consecutive hours, that vestibules of street cars be heated in the winter. That new employees on street railways be given 30 days training before being allowed to take charge of a car, and that private detective agencies in the Province be abolished, it being alleged that they are a "menace to the lives and liberties of Canadian workmen."

The Imperial Privy Council has reserved its judgment in the appeal of the Toronto Suburban Ry. against a judgment of the Supreme Court of Canada on an order of the Ontario Railway and Municipal Board, relative to the paving and upkeep of the roadway used for railway purposes and 18 ins. on each side, on Upper Bathurst St. and Davenport Road. In the Supreme Court it was held that the Board had jurisdiction to make an order to pave, but could not delegate the power to determine the character of pavement to its engineer, but must itself direct what material should be used in paving.

The London St. Ry. has received 4 single end, single truck, p.a.y.e. cars mounted on 21-E trucks with 8 ft. wheel base, from the Preston Car and Coach Co. They are respectively duplicates of the 6 cars which the company received from the same source in 1913 and which were described and illustrated in Canadian Railway and Marine

Suburban Car for Niagara, St. Catharines and Toronto Ry.

The Toronto Board of Control has decided to permit advertising in the civil railway cars.

The Manitoba Public Utilities Commission is conducting an investigation into the street car service given by the Winnipeg Electric Ry. R. R. Knox, the company's Traffic Superintendent, gave evidence at the sittings held Dec. 12 and 14.

The Quebec City Council requested the Quebec Ry., Light, Heat, and Power Co. recently to issue transfers from certain of its city cars to cars operated over its Sillery line, within the city limits. The company has replied that the Sillery line is owned by a separate company.

The Saskatoon, Sask., City Council has made arrangements with the local branch of the St. John's Ambulance Association for a course of instruction in first aid work to be given to the employees of the municipal railway. The classes are being held twice a week.

The Port Arthur, Ont., City Council finance committee has recommended that the present electric railway charges be closely examined with a view to their reduction,

them to take advantage of the reduced fare for scholars on the municipal railway.

The Mayor of Saskatoon, Sask., expressed the opinion at a Council meeting recently, during a discussion on a proposition to issue tickets at six and eight for 25 cents, that the increase of fares on the municipal railway had been a failure. The Council decided to have a special report on the matter.

The Brandon Municipal Railway has reduced its car hours from 18 to 17 hours a day. Motormen have been paid 8½ hours each, not allowing for reporting time, which is 10 minutes, and they have sent in a request to the city council to be paid for reporting and they also ask 9 hours' pay.

The Port Arthur, Ont., City Council, on Dec. 1 ratified a new agreement with its street railway and other employees, under which there is a certain reduction of pay, dating from Nov. 15, thus bringing the employees of the corporation's electric department into line with those of other departments.

The electrical equipment for the six single truck cars which the Brantford Municipal Ry. ordered recently from the

World for Dec., 1913, and Jan., 1914. Some slight changes were made in the interior seating, by having longitudinal seats on one side and cross seats on the other, and instead of having hand pole straps, as is usual in longitudinal seat cars, there is a hand pole hung on brackets, 5½ ft. from the floor, and 5 ins. back from the face of the cushion.

The Niagara, St. Catharines and Toronto Ry. has received four 55 ft. suburban cars, from the Preston Car and Coach Co. They are divided into two compartments, the smoker at one end being separated by a partition which allows a passage way on one side of the car, enabling passengers to go into the other compartment without having to pass through the smoker. The seats are upholstered in green plush, the backs being especially high with head roll. The trimmings throughout are statuary bronze. The cars are finished in polished quartered oak inlaid with white holly, agastoe headlinings and empire decks. The framing is entirely of steel covered with wood. The cars are painted steel grey with black and gold lettering, and are geared to run at 60 miles an hour. The wheels are steel tired with cast iron centres, M.C.B. journals, Keystone sign boxes and Tomlinson radial automatic couplers. The electrical equipment consists of 4 G.E. 214 motors with type M.K. simplified control, the master controller having dead man release handle. The cars are equipped with straight air and Westinghouse automatic brakes.

### Mainly About Electric Railway People.

A. GABOURY, Superintendent, Montreal Tramways Co., read a paper on the safety first movement before the Montreal Electrical Society, Dec. 7.

W. F. GRAVES, Chief Engineer, Montreal Tramways Co., is one of a committee of three to make a valuation of the Detroit United Ry's. Co.'s track property for the Michigan Railroad Commission.

D. S. MARTIN, who died from wounds received in the fighting at Messines, France, was an electric engineer, and at one time was on the British Columbia Electric Ry.'s engineering staff.

A. W. WESTMAN, Superintendent, Windsor, Essex and Lake Shore Rapid Ry., was electrocuted at the car barns at Kingsville, Ont., Dec. 21, while preparing to put a snow plough at work. He leaves a wife and 6 children.

ADOLPHE ALFRED DION, General Superintendent of the Ottawa Gas Co., who has been elected a director of Ottawa Electric and also of Ottawa Gas, is a well known sportsman and for many years has been vice commodore of the Ottawa Canoe Club. He is President of the Moose Jaw Electric Ry.

SIR ADAM BECK, Chairman, Hydro Electric Power Commission of Ontario, has been appointed Chief Remount Commissioner for Eastern Canada, with the title of Colonel and attached to the headquarters staff. Sir Adam has been in charge of the purchasing of remounts for the British Army, in Ontario, since the outbreak of war.

PATRICK DUBEE, Secretary-Treasurer, Montreal Tramways Co., and a member of the Canadian Electric Railway Association's executive committee, has been appointed on three of the American Electric Railway Association's committees, viz., on taxation matters, on relations with other associations, and on transportation for the next annual convention at San Francisco.

T. E. MITTEN, who has been elected President of the Philadelphia Rapid Transit Co., Philadelphia, Pa., was from 1901 to 1905 General Superintendent of the Inter-

national Ry., Buffalo, N. Y. In 1905 he was appointed President of the Chicago City Ry. Co. and also Vice President of the International Ry., Buffalo. His association with the Philadelphia properties began early in 1911.

F. S. BARNARD, who has been appointed Lieutenant-Governor of British Columbia, was born at Toronto, May 16, 1856, and has been associated with the British Columbia Electric Ry., for many years, acting latterly as local adviser to the directors, all of whom are located in London, Eng. He is a son of the late F. J. Barnard, who established an express company in British Columbia some years ago, which was originally known as Barnard's Express, and which later developed into the British Columbia Express Co., of which he was Manager from 1880 to 1888.

### Electric Railway Track Laid in 1914.

Below is a preliminary table showing track laid on electric railways in Canada during 1914. It is not published as a complete one, owing to the fact that some of the companies have not replied to the circular sent, but it is believed to be approximately correct. The \* mark indicates that the figures given are estimated.

	Miles.	Miles.
* British Columbia Electric Ry.		
Various extensions .....		5.00
* Fort William Electric Ry.		
Extensions .....		2.00

The Montreal and Southern Counties Ry. put in operation during 1914 nine miles of track between Marieville and St. Césaire. This mileage was taken over from the Central Vermont Ry., the M. & S.C. Ry. rebalancing the track, bonding the rails, and putting up the catenary overhead construction.

### Telegraph, Telephone and Cable Matters.

James Bayliss, Chief Engineer, Bell Telephone Co., died, Dec. 7, at Montreal, aged 45.

F. C. Robertson, Inspector, C. P. R. Telegraphs, Toronto, died at Port Hope, Ont., Nov. 29. He entered C. P. R. Telegraph service in 1886 as chief operator at Toronto, prior to which he had been with the Western Union and Baltimore and Ohio Telegraph Companies, at various points in the U. S.

The Marconi Wireless Telegraph Co. has obtained an injunction, in a U. S. District Court, restraining the DeForest Wireless Telegraph and Telephone Co., the Standard Oil Co., and Lee DeForest, from continuing to install a wireless device on Standard Oil Co.'s vessels, which is alleged to be an infringement of patents held by the Marconi company.

The present war is responsible for the creation of many precedents in the conducting of warfare, and although war on the cables cannot be included in these, there is,

to a certain extent, a precedent, as in no previous war has the inconvenience been so general, nor has it interfered so much with neutral countries, as now. The recent raids on isolated British stations, and the Pacific cable at isolated points, caused considerable damage, and some inconvenience, but all has now been repaired, but it is reported that Germany is practically isolated so far as cable communication is concerned, any communication with that country having to be carried on over certain British cables and land lines of neutral countries or of the allies. Where German cables have been severed, no attempt is being made to effect repairs, for the simple reason that it is impossible to do so. One of the latest cables to be cut is that of the German Atlantic Cable Co., Cologne, which is carried via Azores and Emden.

### Among the Express Companies.

The Canadian Ex. Co. has placed its service in effect over the portion of the Grand Trunk Pacific Ry., recently opened between Hazelton and Prince Rupert, B. C., and has opened offices at Terrace and Prince Rupert.

### Changes in Express Merchandise Receipt.

The Board of Railway Commissioners passed order 22973, Dec. 7, 1914, directing that in lieu of notice contained in the Express Merchandise Receipt reading, "Liability limited to \$50 unless higher value is declared by shipper and inserted herein," the following be substituted,—"Liability limited to \$50, unless higher value is declared by shipper and inserted herein, in which case an extra charge is made depending upon value declared. No extra charge if value is below \$50."

In lieu of the present sec. 4 of Terms and Conditions of Merchandise Receipt, the following be substituted,—"Money, specie, completely signed and executed bonds, coupons, bank notes and negotiable paper, or incompletely executed legal tender and bank notes, jewellery and precious stones shall not be packed or included with shipments of ordinary freight, and if so packed, company shall not be liable for loss of, or damage to, such goods.

Effect shall be given to the foregoing not later than July 1, 1915.

Express companies are to add the following notice to the face of Merchandise Receipt,—"The Post Office Act gives the Postmaster General exclusive right of conveyance of letters within Canada. This includes circulars, etc., enclosed in envelopes, sealed or ready to be sealed at point of destination. Heavy penalties are imposed for violation of the act. The company does not accept for transportation packages containing such letters or circulars."

**Vancouver Elevator.**—A press dispatch from Ottawa, Dec. 2, stated that the contract for the erection of the Dominion Government terminal elevator at Vancouver, B.C., had been awarded to Barnett, McQueen and Co., Fort William, Ont. The elevator will have capacity for about 1,250,000 bush., and the estimated cost is \$1,000,000.

**The C.P.R. has manufactured at its Angus shops, Montreal, a special hay press for baling hay bought in Canada by the British and French governments. It turns out a bale a minute, 14 by 17 by 22 ins., and averaging 100 lbs. in weight.**

A press dispatch states that the German Government has laid an eight track system between Berlin and Cologne, about 300 miles, for strategic purposes.

# Marine Department

## Ontario No. 2, Another Car Ferry for the Ontario Car Ferry Company.

An all steel car ferry, Ontario No. 2, a sister ship to Ontario No. 1, which is being operated between Cobourg, Ont., and Charlotte, N.Y., by the Ontario Car Ferry Co., under construction by the Polson Iron Works, Toronto, will probably be launched this month. The Ontario Car Ferry Co. is a combination of the G.T.R. and Buffalo, Rochester and Pittsburg Ry. interests, formed some years ago to handle the coal traffic originating on the latter company's lines, destined to points in Eastern Ontario on G.T.R. lines, the object being to eliminate the long haul around the west end of Lake Ontario. The business handled by the company has increased to such a degree that the addition of another vessel became necessary. The new one is almost identical with the one at present in service, which was described in Canadian Railway and Marine World, May, 1907.

It is of the shelter deck type, with four tracks for cars on the main deck, and will be propelled by twin screws. The main deck is of steel throughout, without wood covering; the shelter deck is of steel laid flush, with a deck house running throughout its greatest length, and containing accommodation for passengers, officers and crew. It has a wooden pilot house and bridge on top of the deck house forward, and a pilot house at the after end of the deck house. It is divided into six transverse watertight bulkheads, extending from the keel to the main deck, with a longitudinal bulkhead along the centre line in three watertight ballast tanks 13 ft. deep. Two of the these ballast tanks are immediately forward of the boiler room, and the third immediately aft of the engine room. The steel lower deck, laid throughout the forward and aft holds and both peaks, forms the top of the deep water ballast tanks. There are two shaft alleys, leading back from the engine room, one on each side, extending into the stuffing box bulkhead. The boiler room contains four single ended Scotch marine boilers placed amidships, with one firehold athwartships and one wing coal bunker on each side of the boiler room. The hull is bossed out on each side to enclose the propeller shafts. There are two steel pole spars without masts or sails.

The vessel has a capacity for 28 standard coal cars of 68 tons gross weight each, and 200 tons of coal in the bunkers. The draught will be about 16¼ ft. when fully loaded, and the vessel will have a normal working speed of 13 miles an hour, with reserve power to make 15 miles an hour under emergency conditions. Following are the principal general dimensions:

Length overall	318	ft.
Length between perpendiculars	307½	ft.
Beam moulded	54	ft.
Beam on main deck	56	ft.
Depth at centre, main deck to promenade deck	17	ft.
Depth at side, main deck to promenade deck	17	ft.
Draught of water full loaded	16¼	ft.
Camber of main and promenade decks	9	ins.
Depth to promenade deck	20½	ft.
Rise of floor	2	ft.

The vessel is built on the transfer system, with solid plate floors and bulb angle frames, with the steel plate extra heavy for working in ice, and not reduced forward. It is built to pass the inspection of the Great Lakes Register, and to receive its highest rating. The plates and shapes are

of mild open hearth steel; the stem, stern frame and rudder of hammered scrap iron; and the spectacle frame of cast steel in two parts.

The frames from the after peak bulkhead to the stern post are 8 by 3½ in., 19.17 lb. bulb angles, spaced at 24 in. centres; from the collision bulkhead to the after peak bulkhead, 10 by 3½ in. 26.6 lb. bulb angles, 24 in. centres; and forward of the collision bulkhead, they are of the same section as in the after peak, but spaced 18 in. centres on the water line. All the frames extend to the main deck in one length. Above the main deck, the frames are 8 by 3½ in. 19.3

lb. first or inner keelson, at 6¾ ft. from the centre keelson is of double 7 by 3 in. 16.1 lb. bulb angles, placed on top of the floor, fitted with a 17.5 lb. filler intercostally between the floors, and connected to the floors and shell by 3½ by 3½ in. 9.8 lb. angle clips. The second keelson, 13½ ft. from the centre keelson, along the inside of the side stanchions, on top of the floor is a single 10 by 3½ in. 26.6 lb. bulb angle, with 17.5 lb. plates fitted intercostally. The third, or outer keelson, is of double 7 by 3 in. 16.1 lb. bulb angles, attached to the main frames by 4 by 3 in. 8.5 lb. angle clips. Extra keelsons are fitted forward, one in each strake

Stern View of Car Deck, Exactly the Same on Both Car Ferries.

lb. bulb angles, spaced at 36 in. centres. The bulkhead frames are 5 by 5 in. 16.2 lb. angles, double rivetted on both flanges, with 6 by 3½ in. 15 lb. angles for stiffeners. The frames below the main deck, in the way of the bossing, are of 4 by 3½ in. 11.9 lb. angles and 15 lb. plate, with 3 by 3 in. 7.2 lb. angle reverse bars. The reverse frames are 3 by 3 in. 7.2 lb. angles, and on all the floors in the engine space, double reverse bars are used.

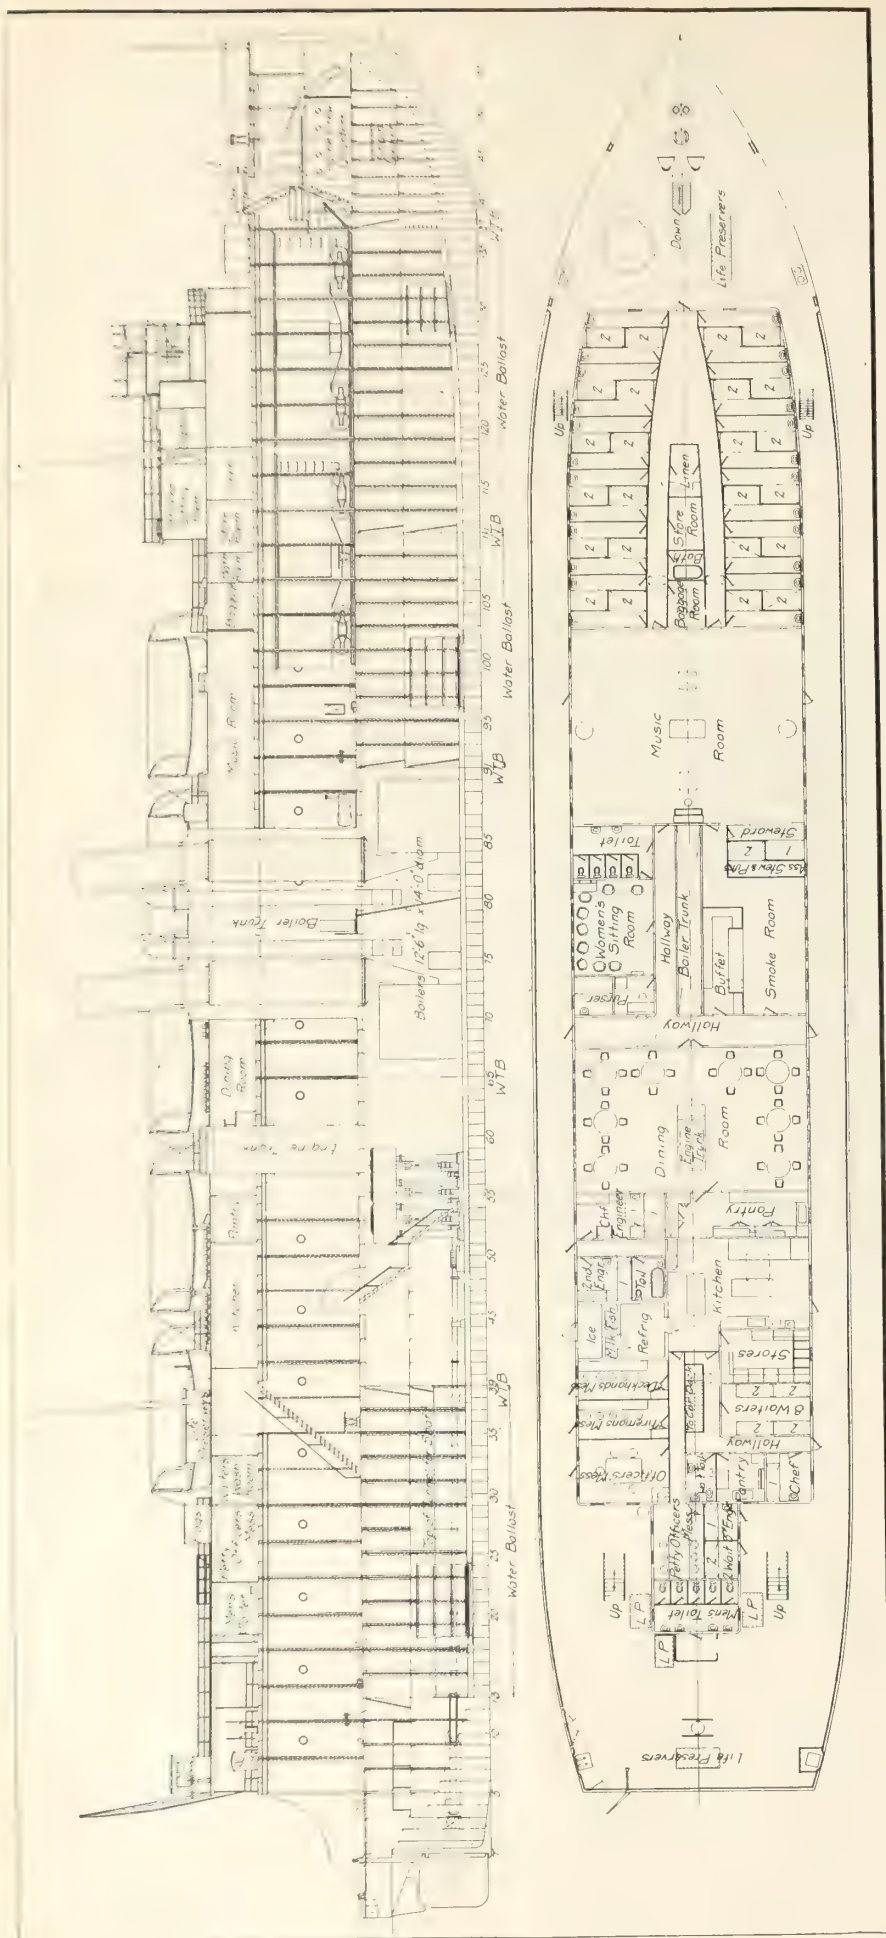

The floors are 33 ins. deep, of 17.5 lb. plate, except in the engine and boiler space, where they are of 20 lb. plate. The 17.5 lb. plates for the floor at the end of the vessel are increased in depth wherever necessary to suit the shape of the vessel. The floors are connected to the centre keelson by double 3½ by 3½ in. 8½ lb. angles.

The centre keelson is 45 ins. deep, of 25 lb. plate throughout, with double 5 by 4 in. 14.5 lb. angles top and bottom. On top of the floors, rivetted to the sides of the centre keelson by one flange, there is on each side a 12 by 3.05 in. 25 lb. channel. The side keelsons are of several kinds. The

of the shell plating, and there are also additional keelsons under the engine space.

The keel plates are 48 ins. wide, of 32.5 lb. plate amidships, reducing to 30 lb. plate fore and aft. The hull plating below the main deck is in 8 courses, the first 5 from the keel plate of 25.5 lb. plate, reducing aft to 21.5 lb., and the remaining 3, of 30.6 lb. plate, reducing aft to 25.5 lb. Above the main deck, there are 3 courses, the lower of 12.75 lb. plate, increasing to 15 lb. forward, and the upper two respectively 12.75 and 15 lb. plate throughout. The bilge keel is a 13 in. 27.95 lb. bulb plate, fitted to the plating by double 5 by 3½ in. 12 lb. angles, and carried amidships for 110 ft. Connection between the plating above and below the main deck is by a 20 lb. plate throughout from the lower strake of the upper plating, on each side of which, near the top, on each side is a 4 by 4 in. 14.3 lb. angle, the inner one of which connects to the main deck stringer. This side plate connects to the end of the main floor beams by 4 by 4 in. 11.3 lb. angle clips. On the outside, at the bottom of the side connecting plate,

Section and Plan of Promenade Deck on Ontario No. 2, for Ontario Car Ferry Company.

there is a 5 by 4 in. 14.5 lb. angle connecting this plate to a horizontal 22.5 lb. plate, which is connected to the upper strake of the hull plating below the main deck, by a 5 by 5 in. 14.3 lb. angle, narrowing the lower part of the hull 2 ft. in beam less than the upper portion. Between the outwardly projecting flanges of the two angles on the outside of the side connecting plate, there is a 13½ by 10 in. oak beam throughout, protected on the outside by a 10 by ¼ in. face plate.

The main deck stringer is a 30 lb. plate, 65 ins. wide for two thirds the length, tapering at the ends to 22.5 lb. plate 36 ins. wide, and rivetted to the connecting strip between the upper and lower part of the hull by the 4 by 4 in. 14.3 lb. angle mentioned before. The hold stringer is of double 7 by 3 in. 16.1 lb. bulb angles, with a 17.5 lb. plate fitted intercostally, and connected to the shell by 3½ by 3½ in. 9.8 lb. angles, and to the main frames by 4 by 3 in. 8.5 lb. angle clips. The lower deck stringer is a 14.75 lb. plate, 48 ins. wide for three quarters the length, reduced to a 15 lb. plate 36 ins. wide, fore and aft, and is connected to the shell and frame by a 3½ by 3½ in. 9.8 lb. angle. The upper hold stringer is 17.85 lb. plate, 39 ins. wide for three quarters the length, reducing to 15 lb. plate, 30 ins. wide, and connected to hull and frame by 3½ by 3½ in. 9.8 lb. angles. The promenade deck stringer is a 17.85 lb. plate, 72 ins. wide for two thirds the length, reducing to 15 lb. plate 42 ins. wide, and connected to the shell by 3½ by 3½ in. 11.1 lb. gunwale angles. The web plate is 17.85 lb. plate, with a 9 in. hole in each, midway between the stringers.

The deck plating for the main deck is 18 lb.; windlass deck, 12.5 lb. except under the windlass, where it is 20 lb.; lower deck, 12.5 lb.; and promenade deck, 10.2 lb. The deck beams for the main deck are 13 by 4 in. 32 lb. channels at 4 ft. centres; windlass deck, 10 by 3 in. 20 lb. bulb angles at 3 ft. centres; lower deck, 10 by 3.5 in. 26.6 lb. bulb angles at 4 ft. centres.

The six transverse bulkheads are watertight, with the collision bulkhead 32 ft. abaft the stem. The central stanchions in the hold and from lower to main deck are double 6 in. 13.3 lb. channels, spaced at 4 ft. centres. From the main to promenade deck, the central stanchions are the same size, only at 6 ft. centres. The side stanchions are also the same size, at 4 ft. centres, but are only carried up to the main deck. The upper ends of all the stanchions are braced by 17.5 lb. plate brackets. The coal pockets have 10 by 2.74 in. 20 lb. stiffener stanchions at 4 ft. centres, 16 ft. from the centre line. The coal pockets are formed by 12.5 lb. plating on the inner face of these stiffeners. The decking of the coal pocket consists of a double layer of 1½ by 8 in. pine planking, laid on 4½ by 3 in. 9.1 lb. beams at 24 in. centres.

The propelling machinery consists of two triple expansion, 20½ by 33 by 54 by 36 in. jet condensing engines, operating normally at about 110 revolutions per minute, both engines turning outward. The four boilers are fitted with forced draught, and they carry 180 lbs. pressure. Each boiler has three furnaces, 42 ins. diam. and 42 ins. long. The auxiliary machinery consists of two 12 by 16 by 18 in. duplex piston type ballast pumps, connected so as to individually fill or empty the ballast tanks; a 12 in. centrifugal pump, direct connected to an engine in the engine room and so arranged as to act as an air pump in emergencies; a fire pump; a 6 by 5 by 7 in. sanitary pump; a 4½ by 4 by 5 in. fresh water pump; and a 4½ by 4 by 5 in. cooler pump. There is also a 2 ton ice machine, working

on the carbon anhydride principle. The electric lighting plant consists of one 15 k.w. and one 20 k.w. generator. There will be a 16 in. searchlight.

There is accommodation on the main deck for 6 coal passers and 6 firemen on the port side, and 2 oilers, 2 watchmen, 4 deckhands and 2 water tenders on the starboard side, all situated forward. The windlass deck is directly over these quarters, from which lead the anchoring chains, which are normally stored in the chain locker on the hold deck, an enclosed pipe connecting the windlass deck with the chain locker, through the crew's quarters.

The promenade deck has accommodation for the ship's officers and passengers, with a promenade extending nearly the full length of the vessel. Forward on this deck are the passenger staterooms, 12 on each side of a double hallway leading forward from the music room. Each stateroom has two berths, giving accommodation for 48 altogether. Between the double hallway, there are the linen room, storeroom, bath room and baggage room. The music room extends the full width, and has a piano. Leading back from the music room, there is a hallway alongside the boiler trunk, connecting into which are the women's sitting room and toilet, and the purser's office and room. The other side of the boiler trunk contains the smoking room, with a buffet in one corner, and the steward's, assistant steward's and assistant purser's quarters. Back of this, there is a cross hall, leading out at either end to the deck, and in the centre leading into the dining room, which has 8 tables, with a seating capacity of 32. The engine trunk passes up through this room.

The kitchen, messes, and quarters for most of the officers are located back of the dining room. On the starboard side, connecting with the dining room, is the pantry, back of which is the kitchen, containing a full equipment. Connecting into the kitchen on that side, are the stores, back of which there is accommodation for 8 waiters, the cook's room, small pantry, and waiters' washing room. The port side, immediately back of the dining room, has the quarters for the chief engineer and 2nd engineer either side of a hall leading in from the deck. Back of this is the refrigerator, with separate compartments for the milk and fish. Back of this again there are three messes, deckhands', firemen's and officers', while at the end of a hall along the front of these messes, is the petty officers' mess. Adjoining, are the 3rd engineer's quarters, and accommodation for 2 waiters. The men's lavatory is in rear of these quarters.

On the forward end of the boat deck, there are located the navigating officers' quarters, with the pilot house in front, back of which is the captain's room, extending the full width, behind which, centrally placed, is a sitting room, on one side of which is the 1st mate's quarters, and on the other, the 2nd mate's, and accommodation for 2 wheelmen. The flying bridge deck is atop of the navigating officers' quarters.

### Grand Trunk Pacific Coast Steamship Company's Dock at Seattle.

We were officially advised, Nov. 26, that plans and specifications were being prepared for the rebuilding of the company's dock at Seattle, Wash., which was destroyed by fire, and that tenders would be invited for the dock itself on Nov. 30, and for the warehouse and building about three weeks later.

The dock will be 680 by 116 ft., extending

out into the harbor to the outer harbor line. It will be provided with a depressed track for its entire length, with a landing berth on the outside and with numerous adjustable cargo slips, and with a flush driveway the entire length made of Australian blue gum. The piling, as well as the bracing and capping, which will be submerged, will be creosoted. The general arrangement of the dock will be materially different from the former dock as dictated by the experience in the traffic of the port for the past five years. About 85,000 yards of gravel and rock were placed underneath the dock just previous to the fire, so that it will be very substantial and first-class in every respect.

The warehouse and office building to be placed on the dock will be three stories high at the street end, the design of the original building being restored. There will be six stores on the ground floor, 26 offices and stores on the second floor, and 20 on the third floor. The waiting room and other passenger accommodation will be as near to the street end as possible. The waiting room will be about 60 ft. square, extending from the north side of the building to the main corridor leading to the steamboats, and will be finished in stained Douglas fir, with an artistic domed roof the entire width of the building. There will be a roomy balcony over the corridor and offices on the south side of the building, reached by an ornamental staircase from the waiting room. Ticket offices, baggage check room, ladies' rest room and other conveniences will be provided, and the illumination will be by indirect method from the dome of the waiting room. The ends of the waiting room will be worked out into a transept in the building proper, which will make a very agreeable break and an ornamental feature. Other than this the balance of the shed extending to the outer end of the dock will be quite plain, and offices will only be built in on the second floor near the street end sufficient to accommodate the lines doing business on the dock.

The warehouse will be of slow burning wood construction, covered on the outside with galvanized iron and roofed with asbestos, to make it as nearly fireproof as possible. An expensive monitor will be built the full length of the shed with openings on the side for ventilation purposes. There will also be drop curtains and fire walls at

frequent intervals sufficient to give the protection required by the city fire ordinances.

The company's steamboats will be berthed on the south side, as usual, but well up the slip against the street end, and the landing stage and inclined walk leading to the waiting room floor will be entirely enclosed in the building itself, so that passengers going to and from the boats will be quite under cover all the year around. This arrangement has been decided on because of the convenience in getting passengers to and from the boats, and as a result of the experience with the fire, and all passenger accommodation is, therefore, arranged as near to the street end as possible, and in addition to that to make access to and from the boats as convenient as possible, thereby avoiding the long and unnecessary walk from the street to the outer end of the dock, which is still the present practice on all of the other docks in Seattle.

On Dec. 8 we were officially advised that a contract for reconstructing the dock had been given to Nettleton-Bruce-Eschbach Co. of Seattle, the work to be completed in three months. The total cost will be about \$75,000.

### Vancouver Dry Dock Projects.

Some information on this subject was published in Canadian Railway and Marine World for Oct., pg. 481, and Dec., pg. 555. Enquiry of Dominion Shipbuilding, and Drydock Co. elicited the following information on Nov. 25: "The clearing of our site has been completed, and last week the foundations were finished for the six buildings, as outlined in the prospectus, viz., machine shop, boiler shop, forging shop, foundry, pattern shop, stores, and general offices. Each of these buildings will be 250 by 68½ ft. in width. The contract for the dredging of the fresh water canal at the mouth of Lynn Creek, and also for the construction of the 4,000 ton marine railway and 1,000 ton railway have been awarded to the B. C. Granite Co., and the dredges are now in position and expect to be operating in the course of the next few days. We fully expect to have the first unit of our plant operating by spring, which will comprise the buildings above enumerated, together with the two marine railways and the fresh water canal."

## Mainly About Marine People.

The late ROBERT THOMSON, ship-owner, St. John, N.B., left an estate of \$343,000 in addition to life insurance.

CAPT. WILLIAM MCCLAIN, who died at Toronto, Dec. 7, aged 92, had been engaged in navigation on the Great Lakes since the early days of sailing vessels. He retired from active service some years ago.

Col. J. B. MILLER, President and General Manager, Polson Iron Works, Toronto, was presented with a gold headed cane, Mrs. Miller with a gold headed parasol, and Miss Margaret Miller with a necklace and locket, by the staff and employees of the company, Dec. 2, prior to leaving for a southern trip.

CAPT. W. H. FEATHERSTONHAUGH, Superintendent of Hulls, Canada Steamship Lines, Ltd., Toronto, died suddenly at Midland, Ont., Dec. 4. Prior to entering Canada Steamship Lines service he was Shore Superintendent, Inland Lines, Ltd., at Midland.

Commander C. D. ROPER, who was loaned by the British Admiralty to the Dominion Government, and acted for some time as chief of staff of the Department of Naval Service, has been given the command of the recently built destroyer Broke, one of the vessels which, at the outbreak of war, was under construction in British yards for the Chilean Government.

Capt. FRANK SCOTT of the Farrar Transportation Co.'s s.s. Collingwood, died in the Collingwood Hospital, Dec. 17, after a few days' illness, the direct cause of death being an abscess in the head near the right ear. He was for many years engaged in the operation of tugs in Collingwood harbor and on the Upper Lakes, but for the past ten years had been with the Farrar Transportation Co.

PETER PATON, who has been appointed Purchasing Agent, Canada Steamship Lines, Limited, Montreal, was born at New Lowell, Ont., Mar. 13, 1869, and entered transportation service May 1, 1911, since when he has been, to May 1, 1912, Western Travelling Agent, Northern Navigation Co., Winnipeg; May 1, 1912, to Mar. 1, 1913, Assistant to President, Northern Navigation Co., Sarnia, Ont.; Mar. 1, 1913, to Feb. 1, 1914, Manager, Northern Navigation Co., Sarnia, Ont.; Feb. 1 to December, 1914, Assistant Operating Superintendent, Passen-Ltd., Toronto.

Capt. OLIVER GILLESPIE, who died at Cornwall, Ont., Nov. 29, aged 87, was for nearly 60 years connected with navigation interests in that neighborhood. In his early days he was joint owner of the steamboats Manitoba and F. B. Maxwell, and was later interested in the American Line, operating steamboats between Clayton, N. Y., and Montreal. He subsequently owned the steamboat Garnet and ran it between Valleyfield and Montreal, and from this beginning was developed the Montreal and Cornwall Navigation Co., of which he was Managing Director for several years. He retired from active work about five years ago.

THOMAS HENRY, whose appointment as Passenger Traffic Manager, Canada Steamship Lines, Ltd., Montreal, was announced in our last issue, was born in Montreal, May 29, 1865, and entered transportation service in 1879, since when he has been, to 1881, ticket agent, Ottawa River Navigation Co., Montreal; 1881, local freight agent, same company, Montreal; 1881 to 1882, clerk in Audit Office, G.T.R., Montreal; 1882 to 1884, ticket clerk, City Ticket Office, G.T.R., Montreal; 1884 to 1887, clerk, Northern Pacific Ry.; 1887 to 1900, District Freight and Passenger Agent, same road, Montreal;

1900 to Feb. 27, 1913, Traffic Manager, Richelieu and Ontario Navigation Co., Montreal; Feb. 27, 1913, to Dec. 1, 1914, Operating Superintendent of Passenger Steamers, Canada Steamship Lines, Ltd., Montreal.

P287 Thomas Henry,  
Passenger Traffic Manager, Canada Steamship  
Lines, Ltd.

P344 Peter Paton,  
Purchasing Agent, Canada Steamship Lines,  
Ltd.

JOHN FRANKLIN PIERCE, who has been appointed General Passenger Agent, Canada Steamship Lines, Ltd., Montreal, was born at Chatham, Ont., Sept. 6, 1877, and entered transportation service, Oct. 14, 1896, since when he has been, to Oct., 1904, clerk, Richelieu and Ontario Navigation Co., Montreal; Oct., 1904, to Oct., 1910, chief clerk, same company, Montreal; 1910 to

1912, Travelling Passenger Agent, same company, Boston, Mass.; 1912 to 1913, District Passenger Agent, same company, Boston, Mass.; 1913 to Dec. 1, 1914, Assistant General Passenger Agent, Canada Steamship Lines, Montreal.

JAMES THOM, Canadian Manager, International Mercantile Marine Co., died at Westmount, Que., Nov. 26. During the early part of the year he had been in ill health, and in August he went to England and Wales for a holiday, returning to Canada in October, when his health had considerably improved. He later spent some time in Ottawa on business, where it is stated he contracted a chill, from which he did not recover. He had been intimately connected with the steamship business in Montreal for many years, and took a great and active interest in all improvements calculated to develop the business of the port, and to better conditions of navigation over the St. Lawrence route. He was born in Montreal, and at an early age entered the service of Thompson and Murray, merchants and shipping agents, there. This firm formed the Canada Steamship Co., of which he became Manager, remaining such until May 1893, when he was appointed Manager of the Hamburg American Line. In 1899 he was appointed Manager, Furness, Withy and Co., and on the resignation of John Torrance, Jan. 1, 1906, he was appointed Manager of the White Star Line. He held many public positions in Montreal, including the vice presidency of the Montreal Board of Trade, and the chairmanship of the executive council of the Shipping Federation of Canada. The funeral at Mount Royal Cemetery, Nov. 29, was attended by a large number of representatives of the transportation, shipping and mercantile companies.

## Changes in Organization, Canada Steamship Lines, Ltd.

W. E. Burke, Assistant Manager, and T. Henry, Passenger Traffic Manager, will remove their offices from Montreal to Toronto, Mar. 1.

J. F. Pierce, heretofore Assistant General Passenger Agent and General Baggage Agent, has been appointed General Passenger Agent, and will continue to perform the duties of General Baggage Agent. Office, Montreal.

Peter Paton, heretofore Assistant Operating Superintendent, Passenger Steamboats, Toronto, has been appointed Purchasing Agent, vice J. J. Phelan, assigned to other duties. Office, Montreal.

J. J. Phelan, heretofore Purchasing Agent, Montreal, has been appointed Assistant to Mechanical Superintendent. Office, Montreal.

**Halifax Dry Dock.**—An Ottawa press dispatch says that plans are being prepared in the Public Works Department for a dry dock at Halifax, N.S. This year's estimates voted by Parliament contained an appropriation of \$250,000 towards the construction of a first class dry dock at Halifax, of the same dimensions as the one now being built at Lauzon, Que., viz., 1,150 ft. long, 120 ft. wide at entrance, and 40 ft. deep at ordinary high water spring tides. The cost of such a dock would probably be about \$3,000,000. No site has yet been acquired, and it is not decided when work will be gone on with.

**International Waterways Commission, Canadian Section.**—C. A. Magrath, heretofore a commissioner, has been appointed Chairman of the Canadian Section, vice Hon. J. P. B. Casgrain, appointed Postmaster General. P. B. Mignault, K. C., has been appointed a commissioner.

### Additional Wharf Accommodation at St. John, N.B.

The formal opening of the additional wharf accommodation at Beacon Bar, West St. John, took place Dec. 10, and was celebrated by a luncheon at the Union Club, the guests including Hon. J. D. Hazen, Minister of Marine; Hon. R. Rogers, Minister of Public Works; G. M. Bosworth, Vice President, C.P.R.; C. A. Hayes, General Traffic Manager, Canadian Government Railways, and a number of other representatives of general transportation and shipping interests.

The contract for the work, involving 3,750 lin. ft. of wharfage, was awarded to the Maritime Dredging and Construction Co. about a year ago, and was divided into two sections, the first consisting of 1,190 lin. ft. of wharfage with back filling, and a temporary shed, all of which was required to be ready for operation by the opening of winter navigation, 1914; and the second section consisting of a wharf extension extending from the first section for 1,770 ft.

Of the first section of the work, which has been placed in service, the cribwork structure is on a stone foundation 5 ft. thick, and is 43 ft. high and 48 ft. wide at the base. The outer faces are double sheathed and sloping at the rate of 6 in 70 ft., and the rear faces are benched. On this cribwork there is a concrete superstructure 27 ft. high, 18 ft. wide at the base and 7 ft. wide at the top. The total height of the structure is 70 ft., the depth of water along the face of the wharf, at low water level, being 35 ft. This section is practically completed, the approximate cost being \$760,000. The second section of 1,770 ft. will be of the same width and height as the first section, except that the stone foundation will be 2 ft. high. It will cost \$575,000.

To provide access to the wharves, and as a site for trackage and warehouses, considerable filling in was required behind the wharves, and about 1,500,000 cub. yds. of material will require to be handled. About half of this work will be completed before the spring, and the balance during next season.

A temporary freight shed, which has been erected on berth 15, is a wooden structure 505 ft. long and 80 ft. wide, the outer wall being 25 ft. from the face of the wharf. The cost of the shed is \$16,000.

The dredging for the sites and berths of the Beacon Bar wharves has all been completed, and the remainder of the dredging on the bar will be finished by Mar. 31, except the removal of some ledge rock there and at the foul ground in the main channel, which will be dealt with next season.

This work is a part of a comprehensive scheme of development at West St. John, covering the conversion of the whole west front from these new wharves, practically to Partridge Island, into modern docks and terminal facilities; the extension of the breakwater to Partridge Island, and other works. It is also intended, in the near future, to replace the temporary shed on berth 15 with a structural steel building having grain conveyors, etc., and the St. John Board of Trade is urging on the Government that this work be undertaken and completed by next winter.

During the luncheon M. W. Doherty, Manager, Maritime Dredging and Construction Co., presented silver cigar boxes to the Ministers of Marine and of Public Works, and a silver cigar case to G. M. Bosworth, Vice President, C.P.R., as souvenirs.

### Rehearing of the Cases of the Stranding of the Steamships Saturnia and Montford.

At a rehearing, authorized at the request of Senator Choquette, which was held in Quebec, Nov. 18, 1914, when four additional witnesses were heard, the court consisted of Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Lapierre and C. Koenig, nautical assessors.

The court found, after weighing the evidence adduced at the formal investigation regarding the *Saturnia* and at the rehearing, at which no evidence of material interest or importance was produced, that the pilot Jules Lachance committed an error of judgment in not making some endeavor to localize the spar buoy marking the sunken block prior to entering the traverse, as such should have been done, especially in view of the fact that the usual marks on shore were indistinct owing to the land being covered with snow. He was notified that the spar buoy was in its position, and it was proved that it was there; but owing to the stage of the tide and its rapidity he must have known that the buoy would be almost covered owing to the pressure of the tide against it, and it was therefore his duty to wait and definitely assure himself of its location. In view of the various adverse conditions existing on the morning, April 28, 1914, the court severely reprimands him and warns him to adopt every precaution in the future to ensure safety to the vessels he may pilot.

With regard to the Montfort case the court finds that the pilot, Francois Gaudreau, committed a grave error of judgment, and apparently got confused, indicating indecision and uncertainty. He had seen the west end of the Island of Orleans, estimated his distance off and shaped a course accordingly. He saw the fog banks rolling from the St. Charles River, and must also have seen the ice coming down, yet when he became enveloped in the fog he heard the sound of rivetting on the south shore, and he immediately ported his helm, offering the port side of his vessel to the force and influence of tide and ice, with the consequences which have already been given. In this instance he has given unmistakable proofs of unreliability, therefore the court adjudges that he be severely censured and fined \$100; but owing to the fact that he has already been penalized, the collection of the fine will not be enforced.

### Insurance Losses on the Great Lakes.—

A Detroit, Mich., press dispatch says:—"The Lakes Protective Association made a very good showing in 1914, which means underwriters had a profitable season, as the association carries 25% of the insurance on the bulk of freighters that are insured. Not one of the 19 vessels lost last season was enrolled in the association, members of which operate about 200 vessels. Only one boat in 100 was in an accident in which there was a total loss. The *Caldera* sunk the *W. H. Gilbert* in Lake Huron. The heaviest loss to the underwriters was the *Benjamin Noble*, which was insured for about \$120,000. Her cargo of steel rails was also insured."

**Fenders for British Battleships.** The Dominion Naval Department is dealing with enquiries relative to the supply of hazlewood or willow boughs to be used as fenders for British battleships. Prior to the war, Great Britain obtained supplies of this material chiefly from Scandinavian territory, but owing to the North Sea being closed to navigation, other sources of supply must be discovered.

### War Rates for Vessels Requisitioned by the British Admiralty.

A committee of steamship owners formed recently to suggest rates of payment for steamships which have been, or may be, requisitioned by the British Admiralty for various purposes during the war, has reported, and the following rates have been fixed by the Director of Transportation. They are stated to be generally less than those suggested by the committee.

For steamships of the first class cargo type, of from 3,000 to 4,000 gross tons, and having a speed of 13 knots an hour, 15s. 9d. a ton; 12 knots, 14s. 9d. a ton; 11 knots, 13s. 3d. a ton; 10 knots, 12s. 9d. a ton. Vessels over 4,000 gross tons, 6d. a ton less; vessels under 3,000 gross tons, 6d. a ton more. For the large fast passenger steamships, the figures run from 16s. 6d. a ton for 15 knot vessels to 25s. a ton for 25 knot vessels, each type requiring to be specially considered. Regulations providing for arbitration in any matters in dispute relating to such requisitioning, were given in *Canadian Railway and Marine World* for Dec., 1914.

### A Slide in the Welland Canal.

A slide, which was 600 ft. long, and on the westerly bank of the Welland Canal, about half a mile north of the Air Line Ry. bridge, occurred sometime in the night of Dec. 3, owing to continued low water in the canal, caused by north easterly winds, lowering Lake Erie level. Two slides in the bank had previously taken place at this point, one about 12 years ago and the other 6 years ago, and had been dredged out. These, with the present one, form a continuous slide some 2,000 ft. long. The bank, the upper part of which is soil deposited when the canal was constructed, is about 52 ft. above the canal bottom. The material moved is clay and the bank sank with practically a perpendicular fault and the underlying material was pushed out into the canal channel in the shape of a fan, narrowing the regular channel bottom of 100 ft. to one but 30 ft. wide at the middle of the slide.

Navigation for loaded full canal size boats was interrupted for about four days until a dredging plant, which was fortunately available at Thorold, removed enough material to permit of safe passage. The total quantity of material to be dredged from the canal prism to restore it to its former section will be in the neighborhood of 18,000 cu. yds. The portion remaining to be removed will be dredged out next spring before the opening of navigation.

We are indebted to L. D. Hara, acting Superintendent Engineer, for the foregoing particulars.

**Panama Canal Traffic.**—A report on the commercial operation of the Panama Canal, from Aug. 15 to Nov. 18, 1914, the first three months, shows the passage of 212 vessels, carrying 1,079,521 tons. The charge of \$1.20 a net ton on the vessels is equivalent to approximately 75c. a ton on the cargo. In the classification of the traffic, over 95% is grouped under four heads:—U.S. coast-wise trade; traffic between the Pacific coast and the U.S. and Europe; the trade of the west coast of South America with the U.S. Atlantic seaboard, and the U.S. trade with the far East.

The Fisheries Branch of the Department of Marine and Fisheries has been placed under the Department of Naval Service, which has hitherto had charge of the fisheries protection cruisers. The change is merely an administrative one, as both departments are under the Minister of Marine.

## Steamship Princess Margaret for British Columbia Coast Service, Canadian Pacific Railway.

The Princess Margaret, which was launched recently at Dumbarton, Scotland, and christened by Mrs. Rene Redmond, the youngest daughter of Sir Thos. Shaughnessy, is the first of two passenger steamships which are being built for the C. P. R., by Kenny Bros. They will be used in the British Columbia service between Vancouver, Victoria and Seattle. The principal dimensions are length 395 ft., breadth moulded 54 ft., depth to promenade deck 28¼ ft. Above the promenade deck is the boat deck, having at its forward end the wheelhouse and accommodation for the officers and the navigating appliances. In the midship portion there will be 42 staterooms, and a vestibule, panelled in white and lit by a very large dome skylight, having softly tinted glass. The forward panelling will be enriched with tapestry. The first class smoking room will be in Old English style, and the framing in antique oak, with white panels. At the forward end will be an old English fireplace, with brickwork panels. The boat equipment will be specially complete, and in addition to a motor boat, there will be com-

class passengers, with accommodation for 160 persons. The dining saloon will be in the Georgian style, framed in mahogany, painted white and relieved with delicate tints, the furniture being of polished mahogany. Immediately adjacent to this will be a range of pantries and galleys. Alongside the machinery space on the port side will be a range of refrigerating chambers, while on the starboard side will be accommodation for the engineers. The lower deck aft will be fitted with accommodation for the cooks, stewards, and junior engineers, while forward there will be rooms for second class passengers, seamen and firemen. All exposed promenades will be covered with awnings, and an elaborate system of electric fan ventilation will be fitted throughout the vessel, and will be provided with hot and cold water, the hot water system being kept in continuous circulation so that hot water will always be available. The ship will be lighted throughout by electricity. A powerful windlass will be fitted forward and steam capstan aft for prompt manoeuvring in port. Steering will be effected by steam

was bought by the Government last year from the Ottoman Line, Ltd., Newport, Eng., for use in the Hudson Bay service. The Hudson Bay season having expired, this vessel, with others from the Government service, was chartered to the Dominion Iron and Steel Co. and the Dominion Coal Co. for the winter. The Sharon sailed from Sydney, N.S., for Newport, Eng., and after reporting from Newfoundland by wireless, was not heard from. She was about a month overdue, Dec. 15, and all hope for her safety had been abandoned. She was a new vessel and cost about \$150,000.

**Hudson Bay Navigation.**—F. Anderson, in charge of the Hudson Bay Survey, refers in his report to the loss of the s.s. Ceareux and Allete. He speaks of extremely and unusually adverse conditions, and says that "if the navigation into Hudson Bay and Straits warrants the expense, by operating a powerful tug equipped with wireless, in connection with a wireless station on the north end of Mansell Island, masters of ships could be kept informed of ice conditions."

**The C.P.R. s.s. Metagama,** launched recently on the Clyde, was the fourth C.P.R. steamship to be launched in 1914. She is a sister vessel of the s.s. Missanabie, a full description of which was given in Canadian

Steamship Princess Margaret, for C.P.R. British Columbia coast service.

plete accommodation, not only for all persons for whom there will be berths, but also a considerable margin provided to deal with deck passengers, who might be carried for short voyages. On the promenade deck there will be 77 first class staterooms and 8 special rooms en suite. These special staterooms will be furnished in different styles, such as Adams, Sheraton, Chippendale, etc. At the forward end will be the observation room, which is a feature in the company's Pacific steamships. This will be white, with green treillage, having a domed ceiling overhead, with plastic ornament. The windows will be very large, with elliptic tops. The upper deck will be devoted to passenger accommodation, and will include a ladies' lounge in Georgian style, finished in white, with mahogany furniture, and provided with large mirrors, flanked by jardinières. The tea room and writing room will be framed in mahogany and have French windows opening into the vestibules, the circular top design being carried completely round the apartments. There will also be several suites de luxe. At the forward end there will be a large vestibule framed in polished oak, with an enquiry bureau, a barber's shop, boot brushing department, and hand baggage room. The main deck aft will be fitted up as a dining saloon for first

tiller acting on a balanced rudder, and controlled by telemotor from flying bridge. The vessel will be fitted with Marconi wireless telegraphy, and a special petrol driven generating set will be installed on the boat deck capable of working the wireless system, as well as lighting the decks, even if there be no steam in the boilers. The vessel will be propelled by geared turbines, with steam by oil fired water tube boilers.

A press dispatch from Vancouver, Dec. 27, states that C.P.R. officials there have been notified that the British Admiralty has requisitioned the company's steamships Princess Margaret and Princess Irene for war purposes. The first named was completed a few weeks ago, and was expected to sail for the Pacific coast shortly, while the latter has just been finished. They are of the latest type of vessel, specially constructed for the Pacific coast service, and are equipped with turbine engines using oil as fuel. They have a speed of 23 knots an hour.

**Loss of the s.s. Sharon.**—We have been officially advised that the Dominion Government steamship Sharon had been lost at some point in the Atlantic Ocean, presumably near Ireland, where she is stated to have struck a mine. The Sharon

Railway and Marine World for August, 1914. Among the number of up to date life saving and other appliances with which she is being equipped are the Babcock and Wilcox patent davits, which enable the lifeboats to be launched from either side of the vessel, and the Murray patent nested lifeboats, providing sufficient accommodation for all passengers and crews. There are no collapsible boats. The Metagama will carry one class cabin passengers, with accommodation for 520, and for 1,200 third class passengers.

**Ice in Hudson Bay.**—In the Naval Service Department's report for the year ended Mar. 31, 1914, issued recently, F. Anderson, in charge of the Hudson Bay survey, refers to the unusually adverse ice conditions, and states that if the navigation into Hudson Bay and Strait warrants the expense of operating a powerful tug equipped with wireless telegraphy on the north end of Mansell Island masters of vessels could be kept informed of ice conditions.

**Quebec Corporation of Pilots.**—At the annual meeting of the Corporation of Pilots for and below the Quebec harbor, at Quebec, Dec. 10, directors for the current year were elected as follows:—A. Lachance, J. B. Bernier, O. Noel, P. X. Lachance, A. Raymond and E. Lachance.

## Atlantic and Pacific Ocean Marine.

The s. s. Royal Edward, owned by the Canadian Northern Steamships, Ltd., is being used as a prison ship at Southend, Eng., for interned alien enemies.

The C.P.R. announces that it has chartered the Allan Line s.s. Grampian to operate with the s.s. Missanabie on the winter service between St. John, Halifax and Liverpool.

The Donaldson Line s.s. Cassandra, from Halifax to Glasgow, which was reported aground in the Clyde towards the end of November, was released with comparatively little damage, Nov. 27.

Ocean navigation on the St. Lawrence River was closed Dec. 4, the Manchester Liners s.s. Manchester Spinner being the last ocean vessel to leave Montreal for a port in Great Britain.

A press dispatch from Rotterdam, Holland, states that the Hamburg-American Line has issued a statement to the effect that the company has no intention of selling its vessels, which are tied up at United States ports during the war.

The Royal Mail Steam Packet Co.'s s.s. Glengyle has been placed in service between the British Isles and Pacific ports, including Vancouver, and she will be followed shortly by a sister vessel to be named Gleneffer.

The trial of the action of the C. P. R. against the owners of the s. s. Storstadt, for damage suffered in connection with the loss of the s. s. Empress of Ireland, has been set for Jan. 11, before Justice Dunlop in the Admiralty Court, Montreal.

The s.s. Alsatian, of the Allan Line, newly fitted and armed with eight 6-inch guns and a number of quick firers, has been chosen as the flagship of the Mercantile Cruiser Squadron, under command of Admiral De Chair, according to a recent press dispatch.

Canadian Steamship Lines s.s. Bermudian, which has for some years been operated on the route between New York and Bermuda, and which was recently requisitioned for transporting Canadian troops to England, is

being completely overhauled and renovated, chiefly in the berthing accommodation.

Furness Withy and Co.'s s. s. Algeriana from South Shields, Eng., for Boston, Mass., arrived at Halifax, N. S., Dec. 21, 26 days out. Some fears were entertained as to her safety, but on her arrival it was learned that she had had a mishap to her propeller, which was repaired before she proceeded to Boston.

The steamships Campanello and Principello, owned by Canadian Northern Steamships, Ltd., are being utilized in conveying horses, for war purposes, from Newport News, Va., to St. Nazaire, France. R. C. Vaughan, Assistant to Second Vice President, was in Newport News, recently in connection with the matter.

The C. P. R. s. s. Empress of Japan, under requisition by the British Admiralty as an auxiliary cruiser in the south Pacific, captured the collier Exford recently, with a number of the crew of the German cruiser Emden, which was sunk recently by the Australian cruiser Sydney, off Cocos Island. Some of the crew who had escaped from the Emden, had commandeered the collier, and were presumably on a raiding expedition.

Furness Withy and Co., who operate a number of steamships to Canadian ports, have removed their headquarters, for operating purposes, from Hartlepool, to Liverpool, Eng., where they have taken offices in the Royal Liver Building. It is not stated whether the removal is to be permanent, or is merely for general convenience, owing to the unsettled condition of affairs on the North Sea coast. In connection with the recent bombardment of Hartlepool, by German vessels, it is possible a portion of the company's docks and plant may have been damaged, but no information on that point is available.

The C. P. R. s. s. Empress of India, which was utilized for some years in the company's Transpacific service, and which was requisitioned by the British Admiralty at the commencement of the war, has been sold to the Maharajah of Scindia for a hospital ship for Indian troops. She is to be renamed Loyalty. She was built at Barrow in Fur-

ness, Eng., in 1891, her dimensions being, length 455.6 ft., breadth 51.2 ft., depth 33.1 ft.; tonnage, 5,905, gross, 3,003 register. She is equipped with two triple expansion engines with cylinders 32, 51 and 82 ins. diam. x 54 ins. stroke, 1,167 n.h.p., driving twin screws.

## Maritime Provinces and Newfoundland.

The Dominion Government s. s. Speedy, which was overhauled recently at Polson Iron Works, Toronto, has been assigned to the patrol and examination service, under the Naval Service Department at Halifax, N. S.

The Charlottetown Steam Navigation Co.'s s.s. Empress having ceased running between Point du Chene, N.B., and Summerville, P.E.I., for the winter, the Dominion Government steamship will operate between Cape Tormentine, N.S., and Summerville until further notice.

The Marine Department has placed a temporary light on the south point of St. Paul Island, Cabot Strait, in place of the lighthouse destroyed by fire recently. The temporary light has the same characteristics as that of the old lighthouse light, but of less power.

The C. P. R. s. s. St. George, which has been operating for some time in the Bay of Fundy service, is stated to have been equipped with guns and other armaments, and to have been generally remodelled internally, for patrol work at the mouth of the Bay of Fundy.

The Mayor of St. John, N.B., returned there from Ottawa, Dec. 7, after interviewing members of the Government relative to arrangements for the winter mail service. He stated that all the Atlantic mail steamships will go on to St. John after calling at Halifax, and will also call at Halifax on the outward voyage.

There was a considerable increase of shipping at Bathurst, N.B., during 1914, as compared with 1913. During 1913, 12 vessels, exclusive of tugs and dredges, and with a total tonnage of 6,474, entered the harbor, while in 1914, 26 vessels, totalling

## List of Steam Vessels Registered in Canada During November, 1914.

10,844 tons, used the port. Of the 26 vessels, 4 were steamboats, the balance being sailing vessels, and all the traffic was for U.S. and Cuban ports.

Since the opening of winter navigation the new pilotage regulations for the port of Sydney, N.S., have been put into operation, providing that steamships employed in trading between any one or more of the provinces of Quebec, New Brunswick, Nova Scotia and Prince Edward Island, and any other or others of them, or employed between any port or ports in these provinces and the port of New York or any port of the U.S. on the Atlantic north of New York, will not hereafter be either wholly or partially exempt from the compulsory payment of pilotage dues, except steamships registered in Canada of not more than 120 tons register.

The Insular Steamship Co. announced recently that it had withdrawn its s. s. Westport III from service between St. John, N. B., and Yarmouth, N. S., and way ports, as the subsidy paid by the Dominion Government was not sufficient. The agreement with the Government provides for a service of 44 trips between Apr. 1, 1914 and Mar. 31, 1915, between St. John, N. B., Westport and Yarmouth, N. S., calling each trip both ways at Freeport, Tiverton, Little River, Mink Cove, Sandy Cove, Weymouth and Meteghan, unless ice prevents. The vessel is not to be taken off the route during December, January, February or March, unless for necessary repairs, in which case the contractors must supply a substitute vessel of about equal capacity, provided that such substitute be employed at a gross expense of not more than \$1,000 a month. The amount of the subsidy is \$5,500, payable in four equal instalments. This is an increase of \$500 more than was paid for the previous year.

### Province of Quebec Marine.

The Gaspé and Baie des Chaleurs Steamship has increased the number of its directors to five, and has changed its head office from Fraserville, Que., to Quebec, Que.

During the 1914 season 615 vessels of 229,255 tons passed through the Lachine Canal, against 664 vessels of 239,377 tons during the 1913 season. There were 9,049 vessel passages, 1,148 less than in 1913, but 4,989,972 tons of freight were handled, an increase of 12,413 tons over the previous year. The decrease in the number of vessels passing through the canal was caused by the lack of U.S. vessels, as there was an increase in the number of Canadian vessels.

Reports are current to the effect that the Bethlehem Steel Co., of the United States, is negotiating for the acquirement of the Canadian Vickers, Ltd., plant at Montreal, to enable it to execute orders stated to have been received from the British Government for submarine and other war vessels, for delivery during 1915. It is stated that the consent of the parent company in England has been obtained for the sale, subject to the concurrence of the Canadian directors. Conflicting statements have been made on the subject, both as to such orders having been placed, and as to any negotiations for the Vickers plant. A United States official statement was issued recently to the effect that the building of any such craft for belligerent powers by U.S. concerns was not consistent with that country's neutral position, and it was not believed that any such vessels were under construction in the U.S. for any of the powers. Press reports in the U.S. state that a number of light war vessels and submarines are being built for Great Britain in Massachusetts.

### Ontario and the Great Lakes.

The Welland Canal was closed for the winter, Dec. 18, the last vessel to pass through being the s. s. Carleton, owned by F. E. Hall and Co., Montreal.

The Montreal, Georgian Bay and Ottawa Canal Co. is applying to the Dominion Parliament for an extension of time for the commencement and completion of canals, etc., which it is authorized to construct, and for other purposes.

The whole of the Montreal Transportation Co.'s vessels with the exception of the Stormont, comprising 10 steamboats, 7 steam tugs and 30 barges, have been berthed for the winter at Kingston. The Stormont is wintering at Midland.

The lightship at Corsica Shoal has been removed from her position and taken to Port Huron for the winter. On the reopening of navigation she will be replaced by a new steel vessel, which is being fitted out at Detroit, Mich.

The St. Lawrence and Chicago Steam Navigation Co. has declared a dividend of 3%, payable Jan. 2, to shareholders of record Dec. 18, 1914. Some of the previous dividends were: 1904, 8%; 1905 to 1907, 10% a year; 1908, 7%; 1909, 8%; 1910, 3%; 1911, 5%; 1912 and 1913, 8% a year.

The Canadian canal at Sault Ste. Marie was closed to navigation for the winter, Dec. 14, and the U.S. canals, Dec. 16. One of the locks was kept open for a few days longer to permit the passing of some Government tugs to be used in certain works in progress.

The Marine Department has awarded a contract for the breaking of ice in the harbors of Port Arthur and Fort William, to the Canadian Towing and Wrecking Co., Port Arthur, for three years. The vessels to be used are the icebreaker St. Ignace, and the icebreaking tugs James Whalen, E. C. Whalen, A. F. Bowman, J. D. Morrison, Sarnia, Salvor and Gorman.

The contract for the erection of the steel superstructure of the St. Paul St. high level bridge over the old Welland canal at St. Catharines, Ont., has been awarded to the Canadian Bridge Co., for \$91,000, which is stated to be nearly \$20,000 below the local engineers' estimate. According to present plans, the projected hydro-electric railway will run over this bridge.

J. L. Weller, Engineer in Charge, Welland Ship Canal who was in Ottawa, early in December, for a conference with the Minister of Railways and Canals stated that good progress was being made in the construction of the new canal. Five sections are under contract and nearly 3,000 men are engaged. An article descriptive of the progress being made was given in Canadian Railway and Marine World for Dec. 1914.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater, for November, as follows:—Superior, 602.45; Michigan and Huron, 579.92; Erie, 571.44; Ontario, 245.25. As compared with the average November levels for the past ten years Superior was 0.09 ft. below; Michigan and Huron, 0.47 ft. below; Erie, 0.43 ft. below, and Ontario, 0.49 ft. below. It was anticipated that Superior, Michigan and Huron would be 0.2 ft. lower, and Erie and Ontario 0.1 ft. lower during December.

A press report from Sarnia, Nov. 18, stated that the Northern Navigation Co.'s s.s. Noronic had been drydocked at Lorain, Ohio, for extensive changes in her hull. It is stated that 2 ft. is being added to each side of the hull below the water line, thus giving her an extra width of 4 ft. below the

water line. It is also stated that the reason for this alteration is that she is somewhat top heavy and she has to carry a large quantity of pig iron ballast to keep her steady.

The Ottawa and Hull town planning commission is recommending to the Government that the headway for vessels on the Rideau canal be reduced to 12 ft., and that large vessels which require greater headway be required to dock at Dows Lake at the foot of Bronson Ave., where an extension of the Ottawa Electric Ry. be made to take care of people travelling to and from the passenger vessels; that fixed bridges be permitted, giving a clearance of 12 ft., between Bronson Ave. and the Ottawa River, and that above Bronson Ave., if any bridges are built that they be movable, or high level.

### Manitoba, Saskatchewan and Alberta.

The Northern Alberta Steamship Co., Grouard, Alta., has assigned to J. A. MacKinnon, Edmonton, Alta., for the benefit of creditors.

The Dominion Public Works Department did a considerable amount of work during 1914 in surveying and charting the Red River, between Selkirk and Lake Winnipeg, and this, in conjunction with that already done in the neighborhood of St. Andrew's locks, etc., will give a complete chart for navigation between the International Boundary and the lake.

It was announced in Winnipeg, Dec. 4, that the Dominion Public Works Department would commence work almost immediately on the construction of one of the three wharves on the Red River, which were recommended by the Winnipeg Harbor Commission recently. The one which will be taken in hand first is known as the Rover St. wharf, located between Annabelle and Macfarlane Sts. It will be 400 ft. long and about 30 ft. wide, and built on piles. It will cost about \$90,000, which includes the necessary dredging, etc.

### British Columbia and Pacific Coast Marine.

The Dominion Government has changed the German name of the dredge Fruhling, to number 303.

The Yukon River was closed Dec. 4, which is said to be the latest date for closing on record, except in 1905, when it was closed Dec. 17.

The Dominion Marine Department is arranging to have obstructions in the Fraser River, caused by blasting in connection with the construction of the Canadian Northern Ry., near Yale, removed. It is stated that the Government intends to try and hold the company responsible for the cost.

J. S. MacLachlan, Resident Engineer, Department of Public Works, Victoria, B. C., read a paper before the Canadian Society of Civil Engineers, Victoria and Vancouver branches, at Victoria, Dec. 11, on harbors generally, with special reference to Victoria harbor and the works now in progress there.

The Marine Department has issued a new edition of tide tables for the Pacific coast for 1915, with an abridged edition giving tables for Vancouver and the Sandheads, with slack water for the First Narrows and Active Pass. The complete edition includes a record of the results obtained in determining the time of slack water in the more important passes.

The Marine Department has issued a notice providing that every vessel entering the

eastern channel of Barkley Sound must call at Banfield and obtain a pass from the senior naval officer to enable her to proceed. Every vessel desiring to fish in the eastern channel must also obtain a pass, which will only be valid for the time indicated on it. All vessels in Barkley Sound must obey the instructions of the officers of the patrol vessels stationed there. No vessel will be permitted to pass through Satellite Pass. Vessels are free to pass to the westward of the eastern channel and through Junction Passage to the Alberni Canal without obtaining passes.

The first war prize court ever held in the Dominion was constituted at Ottawa, Dec. 15, when Justice Cassels of the Exchequer Court deal with the question of the s.s. *Belas*, which was seized by the customs officers at Quebec after the outbreak of war. The vessel's papers disclosed that she was a German vessel, built in 1875, and owned by J. Wimmer & Co., Hamburg. The Dominion Government claimed her condemnation, together with cargo, as "good and lawful prize and droits of the Admiralty." An appearance was entered by a Portuguese subject, who claimed that she had been purchased from the German owners prior to the war, but it transpired that the transfer had not been completed, and it was ordered that the vessel and cargo be detained until the conclusion of the war.

**Grain Shipments from Montreal.**—A report prepared in Montreal regarding the shipments of grain from the port in 1914 shows that there was a very large increase in quantity over 1913. It is stated that the large increase is partly due to the lateness of the 1913 crop, much of which was shipped early in 1914, and that a large quantity of U. S. grain was forwarded through Montreal. The war also caused some increase in the amount handled. The following table gives the approximate amounts shipped during 1914, compared with the figures for 1913:

	1914.	1913.
Wheat .....	60,839,376	33,187,474
Flax .....	181,908	7,808,342
Oats .....	8,492,983	7,279,880
Barley .....	4,588,945	5,087,489
Rye .....	125,746	210,808
	74,228,958	53,573,993
Flour .....	2,751,934	2,504,565

The U. S. Steamboat Inspection Service in the year ended June 30, 1914, inspected 7,930 vessels, with a gross tonnage of nearly 10,000,000. There were 232 accidents during the year on vessels subject to inspection, resulting in a loss of 105 passengers and 477 members of the crew. One passenger was lost for each 3,029,000 passengers carried. The report recommends legislation to require fireproof construction on all excursion steamers hereafter built, and that the designs for the hulls and boilers of all vessels hereafter built should be first examined and approved by a corps of inspectors in the office of the supervising inspector general.

**New Pilotage Stations in Great Britain.**—The British Admiralty has issued a notice to mariners providing that, in view of the extension of the system of mine defence, pilotage has been made compulsory for the Rivers Humber and Tyne, in England, and Firth of Forth, Moray Firth, and Scapa Flow, in Scotland. Pilotage stations have been provided at convenient points, where vessels must call for and drop pilots. All the places named front on the North Sea.

**Life Saving Appliances.**—An order in council has been passed providing rules for life saving appliances on foreign going steamships and for coasting and inland steamships, and cancelling part 8 of the rules for the inspection of steamboats. The new

rules are the same as have been adopted by the British Board of Trade, and are of the same standard as those required by other governments.

During the war, in order to meet the conditions prevalent owing to the dislocation of shipping on the east coast of Great Britain, the Government railway executive committee, responsible for the operation of British railways, has made certain preferential rates, and it is anticipated that further preferences will be granted later on.

Brass furnace linings are said to have their life doubled by the use of oil fuel instead of coke.

## Transportation Conventions in 1915.

- Western Canada Railway Club, Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July and August.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Canadian Locomotive Co.** has paid the usual 1¼% quarterly dividend, due Jan. 1 on its preferred shares.

**Independent Pneumatic Tool Co.**, Chicago and Montreal, has issued circular E, describing and illustrating a new line of Thor portable electric drills.

**Canadian General Electric Co.**—The Lieutenant Governor of Ontario, J. S. Hendrie, has been elected a director of the Canadian General Electric Co., vice Senator Jaffray, deceased.

**Edison Storage Battery Co.**—F. V. McGinness, Sales Engineer of the Edison Storage Battery Co., Orange, N.J., has been appointed Assistant Manager of the Railway Department, taking the position of W. F. Bauer, who was recently made manager of the company's Chicago office.

**Steel Co. of Canada.**—One of the executive officers says: "Our General Manager, Robt. Hobson, is in London but he is not there in connection with any new financing of the company. We hope that he will be successful in securing orders from the various Governments in connection with their present requirements for the war."

**Safety Car Heating and Lighting Co.**—Harry Bayne, who has been connected with electrical and manufacturing interests in Canada for a number of years, has been appointed General Agent for Canada and Newfoundland for the Safety Car Heating & Lighting Co., of New York. He will have offices in Montreal and Toronto. R. H. Harvey remains with the company in Montreal, as heretofore.

**Edison Storage Battery Co.**—The fire that destroyed part of the Edison phonograph works at Orange, N.J., on Dec. 9, did not in any way affect the Edison Storage Battery Co. One end the large concrete buildings of the battery works is across the street from Mr. Edison's private laboratory which was saved, and this, as well as the rest of the plant, escaped unscorched.

**Standard Underground Cable Co. of Canada Ltd.**—H. C. Barber, who has been appointed on the sales force of the Standard Underground Cable Co. of Canada, Ltd., Hamilton, Ont., which manufactures electric wires and cables, cable terminals, junction boxes and other cable accessories, is a graduate of the Faculty of Applied Science, Toronto University, and has occupied positions on the engineering and executive staffs of the Toronto and Hamilton hydro electric departments, also on the Packard Electric Co.'s sales force at St. Catharines, Ont. He will advise customers in regard to installation problems.

L'Air Liquide Society, Montreal, has issued Oxy-Acetylene Welding and Cutting and its Applications, 60 pgs., 6 by 9 ins., thoroughly illustrated. Among the illustrations of special interest to Canadian Railway and Marine World readers are: part of water tube boiler made by welding; cutting iron bridge at Toronto; cutting bridge to pieces and burning off rivet heads; welding a rudder; adding metal to worn out dredge bucket; part of bow of s. s. Empress of Britain removed by the cutting blow pipe following a collision in the St. Lawrence; building up a worn out electric railway rail with the oxy-acetylene blow pipe; welded rail connection on electric railway; locomotive wheel reclaimed by welding; patch cut out of locomotive boiler and patch welded in; locomotive cylinder welded; cracks welded on locomotive dome; oxy-gasoline cutting outfit for railway yards, wrecking equipment, etc.

#### KETTLE VALLEY RAILWAY COMPANY.

NOTICE.—The Kettle Valley Railway Company will apply to the Parliament of Canada, at its next session, for an Act—

1. Extending the time within which it may construct the following lines of railway, all in British Columbia, previously authorized:—

(a) From Summer Creek or One Mile Creek to Copper Mountain and Voigt Mining Camps.

(b) From Vernon to Penticton via Kelowna.

(c) From the terminus of the branch authorized by paragraphs (b) of section 2 of chapter 101 of the Statutes of 1911, to Otter Summit.

(d) From a point on the line described in paragraph (c) at or near Tulameen up the Tulameen River, a distance of about 50 miles.

(e) From Penticton to Osoyoos Lake.

(f) From Summer Creek to Allison or Princeton and thence to Granite Creek Coal Areas.

(g) From Grand Forks to point 50 miles up North Fork of Kettle River.

(h) From Midway to Hedley.

(i) From Penticton to Nicola.

2. Ratifying and confirming an agreement between the company and the Vancouver, Victoria & Eastern Railway and Navigation Company respecting joint section between a point near Princeton and Otter Summit.

And for other purposes.

Dated at Toronto, this 15th day of December, 1914.

C. B. GORDON, Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

#### CANADIAN NORTHERN ONTARIO RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Ontario Railway Company will apply to the Parliament of Canada, at its next session, for an Act confirming and ratifying an agreement between the Campbellford, Lake Ontario and Western Railway Company respecting the terminals at Belleville, also confirming and ratifying an agreement between the Georgian Bay and Seaboard Railway Company and the Canadian Northern Ontario Railway Company respecting joint tracks and terminals at Orillia.

GERALD RUEL,  
Chief Solicitor.

Laboratory and Factory, Philadelphia, Pa.

Agencies throughout the world.

The sailor, like any other person, has a natural desire to rise. You want to become an officer—if possible, to command your own craft. Or you want to become a marine engineer.

But seamanship alone will not place you on the quarterdeck nor qualify you as engineer. Your years of training before the mast or in the stokehold will avail you nothing beyond your monthly wages as a seaman or stoker.

In addition to your practical experience you must know the theory and practice of navigation or marine engineering in order to pass the required examination for license.

The I.C.S. system of teaching navigation and marine engineering will enable you to get what you need without coming on shore, and at no expense other than the price of the Course, which is within reach of every sailor, no matter how small his wages.

To succeed with an I.C.S. Course requires only that you be able to read and write. You are not required to leave your ship to learn; you study and recite in the fore-castle, on the deck, or in any other part of the ship that is convenient for reading and writing.

Completion of one of these Courses will enable you to pass any examination required to obtain a license for master, mate, or marine engineer.

*Fill out and return the attached coupon and the I.C.S. will tell you how they can prepare you for examination.*

### BRITISH COLUMBIA SOUTHERN RAIL- WAY.

NOTICE—The British Columbia South-  
ern Railway Company will apply to the Par-  
liament of Canada at its next session for an  
Act extending the time within which it may  
construct its railway from Michel to Kan-  
anaskis, and for other purposes.

Dated at Montreal the 25th November,  
1914.

H. C. OSWALD,  
Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

### SOUTH ONTARIO PACIFIC RAILWAY.

NOTICE—The South Ontario Pacific Rail-  
way Company will apply to the Parliament  
of Canada, at its next session, for an Act  
extending the time within which it may con-  
struct its railway from a point at or near  
Hamilton to a point on the Niagara River  
at or near the City of Niagara Falls, and  
for other purposes.

Dated at Montreal the 25th November,  
1914.

H. C. OSWALD,  
Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

### MANITOBA & NORTH WESTERN RAIL WAY.

NOTICE—The Manitoba & North West-  
ern Railway Company of Canada will apply  
to the Parliament of Canada, at its next  
session, for an Act extending the time  
within which it may construct its railway  
from a point at or near Theodore to a point  
between Govan and Lanigan, and for other  
purposes.

Dated at Montreal the 25th November,  
1914.

H. C. OSWALD,  
Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

## FOR CONCRETE ROAD PAVEMENT, WALKS, BUILDING FLOORS, ETC.

We are the originators of this wire reinforcement in flat sheets, and it is coming into universal use wherever introduced. We have supplied many carloads of it this past season.

The standard mesh for road pavement is 6 x 12 inches; for bridges and building floors, the standard is 3 x 6 inches. Also, other meshes as desired. All sheets 4 feet wide, and any length specified that can be loaded in cars.

*Samples will be sent upon request.*

We also supply Iron Fences, Fire Escapes, Office Wire Work, and all kinds of Builders' Wire and Iron Work

## How Much Is Safety Worth?

Isn't it worth a whole lot to know that your guy ropes will not pull out when severe strains are thrown upon them? Isn't it worth a lot to feel perfectly easy about the wire rope fastenings that hold the heavy girders, etc., you are hoisting into position? Such security is worth a great deal, but it costs but a trifle more than the uncertain, unreliable performance of cast or malleable clips.

**"CROSBY" CLIPS** are safe. They are drop forged from special analysis steel and galvanized. **They Hold!**

MADE BY THE

# Difficult Frame Welding Made Easy with Thermit

Thermit Weld on Eng. 802 of Grand Trunk Pacific, Transcona, Man.

Frame welded with Thermit by Illinois Central R.R., Centralia, Ill.

Pamphlet No. 2144, Second Edition.

You can weld a frame quickly and economically with Thermit, whether it is broken in the splice, under the fire box, close up to the cylinder, or at any other point. It is not necessary to take the frame down, as all welds can be made with the frame in place.

The Thermit process can also be used for repairing broken connecting rods, guide-yokes, cross heads, and many other sections.

The Welding in of heavier frame sections is an easy matter when Thermit is used for this purpose and a permanent job is assured.

No other process of welding is so quick and uniformly efficient and economical in operation as the Thermit Process.

The proof is in the fact that to-day 435 railroad shops in North America are using Thermit regularly for this class of work and are returning their engines to service in from 10 to 24 hours.

## Get This New Book.

We have just issued a new pamphlet of instructions for the use of Thermit in railroad shops, known as pamphlet No. 2144. This should be in the hands of every railroad man, as it tells how and why the Thermit Process of welding will save thousands of dollars every year in repair costs. Write for it to-day.

## Freight Interchange Service with Electric Locomotives

60-Ton Baldwin-Westinghouse Locomotives Equipped With Westinghouse Motors and H-L Control

A development in electric railway operation is the handling of cars to and from steam road interchange points and industrial plants.

The Niagara Junction Railway is effecting reliable and economical handling of freight by means of two Baldwin-Westinghouse Electric Locomotives equipped with Westinghouse motors and H-L Control.

While this road has only about four miles of main line yet it handles 1800 to 2000 cars per month.

# Why Dynamic Indication is the always-safe principle in G R S Electric Interlocking

The fundamental safety first principle of **G R S Electric Interlocking Dynamic Indication** remains as it was invented 13 years ago. This test of years is the most convincing evidence in the unflinching integrity of Dynamic Indication.

This indication is not secured from energy existent at the function prior to the movement of that function and dependent only on closing of a single break in the indication circuit, as is the case in A. C. and battery indication systems; but being a dynamic current generated by the momentum of the motor, it can be secured only after actual operation of the function. Since it is impossible to obtain an indication upon the lever controlling the function in any other way than by this generated current pro-

duced by the motor after the completed movement of the function, this system is **always safe**. Furthermore, dynamic indication is solely and **only a G R S principle**.

This **only — always — safe** principle of Dynamic Indication with several other features has brought this system into marked favor with the result that 80% of the power interlocking in use to-day is **G R S Electric**.

This system is equally suited to the 8 and 24 lever plant as it is to the Grand Central Terminal which is the largest interlocking in the world.

Why not install the **only — always — safe — system**, the **G R S Electric Interlocking** employing Dynamic Indication?

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

## To Parties Manufacturing, or Intending to Manufacture in Canada:

We are prepared to produce, upon a large scale, articles of metal and wood.

Our facilities are those necessary for the extensive and economical manufacture of the heaviest freight cars and the highest class of passenger cars. These facilities include plants for the manufacture of steel, malleable and grey iron castings—rolled steel and iron products—frogs, switches and track work for electric and steam railways—coil and elliptic springs—forgings—cabinet and other wood work—and all preparatory and finishing adjuncts.

The various plants are distributed from Amherst, N.S. to Fort William, Ont.

# 440 Railroad Shops Use Thermit Because It "Delivers the Goods"

Thermit Weld on Eng. 802 of Grand Trunk Pacific,  
Transcona, Man.

Frame welded with Thermit by Illinois Central R.R.,  
Centralia, Ill.

Pamphlet No. 2144, Second Edition.  
GET THIS BOOK

It can be said without exaggeration that the list of railroads using Thermit includes practically every system from the small road having only a few locomotives to the largest systems having many thousand locomotives.

Thermit is equally beneficial to all.

15 Frames, side rods, guide yokes, links, driving wheel spokes and other sections can be quickly repaired, returning the engine to service in from 10 to 12 hours. Frames can be welded in place and with very little if any dismantling to other parts of the locomotive.

Remember that the greatest railway systems in the world use hundreds of thousands of pounds of Thermit. They do not use it for any reason except that it "delivers the goods", and has proved itself a profitable investment.

Thermit and all appliances for using it are MADE IN CANADA and full information is given in our new pamphlet No. 2144 "Thermit Locomotive Repairs" which shows how effectively and economically the process can be used. Send for a copy today.

The Grand Trunk System reaches all trade centres in Eastern Canada, and is now a large factor in Western Canada traffic through the Grand Trunk Pacific Railway, recently completed to the Pacific coast.

W. P. HINTON,  
Assistant Passenger Traffic Manager,  
Montreal, Que.

## The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is Prevention and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

# LOCOMOTIVES

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

## Winter Track Inspection with the Fairmont

The damage one broken rail may do, if not discovered in time, makes it of the utmost importance that track be inspected every day, particularly in zero weather.

Any hand or push car equipped with the Fairmont Engine can be run as slowly as three miles per hour. Every inch of track can be as perfectly inspected as by a man on foot.

The Section Foreman with a Fairmont Engine on his hand car enjoys track inspection.

Warmly clothed, he rolls slowly along, free to give his entire attention to close scrutiny of the rail.

The 4 H.P. engine weighs only 225 lbs., and is mounted over one axle, making other end easy to lift around.

Two men can handle the car anywhere. It runs just as well backward as forward.

Two men with a good reliable cold-weather motor car such as the Fairmont makes, can do as much winter work as three or four with the old-fashioned hand car.

The small installments on which these engines and cars are sold make it easier to own one than to do without it. Write for catalogue of new 4, 6 and 8 H.P. models.

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,600 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders,  $23\frac{1}{2}$  x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

20 in.	2	1, 1½, 1½, 2 in.	7.50	2.50	3, 1, 1½ in. 1.00
25 in.	3	1½, 2, 2½, 3 in.	7.50	3.00	1½, 2, 2½, 3 in. 1.25

Prices on larger sizes furnished upon application.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2½ wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## Some Maximums and Minimums in Train Operation.

By Alfred Price, Assistant General Manager, Eastern Lines, Canadian Pacific Railway.

It has become a trite saying that a railway company has nothing to sell except transportation, but in order to sell its sole commodity, it must have an ample supply available at all times, and to do so must buy a variety of materials. During the past ten years every item it uses in construction and in the operation and maintenance of its property has increased in price. For example: steel rails, telegraph poles, car sills and lumber have increased by amounts varying from 29% to 54%, while the wages of its enginemen, trainmen, yardmen, telegraphers and maintenance of way employes have increased from 19% to 79%, an increase in all its purchases, including labor, of approximately 35%.

If a commercial institution had to face the problems of securing sufficient additional revenue to offset such tremendously heavy increases in the cost of its raw material and its labor, it would adopt the simple, and natural expediency of increasing the price of its product, so that the consumer would ultimately pay the piper. But although a railway is a business conducted under much the same conditions as a manufactory, having many similar problems and difficulties, it does not enjoy the privilege of increasing its rates. In proof of this statement the following table, showing the earnings on all Canadian railways during the past seven years, is submitted. The units are, one passenger carried one mile—the passenger mile; and one ton carried one mile—the ton mile:

Year	Passenger mile cents	Ton mile cents
1907	1.911	.815
1908	1.920	.723
1909	1.921	.727
1910	1.866	.739
1911	1.944	.777
1912	1.943	.757
1913	1.973	.758

Since 1907, therefore, the earnings per passenger per 100 miles shows an increase of 6c., and per ton of freight per 100 miles a decrease of 5½c. But the ton mile units for 1914 were 23 billions, and the passenger mile units only 3 billions, so that the figures actually represent a very serious decrease in earnings. To be more specific, had the passenger mile and ton mile earnings of 1907 been applied to the 1913 traffic, the railways would have shown an increase in their net earnings of over \$11,000,000.

But, compared to a commercial enterprise, the railway has other handicaps; it cannot, like a manufactory, for instance, close down its plant in dull times and wait until there is a demand for its product, nor can it warehouse its product, holding for higher prices. The public demands that an ample supply of transportation be kept on hand at all times whether required or not; that the railway company be prepared to take care of the peak load whenever an unusual demand occurs, and that the service be efficient. These demands may, or may not, be reasonable, but in any event the railway company must comply with them. In view of these demands and the constantly increasing cost of everything the railway has to buy, and the stationary, or decreasing, cost of every-

thing it has to sell, it is absolutely necessary that the strictest economy, consistent with efficiency, be practiced, and that intelligent, scientific methods of operation be adopted.

Unfortunately, the existing lines and facilities are not likely to be taxed to handle the traffic for some time to come. It would be folly, therefore, to advocate the lowering of transportation costs by reducing grades, eliminating curves, or building better operating facilities. Instead, it is desired to suggest that, under existing conditions, there are opportunities to reduce the operating expenses, for it will be freely admitted that there is a wide field for economy on Canadian railways without any impairment of efficiency.

The operating official naturally desires to provide a service as satisfactory as can be

tract. The railways are almost entirely responsible for this loss. The waste can be stopped by the adoption of up to date methods and insistence upon the exercise of greater care on the part of agents, billers, checkers, porters and trainmen.

For clearing wrecks and satisfying claimants on account of injuries Canadian railways paid out last year over \$1,500,000. There were no less than 710 people killed by the movement of trains, besides 2,966 injured. It is quite true that almost half of those killed were trespassers, and we are likely to continue to have a harvest of deaths from this cause every year until there is a law making trespassing a criminal offense, and a severe penalty is imposed for a violation. Most of the other fatalities and injuries might have been avoided by the exercise of ordinary care. What is needed more than anything else is increased safety in railway operation. One dislikes to speak of the loss in dollars and cents in the face of the awful loss of life and limb as a result of these accidents. The figures quoted tell their own pitiful tale in terms needing no emphasis. The safety first campaign is doing a grand work, and is entitled to the sympathy and active help of every railway officer and employee.

The largest single operating item is the fuel bill. It amounted to \$28,000,000 last year on Canadian railways. For every locomotive mile run there was consumed 113 lbs. of coal for which was paid 17¼c. It is conceded that in order to secure the maximum tonnage with the minimum consumption everybody having to do with the running of trains must co-operate. The fireman alone might save a considerable sum of money. He now puts 11 scoopsful of coal into the firebox per mile run. If he could manage to get it down to 10 the net earnings of the railways would increase by \$2,500,000. The question is, "Would he do it if it was his own coal?" But it must not be left to the fireman alone. Coal can be saved by the locomotive man, the locomotive foreman and his staff, the yardmaster and his staff, train despatchers, operators, trainmen, and, in fact, by everyone from the superintendent to the callboy.

It does not pay to run trains at high speeds, for aside from the greater liability to accident, and the relatively greater amount of damage and loss when an accident occurs, the service is expensive. Because of keen competition in certain territories, it would appear to be necessary to schedule some fast passenger trains, but when and where possible the actual running speed should not exceed from 45 to 50 miles an hour.

Last year the average number of passengers per train on Canadian railways was only 62, and the average number of cars was 5.6. The minimum tonnage per passenger train mile should be handled. On the other hand, and for obvious reasons in freight service, the maximum tonnage per train mile should be handled, and all way freights should be scheduled slow enough to enable locomotives to pull their full tonnage under normal weather conditions. It is significant that the Interstate Commerce

19258 Alfred Price,  
Assistant General Manager, Eastern Lines,  
Canadian Pacific Railway.

reasonably expected by the public, and at the minimum cost. Efficiency and economy might well be adopted as his slogan, the maximum efficiency at the minimum cost. If he can handle the freight without damaging, or losing it, he will take a long step towards efficiency, and, at the same time, will accomplish something worth while under the head of economy. Last year the freight loss and damage account of Canadian railways amounted to over \$2,000,000, double the amount paid out in 1911. The shipper wants the goods delivered to the consignee intact, and would gladly waive the \$2,000,000 he now receives to have this done. This sum, therefore, may be regarded as a penalty imposed upon the railway for nonfulfilment of an obligation or con-

Commission has advised the American railways to lengthen the time of their fast freight train schedules in order to enable them to lessen their operating expenses.

There is an economical load for a locomotive. What that load is can be determined only by experience and by a series of tests. The maximum tonnage may not be an economical load, especially on what is known as a low grade line. A locomotive given the maximum tonnage which it is capable of hauling on a line with grades of 4-10% of 1%, or less, would run into overtime, the fuel consumption would be excessive and it would probably be found that the last straw, speaking metaphorically, had broken the back of the locomotive camel. On the other hand, to underload locomotives in through freight service in both directions is an inexcusable waste.

When, by tests made with a dynamometer car, it has been determined what tonnage a locomotive of a certain tractive power is capable of hauling economically over the maximum grades on a subdivision, operating officials should insist upon locomotives being so loaded, at least in one direction, and under normal weather conditions. Low temperature, a heavy fall of snow, a greasy rail, or any atmospheric condition that will retard the movement of a train will warrant running with a reduced tonnage, so as to permit reasonably good time being made from the initial to the objective terminal. It does not pay to haul maximum tonnage at the expense of excessive fuel consumption and overtime.

Theoretically, locomotives should be given their full tonnage rating in both directions, but in practice it is found that this cannot be done, as usually there is a preponderance of traffic one way, and locomotives must run in the opposite direction with reduced tonnage in order to keep the freight moving. However, under the circumstances, if locomotives haul the maximum load in one direction, the results should be satisfactory.

It might be well to demonstrate the effect of running trains with greatly reduced tonnage. The following statement makes a comparison of actual results on a certain subdivision, the period A and B representing two summer months. During B the gross tonnage handled one mile was 87,008,449, and items indicated by X in A are based on this ton mileage:

Item	Period A	Period B
Average weight of train per mile	1,737 tons	2,133 tons
Train miles	50,136 x	40,876
Pounds coal used per train mile	129	128
Pounds coal per thousand tons hauled one mile	75	61
Cost	\$22,893.55x	\$18,637.98
Saving		\$ 4,255.57

The saving on this 125 mile subdivision was not due to any change in the physical characteristics of the road nor to the use of more powerful locomotive, but merely to a better loading of trains, and during the month the saving amounted to \$4,255.57.

It will be observed that, although the average weight of train per mile during period B was 396 tons more than during A, the amount of coal consumed per train mile was approximately the same. This will not always follow, but the statement demonstrates clearly that if a locomotive is not overloaded, it will burn almost as much coal per mile when hauling 75% or 80% of its full tonnage as when it is loaded to its capacity. The same is true of wages and other engine and train supplies.

It is surprising the effect upon almost every operating item a small increase in the average load per loaded car would have. During 1913 the average weight of contents in loaded cars on all Canadian railways was 19 tons—a very small load when it is considered that the average carrying capacity

was 32.14 tons. An increase in the average contents would result in a decrease in the number of cars required to carry the same volume of traffic, and fewer cars would lessen the cost of locomotives, train, yard and round-house service, as well as some other incidental expenses.

There is now a campaign on to increase the average weight of contents of loaded cars on the Eastern lines of the C.P.R. in 1915, the increase aimed at being 3 tons a car. Based upon the traffic handled in 1913, when the average weight of the contents of loaded cars was 20.15 tons, it is estimated that the increased average load would represent a saving in three items alone of not less than \$800,000, as follows:

In locomotive and round house expenses	\$ 99,608.50
In car repairs	282,367.65
In ton mileage	427,502.60
Total	\$809,478.75

The question might well be asked: Is it possible to secure the additional tonnage? It cannot be done without the hearty and intelligent co-operation of the officers of the railway company and its employees, with the shippers and consignees; but there are many ways in which to increase the average load: only a few need, however be mentioned:

Select cars of large capacity for heavy freight. For 100,000 bush. of wheat, if 80,000 lb capacity cars were used, the cars would be loaded up to 88,000 lbs., and the whole shipment would be carried in 68 cars. To make the shipment in 60,000 lb capacity cars the cars would carry only 66,000 lbs. each and 91 cars would be used. In the former case the average weight of contents would be 44 tons, and in the latter only 33 tons. By using large cars the figures would be: Contents, 3,000 tons; tare, 1,274 tons; total, 4,274 tons. By using small cars the figures would be: Contents, 3,000 tons; tare, 1,558 tons; total, 4,558 tons. Therefore, under the second proposition, in addition to supplying grain door, switching, inspecting and hauling 23 extra cars, the locomotives would have to haul 284 additional tons of dead weight from the point of shipment to destination and back again.

Select smaller capacity cars for light and bulky freight. As the smaller capacity cars are approximately the same dimensions as the larger, and weigh 2 tons less, they are just as suitable for hay, furniture, oats, etc., and for such commodities it is profitable to use them.

Consignees who need but one car of freight at a time usually order the minimum car load, as per the freight classification. If the matter was properly represented to them, they might be induced to order in larger units.

When a shipper holds an order for several car loads of freight for the same consignee and destination, it should not be a difficult matter to persuade him to load the full order in the minimum number of cars.

Shippers and consignees who have suffered through car shortages in the past can be shown that the simplest way to prevent a recurrence of such a condition is by loading all cars to their full capacity. Not only will this plan avoid car shortages for a number of years to come, but it will prevent the congesting of terminals, which has also been the cause of a great deal of trouble to shippers and consignees in past years.

Another way to secure the maximum freight tonnage to the minimum tare and in the minimum number of cars is by avoiding the unnecessary movement of empty cars.

When the settlement for the use of foreign cars was on a mileage instead of a per diem basis, the principle that empties should be run in only one direction, and that op-

posite to the direction of the preponderance of traffic, was pretty generally adhered to. A cross movement of empties was then looked upon as exceedingly bad transportation. Since the change in the system, the penalty for holding foreign cars has been so heavy (at present 45c. per day) that under most circumstances it pays to send foreign cars home empty, even when to do so they must travel in the direction of traffic.

The necessity of moving foreign empties homeward promptly has, probably, had a tendency to weaken the hold which the transportation officer a few years ago had upon the principle of moving empties in one direction only. The principle, however, is as sound today as ever it was, but it is conceded that, under the changed conditions, it must often be departed from.

The direction in which empties should move is naturally that opposite to the movement of the preponderance of traffic. The cost in that direction is comparatively small, because the locomotives returning for loads are light enough to handle them and no additional locomotive mileage is necessary. When, however, empties are moved in the same direction as the balance of traffic, additional locomotive mileage is involved—but not only so, for the empties are being sent out of a territory where they are in demand, and for every such movement, an empty must be hauled in the opposite direction to take its place, except for cars of special classes and for which there is no suitable commodity.

A conservative estimate of the cost of hauling empty cars is 1½c. per car mile. If, therefore, an empty suitable for traffic is sent in the direction of the balance of tonnage, a distance of 300 miles, the total additional mileage involved is 600 miles at a cost of \$9—a sum well worth trying to save.

During last year 24% of the car mileage on Canadian railways was empty. If by some means this percentage could be reduced to say 20% it would represent a large increase in the net earnings of our railways.

### Reported Settlement of Detroit River Tunnel, Michigan Central Railroad.

A rumor came to our attention recently that the M. C. R. tunnel under the Detroit River was showing evidences of settlement. This tunnel is a structure of concrete of rectangular cross section and was built by floating successive steel caissons into position and filling in around them with concrete deposited under water. There would seem to be no reason why a tunnel of this type should be more liable to settlement than a circular tube tunnel, such as that under the St. Clair River, which is driven through clay very similar to that in which the Detroit tunnel lies.

We find upon inquiry that some settlement did take place during the construction of the Detroit tunnel before it was opened to traffic, and was found to be due to a enormous additional load upon the under side of the tunnel and thereby placed small amount of leakage coming through the floor of the tunnel. This had the effect of relieving the hydrostatic pressure on the foundation soil underlying the tunnel. Measures were at once taken to stop the leakage through the tunnel floor, and when this was done the settlement stopped. There has been no ascertainable settlement since the tunnel was opened to the operation of trains; and the small amount of water which seeps into the tunnel is steadily decreasing, due probably to the gradual stoppage of the pores in the concrete by particles of silt.—Engineering News.

Divisional Facilities on the Grand Trunk Pacific Railway.

The accompanying plan shows the G.T.P.R. divisional yards at McBride, B.C., which are typical of the facilities which are being provided at other points along the portion of the line now under construction. These facilities are being constructed at Prince George, Endako, Smithers and Pacific, and

Grand Trunk Pacific Railway Divisional Yards at McBride, B.C. Typical of the Several on the Line.

are duplicates of the McBride layout, with the exception of at the last two points, where the locomotive houses will be curtailed in so far as the extent of the machine shop is concerned, and the boiler capacity will be reduced. The McBride installation is complete, and the others are under way.

In the McBride layout the terminal plans call for a 12 stall locomotive house, with a machine shop to the rear. The locomotive house will be heated by hot air, from a fan house midway in the outer wall. As contemplated, the final capacity of the locomotive houses will be 48 stalls, in four 12 stall sections, each section with its own heating fan arrangement. In the McBride installation there is a 1,000 ton coaling plant, which it is the intention to eventually replace with an oil fuel station. The other four points are being equipped with oil fuel stations, each of which will contain a 350,000 imperial gallon storage tank, with provision for extension to include two other similar tanks. There will also be a service tank, under which will be located pumps, which will take the oil directly from a sump into which the tank cars drain, and deliver it either to the service tank or the storage tank. These tanks will be provided with heating coils, measuring apparatus, etc., supplied with steam from the locomotive house boilers. Each of the five points will have a 100,000 gallon steel water tank, and a 50,000 gallon steel service tank.

The initial layout in these yards will only have repair tracks near the locomotive house for car repairs, but it is the intention in the future to add a planing mill and store and a car bin for repair parts, and, as well as additional shop buildings as shown.

Opposite the locomotive house there will

minor facilities such as are required at these points. We are indebted to H. A. Woods, M. Can. Soc. C.E., Assistant Chief Engineer, Grand Trunk Pacific Ry., for the information on which this article is based.

Canadian Pacific Railway Double Track and Alternative Routes.

The C.P.R. has in operation 1,445.35 miles of double track line, and it has also in operation 525.20 miles of track which give alternative routes to the previously existing lines. The following table shows the location and mileage of the sections of double tracked lines:

Eastern Division:—	Miles.
Montreal (Windor St.)—Smiths Falls Yard	120.18
Montreal West—Brigham Jet	44.72
Montreal West—Mile End	7.19
Montreal (Place Viger) — Ste. Therese Terminals (additional mileage)	20.11
Montreal Terminals	0.71
Ontario Division:—	
Smiths Falls—Glen Tay Junction of Lake Ontario Shore Line (near Agincourt)—Toronto	14.87
Toronto—Guelph Jet	13.40

Nemegos—Esher	30.00
Healy—Barkow	25.60
Healy—King Peninsula	19.10
Healy—Pays Plat	27.10
Salem, Gurney	8.40
Covers	13.60
Gurney	11.00

as to render the rails useless by spiralling. In the hasty repair of bridges, the engineers were materially assisted by the small flow of water in the dry season, and in consequence it was possible frequently to throw across shorter bridges at a lower level than the permanent structure, on a low level deviation, the permanent line taking the higher level on account of the high water in the rainy season.

Fire Hill, Ruby	4.00
Nayahus, Port Arthur	7.90
Manitoba Division:—	
Port Arthur—Jolson	386.06
Winnipeg terminals	9.20
Whitehead—Broadview	180.00

Indian Head—Swift Current	16.00
Alberta Division:—	
Swift Current—Java	191.20
Calgary terminals	6.00
	6.20
	12.20

The principal method of repair was the employment of short Bates link trusses, up to lengths of 25 ft., spanning between cross-tie piers or trestle bents. The link trusses were provided from the military base in quantities, for repair purposes, and would fit into a great many places. The ties used were standard for the South African Railways, of Jarrah wood or teak, with 5 by 10 in. section, accurately sawn, so that when built up in bird cage form they made a solid pier. Most of the temporary piers were thoroughly bedded on the ground level, the soil being hard, but in some instances, where trouble was anticipated from washouts concrete foundations were placed, to which the ties were anchored. Where the pier height was great, triple cribs of ties were in some instances used, the three cribs being tied together, at about every fifteenth course, with cross rails.

**The Railways and City Smoke Bylaws.**—Judgment was delivered recently in Toronto, on a motion on behalf of the C.P.R. to quash a conviction for allowing smoke to issue from its locomotive house there, contrary to the city bylaw. In giving his judgment, the judge said:—"If the railway is subject to the operation of the bylaw in question, the magistrate could convict on the evidence before him, but I am of the opinion that the railway in its operation is not subject to the municipal bylaw, but is subject to the Dominion Railway Board's regulations. The conviction will therefore be quashed without costs and with protection to the magistrate."

**Assuming fuel oil and coal to cost the same on the B.C. basis, there is said to be a saving in favor of the former of about 25% due to the lesser volume of air required, which, in the case of coal, carries a large amount of heat out of the stack with it.**

Repairing Bridges in the South African War.

A. F. Stewart, M.Can.Soc.C.E., Chief Engineer, Mackenzie, Mann & Co., Ltd., Toronto, gave an address on this subject recently to the Canadian Society of Civil Engineers, Toronto branch, of which he is Chairman. Some of the points brought out demonstrating the resourcefulness of the engineers conducting the repairs, would prove of great value to construction men. The Boers had four methods of interrupting communication on the railways with the object of impeding the British advance: Blowing up bridges, blowing up the rail joints on a section of line, blowing up trains, and turning over sections of line, so

### Mountain Type Locomotives, Canadian Pacific Railway.

The C.P.R. has built recently at its Angus shops, Montreal, 2 Mountain type locomotives, the first to be used in Canada. This type was first introduced on the Chesapeake and Ohio Ry. in 1911, and as it was especially designed for high speed passenger service over mountainous divisions, the same now used naturally followed. In detail design these new C.P.R. locomotives follow C.P.R. standard practice as far as possible, and the cylinders, pistons, piston rods, piston valves, cylinder heads, steam chest covers, boxes, axles, and other details are interchangeable with the more recent

Railway and Marine World, June, 1912, and have the latest design of screw reverse gear.

### Canadian Northern Railway Terminals at Port Mann.

Canadian Railway and Marine World for March, 1914, contained a description and plans of the terminal facilities planned by the C.N.R. at Port Mann, B.C., part of which were then under way. While the scheme as outlined there provided for an extensive terminal, sufficient to meet all requirements of the line for some years to come, the intention was to merely build a portion of the facilities, adding thereto according to a prearranged scheme as required.

South of the locomotive house there have been erected two buildings for the men, a dining hall and bunk house. The dining hall is 86 by 31 ft., two stories high, with a seating accommodation on the lower floor for 200 men. The upper floor is laid out for 13 bedrooms, with lavatory accommodation, and a sitting room at one end. The bunk house, 92 x 31 ft., is similar in construction to the dining room, with 13 bed rooms upstairs and 13 downstairs, and lavatory accommodation and sitting room on both floors. These two buildings have been used by the construction men, but will be turned over to the operating department for the shop and road men.

About \$20,000 has been spent in laying out good roads from the shop site to Bon Accord

Mountain Type Locomotive, Canadian Pacific Railway.

consolidations and the mikados, classes P1 and N1, over 200 of each of which are in service. Following are the principal dimensions:

Type .....	4-8-2
Sub class .....	H1a
Boiler pressure .....	200 lbs.
Firebox width, inside .....	88 7/8 ins.
Firebox length, inside .....	161 1/2 ins.
Tubes, number and outside diameter .....	210—2 1/4 ins.
Flues, number and outside diameter .....	30—5 1/4 ins.

A 10 stall section of the proposed 43 stall locomotive house has been completed, and is in use, and for it certain facilities, such as coaling plant, ash pits, etc., have been built, including an 80,000 gal. steel tank. The locomotive house stores building has also been completed. This consists of a single story and basement structure, 83 1/2 x 30 ft., with an 8 ft. platform along three sides, with a platform 30 ft. long along the fourth side for outside storage. This is

Road, which runs through what will eventually be the main business section of Port Mann. About \$350,000 has been expended in and around the shop area. We are indebted to J. Montgomery, of the Imperial Construction Co., which had the contract for this work, for the information contained in the foregoing, and to T. H. White, M. Can. Soc. C.E., Chief Engineer, Canadian Northern Pacific Ry., for the photograph from which the illustration was made.

Canadian Northern Railway Terminals at Port Mann.

A.—12 stall locomotive machine shop; B.—10 stall locomotive house; C.—dining hall and bunk house; D.—store house; E.—80,000 gal. steel tank.

Length over tube sheets .....	20 ft. 8 1/2 ins.
Superheater, type .....	Vaughan-Horsey
Superheater tubes, number and outside diameter .....	120—1 1/4 ins.
Superheater tubes, average length .....	19 ft. 4 1/2 ins.
Superheating surface .....	760 sq. ft.
Firebox heating surface .....	299 sq. ft.
Tube heating surface .....	3,414 sq. ft.
Equivalent heating surface .....	4,853 sq. ft.
Grate area .....	59.6 sq. ft.
Cylinders .....	23 1/2 by 32 ins.

One of the main features of the design is the style of firebox adopted, which is 13 ft. 5 3/8 ins. long by 7 ft. 6 7/8 ins. wide, fitted with a Gaines combustion chamber and arch, and having a 59.6 sq. ft. grate area. The locomotives are equipped with the Vaughan-Horsey superheater, and the vestibule cab, which was described in Canadian

served by a spur track from the main line, which also serves the boiler house addition to the locomotive house, over which coal is supplied.

A section of the locomotive repair shop, 277 1/2 x 145 ft. has been completed, to the southern end of which a future addition will be made, increasing the size to 600 x 145 ft. when required. This shop is of a mill design, consisting of two bays, with a central row of cast iron columns, and a low gallery along one side of one of the bays, about half the width of the bay. This shop is due west of the locomotive house, and separated from it by a track storage space and 80 ft. transfer table, which is completed to serve the 12 shop tracks.

### Bending Copper Pipes.

Bending copper pipes, as ordinarily effected by plugging up one end, filling it with melted resin, and then, after bending, melting out the resin again, is troublesome and expensive. The substitution of sand for resin is sometimes practised as an improvement on the resin, as regards the time that it takes. There is a much better way, which leaves the pipes much more truly circular in cross section at the bends. It consists of taking a spiral of wire, preferably of square section, of a diameter slightly greater than the bore of the pipe to be bent. One end of the spiral has a squared shank to permit of the application of an ordinary car-

penter's brace. By means of the latter, the spiral is inserted inside the pipe completely, by turning the brace in the direction of the spiral, so as to slightly diminish the diameter of the spiral; on the discontinuance of the turning the spiral springs to the full inside diameter of the pipe. The pipe may then be bent as though it were a lead rod, after which, by reversing the rotation of the brace, the spiral may be withdrawn from the tube. Curves of any degree of complication may thus be made without any flattening at the bends; the only limit of sharpness of curvature is that imposed by the quality of the metal being bent. Curves in all three planes may be made.—Shop Kinks, by R. Grimshaw.

### Quick Shifting Indexing Fixture.

The accompanying illustration shows a quick shifting indexing fixture, which is used on a milling machine for milling ratchet teeth of the form shown at A in the illustration. The blank is held on the fixture by means of a screw and slotted washer, the arrangement of which is clearly shown in the side view. The operation is as follows: The handle B is moved in the direction of the arrow, causing the pin C at the end of the oblong slot in the handle to force the pawl D out of its slot in the dial. As soon as the pawl is out of the slot, the V shaped pin E, which is kept engaged with the ratchet F by a spring, will cause the shaft to which the dial is keyed to revolve. When the pin C has reached the point G, it will release the pawl, which is then thrown back into contact with the dial by a spring. As the dial continues to revolve,

Quick Shifting Indexing Fixture.

the pawl will drop into the next slot and locate the work for milling the next tooth.

In returning the handle, the pin C will travel on the opposite side of the pawl, and when left in the curve H the spring behind the pin will hold the pawl D securely in the slot in the dial. The spring behind pin E is made just stiff enough to keep the pin from slipping when the pawl is out of a slot in the dial. The teeth in the ratchet F were cut with an ordinary thread cutter. This fixture is used on a hand miller, and the teeth in the blank are cut with an ordinary angular cutter. This system of shifting could easily be applied to a horizontal attachment, and by substituting a centre for the stud and inserting a ball thrust bearing, it could be used instead of an index head where quick shifting is desirable. For those classes of work for which it is adapted, a fixture of this kind enables a very satisfactory rate of production to be attained.—Machinery, New York.

### Block Signaling on the Intercolonial Ry.—

The block signaling system, which is being installed on the I.R.C., has been completed between Nelson Jct. and Newcastle, N.B., and was placed in operation Jan. 10. The system is already in operation between Halifax and Windsor Jct., St. John and Hampton, and Moncton and Painsec Jct.

### Milling Out Keys.

About as cheap a way of making keys in quantity, or even when only a few are needed, is to mill them out of a slab, as shown herewith, by means of a cutter, which is practically a thick saw. This insures that the sides, which are at an angle to each other, and which do the work and hence require to be true and well finished, have a perfect surface and regular taper, the lat-

Milling Keys from a Slab.

ter being of whatever degree it is required, which is readily determined by the graduated table of the machine. From one slab, either planed off or milled on the two parallel sides, there may be milled a number of keys, cutting them alternately head and tail, so that the width is properly arranged for, the whole stock may be used up. The accompanying illustration shows a key partially milled out of a slab.—Shop Kinks, by R. Grimshaw.

### Accurate Tapered Plug Gauges.

An accurate tapered plug gauge that has been found of value in grinding work especially, is illustrated herewith. It is made quite heavy to withstand the severe usage it would meet with in the hands of the tool boy, etc. The two yokes A were rough turned from machine steel forgings, and the surfaces B were then ground on a surface grinder to insure having them parallel. The pieces C

Gauge for Measuring Tapered Work.

were made of tool steel, hardened, with the surfaces D ground, and the surfaces E ground and lapped. The slots were made 1-16 in. larger than the screws, in order to provide for the required amount of adjustment.

This tool was used for gauging the tapered plugs while grinding, the method of setting forth the proper taper in inches per foot being as follows: A block, made of machine steel, with two holes of accurate diameter and spacing between centres, was used. Assuming that a plug is required with a taper of  $1\frac{1}{4}$  in. per ft. and 1 in. diam. at the large end, it would be necessary to use accurate 11-16 and 1-in. plug gauges in connection with this block. As the centre distance of the holes in the block is exactly 3

ins. it will be evident that the difference in diameter of the plugs should be 5-16 in. to correspond to a taper of  $1\frac{1}{4}$  in. per ft. In setting the gauge shown all that is necessary is to insert the standard plugs in the block, and then set the parallels to engage the protruding ends of the plugs. In case other tapers than  $1\frac{1}{4}$  in. per ft. are required, it would be necessary to make extra plugs with shanks to fit the holes in the block, and with the protruding ends of the proper diameters to correspond with the required taper.—Machinery, New York.

### Tool for Drilling Long Deep Holes.

For drilling long deep holes that do not go clear through the pieces so as to permit the use of a boring bar, a tool having right back of it a set crew that can be set out so as to bear against the side opposite the cutting

Tool for Drilling Long Deep Holes.

so as to touch the opposite side of the bore, and with a similar set screw midway between the tool and the first mentioned set screw, bearing against the bore hole circumference at a midway point, has been found very effective. Such a tool is shown in the accompanying illustration. One set screw is directly opposite the tool, and the other one midway. The opposite set screw prevents the tool from backing away from the work, and the midway one prevents the tool from springing away from a central position. If the job be such as to permit the hole being bored vertically, there will be no trouble about getting out the borings or having them crowd under either of the set screws, but if the job must be placed horizontally, the tool must be rigged so that one of the screws shall be on top, and the other on the side.—Shop Kinks, by R. Grimshaw.

### Centre Drilling Device.

A centre drilling device for small work, and which is of novel design, is shown in the accompanying illustration, which is a plan view. A frame S is bolted to the lathe shears, close to the headstock, directly be-

Centre Drilling Device.

neath the centre drill. This frame carries two pin bolts P, which act as guides for a carriage G, which is normally kept to the right by the coil springs on the pin bolts P. The rear of the carriage G is recessed for drill chuck clearance, with a central hole through which the centre drill passes. The front of the carriage is recessed with a tapered recess, of such a size as to take the largest bars to be centred. The recesses on either side and the drill hole are concentric, and in line with the lathe centres. The

tailstock spindle T carries a centre D of similar design to the tapered recess on the front side of the carriage. When not in use the drill is back in the drill clearance hole. The work W to be centred is placed between the tapered recesses, and by working the tailstock spindle forward, the work is forced on the drill, which drills a centre hole, truly concentric with the work.—Shop Kinks, by R. Grimshaw.

### Handy Eccentric Vise.

A handy eccentric vise for holding narrow flanged pieces that are to be faced on two sides, is shown in the accompanying illus-

### Efficiency methods. Rail laying from the inside.

The figures in this plan and the one below relate to the number of men, thus:—"6 applying joints and wrenches."

### Efficiency methods. Rail laying from the outside.

tration. The pieces for which the vise was originally made were narrow arched members, with flanges at either end, on which the clamping jaws set, the far and near sides of which were to be finished. It was a job that would ordinarily be done on a milling machine, but as all the milling machines were in use the vise was clamped to the

Handy Eccentric Vise.

carriage of a lathe, and side cutters mounted on an arbor between lathe centres, with the vise containing the work fed across the carriage. It could be used in a variety of ways, and for flanged pipe work, should be most useful in the lathe, planer, boring mill or milling machine. With the clamping eccentrics a positive grip on the flanges of the pieces to be held can be secured. The base of the vise is made in two parts, with the mating surfaces on an incline, to allow for vertical adjustment of the work with regard to the tool.—Shop Kinks, by R. Grimshaw.

## System in Railway Track Work.

By A. M. Clough, Supervisor, New York Central and Hudson River Railroad.

It is just as essential to have proper organization of men in doing track work as it is in many of the departments of an army. The fact that a body of men when dressed alike and when moving in harmony give an added effect to their movement can be worked in several instances in laying rail, or handling ballast, etc., and men can be taught to work with as much regularity and precision as a body of military men on duty.

Take, for instance, in laying rail: The men pulling spikes, 8 or 10 of them, can be taught to pull every eighth or tenth spike,

troublesome and harder to handle than poor cinder or gravel ballasted track. Weeds will grow and it is impossible to cut them, moisture will cause ties to decay and track to heave in winter and instead of having a clean, bright looking track it will look worse than poor cinder or gravel ballast.

A light lift, of from 1½ to 2 ins., should be made if possible, but before anything else is done the stone and dirt from between the ties, for their full length, should be removed to nearly the depth of the tie. This should be put outside on the shoulder.

each pulling their own without the confusion of a poorly organized gang that goes at it haphazard and moves past each other in any old way. The same is true in lifting a rail. Twelve or more men will move forward with clocklike regularity when taught to do so, instead of dragging along haphazard. All the others, wrenchers, spikers, those throwing out the old rail, etc., each is found in his place and knows how to keep it. In fact, it can be worked down to a system that can be outlined or illustrated, as in the accompanying diagrams, and anyone who has never tried it will be surprised at the results when compared with less specific methods.

Another thing very necessary in order to obtain the full benefit, is the foreman's selection of men to fill the different places. Many a man makes a good wrencher who is not as good either in pulling spikes or on the tongs. In the diagrams, the placing of men is based on long experience and study and will not cost anything to be tried by those who heretofore have not worked to a set system.

**Cleaning Stone Ballast and Keeping it Clean.**—This plan should interest every trackman who has charge of stone ballasted track and instead of making it a secondary consideration, sometimes considered a waste of money, it should be considered paramount. Whenever a foot of track is to be repaired, where dirty stone ballast exists, the dirty stone should be removed and when replaced it should be put back with the ballast forks or be cleaned with some other devices made for the purpose.

Stone ballasted track, if permitted to get foul with sparks, cinders or other foreign matter, will become in a short time more

There will still be some sparks and cinders in the ballast left in the track, but this should be loosened up with picks to permit what is left to go down as deep among the stone as possible. A light lift should then be made and any tie renewed that needs to be without disturbing the old bed of the tie taken out. Then tamp up the track with clean stone forked in from the shoulder, loosen up the shoulder with picks and fork over the stone, shovelling out the dirt. Make the shoulder standard with what has been shovelled out and if there is any stone needed to finish the standard dressing, this should be unloaded in the centre of the track from ballast cars. Then you will have track that will look like new ballasted track and will ride smooth and elastic. It will also be good for two years under the heaviest kind of traffic and longer where it is lighter.

When simply cleaning the stone, screens can be used that will throw the stone back where it was shovelled out from, but where track is being given a light lift and ties renewed it is necessary to put the stone outside and then it can be forked back in more economically and just as cleanly as screening it.—Maintenance of Way Bulletin.

**Railway Rates in Australia.** It is stated that on the New South Wales Government Railway an increase has been made recently in passenger fares ranging from 6% on through fares to 14, 25 and 50% on different kinds and classes or reduced excursion fares. An increase of 10% has been made in freight rates also. The advances are for the purpose of enabling the railways to meet the very considerable increase in operating expenses.

## Birthdays of Transportation Men in February.

Many happy returns of the day to:—

B. H. Bennett, General Agent, Chicago and North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Division Engineer, Eastern Lines, G.T.R., Montreal, born there Feb. 21, 1877.

C. H. Booth, ex-Local Freight Agent, Midland Ry., of Manitoba, Winnipeg, born at Banff, Scotland, Feb. 16, 1882.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

G. E. Bunting, General Western Freight Agent, Allan Line Steamships, and Manager, Allan and Co., Chicago, Ill., born at Toronto, Feb. 8, 1873.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Superintendent, Intercolonial Ry., Levis, Que., born at Bic, Que., Feb. 24, 1871.

F. W. Cooper, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Montreal, born at London, Ont., Feb. 16, 1880.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

A. J. Donegan, Superintendent, Algoma Eastern Ry., Sudbury, Ont., born at Perth, Ont., Feb. 17, 1872.

R. W. Drew, Division Freight Agent, Saskatchewan Division, C.P.R., Regina, born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M. Can. Soc. C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light and Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

L. O. Genest, General Storekeeper, Western Lines, C.P.R., Winnipeg, born at St. Henri, Levis County, Que., Feb. 16, 1856.

J. H. Guess, General Purchasing Agent, Grand Trunk Ry., Montreal, born at Raleigh, N.C., Feb. 5, 1878.

J. C. Holden, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Winnipeg, born at St. John, N.B., Feb., 1876.

T. C. Hudson, Division Master Mechanic, Quebec Grand Division, Canadian Northern Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Commercial and Traffic Superintendent, G.T. Pacific Ry. Telegraphs, Winnipeg, born in London, Eng., Feb. 15, 1883.

C. Gardiner Johnson, Lloyds' Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

F. C. Johnson, Night Locomotive Foreman, C.P.R., North Transcona, Man., born at Montreal, Feb. 26, 1885.

R. S. Logan, Vice President G.T.R., Montreal, born at St. Louis, Mo., Feb. 13, 1864.

John McCraw, General Agent, Central Vermont Ry., New London, Conn., born at Craigvale, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

D. McDonald, District Passenger Agent, Canadian Government Railways, Montreal, born at Ste. Hyacinthe, Que., Feb. 28, 1862.

T. McNabb, ex-Master Mechanic, Alberta Ry. and Irrigation Co., now of Turin, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNeillie, Superintendent, District 3, Eastern Division, C.P.R., Montreal, born at Toronto, Feb. 23, 1874.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

D. MacPherson, M. Can. Soc. C.E., ex-Assistant to Chairman, National Transcontinental Ry. Commission, Ottawa, born at Bath, Ont., Feb. 2, 1858.

C. S. Maharg, Superintendent, District 3, Manitoba Division, C.P.R., Brandon, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, Engineer of Water Service, Western Lines, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, General Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, District Passenger Agent, C.P.R., Toronto, born at Halifax, N.S., Feb. 26, 1878.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Radalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

J. E. Robitaille, Treasurer, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, General Freight Agent, G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

H. H. Schaefer, ex-Division Freight Agent, Intercolonial Ry., Moncton, N.B., born at Cologne, Germany, Feb. 10, 1848.

J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Assistant Chief Operating Officer, Board of Railway Commissioners, Winnipeg, born in London, Eng., Feb. 21, 1865.

R. H. Sperling, Assistant to Chairman of the Board, British Columbia Electric Ry., London, Eng., born there, Feb. 9, 1876.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

Sir Wm. C. VanHorne, K.C.M.G., Director, C.P.R., and President, Cuba Co., Montreal, born in Will County, Ill., Feb. 3, 1843.

F. L. Wanklyn, M. Can. Soc. C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

John L. Weller, M. Can. Soc. C.E., Engineer-in-charge Welland Ship Canal, St. Catharines, Ont., born at Cobourg, Ont., Feb. 13, 1862.

A. Williams, Superintendent, District 2, Atlantic Division, C.P.R., Woodstock, N.B., born at Mono Road, Ont., Feb. 22, 1872.

## Disinfectant System for Trains and Lake Steamships.

A system of sewage disinfection for Great Lakes steamships as well as for trains has, according to a Detroit, Mich., press report, been worked out by Sanitary Engineer L. C. Frank, of the U. S. Public Health Service, and it is expected that the Treasury Department at Washington will issue regulations based on the plan devised. The action follows the U. S. Government's enquiry into the outbreaks of typhoid in 1913 among persons who had been fellow tourists on certain Great Lake steamships.

Prof. E. B. Phelps has suggested that steam might be used to disinfect the sewage from steamships and railway cars before it is discharged and a device has been designed to perform this function automatically. This device may be used wherever it is desired, to heat to 100 degrees centigrade and discharge automatically any liquid which is received intermittently or continuously. The device will apply in particular to the disinfection of sewage or lavatory waste from steamships or from steam, electric or gasoline trains.

Preliminary studies of the cost of operation indicate that with steam as heating agent, the disinfection of one closet would cost about 7½c. per 1,000 flushes. Therefore, if each steamer closet discharges on the average 50 times every day, the cost of disinfection a day per closet on steamships will be 5c.

## Expenditures on Grade Crossings by Board of Railway Commissioners.

Following is a statement of amounts paid by railway companies, municipalities and out of the Railway Grade Crossing Fund to April 1, 1914, in connection with orders by the Board of Railway Commissioners:

Fiscal Year.	Railway Companies.	Municipalities.	Grade Crossing Fund.
1909-10 ...	\$ 30,242.91	\$ 7,703.76	\$ 70.00
1910-11 ...	196,733.50	23,433.99	6,909.18
1911-12 ...	155,866.45	31,537.20	12,630.68
1912-13 ...	15,395.69	2,691.51	26,152.24
1913-14 ...	4,694.88	906.33	41,877.93

Totals .. \$402,933.43 \$69,272.79 \$87,640.03

This includes all payments to date, with the exception of the St. Lawrence Boulevard Subway, St. Louis, Que. (order 8339), which provides for \$5,000 from the Railway Grade Crossing Fund, \$15,000 to be paid by the Montreal St. Ry. and the balance by the C.P.R. and the municipality, as agreed upon between themselves.

## General Clauses for Contract Specifications.

The Canadian Society of Civil Engineers' Committee on this subject, of which H. Holgate, Montreal, is chairman, presented a report at the annual meeting in Montreal in January, from which the following are extracts:—

"We have compiled the accompanying form of general clauses from various sources, and have revised, altered and added to them as we thought necessary. We have arranged them in a manner which, we hope, will be satisfactory, and have endeavored to cover the necessities of various classes of work. By the use of this or a similar form of general conditions, the form of contract and of the specification can be very much abbreviated, as many of these clauses would of necessity be incorporated in either the contract or specification, and by its use the standardization of forms of contract would be advanced.

"Though perhaps somewhat beyond the question that we have been asked to report on, we would recommend that all contracts should embrace in one document:—The agreement or contract itself; the tender or a certified copy of it; the specification; the general clauses; the signed drawings as tendered on; any modified drawings agreed to prior to signing of contract. Preferably these should be printed documents.

"In case of the adoption of a form of general conditions we would suggest that the Society have it printed and sold to the membership at a moderate charge."

## Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue a list of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the orders were drawn.

23004. Dec. 19.—Authorizing Erie & Ontario Ry. (T.H. & B. Ry.) to open for traffic line from Smithville to Dunnville, Ont., and to operate over grade crossings of M.C.R. near Attercliffe, and G.T.R. near Diltz and at Dunnville, subject to certain conditions.

23005. Dec. 15.—Amending order 22961, Nov. 30, 1914, re G.T.R. deviation near Welland, Ont.

23006. Dec. 3.—Amending order 20677, Oct. 24, 1913, re provision of cattle pass by C.N. Ontario Ry. for W. R. Kirk, Foresters Falls, Ont.

23007. Dec. 18.—Dismissing Toronto Board of Trade's application for an order including school crayons in stationery list of Canadian Freight Classification.

23008. Dec. 11.—Approving agreement between Bell Telephone Co. and Brussels Village, Ont., Dec. 1.

23009. Dec. 19.—Extending to Nov. 30, 1915, time within which Canadian Northern Ry. shall equip its cabooses with air brakes, subject to condition that cabooses already so equipped shall be kept in service as much as possible.

23010. Dec. 18.—Authorizing C.P.R. to use bridge 0.7 across Wellington St., Sherbrooke, Que.

23011. Dec. 17.—Approving agreement between Bell Telephone Co. and Princeton & Drumbo Telephone Co., Dec. 4.

23012. Dec. 17.—Approving location of G.T.R. new station at Inglewood Jct., Ont.

23013. Dec. 18.—Authorizing Saskatchewan Highway Commissioners to build road over Canadian Northern Ry. right of way in n.e. ¼ Sec. 33-43-16, W. 3 M. After crossing has been built, C.N.R. is authorized to close portion of original road allowance north of n.w. ¼ Sec. 33, within its right of way.

23014. Dec. 12.—Relieving C.P.R. from speed limitation of 10 miles an hour over crossing of 8th St. East, Calgary, Alta.

23015. Dec. 17.—Authorizing Cedar Rapids Mfg. & Power Co., Montreal, to take additional 25 ft. across portion of Lot 123, North River, Delisle, St. Ignace du Coteau du Lac Parish, Que.

23016. Dec. 14.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) to erect station at New Westminster, B.C., within 60 days.

23017. Dec. 11.—Authorizing C.P.R. to build spur for City of Swift Current, Sask.

23018. Dec. 21.—Amending order 22871, Nov. 16, re G.T. Pacific Ry. fencing between Irma and Kinsella, Man., by substituting Alta. for Man.

23019. Dec. 18.—Recommending to Governor in Council for sanction the General Train and Interlocking Rules of Quebec, Montreal & Southern Ry., approved by its bylaw 26.

23020. Dec. 22.—Suspending Supplement 1 to C.P.R. Competitive, Proportional and Joint Freight Tariff, C.R.C. no. E-2847, to become effective Jan. 4, 1915, pending hearing of applications at sittings of Board at Ottawa, Jan. 5; also suspending Supplement 16 to G.T.R. Special, Local, Joint and Proportional Tariff, C.R.C. no. E-2588, to become effective Jan. 4, 1915, increasing its rates on same commodity from same territory to same point, via Sherbrooke, and Boston & Maine Rd.

23021. Dec. 19.—Dismissing Fort William Board of Trade's application for order directing C.P.R. to provide local freight sheds, separate from wharf sheds.

23022. Dec. 23.—Establishing express collection and delivery limits in Cobalt, Ont.

23023, 23024. Dec. 18, 21.—Authorizing the Hydro Electric Power Commission of Ontario to erect wires across C.P.R. at Kenzie St., Woodbridge, and across G.T.R., at Lot 118, Thorold Tp., Ont.

23025. Dec. 23.—Authorizing C.P.R. to open for traffic portion of Kootenay Central Ry. from Fort Steele to Edgewater, mileage 23.06 to 59 south from Golden, B.C.

23026. Dec. 22.—Approving C.P.R. clearances at siding at coal and wood warehouse, Sudbury, Ont.

23027. Dec. 23.—Authorizing C.N. Ontario Ry. to operate over crossing of C.P.R. Stobie Branch in Lot 4, Con. 5, McKim Tp., upon its putting interlocking plant into operation; after interlocking plant is in use C.P.R. is authorized to operate over crossing at speed not exceeding 15 miles an hour, without first stopping trains; and rescinding order 22927, Dec. 1.

23028. Dec. 22.—Authorizing G.T. Pacific Ry. and Fort William Electric Ry., pending instal-

lation of half interlocking plant, to operate over crossing on Empire Ave., at Sprague St., Fort William, Ont., half interlocking plant to be completed by May 31, 1915.

23029. Dec. 23.—Certifying correction in G.T. Pacific Branch Lines Co.'s plans by endorsing thereon affidavit of J. E. Gray, Winnipeg, Dominion Land Surveyor.

23030. Dec. 22.—Ordering G.T.R. to install gates at crossing of Gage Ave., Hamilton, Ont., to be operated by day and night watchmen, appointed by company; 20% cost of gates to be paid out of railway grade crossing fund; wages of watchmen, half by City of Hamilton.

23031, 23032. Dec. 22.—Authorizing Hydro Electric Power Commission of Ontario to erect wires across G.T.R. near Strathroy Station, and in Stayner, Ont.

23033. Dec. 23.—Authorizing C.N. Ontario Ry. to cross and divert public road between Lots 10 and 11, Pembroke Tp., and cross and divert highway in half Lot 10, carrying highway under tracks by subway.

23034. Dec. 21.—Dismissing application of farmers and citizens of Ensign, Alta., for order directing C.P.R. to continue station agent there, and ordering C.P.R. to have station building at Ensign heated before arrival and departure of passenger trains during cold weather.

23035. Dec. 22.—Authorizing British Columbia Public Works Department to build level highway crossing over Great Northern Ry. near White Rock station.

23036. Dec. 19.—Authorizing City of Toronto to waterproof superstructure of subway at Keele St., under C.P.R., company to maintain it in that condition in future.

23037. Dec. 23.—Certifying correction in G.T. Pacific Branch Lines Co.'s plan, showing location of Biggar-Calgary Branch from mileage 77.13 to 104.06, Saskatoon District, Sask., by endorsing thereon affidavit of J. E. Gray, Winnipeg, Dominion Land Surveyor.

23038. Dec. 23.—Ordering Esquimalt and Nanaimo Ry., within 60 days, to install bell at crossing of Victoria and Campbell River trunk road; to ring only when trains approach from south; 20% of cost to be paid out of railway grade crossing fund, and rescinding order 22817, Nov. 4.

23039. Dec. 23.—Recommending to Governor in Council for sanction, lease of Southampton Ry. to C.P.R., Nov. 14.

23040. Dec. 23.—Ordering Bay of Quinte Ry. to remove any station or buildings from J. James' land, Elzevir Tp., Ont., and not to erect any buildings thereon; that railway shall, upon it being shown by him that he is about to operate his mining property, within 3 months of such proof, build subway under its tracks sufficient for purpose of carrying on the mining business; also that J. James shall be at liberty to erect aerial trams across B. of Q.R. for the conveyance of material.

23041. Dec. 24.—Authorizing Kettle Valley Ry. to build bridges 32.65, 32.55 and 36.3 across Coquihalla River, B.C.

23042. Dec. 24.—Approving Canadian Northern Ry. plan showing its combined standard station and section house.

23043. Dec. 24.—Approving location of Erie & Ontario Ry. (T.H. & B.R.) through Moulton and Sherbrooke Tps., Ont., between Dunnville and Port Maitland, mileage 14.61 to 19.19.

23044. Dec. 24.—Authorizing Canadian Northern Ry. to build across and divert road in south half Sec. 18-29-27, W. 3 M., Sask., subject to condition that land necessary for diversion be secured by C.N.R. in name of Province of Saskatchewan.

23045. Dec. 24.—Ordering that 20% of cost of installing gates at crossing of first highway east of Clarkson Station, Ont., by G.T.R., be paid out of railway grade crossing fund; remainder:—25% by Toronto Tp. and 75% by G.T.R.; cost of maintenance:—75% by G.T.R. and 25% by Toronto Tp., the 25% to cover expense of watchmen employed at crossing since erection of gates.

23046. Dec. 23.—Appointing Judge Winchester, of York County, as arbitrator to adjust claims for damages occasioned by construction of subways in Toronto, authorized under orders 16842 and 16846.

23047. Dec. 22.—Ordering Great Northern Ry., within 60 days, to install improved type of automatic bell at crossing of Front St., near intersection of Columbia St., New Westminster, B.C.; 20% of cost to be paid out of railway grade crossing fund.

23048. Dec. 24.—Approving location of G.T. Pacific Ry. station at Hutton, B.C., mileage 1220.6 west of Winnipeg.

23049. Dec. 24.—Authorizing Toronto Hydro Electric System to erect wires across C.P.R. and G.T.R. at Ruskin Ave., Toronto.

23050. Dec. 10.—Authorizing Canadian Northern Ry. to carry traffic over its line between Grand Marais and Birds Hill, Man., 50 miles, until July 15, 1915.

23051. Dec. 23.—Authorizing Vancouver, Vic-

toria and Eastern Ry. and Navigation Co. (G. N.R.) to build spur for McLellan Lumber Co., Guichon, B.C.

23052. Dec. 28.—Approving location of Canadian Northern Ry. third class station at Turleford, Sask.

23053. Dec. 26.—Authorizing City of Toronto to repair sidewalks on bridge at Moore Ave., and rescinding order 22304, July 31.

23054. Dec. 28.—Extending to Feb. 28, 1915, time within which C.P.R. shall build transfer track at Coldwater, Ont.

23055. Dec. 28.—Authorizing C.P.R. to build road diversion in Sec. 13-6-8, W. 4 M., at mileage 71.16 of Weyburn-Stirling Branch.

23056. Dec. 28.—Authorizing C.P.R. to close station at Three Valley, B.C.

23057. Dec. 28.—Authorizing Canadian Northern Ry. to open for traffic its line from junction with Battle River Subdivision north of Camrose to junction with C.N. Western Ry. near Strathcona, Alta., 46 miles; speed of trains limited to 25 miles an hour.

23058. Dec. 28.—Extending to July 1, 1915, time within which Canadian Northern Ry. shall complete alterations and additions to its station building at Alsask, Sask.

23059. Dec. 29.—Amending order 22721, Oct. 16, re opening of double track for traffic on its White River Subdivision, Ont.

23060. Dec. 23.—Approving location and details of G.T. Pacific Ry. station at Ribstone, Alta.

23061. Dec. 11.—Dismissing application of Town of Courtenay, B.C., for order directing Esquimalt & Nanaimo Ry. to permit B.C. Government to make road from freight shed northwesterly to Lake Trail, approximately 900 ft. to obviate haul now necessary between the trail and freight shed of approximately 5,700 ft.

23062. Dec. 29.—Authorizing Kettle Valley Ry. to connect with Vancouver, Victoria & Eastern Ry. (G.N.R.) at Hope, B.C.

23063. Dec. 24.—Authorizing G.T.R. to cross Toronto, Grey & Bruce Ry. (C.P.R.) at grade with its spur for Elias Rogers Co., south of St. Clair Ave., Toronto, crossing to be protected by interlocking plant.

23064. Dec. 29.—Authorizing Ingersoll, Ont., Electric Power and Light Commission to erect wires across C.P.R. on Wingham St., between Charles and Hamilton Sts., Ingersoll, Ont.

23065. Dec. 29.—Authorizing C.P.R. to open for traffic additional track and diversions at various points on its Lake Superior Division, Ont.

23066. Dec. 29.—Extending to Apr. 30, 1915, time within which C.P.R. shall complete spurs in York Tp. on land owned by Canadian Kodak Co.

23067. Dec. 29.—Authorizing G.T.R. to rebuild bridge 317, near Weyvale, Ont.

23068. Dec. 31.—Approving location of Erie & Ont. Ry. (T.H. & B. Ry) station at Diltz Jct., Ont.

23069. Dec. 30.—Authorizing C.P.R. to build spur for Austin & Nicholson, Tp. 37, Sudbury District, Ont.

23070. Dec. 29.—Approving C.P.R. clearance between northerly track of its team yard and three poles on south side St. Ambrose St., Montreal, owned by Montreal Light, Heat and Power Co.

23071. Dec. 3.—Authorizing Sandwich, Windsor & Amherstburg Ry. to connect track leading to car barn to Michigan Central Rd. team tracks, Windsor, Ont.

23072. Dec. 29.—Authorizing Canadian Northern Ry. to discontinue station agent at Lorette, Man., company to appoint caretaker to keep waiting room cleaned and heated for arrival and departure of passenger trains, to see that l.c.l. freight is properly housed and freight shed locked, and freight delivered to consignees.

23073. Dec. 30.—Authorizing Canadian Northern Ry. to build transfer track between its Strathcona-Edmonton branch (formerly Edmonton, Yukon & Pacific Ry.); and to build across Nineteenth Ave. South and cross and divert Bay Lakes Trail, Edmonton, Alta.

23074. Dec. 31.—Rescinding order 17840, in so far as it relates to Vancouver, Victoria & Eastern Ry. overhead crossings at Pender, Keefe, and Harris Sts., Vancouver, B.C.; and reserving leave to any party to make new application; V. & E. Ry. & Nav. Co. to erect crossing signs and flag all trains over crossings.

23075. Dec. 31.—Approving C.P.R. overhead clearances at Victoria and McKay Ave. bridges, Edmonton, Alta.

23076. Dec. 31.—Dismissing application of S. S. Hamilton Co., Moose Jaw, Sask., for order directing Canadian Northern Ry. and C.P.R. to build transfer track at Hawick, Alta.; or, in the alternative, for order directing the issue of joint freight tariff on coal between Drumheller and Moose Jaw, via Calgary, Alta.

23077. Jan. 2.—Recommending to Governor in Council for approval New York Central & Hudson River Rd. rules 11, 27, 466, 484, and 507, as modified.

23078. Dec. 31.—Amending order 18580, Jan. 24, 1913, re Canadian Northern Ry. crossing of Water Ave., Winnipeg.

23079. Jan. 4.—Extending to March 31 time within which C.P.R. shall install bell at highway

between lots 5 and 6, mileage 12.61, Toronto Tp., Ont.

23080. Dec. 30. — Authorizing Hydro-Electric Power Commission of Ontario to erect wires across G.T.R., near Paris station, Ont.

23081. Jan. 2. — Ordering G.T.R. to change time of train 191 to leave Stratford at 7.50 a.m. and arrive at Palmerston at 9.15, timing it at Listowel at 8.45 a.m. or 8.48 a.m., if desired, to meet opposing train at latter time.

23082. Dec. 31. — Authorizing City of Regina, Sask., to build overhead bridge across C.P.R. on Hamilton St., Regina.

23083. Jan. 2. — Authorizing C.P.R. to take for highway, certain lands adjoining southern limit of main line right of way in s.w. quarter section 32-16-24, w. 2 m., Sask., containing by admeasurement 4.06 acres, more or less.

23084. Dec. 30. — Ordering that Canadian Northern Ry. crossing by Suburban Rapid Transit Co. on Portage Ave., Winnipeg, Man., be protected by a half-interlocking plant with derails; plans to be submitted for approval of board's engineer by Feb. 1; work to be completed by June 15; cost of installing to be paid, 50% by C.N.R., 25% by Winnipeg Electric Ry., and 25% by Suburban Rapid Transit Co.; maintenance and operation to be paid, 40% by C.N.R., 30% by Winnipeg Electric Ry., and 30% by Suburban Rapid Transit Co.; watchman employed in the meantime to be paid, 40% by C.N.R., 30% by Winnipeg Electric Ry., and 30% by Suburban Rapid Transit Co.

23085. Dec. 18. — Dismissing application of municipality of Brokenhesh 68, Sask., for order directing Canadian Northern Ry., to build bridge over creek at mileage 5.2, Moose Jaw Subdivision, and authorizing C.N.R. to cross and divert north and south road between sections 10 and 11, Tp. 7, R. 18, w. 2 m., Sask.; work to be completed by May 1, 1915.

23086. Jan. 2. — Authorizing C.P.R. to remove regular station agent at Ivry, Que., for winter months; company to provide reliable man to keep station heated and to look after baggage and express.

23087. Jan. 5. — Authorizing British Columbia Public Works Department to build level crossing over C.P.R., Arrow Lake branch, at corner of section 10-23-2, w. 6 m.

23088. Jan. 4. — Relieving Michigan Central Rd. from providing watchmen or other protection at crossing of second public highway west of Tillsonburg station, Ont.

23089. Jan. 5. — Authorizing G.T.R. to build siding for Rathbone & Lovering, York Tp., Ont.

23090. Jan. 7. — Ordering G.T. Pacific Ry. forthwith to establish a semi-weekly train service, in each direction, on its Regina-Moose Jaw and Northwestern branch, install a Y at Gilroy, Sask., to permit turning locomotives, and to provide box car stations at Central Butte, Gilroy, and Lawson; work to be completed by May 1.

23091. Jan. 7. — Authorizing C.P.R. to build siding for American Tar Products Co., La Salle, Que.

23092. Jan. 8. — Approving Edmonton, Dunvegan & British Columbia Ry. location through Tp. 78, R. 3 and 6, w. 6 m., Alta., mileage 331.89 to 360.47.

23093. Jan. 8. — Authorizing C.P.R. to build road diversion in s.w. quarter section 20-35-21, w. 3 m., Sask., and build its Kerrobert northeastern branch across same at grade at mileage 9.55.

23094. Jan. 8. — Authorizing C.P.R. to build highway diversion across its main line in Shawanaga Indian Reserve, Shawanaga Tp., Parry Sound District, Ont.

23095. Jan. 8. — Authorizing Canadian Northern Ry. to build spur for Sterling Coal Co., Ltd., in s. w. quarter section 9-29-20, w. 4 m., Alta.

23096. Jan. 7. — Authorizing C.P.R. to discontinue services of agent at Meadows station, Man., company to keep building cleaned and heated and have package freight and express matter properly housed.

23097. Jan. 8. — Approving C.P.R. clearance at bridge 112.6, carrying Sandwich St., Windsor, Ont., across its tracks.

23098. Jan. 9. — Rescinding order 13963, June 15, 1911, in so far as it authorizes C.P.R. to build its Kipp to Aldersyde branch across road allowances at mileage 41.47, 57.03, and 83.51, and authorizing it to build across diversion of road allowances at mileage 41.47, 57.03, and 83.51.

23099. Jan. 7. — Rescinding order 22646, Oct. 1, 1914, re stopping of C.P.R. train 211 at Highlands, Que.

23100 to 23104. Jan. 9. — Authorizing Hydro-Electric Power Commission of Ontario to erect wires across G.T.R. at five points in Simcoe, Ont.

23105. Jan. 8. — Authorizing Edmonton, Dunvegan & British Columbia Ry. Co. to cross and divert 30 highways in Alberta, mileage 331 to 360.

23106. Jan. 9. — Ordering that while Intercolonial Ry. is operating its eastbound train known as Ocean Limited, Quebec Oriental Ry. shall hold its eastbound train daily, except Sunday, at Matapedia for connection, from May 1 until Nov. 1, and on Saturdays only from Nov. 1 until May 1 each year; time tables so arranged to be filed with board by April 1.

23107 and 23108. Jan. 8. — Approving location of Erie & Ontario Ry. (T.H. & B. Ry.) stations at Vaughan, mileage 5.17, and at Port Davidson, mileage 7.68, Ont.

23109. Jan. 11. — Authorizing Erie & Ontario Ry. (T.H. & B. Ry.) to open for traffic its branch lines to freight and passenger stations at Dunnville, Ont.

23110. Jan. 11. — Approving revised location of portion of C.P.R. Weyburn-Stirling branch line, from section 13-6-9, easterly to section 12-6-7, w. 4 m., mileage 64.34 to 77.84, Alberta.

23111. Jan. 11. — Authorizing G.T.R. and Campbellford, Lake Ontario & Western Ry. (C.P.R.) to operate over crossings at mileage 119.90, 119.91, and 120.02, Cobourg, Ont., until June 1 all trains to be stopped before crossing and to be flagged over, pending installation of interlocking plants.

23112. Jan. 11. — Authorizing C.P.R. to build road diversion in section 34-16-11, w. 3 m., Sask.; and build additional track, Swift Current subdivision, across same, at mileage 92.17.

23113. Jan. 11. — Authorizing C.P.R. to open for traffic portion of double track, mileage 0 to 0.5, Thompson Subdivision, B.C.

23114. Jan. 11. — Amending order 22293, July 17, 1914, re C.P.R. farm crossings in Bolton Tp., Que.

23115. Jan. 11. — Ordering G.T.R. to protect crossing of Bridge St., Meaford, Ont., by watchman during switching operations, and arrival and departure of passenger trains.

23116. Jan. 9. — Approving agreement of Bell Telephone Co. with Central Dufferin Telephone Association, Dec. 21, 1914.

23117. Jan. 11. — Authorizing Bow Valley rural municipality 219, Alta., to build 3 highway crossings over C.P.R.

23118. Jan. 12. — Relieving Canadian Northern Ry. and G.T. Pacific Ry. from maintaining night signalman at crossing at Dana, Sask.

23119. Jan. 12. — Relieving C.P.R. and G.T. Pacific Branch Lines Co. from maintaining night signalman at crossing at Alix, Alta.

23120. Jan. 12. — Relieving Canadian Northern Ry. and C.P.R. from maintaining night signalman at crossing at Stettler, Alta.

23121. Jan. 12. — Relieving C.P.R. and G.T. Pacific Branch Lines Co. from maintaining night signalman at crossing at Frobisher, Sask.

23122, 23123. Jan. 12. — Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalmen at crossings at Bienfait and Carlyle, Sask.

23124. Jan. 12. — Relieving C.N.R. and Great Northern Ry. from maintaining night signalman at crossing at Roland, Man.

23125, 23126. Jan. 12. — Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalmen at crossing at Midale, Sask., and Hartney, Man.

23127. Jan. 12. — Relieving C.P.R. and G.T. Pacific Branch Lines Co. from maintaining night signalman at crossing at Griffin, Sask.

23128 to 23131. Jan. 12. — Relieving Canadian Northern Ry. and C.P.R. from maintaining night signalmen at crossings at Forward, Sask., Carberry and Findlay, Man., and Conquest, Sask.

23132. Jan. 12. — Relieving G.T. Pacific Branch Lines Co. and C.P.R. from maintaining night signalman at crossing at Yorkton, Sask.

23133. Jan. 12. — Relieving Canadian Northern Ry. and G.T. Pacific Ry. from maintaining night signalman at crossing at Empire Ave., Fort William, Ont.

23134. Jan. 13. — Relieving G.T.R. from providing further protection at Marsh Winery crossing, about 3 miles west of Niagara Falls, Ont.

23135. Jan. 13. — Approving location of Canadian Northern Ry. third class station at Wisetown, Sask.

23136. Jan. 13. — Ordering that Canadian Northern Ry. diversion, authorized by order 19631, June 18, 1913, near Victoria Bridge, Calgary, Alta., be completed by March 1.

23137, 23138. Jan. 11, 13. — Approving Bell Telephone Co. agreements with Canadian Telephone Co., Dec. 28, 1914, and with Dover Tp., Ont., Dec. 24, 1914.

23139. Jan. 12. — Authorizing G.T.R. to open for traffic portion of deviated line through Grantham Tp., Town of Thorold, and Thorold Tp., Ont., and temporary cross over to connection with present line at bridge 11, Welland Canal.

23140. Jan. 12. — Approving deviation of Dominion Atlantic Ry. main line from near Chestnut St., Windsor, to north side of Avon River, N.S., 3.250 ft.

23141. Jan. 13. — Authorizing West Kildonan municipality, Man., to build highway over C.P.R. Selkirk Branch at Enniskillen Ave.; and dismissing similar application respecting Kenilworth Ave.

23142. Jan. 12. — Rescinding order 22505, Sept. 5, 1914, authorizing C. N. Ontario Ry. to build spur for Hawkins Bros., Parry Sound.

23143. Jan. 14. — Relieving Canadian Northern Ry. and Midland Ry. of Manitoba (G.N.R.) from maintaining night signalman at crossing at Carman, Man.

23144. Jan. 14. — Relieving Brandon, Saskatchewan & Hudson Bay Ry. (G.N.R.) and Canadian Northern Ry. from maintaining night signalman at crossing in Sec. 31-1-18, w.p.m. Man.

23145 to 23148. Jan. 14. — Relieving C.P.R. and Canadian Northern Ry. from maintaining

night signalmen at crossings at Rosetown, Sask.; Brookdale, Man.; in Sec. 35-24-27, and in s.e. and s.w. ¼ Sec. 28-25-24, w. 4 m., Alta.

23149. Jan. 14. — Relieving G.T. Pacific Ry. and Canadian Northern Ry. from maintaining night signalman at crossing at Petrel, Man.

23150. Jan. 12. — Authorizing C.P.R. to build spur for Georgetown Collieries Ltd., Canmore, Alta.

23151. Jan. 14. — Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalman at crossing at Morris, Man.

23152. Jan. 14. — Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalman at crossing at Holmfild, Man.

23153. Jan. 13. — Dismissing application of Central Convention of Farmers' Institutes of British Columbia for order granting privilege of shipping mixed carloads of flour and feed (in sacks) and baled hay and straw at carload rates.

23154. Jan. 15. — Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalman at crossing at Maryfield, Sask.

23155 to 23157. Jan. 15. — Relieving G.T. Pacific Ry. and Canadian Northern Ry. from maintaining night signalmen at crossings at St. Boniface, Man.; Leaman, Alta.; and Harte, Man.

23158, 23159. Jan. 15. — Relieving G.T. Pacific Branch Lines Co. and C.P.R. from maintaining night signalmen at crossings at Druid and Oban, Sask.

23160. Jan. 15. — Relieving C.P.R. and G.T. Pacific Ry. from maintaining night signalman at crossing at Reford, Sask.

23161. Jan. 15. — Relieving Canadian Northern Ry. and G.T. Pacific Ry. from maintaining night signalman at crossing at Ryley, Alta.

23162. Jan. 15. — Relieving G.T. Pacific Ry. and C.P.R. from maintaining night signalman at crossing at Deer, Man.

23163. Jan. 15. — Relieving G.T.R. Branch Lines Co. and Canadian Northern Ry. from maintaining night signalman at crossing at Lampman, Sask.

23164. Jan. 15. — Relieving G.T. Pacific Branch Lines Co. and C.P.R. from maintaining night signalman at crossing at Neeley, Sask.

23165. Jan. 15. — Relieving Canadian Northern Ry. and Great Northern Ry. from maintaining night signalman at crossing at Minto, Man.

23166. Jan. 15. — Approving Michigan Central Rd. plan of 6th-7th side road drain across Cons. 2 to 8, Brooke Tp., Ont.

23167. Jan. 15. — Ordering that \$5,000 towards cost of building bridge from Coutts St., produced, north from Baroness Road, across C.P.R. yards, Lethbridge, Alta., be paid out of railway grade crossing fund, and be divided equally between C.P.R. and city.

23168. Jan. 15. — Authorizing G.T.R. to build siding and spur for Campbell Flour Mills Co., West Toronto, Ont., and approving clearances.

23169. Jan. 16. — Approving C.N. Ontario Ry. location through Trenton, Ont.; the rearrangement of Central Ontario Ry. tracks to permit of location between mileae 145 and 145.94 from Ottawa; and crossing of Joseph, King, and Dundas Sts.; and location along Division St.; and authorizing crossing of Joseph, King, and Dundas Sts.

General order 133. Dec. 19. — Suspending proposed cancellation, on Jan. 1, 1915, of arrangements whereby mixed carloads of foreign and native liquors and mixed carloads of groceries, classified 5th class in straight carloads and dried fruits, classified 4th class in straight carloads, are carried at their respective carload rates between points west of and including Port Arthur, and thence from eastern shipping points.

**Rogers Pass Tunnel Suit.**—The hearing of the action of McIlwee and Sons, against Foley, Welch and Stewart for damages consequent on the cancellation of a sub-contract on the C.P.R. Rogers Pass tunnel contract, was begun in Vancouver, Jan. 5. The case was expected to last a considerable time.

The paper by Alfred Price, Assistant General Manager, Eastern Lines, C.P.R., on Some Maximums and Minimums in Train Operation, on the first two pages of this issue, was read before the Canadian Railway Club in Montreal, which should have been stated on one of those pages.

**Western Canada Ry. Club.**—An address was given to the members at Winnipeg, Jan. 11, by A. Calder, formerly of the C.P.R. Passenger Department there, in which he gave many details of early railway history in the West.

**C.P.R. Hotels** during the year ended June 30, 1914, served 2,901,598 meals to guests and employees, an average of 7,650 a day, showing that 2,973 persons were supplied with three meals a day.

## A Problem in Economics of Mountain Railway Location at Rogers Pass, B.C.

By J. G. Sullivan, M. Can. Soc. C.E., Chief Engineer, Western Lines, Canadian Pacific Railway.

The data to be taken into account is as follows: Present location, total distance 23.1 miles, revised location 18.68 miles, as shown in fig. 1; grades are as shown in fig. 2, and consist, on the present location of 16.65 miles up hill for westbound traffic on maximum grade of 2.2%, 6.45 miles down grade same maximum with a total rise of 1,726 ft. and a drop of 692.1 ft. with 1,860 degrees of curvature on the up hill and 1,288 degrees on the down hill portion of the line. The revised location consists of 16.77 miles up hill with about 5 miles of 2.2% pusher grade, the balance 1% and a down hill run of 1.91 miles with a maximum 2.2% grade; a total rise of 1,178.2 ft. and a drop of 144.3 ft., with 635 degrees of curvature on the up hill grade and 66 degrees on the down hill. The average traffic for 1912 and 1913, which is made the basis of calculations, was 1,342½ passenger trains in each direction; the average weight of the passenger trains, exclusive of locomotives, was 443 tons; 980 of the passenger trains required pusher locomotives; the weight of the passenger and pusher locomotives for passenger trains was

Resistance to overcome, on present line.

Extra cost, maintenance of equipment, 27,236 train miles at 21 cts. ....	
Extra cost, maintenance of equipment, account of extra number of degrees of curvature, assuming that 400° of curvature per mile would increase rate of 21 cts. per train mile by 40%.	
6,162 trains $\times$ 2,447° $\times$ 21-1,000 cts. ....	3,166 47
<b>Total annual saving in cost of operation</b> .....	<b>\$170,635 61</b>

The rate at which traffic has been increasing would indicate that shortly after the work of constructing the tunnel was completed the traffic would have doubled. In this case, if no further economics were made in methods of operating this section

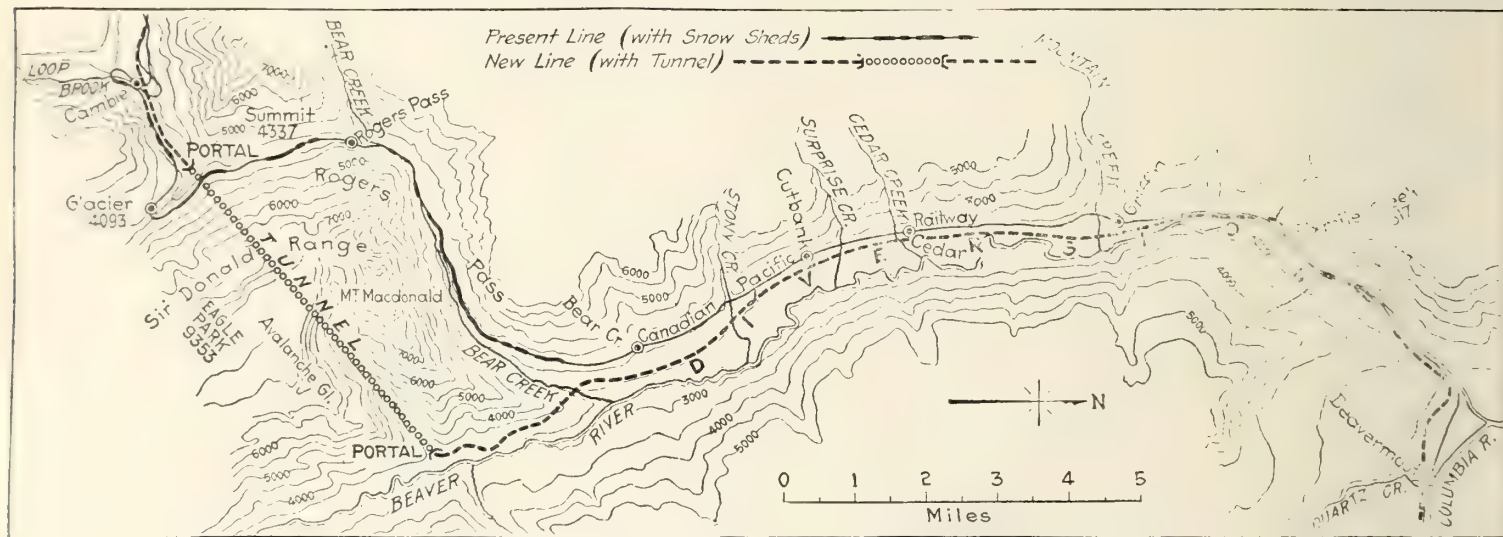

Fig. 1.—Rogers Pass Tunnel. Map of Old and New Lines.

175 tons each; there were 1,738½ freight trains in each direction per year; the average weight of the freight trains eastbound, exclusive of locomotives, was 950 tons; the average weight of freight trains westbound was 898 tons; all freight trains had to be pushed in both directions; weight of freight locomotives and pushers, 181 tons each. The tonnage eastbound and westbound was as follows:

EASTBOUND.		Tons.
1,342½ trains @ 443 tons each .....	594,727.5	
2,322 locomotives @ 175 tons each ..	406,350.0	
1,738½ freight trains @ 950 tons each	1,651,575.0	
2,477 locomotives @ 181 tons each ..	629,237.0	
<b>Total</b> .....	<b>3,281,889.5</b>	

WESTBOUND.		Tons.
1,342½ trains @ 443 tons each .....	594,727.5	
2,322 locomotives @ 175 tons each ..	406,350.0	
1,738½ freight trains @ 898 tons each	1,561,173.0	
3,477 locomotives @ 181 tons each ..	629,237.0	
<b>Total</b> .....	<b>3,191,487.5</b>	

Comparison of Comparable Factors affecting the Cost of operating over Rogers Pass, via Present Line and via Tunnel Line, now under construction, Average Traffic for 1912 and 1913.

Eastbound tonnage per year, including weight of locomotives, 3,281,890 tons.

Friction resistance, 16.77 mls. $\times$ 15 ft. ....	251.5 ft.
<b>Total</b> .....	<b>1,455.1 ft.</b>
<b>Difference</b> .....	<b>595.0 ft.</b>
3,191,488 tons $\times$ 595 ft. equals 1,898,935,360 foot tons.	
Total work done extra ... 2,181,800,472 foot tons	
1,898,935,360 foot tons.	
<b>Total</b> .....	<b>4,080,735,832 foot tons</b>

1,000 foot tons equals approximately 1 horse power hour. Assuming that 5 pounds of coal is consumed in doing one horse power hour's work and that coal on locomotive costs \$4.60 per ton, the saving in fuel will amount to:—

1,080,736 $\times$ 5 lbs. $\times$ \$4.60	
2,000 lbs (one ton)	
= .....	\$46,928 46

### EXTRA WAGES, TRAIN AND ENGINE CREWS.

Present Line.	
6,162 trains for 23.1 miles.	
5,437 pusher engines for 23.1 miles.	
142,342.2 train miles.	
125,594.7 pusher engine miles.	
Tunnel Line.	
6,162 trains for 18.68 miles.	
5,437 pusher engines for 13 miles.	
115,106.2 train miles.	

of track, the annual saving on account of operating over tunnel line would be:—

$$\$85,635.61 \times 2 \text{ plus } \$85,000.00 = \$356,271.22$$

In arriving at the above figures no account is taken of whether line was single or double track, and for comparative figures it was assumed that methods of operation would be the same. Now, as a matter of fact, the present single track line with double the present traffic would make the business too congested for economical single track operation. Therefore, it was apparent that it was time to study the question of double tracking the present line or seeking a new line for double track. It was decided to double track on the five mile tunnel location as shown in fig. 1, with grades as shown in fig. 2. Now to operate successfully a five mile tunnel we will require the installation of an electric plant and the purchase of electric locomotives. All the details of the proposed electrification have not been worked out, but even if they were, the reader is not interested in the details of cost. He can see at once that the problem was to find out if the cost of operating and maintaining the tunnel line, taking into account the extra costs of operating on account of having a short section

of electric operation and extra cost of maintaining tracks in the tunnel, plus the interest on the cost of building the new double track line, including the cost of electrifying the tunnel, would be less than the cost of operating and maintaining a double track line on the present location plus the interest on the cost of building the second track. The figures would not have been very decisive one way or the other were it not for the fact that there is now  $4\frac{1}{2}$  miles of wooden snow sheds on the present location which will be all done away with on the new location. The maintenance and renewals of these sheds cost between \$85,000 and \$100,000 a year. To maintain and renew a double track wooden shed would probably cost at least 50% more than the above, so that with a saving of about \$125,000 a year in maintenance and renewals of snow sheds and a calculated saving in operation and maintenance of \$171,271.22 on a traffic that surely will be reached in the near future, there was no doubt as to the proper course to pursue.

As to the details of figuring economics of railway location, the writer is well aware

speed between 7 and 35 miles an hour:—

$$R = 2.2 T + 121.6 C.$$

R = total resistance on level tangent.

T = total weight cars and contents in tons.

C = total number of cars in train.

This amounts to 4 lbs. per ton to 8 lbs. per ton, depending on whether cars are fully loaded or empty. This is equivalent to a rise of from 10 ft. to 20 ft. per mile. For mixed traffic a conservative estimate is train resistance equals rise of 15 ft. per mile.

It may appear that the rate of 25c. per actual pusher mile covering the cost of repairs and engine crew wages and extra cost of maintenance is too high, but as a matter of fact it is very conservative for the repairs, maintenance and renewals of the locomotives alone will run somewhere between 7c. and 10c. per mile, and we have had cases where the locomotive crew wages alone averaged 25c per mile for the actual mileage run, on account of delays to the pusher.

The foregoing was contributed by Mr. Sullivan to the Cornell Civil Engineer, pub-

## Traffic Orders by the Board of Railway Commissioners.

### C.P.R. Joint Tariff on Grain.

22989. Dec. 17.—Re Supplement 2 to C.P.R. Joint Tariff on Grain and other Commodities, C.R.C. no. W. 1890, published to become effective Jan. 1, 1915. Upon reading the application of the Taylor Milling & Elevator Co. and the Ellison Milling & Elevator Co., of Lethbridge, Alta., protesting against the proposed cancellation of the joint through rates prescribed by the order 20462, Oct. 2, 1913. It is ordered that that supplement be suspended pending the hearing and determination of the matter by the Board.

### Rates on School Crayons.

23007. Dec. 18. Re application of Toronto Board of Trade for an order including school crayons in the stationery list of the Canadian Freight Classification, it is ordered that the application be dismissed.

### Rates on Pulpwood to Mechanicville, N.Y.

23020. Dec. 22.—Re Supplement 1 to C.P.R. Competitive Proportional, and Joint

Fig. 2.—Rogers Pass Tunnel. Profile of Old and New Lines.

that it is impossible to devise any method that will show absolutely that saving in cost of operating one line over another, but he believes that the method herein followed, namely, that of comparing cost of fuel on the basis of work done rather than on a train mile or any other unit is much more logical and will give more reliable results than other methods that have been followed. The train mile is possibly the best unit for comparison in cost of wages and for cost of maintenance of equipment. In figuring maintenance of way a fixed sum should be taken, plus a rate per daily train rather than a fixed rate alone per train mile, for the reason that a certain amount of expense must be incurred regardless of whether trains are run or not. The fixed sum of \$200 a mile taken in this problem is probably about one half the actual sum that would be assumed if the entire cost of maintenance was to be included in this fixed sum per mile plus the rate per train mile for the reason that cost of maintenance of terminals and other items are not affected by the details of location between fixed terminals.

Frictional resistance, normal conditions, warm weather, modern freight equipment,

lished by the Association of Civil Engineers of Cornell University, Ithaca, New York, of which Mr. Sullivan is a graduate. Other articles on this tunnel have been published in Canadian Railway and Marine World, as follows:—April, Oct. and Nov., 1913; Jan., June, Oct. and Dec., 1914, and Jan., 1915.

### Grand Trunk Railway Secured Notes.—

The G.T.R. issued in London, Eng., in December, a prospectus of £1,000,000 three year  $5\frac{1}{2}\%$  secured notes dated Jan. 15, 1915, due Jan. 14, 1918, the issued price being £98 10s. The notes are secured by deposit with the trustee of £1,430,000 G.T.R. perpetual 4% consolidated debenture stock. The proceeds are to be applied to the company's general purposes. The prospectus stated that the net revenue for 1913 showed a surplus after providing for fixed charges of £975,000. The complete figures for 1914 were not available, but although the amount must be reduced owing to the depression of trade, the outbreak of war and the increase in net revenue charges, the net revenue available would cover the interest on the issue many times over. We are officially advised that the issue was fully subscribed.

Freight Tariff on pulpwood, C.R.C. no. E-2847, published to become effective Jan. 4, 1915, in connection with Boston & Maine Rd. Upon reading the application of Auger & Son and the d'Auteuil Lumber Co., both of the City of Quebec, protesting against the proposed increases in the joint through rates on pulpwood, in carloads, from C.P.R. stations south of the River St. Lawrence and east of Montreal to Mechanicville, over the C.P.R. and the Boston & Maine Rd. It is ordered that the said supplement be suspended pending the hearing of the said application at the sittings to be held at Ottawa on Jan. 5, 1915. And it is also ordered that Supplement 16 to G.T.R. Special Local, Joint, and Proportional Tariff, C.R.C. no. E-2588, published to become effective Jan. 4, 1915, increasing its rates on the same commodity from the same territory to the same points, via Sherbrooke, Quebec, and the Boston & Maine Rd., be suspended pending the hearing aforesaid.

A decided shop economy results from the use of the outside locomotive gear, as repairs to it can be more readily handled in the locomotive house shop.

## Progress of Work on the Quebec Bridge During the First Erection Season.

By H. P. Borden, Assistant to Chief Engineer.

During the past season substantial progress has been made toward the erection of the new Quebec Bridge. In spite of the fact that the actual start on the work of erecting the main trusses of the anchor arm was not made until the middle of July, 1914, over 80% of the north anchor arm, amounting to some 15,000 tons, has been entirely erected, and for the most part riveted. During the winter of 1913-1914, the traveler for this work was erected on the north shore, just clear of the abutment. On May 18, 1914, the traveler was completed and moved out over the approach span, which had been put in place the season before.

**Falswork.**—From a position over the north anchor pier a start was then made on the erection of the steel falswork extending between this pier, and the north main pier. The erection of two systems of falswork was required at this point: (1) An inside falswork, which was required to support the floor of the bridge during erection and upon which the traveler and all erection equipment and plant were handled; (2) an outside falswork, entirely independent of the first, which supported the trusses of the anchor arm during erection. The inside falswork consisted of seven bents, braced laterally and horizontally, the traveler moving ahead panel by panel as each bent was erected. These seven bents, covering a distance of 500 ft., were erected in practically two months, or at the rate of one bent a week.

On July 15, 1914, a start was made on the erection of the shoes on the north main pier. These shoes, weighing 400 tons each, had been completely erected in the shop before shipment and all holes reamed out either in place or to template, and all parts accurately matchmarked and stamped, so that the assembling at the site went ahead very quickly. By Aug. 1 they were entirely assembled and sufficient rivets driven to allow a start to be made on the erection of the bottom chords.

**Placing Bottom Chords.**—According to the scheme of erection, the bottom chords as a whole were erected on the outside staging from main to anchor pier before any of the web members were erected in place. The average main panel length being 86 ft., it was necessary to erect the lower chord members in four pieces for each panel, there being a transverse as well as a longitudinal field splice (both vertical). A full panel of bottom chord near the shoe weighs approximately 400 tons per truss. By Sept. 28 these chords were erected, connected up with the bottom lateral system, and the web splices riveted. The traveler moved back toward the anchor pier as the work progressed.

**Erecting Web Members.**—When the traveler had finished the erection of the bottom chord, it was again moved forward to the main pier and the erection of the lower half of the web members (up to the point where the diagonals and the verticals intersect) was started. These diagonals, also on account of their weight, had to be erected in four pieces between main panel points, having a vertical as well as a longitudinal field splice. As their ends are pin-connected, the erection of this portion of the web system proceeded rapidly. Each diagonal was accurately trued up and all the rivets in the vertical web splices were driven for the connection before it was connected to the vertical. No difficulty whatever was met with in the erection of these members.

The lower half of this web system was fully erected back to the north anchor pier by Nov. 9, 1914. The anchorage bars were then put in place in the anchor pier and connected up to the eye-bar heads, which had been left extending above the masonry at the foot of the well. These bars were carried up and connected to the top of the end compression diagonal, which is held in position by a special steel strut resting on the anchor pier until such time as it receives stress from the weight of the cantilever arm.

The start on the upper portion of the web system, including the top-chord eye-bars, was made on Nov. 12, the traveler moving forward panel by panel toward the main pier as the work progressed. This work went ahead even faster than the lower half of the web system, as the compression verticals were shipped in one length, and very little riveting was required. Although the longer of the tension diagonals were shipped in two pieces, they were riveted together on the ground before they were erected in place, thus saving time in actual erection.

**Top-Chord Eye-Bar Erection.**—The top chords are composed of two banks of eye-bars. On account of the impossibility of getting eye-bars of sufficient length to span a full panel, they are erected in two lengths, supported on the centre by a small lattice truss, thus doing away with redundant members in the web system. The eye-bars are assembled in these trusses in the storage yard, the centre pins driven, and the whole panel of eye-bars erected as a complete member; thus only the end pins need to be driven to fully erect a whole section of the chord. The erection proceeded to panel point 10, or two full panels away from the main pier, where the work ceased for the season on Dec. 5. Owing to the excellent equipment of the erection traveler, the members for both trusses were erected simultaneously, which materially expedited the work.

The erection of one complete panel of the upper section of the web, with all pins driven, was the best single day's work during the season.

The St. Lawrence Bridge Co., of Montreal is the contractor for this work. Phelps Johnson is President; G. H. Duggan, Chief Engineer; George F. Porter, Engineer of Construction; W. B. Fortune, Superintendent of Erection; S. P. Mitchell, Consulting Engineer of Erection.—Engineering News.

At the annual meeting recently of the Dominion Bridge Co., which is largely interested in the St. Lawrence Bridge Co., it was stated that 42% of the steel of the Quebec Bridge had been fabricated and 18% erected. It is anticipated that the work will be finished on time and within the original cost estimates.

**Railway Financial Issues in England in 1914.**—During 1914, Canadian railways placed loans on the London market, aggregating £11,545,000, as follows.—Canadian Northern Ry., 4% guaranteed debenture stock £3,000,000 at 94; Canadian Northern Western Ry., 4½% Alberta guaranteed first mortgage debenture stock, £1,320,000 at 93; Central Ry. of Canada first mortgage 5% bonds, £1,225,000 at 90; Grand Trunk Ry. perpetual 4% consolidated debenture stock, £1,500,000 at 90, and three year 5½% secured notes, £1,000,000 at 98½; Pacific Great Eastern Ry. first mortgage 4½% guaranteed debenture stock, £1,500,000 at 95.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,594,300	\$1,163,800	\$430,500	x \$53,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,109,900	1,519,000	590,700	x 65,800
Oct.	1,895,300	1,332,100	563,200	x 440,900
Nov.	1,670,200	1,123,100	547,100	x 417,700
Dec.	1,329,100	908,000	423,100	200,900
	\$9,966,500	\$7,167,200	\$2,799,300	x \$1,241,400
Decr.	\$3,398,400	\$2,157,000	\$1,241,400	.....

x Decrease.

Approximate earnings for three weeks ended Jan. 21, \$656,600, against \$1,040,700 for same period 1913.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$10,481,971.72	\$6,703,525.89	\$3,778,445.83	\$338,947.35
Aug.	8,917,764.38	6,554,606.68	3,373,157.70	597,981.54
Sept.	10,764,139.67	6,387,091.28	4,367,048.39	48,530.30
Oct.	9,282,928.49	5,361,600.13	\$3,921,328.36	2,281,529.48
Nov.	8,057,358.89	5,413,866.72	2,644,072.17	2,244,173.89

	\$48,494,163.15	\$31,020,110.70	\$17,474,052.45	\$5,510,562.51
Dec.	\$14,977,673.21	\$9,467,110.70	\$5,510,562.51	.....

Approximate earnings for Dec., \$7,321,000 against \$11,695,000 for Dec., 1913; and for two weeks ended Jan. 14, \$2,637,000, against \$3,413,000 for same period 1913.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., G.T.W.R., and D.G.H. & M.R. for Nov., 1914, compared with Nov., 1913:—

Grand Trunk Railway (Including Canada Atlantic Ry.)		
	1914.	1913.
Earnings .....	\$2,953,700	\$3,724,300
Expenses .....	2,551,900	3,028,300
Net earnings .....	\$401,800	\$696,000
Grand Trunk Western Railway.		
Earnings .....	\$576,200	\$557,200
Expenses .....	607,300	502,500
Net earnings .....	\$31,100*	\$74,700
Detroit, Grand Haven & Milwaukee Ry.		
Earnings .....	\$240,400	\$241,900
Expenses .....	227,600	210,200
Net earnings .....	\$12,800	\$31,700

\*Deficit.

## TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate traffic receipts from July 1 to Dec 31, 1914:—

	1914	1913	Incr.	Decr.
G.T.R. ....	\$21,387,842	\$24,374,136	.....	\$2,986,294
G.T.W.R. ....	3,752,189	3,717,877	\$34,312	.....
D.G.H. & M.R. ....	1,389,801	1,347,427	42,374	.....
Totals ....	\$26,529,832	\$29,439,440	.....	\$2,909,608

Approximate earnings for Dec., \$4,087,967, against \$4,761,352 Dec., 1913; and for two weeks ended Jan. 14, \$1,523,267, against \$1,607,187 for same period 1914.

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for December were \$317,894, against \$554,926 for Dec., 1913. Aggregate earnings for six months ended Dec. 31, \$3,076,890, against \$4,293,114 for the same period 1913.

**C.P.R.'s Algonquin Hotel.**—It is expected that the reconstructed Algonquin Hotel, St. Andrews, N. B., will be ready for occupation June 15. It will contain 220 bedrooms, many with private baths attached. The dining room will be 112x41½ ft.; the general lounge 89½x21½ ft.; and the drawing room 38½x37 ft., with an extension of 21x17½ ft. There will be large verandahs.

## Typical Station on the Quebec Central Railway.

The Quebec Central Ry. has developed a very neat, attractive, and substantial type of standard station, which will be built at the more important points along the line as required. One of the buildings as completed is shown in the accompanying illustration of the station at East Angus, while another is shown in the plan of a station completed recently at Tring Jct. The feature of especial value in connection with these

Typical Station on Quebec Central Railway at East Angus, Que.

stations is that they are built almost entirely of asbestos, the foundations and walls being of asbestos concrete and asbestos blocks, and the roof covered with asbestos shingles, rendering the building almost entirely fireproof, a very desirable feature. It also shows what a substantial and attractive type of building can be made of the asbestos mineral, which is one of the greatest industries of the Province of Quebec, and which is almost entirely located along the Q.C.R. In fact, over 85% of the world's

ing position on the other side of the offices, the general waiting room, 24 ft. square, is located. Adjoining the latter is the baggage room, 16 by 24 ft.

The ticket office has a ticket wicket into both waiting rooms, the wicket being made of ornamental iron, with a balanced sash. It is entered from the general waiting room through a small lobby for trainmen, from which there are small ornamental iron

wickets into both offices. The trainmen's room has a small desk for order books, etc. The stair to the upper floor leads from this small room. The private office to the rear of the ticket office, is entered from the latter through a door connecting the two offices. One corner of the room is cut off for the chimney, while at the rear of the room, on the same side, there is a projection from the women's waiting room for the women's lavatory.

The women's waiting room is entered from

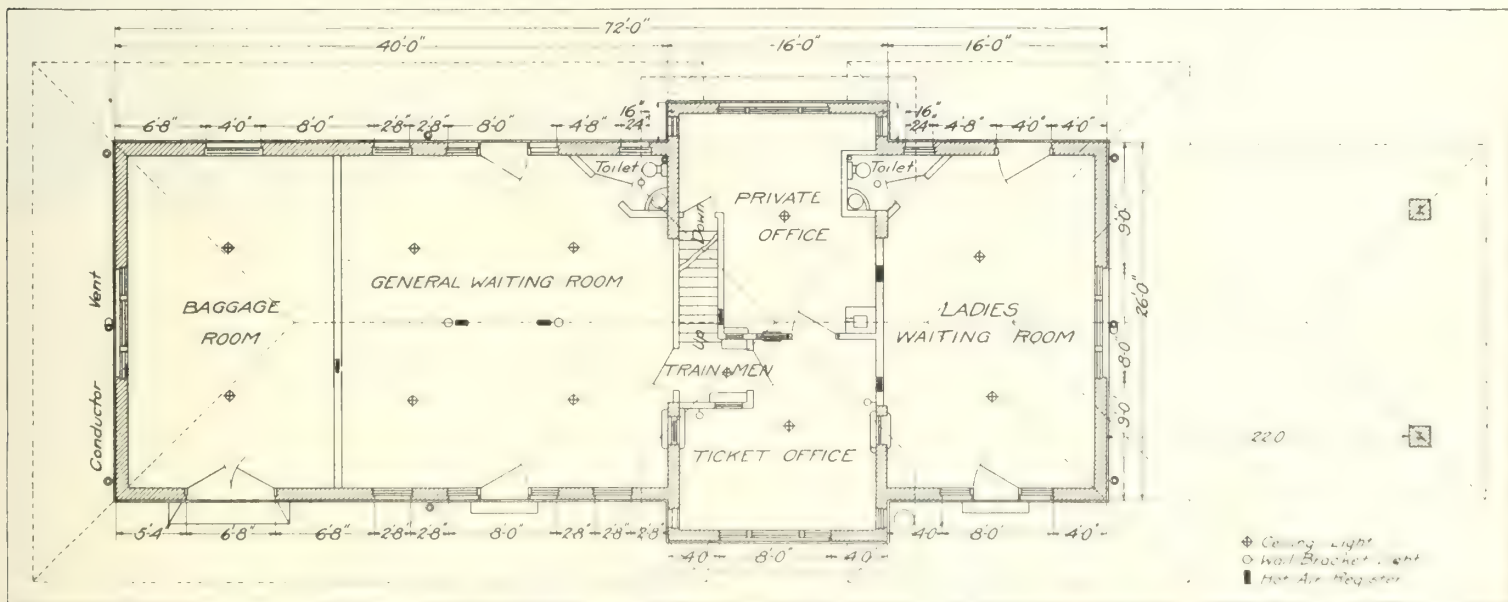

corner to that in the women's waiting room, there is another lavatory.

The baggage room at the end of the building has no connection from the main part of the building, and is entered by a double door, 6 ft. 8 ins. wide, leading out on the train platform. The two waiting rooms and the baggage room have an 8 by 12 in. beam extending over top.

The covered platform at the opposite end of the building is carried on two concrete piers, reinforced with rails, located 22 ft. back from the building wall.

The floor lining in all the rooms is  $\frac{7}{8}$  in. spruce, with a surfacing of clear birch in all but the baggage room, which has a no. 1 birch floor. The general waiting room, women's waiting room, offices and lavatories have ornamental metal ceilings, and the ceiling of the covered section of the end of the station is of  $\frac{7}{8}$  in. tongued and grooved no. 1 spruce sheathing,  $2\frac{1}{2}$  ins. wide, a similar treatment being given to the underside of the overhanging roof all around the building. The baggage room has a similar ceiling. The partition walls are made up of a framing of 2 by 6 in. scantlings at 16 in. centres, while the exterior walls are furred with 2 by  $1\frac{1}{4}$  in. spruce at 16 in. centres. All the rooms are wainscotted to a height of  $4\frac{1}{2}$  ft. Above this, there are applied two coats of asbestic plaster, the second coat of asbestic lime putty with plaster of paris, trowelled to a perfectly smooth surface. There is a single coat of plaster behind the wainscoting.

The outside doors and all sashes are of no. 1 kiln dried pine, and all the frames to the doors and windows are of no. 1 pine or spruce. All the windows have storm sashes attached inside, where the sashes are balanced, with the lower half of the storm sash balanced. All the outside woodwork is painted with three coats of a bottle green lead and oil paint.

Typical Station on Quebec Central Railway at Tring Junction, Que.

production originates on, or is shipped over that line.

The building is symmetrically arranged about the central offices, when the covered platform at one end is included. The building proper is 72 by 26 ft., with projecting wings at the centre giving a width of 32 ft. opposite the offices. The ticket office, 14 ft. square, occupies the front half of the office section, behind which is the private office, 14 by 16 ft. On one side is the ladies' waiting room, 15 by 24 ft., while in a correspond-

the front and rear of the building, through doors at each end of the room. From this room, there is a door leading into a small lavatory, which is located in the back corner, adjoining the private office, into which the lavatory projects.

The general waiting room also has two entering doors, in the front and rear. In the centre line of the room, there are two hard pine columns, all the other rooms being clear, the upper floors being carried on the room walls. In the corresponding

Electric lighting is employed, either in ceiling lights, or wall brackets, all controlled from wall switches, conveniently located beside doors. The heating is by hot air, the ducts passing up in the walls, with wall registers, with the exception of the general waiting room, which has two registers of similar type in the centre of the room. The furnace is in the basement.

We are indebted to J. H. Walsh, General Manager, Q.C.R., for the data from which this article has been prepared.

## Difficulties of Railway Contractors in British Columbia.

The troubles of the railway contractor are ever legion and as varied as they are numerous, yet I believe the construction of the Canadian Northern Pacific Ry. through the canyons on the Fraser and Thompson Riv-

Difficult Sidehill Location, C.N.P.R.

ers presented more new problems than any of the other lines built in the West. The fact that the cost of the 500 miles of the road within the borders of British Columbia averaged about \$75,000 a mile tells only the financial side of the story, and even so, railway builders are agreed that for the low gradients secured this average cost is extremely low.

However, in addition to the engineering questions involved in this work there was also the human side—the side that has to do with keeping crews at work under extreme weather conditions, striving to maintain contentment in a camp to which mail and supplies come only once a month, and encouraging among men on disheartening work the esprit de corps without which the average cost would have been even greater.

The two photographs I am sending here-with may be of interest. The view of the sidehill was taken in the canyon of the North Thompson near Hell's Gate, where solid-rock excavation was continuous for 5 miles. The cut under construction is marked in the background, while the foreground gives a good idea of the character of the country to be traversed. The final location surveys, made along the face of ice covered cliffs of this sort, can be imagined better than described, yet the fatality was surprisingly low.

The other photograph shows a horse being hauled back to the grade by 26 men, after it had fallen some 30 ft. without injury. —K. T. Roberts, Victoria, B. C., in Engineering Record.

## Discussion of the Draft Gear Problem.

A Montreal subscriber to Canadian Railway and Marine World wrote recently as follows:—"The draft gear problem is certainly the most important item in considering railway freight. The annual cost of repairs to cars that are damaged through draft gear failure, and loss and damage claims resulting from this cause far exceeds all other repairs made to freight car equipment. The draft gear equipment in most of the old cars used in service today is inadequate to withstand the shock incident to the heavy power that is being universally used, and there is only one thing to do, viz., do away with the old and put on the new up to date modern equipment. Draft gear today is manufactured tandem, spring, and friction, and any of these is away ahead of even the most modern car construction. Short draft gear is used today on railways on, say, seven out of ten cars, and it appears that the only reasonable way would be to make as few repairs on these cars as possible and to retire them from service as speedily as economic conditions permit."

We sent a copy of the above to several

arms riveted to same, or steel draft arms so arranged that the plate extends upwards and bolted to the side of the sills, in addition to the regular draft timber bolts now in use in wood under frame cars, and it is very essential that the plate of the draft arm extend back beyond the bolster. There are several types of steel draft arms being used by the different railways, designed to suit their equipment. Repairs to cars through draft sills and gear failure is the largest item we have today in freight car repairs."

W. S. Atwood, Chief Engineer, Canadian Car and Foundry Co., Montreal.—"I believe the writer of this paragraph is quite correct in his statement, in that the draft gear problem is one of the most important items in railway freight car construction, and I believe that his points are well taken, except that I do not quite understand his meaning of the sentence reading 'Draft gear today is manufactured tandem, spring and friction, and any of these is away ahead of even the most modern car construction.'"

Canadian Railway and Marine World sent a copy of Mr. Atwood's letter, as published above, to the subscriber in Montreal who brought up the question, and who has written in reply as follows:—"The gear which

A "One Horsepower Hoist" on the Canadian Northern Pacific Ry.

authorities on car building and maintenance, and have received the following replies:—

J. Coleman, Superintendent, Car Department, G.T.R., Montreal.—"The short article sent you is no doubt all right. Draft gear in freight cars applied several years ago is entirely out of date for the present service on account of the increased size of locomotives and in turn the increased size and length of trains and tonnage, making the service on draft gear a great deal heavier. A serious problem today is, what can be done with old wooden box cars to reinforce them with steel underframe and make them sufficiently strong?"

G. E. Smart, Master Car Builder, Canadian Government Railways, Moncton, N. B.—"The draft gear equipment is not the real source of trouble on freight car equipment at present, it is the wood underframe cars, with the short draft timbers, that are failing under the heavy service of today. These cars, in most cases, are equipped with tandem draft gear, and in some cases the friction draft gear that your correspondent refers to, but it is the short draft timber bolted to the wood sills that is causing the trouble. The remedy for this is to apply steel centre sills, with steel draft

I referred to is manufactured tandem, spring and friction, and can be seen in operation on the New York Central Lines. The noticeable feature is that when cars are damaged, that have been equipped with this modern and up to date draft gear, it is not the gear that is damaged, but the rest of the car. W. O. Thompson, District Master Car Builder, N.Y.C. and H.R. Rd., at Buffalo, can vouch for these facts."

C. P. R. Employees Medical Association of British Columbia.—Following are the officers of the Association for the current year:—President, F. W. Peters; Vice President, G. R. Thomas; Secretary-Treasurer, A. M. Innes; other members of board of management, C. A. Cotterell, W. O. Miller, W. P. Martin, Dr. A. P. Proctor, A. S. Emms, R. B. Urquhart, A. E. Shaw, T. L. Bloomer, O. L. McCrea, F. B. McCharles, A. Robb, R. Winterholder, J. H. Taylor, W. E. Kingston. Of these the following have been elected the Executive Committee:—F. W. Peters, Dr. Proctor, A. L. McCrea, W. Robb, W. G. Kingston. The board has decided to provide free medical attendance for the families of all employees who have enlisted in the military service of Canada for the war.

## Steam Railway Track Laid in 1914.

Following the usual annual custom of many years, circulars were sent in December by Canadian Railway and Marine World to all railways in Canada asking information as to new track built in 1914. From the replies received and estimates made a table was given in our January issue showing 2,088.09, a figure which did not agree with the total in the table. The errors have been adjusted, and with revised official information, except in three instances, the table shows that 2,041.31 miles of new single track were laid in 1914, as follows:

	Miles.	Miles.
<b>Alberta and Great Waterways Ry.</b>		
Carbondale to Lac La Biche .....	114.00	
<b>Canadian Northern Ontario Ry.</b>		
Between Montreal and Grenville .....	39.00	
Between Ottawa and Capreol .....	130.00	169.00
<b>Canadian Northern Ry.</b>		
Birds Hill to Pt. Grand		
Marias, Man. ....	50.77	
Chatfield, Man., northerly ..	27.08	
Laird, Sask., northerly ..	8.67	
C. N. A. Ry., Yellowhead easterly .....	2.48	
C. N. Western, Stolberg-Brazeau .....	17.44	106.44
<b>Canadian Northern Pacific Ry.</b>		
Yellowhead Pass westerly ..	94.40	
Waterfall to Spatum .....	43.00	
Kamloops W. to Upper Black Canyon .....	52.00	
Irvine to near Goose Creek ..	44.00	233.40
<b>Canadian Pacific Ry.</b>		
Quebec—		
Porsyth St. branch, Montreal .....	0.64	
Interprovincial and James Bay Ry., mileage 7.5 to 9.87 Keweenaw north .....	2.37	
Ontario—		
Trenton freight spur .....	1.11	
Manitoba—		
Gimli to Riverton .....	26.30	
Saskatchewan—		
Weyburn-Lethbridge line ..	87.00	
Moose Jaw South West line	22.40	
Kerrobart to Sask. boundary .....	50.00	
Alberta—		
Monitor to Alberta-Sask. boundary .....	22.00	
Empress to Westerham ..	18.00	
Empress to Bassano .....	118.30	
Suffield S. W., m. 57 to 84 ..	27.00	
Coronation to Lorraine ..	18.70	
Gleichen to Shepard .....	12.50	
Alberta Central Ry. between Red Deer and m. 64.50 ..	32.00	
British Columbia—		
Kootenay Central Ry., Edgewater to Kootenay River ..	68.30	506.82
<b>Dominion Atlantic Ry.</b>		
Centerville to Weston, N.S. ....	14.80	
<b>Edmonton, Dunvegan and B.C. Ry.</b>		
Smith to McLennan .....	131.00	
<b>Erie and Ontario Ry. (T., H. &amp; B. R.).</b>		
Smithville to Dunville, Ont. & ..	14.90	
<b>Esquimalt and Nanaimo Ry.</b>		
Big Qualicum to Courtenay, B.C. ....	28.70	
<b>Essex Terminal Ry.</b>		
Extension to Ojibway, Ont. ....	1.00	
<b>Glengarry and Stormont Ry.</b>		
St. Polycarpe, Que., to Cornwall, Ont. ....	28.00	
<b>Grand Trunk Pacific Ry.</b>		
Shelley to Tintagel, B.C. ....	157.30	
Talmage to Weyburn, Sask. ....	14.50	
Central Butte to Riverhurst, Sask. ....	17.60	
Rossman to Carruthers, Sask. ....	15.80	205.20
<b>Hudson Bay Ry. (Dominion Government)</b>		
Mileage 86 to 197 .....	111.00	
<b>Intercolonial Ry.</b>		
Dartmouth Branch Line .....	33.00	
* Kettle Valley Lines .....	60.00	
Extensions .....		
<b>Lake Erie and Northern Ry.</b>		
Brantford to Galt, Ont. ....	22.00	
Waterford towards Simcoe ..	8.00	30.00
<b>* Pacific Great Eastern Ry.</b>		
Mileage 13.50 from Squamish, B.C., to m. 120 .....	106.00	
<b>* Prince Edward Island Ry.</b>		
Carleton Point spur .....	2.50	
<b>Quebec Central Ry.</b>		
Extension east of St. Camille, Que. ....	5.00	
<b>Roberval-Saguenay Ry.</b>		
Extension St. Alexis branch ..	0.50	

<b>St. John and Quebec Ry.</b>	
Fredericton to Woodstock, N.B. ....	24.98
Fredericton to Gagetown ..	3.51
Woodstock to Centreville ..	1.50
	29.99
<b>Vancouver, Victoria and Eastern Ry.</b>	
Coalmount to Brooks, B.C. ....	25.56
<b>Winnipeg Water District.</b>	
St. Boniface to Shoal Lake, Man. ....	85.00
Total .....	2,041.31
* Estimated.	

Of the total mileage laid in 1914 the Canadian Northern Ry. lines laid 508.84 miles; the Canadian Pacific Ry., 506.62, and the Grand Trunk Pacific Ry., 205.20 miles, or a total of 1,222.66 against 2,710.51 miles in 1913 and 1,864.07 miles in 1912.

Divided by provinces the track laid in 1913 and 1914 compares as follows:

	1914.	1913.
British Columbia .....	679.26	655.32
Alberta .....	513.12	511.51
Manitoba .....	300.15	221.88
Saskatchewan .....	215.97	765.49
Ontario .....	200.01	840.57
Quebec .....	52.51	103.26
Nova Scotia .....	47.80	12.80
New Brunswick .....	29.99	107.84
Prince Edward Island .....	2.50	.....
	2,041.31	3,218.67

Following are the figures showing new single track laid from 1906:

	Miles.
1906 .....	1,204.06
1907 .....	1,469.65
1908 .....	1,505.95
1909 .....	1,588.47
1910 .....	1,869.24
1911 .....	1,851.98
1912 .....	2,179.09
1913 .....	3,218.67
1914 .....	2,041.31

The C.P.R. built during 1914, on the Lake Superior Division, 21 miles of double track diversion to replace an approximately equal mileage of old second track. This is located as follows:—Cartier Subdivision, mileage 101 to 107, six miles; Schriber Subdivision, mileage 3 to 7, four miles; mileage 9 to 11, two miles; mileage 21 to 22, one mile; Nipigon Subdivision, mileage 14 to 22, eight miles; total, 21 miles. New second track was laid as follows:—Cartier Subdivision, mileage 95.5 to 100, 4.5 miles, and mileage 110 to 113, three miles; Chappleau Subdivisions, mileage 125 to 129, four miles; White River Subdivision, mileage 29 to 30, one mile, and mileage 33 to 38, five miles.

The Canadian Northern Ry. has, in addition to the completed grade on the transcontinental line to Vancouver, on which track is expected to be laid in about a month, 155.25 miles of grading practically ready for the track on Vancouver Island, in addition to a considerable mileage of branch mile grading in Saskatchewan and Alberta.

The Lancashire & Yorkshire Ry. Chief Goods Manager's staff has made it a custom for 20 years to hold an annual dinner at the company's head office at Manchester, Eng., but this year, on account of the war, it was not thought desirable to do so. Instead, the staff entertained about 150 Belgian refugees to a dinner and concert, the guests being called for, and taken home by motor cars. The invitations were printed in English, Flemish and French, and the chief speech of the evening was translated into the two latter languages.

The Intercolonial Ry. Ticket Office at St. John, N.B., has been removed from its old quarters at the foot of King St. to the offices formerly held by the C.P.R. in the Royal Hotel, at the corner of King and Germain Sts.

## The Late Thomas C. Keefer.

The death occurred at Ottawa, Jan. 7, of T. C. Keefer, the father of the engineering profession in Canada. He was born at Thorold, Ont., Nov. 4, 1821, and was educated at St. Catharines, Ont., Upper Canada College, Toronto, and McGill University, Montreal. He commenced his engineering career on the Erie and Welland canals in 1838, and continued as an engineer on that work until 1845. From 1845 to 1848, he was Chief Engineer of the work in connection with the improvement of navigation on the Ottawa River, and later was engaged in survey work for the navigation of the rapids on the St. Lawrence River. In 1850 he was sent by the Canadian Government to assist a U. S. representative to report on Canadian trade with the U. S., and he also assisted in preparing a second report on the same subject. In 1851 he was engaged on preliminary surveys for the G. T. R. between Montreal and Toronto, and for a railway bridge over the St. Lawrence River at Montreal. In 1853 he was appointed Engineer for the Montreal Harbor Commissioners, and later constructed water works for Montreal, Hamilton and Ottawa, and was for some time Chief Engineer of various railways in Upper and Lower Canada, since amalgamated with the larger systems. He was also appointed a member of the International Commission of Waterways. He was made an honorary member of the Canadian Society of Civil Engineers in 1903, and was one of its founders and its first President. He was also a member of the American Society of Civil Engineers, Institute of Civil Engineers (England), and the Royal Society of Canada. He was created a Companion of the Order of St. Michael and St. George in 1878, and was also made a member of the Legion of Honor, of France, in the same year.

He produced a number of works, treating of transportation in the Dominion, issuing his Philosophy of Railways in 1849, which, it is stated, greatly influenced the Government in its railway policy. In 1850 he won the then Governor General's prize for an essay on the influence of the canals of Canada on her agriculture.

## Railways and the Ontario Workmen's Compensation Act.

Representatives of a number of steam and electric railways operating in Ontario met the members of the Ontario Workmen's Compensation Board in Toronto, Jan. 15, to discuss the operation of the Act as applying to railways. The Board pointed out that the railways are in schedule 1 of the Act, which means that while they are under the general provisions of the measure, they are not brought within the grouping system, each company being held individually liable for its dependents in case of injury or death.

When a workman is injured or killed, the company must at once notify the Board, supplying a physician's report and other data. The Board passes upon the case, fixes the compensation due the workman and notifies the company. A cheque for the amount fixed must then be forwarded to the Board, which places it upon record and sends it on to the workman.

In every respect the employe of a railway is given the same protection and compensation that the worker under the general scheme receives, the only difference being that he gets his compensation from his employer instead of from a general fund.

The Canadian Northern Ry. was reported Jan. 9, to have sold \$2,000,000 of equipment trust notes in New York.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alaska.**—A proposition has been submitted to the United States Government for the sale to it of the Copper River and Northwestern Ry., with a view of its inclusion in the projected Government system of railways in Alaska. The Government's engineering commission is making a valuation of the Alaska Northern Ry., and will make a valuation of the C. R. and N. W. Ry. later. The Government project looks to the building of a railway from the Pacific Coast through the centre of the Territory to the Yukon River, at the boundary of British Columbia. (Sept., 1914, pg. 418.)

**Alberta and Great Waterways Ry.**—Press reports stated that grading had been completed Dec. 20, from Carbondale, the junction with the Edmonton, Dunvegan and British Columbia Ry. to mileage 137, about 23 miles beyond the Hudson's Bay reserve at Lac La Biche, and that tracklaying had practically reached the lake. The right of way beyond mileage 137 is being cleared, and grading will be proceeded with during the summer. Location surveys are practically completed to Clearwater River, mileage 310, about seven miles above Fort McMurray. It is expected to have track laid to that point this year. (Jan., pg. 10.)

**Athabasca, Grand Prairie and Peace River Ry.**—The Dominion Parliament is being asked to authorize the building of the following lines:—From Brule Lake, Alberta, on the Grand Trunk Pacific Ry. main line north easterly to Grand Prairie, thence north westerly to a junction with the Pacific Great Eastern Ry., at the boundary between Alberta and British Columbia; from Grand Prairie northerly to the Peace River at the point where the Pacific, Peace River and Athabasca Ry. proposes to cross. The length of the two lines is approximately 400 miles. Pringle, Thomson, Burgess and Cote, Ottawa, solicitors for applicants. (See Athabasca and Grand Prairie Ry., Nov., 1914, pg. 500.)

**British Columbia and White River Ry.**—Application is being made to the Dominion Parliament for an extension of time for the construction of the projected railway from Bear Creek, at the mouth of the Chilkat River, B.C., to the White River, and then on to the boundary between Yukon and Alaska. C. M. Marpole, G. E. Wilson, G. E. MacDonald, A. McDonnell, Jas. Ironside, are the provisional directors. The company was incorporated in 1911. Barnard, McKeown and Choquette, Montreal, solicitors for applicants. (July, 1911, pg. 645.)

**Brule, Grand Prairie and Peace River Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Brule Lake, Alberta, on the G.T. Pacific Ry. and the Canadian Northern Ry., to Grand Prairie, thence to the boundary between Alberta and British Columbia, there connecting with the Pacific Great Eastern Ry.; also a line from Grand Prairie to the crossing of the Montagneuse River by the Pacific, Peace River and Athabasca Ry., and on to the Peace River at Dunvegan; in all about 400 miles. Pringle, Thomson, Burgess and Cote, Ottawa, solicitors for applicants.

**Burrard Inlet Tunnel and Bridge Co.**—The British Columbia Government informed the company, Dec. 23, 1914, that it was not prepared to endorse either of the three plans under consideration for the projected bridge across the Second Narrows of Burrard Inlet, Vancouver. The directors held a meeting, Dec. 24, when it was decided to

ask Vancouver City to raise its contribution to the total amount to be contributed by the municipalities on the opposite side of the Inlet, and to ask the Provincial Government to guarantee a sufficient amount of the company's bonds to permit the letting of a contract for the substructure, pending the settlement of the question of superstructure plans. A large section of the directors favor the Canadian Bridge Co.'s design, but the Vancouver city directors desire to have the superstructure manufactured in Vancouver and erected by a Vancouver contractor. Further consideration of the question was postponed. (Jan., pg. 10.)

**Calgary and Fernie Ry.**—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Calgary, Alberta, to Fernie, B.C. Hough, Campbell and Ferguson, Winnipeg, Man., solicitors for applicants. (Aug., 1914, pg. 371.)

**Canadian Western Ry.**—The Dominion Parliament is being asked to extend the time for the building of this projected railway from the International Boundary through Pincher Creek and Cowley, and along the Old Man River, to the Livingstone Mountains, thence to Calgary, Alta., with a branch from the Livingstone Mountains to Michel, B.C. The company was incorporated in 1909, the provisional directors being J. S. Hough, L. L. Metcalfe, A. S. Kildall, H. J. Box, and O. L. Boynton, Winnipeg. Hough, Campbell and Ferguson, Winnipeg, are solicitors for the applicants.

**The Cape Breton Coal, Iron and Ry. Co.** closed down its coal mine at Broughton, N.S., Jan. 17. The mine was only reopened a year ago, after having been idle for several years. The company owns a railway from the colliery to a junction with the Sydney and Louisburg Ry., 3 miles, and in 1913 graded a 3 mile extension to Mira, on which track has not been laid. The President is H. Mayhew, Chester, Eng., and the only Canadian director is W. Hanson, Montreal. (Dec., 1913, pg. 573.)

**Central Canada Ry.**—Press reports state that tracklaying has been started at McLennan, Alta., on the Edmonton, Dunvegan and British Columbia Ry., on the 28 miles of grading completed on this line. On the completion of this tracklaying supplies will be got in for the grading of the 22 miles between track end and Peace River Crossing. The construction on the first 8 miles of this will be average, but heavy on the other 14. The route follows the valley of the Heart River, which drops 700 ft. to the Peace River, in the 22 miles. The stream is not a large one, but is subject to high floods, and it has been found impossible to arrange a grade on a side hill cut. In order to establish a satisfactory roadbed the stream will, it is said, be crossed 58 times in 18 miles. The ruling gradient is 1.3%. The grading and track laying on the 22 miles is estimated at \$87,000 a mile, and the cost of the steel for the bridges \$750,000. The bridge required for the crossing of the Peace River will be 1,800 ft. long, 80 ft. above low water, with a 2,500 ft. trestle approach on the east side. This bridge is estimated to cost \$800,000. Beyond the river prairie country stretches for over 200 miles, through which it is proposed ultimately to extend the railway. (Dec., 1914, pg. 544.)

**Dominion Atlantic Ry.**—The Board of Railway Commissioners has approved plans for the deviation of the main line in Windsor, N. S., for 3,250 ft. (Sept., 1914, pg. 418.)

**Dominion Government Railway to Hudson Bay.**—J. D. McArthur, the contractor for building this railway, and — MacLachlan, his engineer, arrived in Ottawa, Jan. 12, from Pas, Man. Mr. McArthur is reported as stating that when he left, track had been laid to mileage 200 from Pas, and that in all 300 miles of grading had been completed. The grading would, he expected, be completed right through to Hudson Bay, by the end of this year, and the track laid by the summer of 1916. (Jan., 1914, pg. 10.)

**Edmonton, Dunvegan and British Columbia Ry.**—Application is being made to the Dominion Parliament for an extension of time for the building of the line now under construction from Edmonton to Dunvegan, and the Alberta-British Columbia boundary. Tracklaying has been completed to McLennan, mileage 245 from Edmonton, where a divisional point is to be laid out, and where the Central Canada Ry. branches off. Grading is reported finished from McLennan to the east bank of the Smoky River, and it is expected to have track laid to that point early in March. Subcontracts are reported let for grading from the west bank of Smoky River to Spirit River, mileage 360. It is expected to have this grading done during the summer and the track laid by the end of the year. (Jan., pg. 10.)

**The Erie and Ontario Ry.** from Smithville to Dunnville, Ont., 14.9 miles, was officially opened for traffic, Dec. 23, when a special Toronto, Hamilton and Buffalo Ry. train was run over it from Hamilton. The official party was entertained at luncheon at Dunnville, by the Mayor, and J. N. Beckley, President T. H. and B. Ry., in speaking referred to the negotiations which led to his company undertaking six months ago to build the road. The promise to have the line in operation by Jan. 1, had been kept, and it was now the duty of the Dunnville people to keep the promise made to supply traffic. The line would be carried through to Port Maitland, and as the traffic warranted it, docks would be built there, and additional facilities for traffic provided along the line. Three trains a day each way are being run.

The Board of Railway Commissioners has approved of location plans of the line from Dunnville to Port Maitland, 4.58 miles. It is expected that this will be built during the summer. (Jan., pg. 10.)

**Intercolonial Ry.**—We are officially advised that no track has been laid on the piece of line being built to the new ocean terminals at Halifax, N.S.

In connection with the Dartmouth branch line, under construction into the Musquodoboit district we are advised that it starts at the terminus of the branch line running from Windsor Jct., through Dartmouth to Woodside. Track had been laid for 33 miles at Dec. 31, 1914, and it is expected that the track laying gang would reach about mileage 53, or three miles beyond Elderbank by Jan. 30. A train service is being operated on the line by the sub-contractors, Cavicchi and Pagano. W. A. Hendry, Dartmouth, is engineer in charge of construction for the Railways and Canals Department. (Jan., pg. 10.)

**Kettle Valley Lines.**—Application is being made to the Dominion Parliament by the Kettle Valley Ry., for an extension of time for building the following lines:—From Summer Creek or One Mile Creek to Copper Mountain and Voigt Mining Camps; from Vernon via Kelowna to Penticton; branch to Otter Summit; from Tulameen for 50 miles up the Tulameen River valley; from Penticton to Osoyoos Lake; from Summer Creek to Alliston or Princeton, thence to Granite Creek coal areas; from Grand Forks for 50 miles up the North Fork of the Kettle River; from Midway to Hedley; from

Penticton to Nicola. Parliament is also asked to ratify an agreement entered into with the Vancouver, Victoria and Eastern Ry. and Navigation Co. respecting the joint section of the main line between Princeton and Otter Summit, B.C.

The Board of Railway Commissioners has authorized the company to connect its tracks with those of the Vancouver, Victoria and Eastern Ry., at Hope, B.C.

The Kettle Valley Ry. has entered into a contract with the Dominion Government, under the act granting aid in the construction of railways, for the building of a railway bridge, under subsidy, over the Fraser River, at or near Hope, B.C. (Dec., 1914, pg. 544.)

**Lake Erie and Northern Ry.**—W. P. Kellett, Chief Engineer, is reported to have said that nothing has been settled as to the opening of the section of the line between Brantford and Galt, Ont., and that it certainly will not be opened Feb. 1. Press reports, Jan. 12, stated that work on the construction of the line in Brantford and in the direction of Port Dover was to be proceeded with at once. This includes a bridge in Brantford and another in Simcoe. (Dec., 1914, pg. 544.)

**Northern Pacific and British Columbia Ry.**—Seattle, Wash., and Vancouver, B.C., press reports state that the application being made to the Dominion Parliament for the incorporation of a company with this title is on behalf of the Northern Pacific Ry. The N. P. R.'s line to Huntingdon has been extensively improved in preparation for the company's direct traffic entrance into Vancouver. Grades and embankments have been improved, new bridges have been built, and heavier steel laid. An order for new rolling stock has been placed for delivery early this year. Entrance to Vancouver will be obtained over the Vancouver, Victoria and Eastern Ry. to the False Creek terminals which are being laid out by the Great Northern Ry. for joint use with the N.P.R. At present the N.P.R. has a traffic agreement with the C.P.R., which is nearing expiration. (Dec., 1914, pg. 544.)

**Pacific Great Eastern Ry.**—A train service is being operated from Squamish, B.C., to the head of Anderson's Lake, 89 miles, about 33 miles from Lillooet. It is expected that it will be possible to operate trains into Lillooet, by Mar. 1.

F. C. Gamble, Chief Engineer of the Provincial Department of Railways, returned to Vancouver, Jan. 9, after making a trip of inspection over the line to the track end. (Jan., pg. 10.)

**St. John and Quebec Ry.**—We are officially advised that the Intercolonial Ry. is operating its trains over the section of the St. J. and Q. R. from Fredericton to Centreville, N.B., 88.2 miles. A mixed train is run daily, except Sundays, leaving Centreville 6.15 a.m., arriving at Fredericton, 11.10 a.m., and returning leaves Fredericton at 4.30 p.m., reaching Centreville, 9.30 p.m. The line is also completed and ready for operation from Fredericton, southerly to Gagetown, 33 miles. Negotiations are in progress for the taking over of this section by the Intercolonial Ry. for operation. The entire line in New Brunswick is to be operated by the Intercolonial, under an agreement. (Dec., 1914, pg. 544.)

**Southern Central Pacific Ry.**—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Vancouver via Kootenay Pass and the Old Man River and on to Hudson Bay at least 100 miles north of Fort Churchill, with branch lines from the Blindman River, Sask., via Dunvegan to the Pacific coast at Gardner's canal, and from the Elk River, B.C., to the Intercolonial boundary at Milk River. The following were named provisional directors in an amending act of 1913: G. F. McDonnell, A. E. Honeywell, W. N. Graham, J. C. Dingman, K. P. Young, Ottawa. McDonnell and Honeywell, Ottawa, are solicitors for the applicants. (May, 1913, pg. 220.)

**Toronto, Hamilton and Buffalo Ry.**—The Hamilton, Ont., City Council, Jan. 4, authorized City Engineer Macallum to attend a conference at Ottawa, Jan. 11, when the

question of the depression of the T. H. and B. Ry. tracks was to be discussed with the Chief Engineer of the Board of Railway Commissioners. W. F. Tye, Toronto, is consulting engineer for the city council in connection with the matter. (June, 1914, pg. 267.)

**Van Buren Bridge Co.**—The Dominion Parliament is being asked to authorize the company to subject its property and assets constructed or acquired in Canada to the lien or charge of a mortgage dated Sept. 1, 1914, to secure its bonds to the amount of \$250,000; to confirm and declare valid such mortgage to the United States Mortgage and Trust Co., and to authorize the registration of the mortgage in Canada. The company is building a railway and general traffic bridge between St. Leonards, N.B., and Van Buren, Maine. The bridge was originally projected to be built by the International Ry. of New Brunswick, which is now part of the Intercolonial Ry. system. (Oct., 1914, pg. 468.)

**Vancouver Terminal Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to construct and lay out railway and terminal works, tunnels, and transfer and connecting tracks and other railways in Vancouver, New Westminster, and at the mouth of the Fraser River, B.C. J. B. Noble, Vancouver, B.C., solicitor for applicants. Parliament was asked to incorporate a similar company in 1914, under the title of the Vancouver Ry. and Ocean Terminal Co., but the bill was withdrawn, April 30. (June, 1914, pg. 268.)

**Winnipeg, Man.**—The Commissioners of the Greater Winnipeg Water District at a meeting Jan. 15, were authorized to advertise for from 8,000 to 12,000 tons of coal for use on its railway. It was reported that track laying on the 85 miles was completed Dec. 10, and that practically the whole of the ballasting has been completed. The contract for digging a navigable channel from Indian Bay to Snowshoe Bay, was let to C. J. Anderson, Kenora, Ont., at an estimated cost of \$12,765. (Jan., pg. 11.)

Concrete Decoration on the Canadian Pacific Railway, near Hamilton, Ont.

With the object of creating something in Canada corresponding to the famous Whiteleaf Cross in Buckinghamshire, Eng., W. Murphy, section foreman on the C.P.R. spur line at Hamilton, Ont., has built the concrete decoration illustrated above, on the side of a hill on the right of way, a quarter of a mile from Grant Jct., Hamilton, representing among other things the C.P.R. beaver trade mark, the representation of the animal measuring 7 ft. in length.

## Mainly About Railway People.

**W. D. Reid**, President, Reid Newfoundland Co., St. John's, Nfld., was in Montreal for the Christmas holidays.

**Henry and C. J. Goldmark** have opened an office as consulting engineers at 103 Park Ave., New York, N.Y.

**D. B. Hanna**, Third Vice President, Canadian Northern Ry., Toronto, has been appointed an honorary colonel.

**F. P. Gutelius**, M.Can.Soc.C.E., General Manager, Canadian Government Railways, Moncton, N.B., has returned from a short holiday at Pinehurst, N.C.

**Miss Kathleen Dunsmuir**, daughter of **James Dunsmuir**, director, C. P. R., left Canada for England recently to train as a nurse preparatory to acting at the front.

**Sir Robt. Turnbull, M. V. O.**, formerly General Manager, London & North Western Ry., (England) has been elected a director of the company.

**J. Madill**, City Passenger Agent, Canadian Northern Ry., Edmonton, Alta., is in the east on two months leave of absence, for reasons of health.

**J. Stewart**, of Foley Welch and Stewart, railway contractors, returned to Canada at the end of December, after spending some time in Great Britain.

**J. R. W. Ambrose, M. Can. Soc. C.E.** Chief Engineer, Toronto Terminal Co., Toronto, has been elected Chairman of the Toronto Branch of the Canadian Society of Civil Engineers.

**Sir Wm. Mackenzie's** son-in-law, Count Jacques de Lesseps, is on active service in the French army's aviation corps. The Countess and her children are in Paris with the Count and Countess Paul de Lesseps.

**D. Pottinger, I. S. O.**, ex Assistant Chairman, Canadian Government Railways Managing Board, and Mrs. Pottinger, returned from England recently, and are spending the winter at Ottawa.

**Nicholas Bawlf**, who died at Winnipeg at the end of December, was connected with a number of grain elevator companies in the west, and was President of the Winnipeg Grain Exchange in 1890.

**G. McLaren Brown**, European Manager, C. P. R., and **F. C. Salter**, European Traffic Manager, G. T. R., London, Eng., have been elected directors of the recently inaugurated Institute of Industry and Commerce.

**R. F. Cobbe**y, who was mentioned recently for gallant work in dispatch riding in France, is a nephew of **F. W. Peters**, General Superintendent, British Columbia Division, C. P. R., Vancouver.

**E. C. Meyers**, a former Secretary of the Kettle River Valley Ry. Co., committed suicide by shooting, in the C. P. R. station at Penticton, B. C., Jan. 4. He was under remand on a charge of shooting, and was to come up for trial Jan. 13.

**D. McNicoll**, Director, C. P. R., who, since his retirement from the Vice Presidency of the company, is learning golf at Hot Springs, Va., was presented by Vice President Odgen with a set of golf clubs, before leaving Montreal.

**E. A. Humphrey**, heretofore Assistant Electrical Engineer, Great Northern Ry., St. Paul, Minn., has been appointed Electrical Engineer, succeeding **C. L. Daugherty**, who has gone to the St. Petersburg, (Fla.) Light & Power Co.

**Sidney P. Howard**, formerly General Freight Agent, C. P. R., Montreal, has been awarded \$80,000 damages against John Findlay, his former partner in the real estate

firm of Findlay and Howard, who terminated the partnership suddenly.

**Frederic Nicholls**, President, Canadian General Electric Co., Vice President, Toronto Railway, and director, Canadian Northern Ry., has been elected a director of the Confederation Life Association, to succeed the late Sir Wm. Whyte.

**R. Marpole**, General Executive Assistant, C.P.R., Vancouver, B. C., has, as reported in a press cablegram from London, sent, at his own expense, 20 fully equipped recruits for the Welsh army corps which is being raised in Wales.

**A. A. Heard**, heretofore General Passenger Agent, Delaware and Hudson Co., Albany, N.Y., who resigned recently, has been appointed Sales Agent for the Saratoga Springs State Waters, which are owned and controlled by New York State.

**A. W. Wheatley**, General Manager, Canadian Locomotive Co., left Kingston, Ont.,

**C. E. Stockdill**, Assistant to Vice President and General Manager, Western Lines, Canadian Pacific Railway.

Jan. 19, for Russia, in the hope of securing orders for locomotives and shrapnel shells for the Russian Government. It is expected that he will be away about four months.

**Mrs. H. E. Whittenberger**, wife of the General Superintendent, Ontario Lines, G. T. R., Toronto, shipped a consignment of clothing recently for Canadian soldiers at the front and for Belgian refugees, the same having been contributed by wives of G. T. R. officials at Toronto and Barrie.

**Lieutenant-Colonel G. S. Cantlie**, General Superintendent of Car Service, C. P. R., Montreal, has been granted extended leave of absence, in connection with his military duties concerning the third contingent of the Canadian expeditionary force, now recruiting.

**Westrop Armstrong**, formerly of Mackenzie, Mann & Co.'s engineering staff, and latterly on the Toronto, Hamilton & Buffalo Ry.'s engineering staff for the construction of the Erie and Ontario Ry., has been

appointed Engineer of Bridges for the Toronto-Hamilton Highway Commission.

**R. H. Aishton**, heretofore Vice President, (operation) Chicago and North Western Ry., has been appointed by the President of the United States to fill the vacancy in the Federal Industrial Relations Commission, caused by the appointment of **F. A. Delano**, of Chicago, to the Federal Reserve Board.

**Lt.-Col. H. S. Greenwood**, formerly Assistant Chief Engineer, Mackenzie, Mann & Co., Toronto, is now attached to the Royal Engineers in England with the rank of major. His son, **Lt. Eric Greenwood**, who is also in the Royal Engineers, was wounded recently while at the front, and has had a leg amputated.

**James Man** on, who was Assistant to the Vice President, C. P. R., Winnipeg, with the late Sir William Whyte, as well as George Bury, was entertained to dinner at Winnipeg, towards the end of December, by the local staff, on leaving for Montreal, where he accompanied Vice President Bury, to act in a similar capacity.

**Archibald McDonald**, the last of the chief factors of the Hudson Bay Co., who died at Fort Qu'Appelle, Sask., Jan. 6, aged 79, started business life as a booking clerk on the old Edinburgh, Perth and Dundee Ry., in Scotland, and left there in 1854 to enter the H. B. C. service, from which he retired in 1913.

**F. M. Lawledge**, a divisional engineer on the Dominion Government railway to Hudson Bay, who went to England in Aug. 1914, on leave, being due to return in November, is reported to be missing. He appears to have registered at one of the Canadian newspaper offices in London, but has not been heard of since, nor was he known at the address given by him when registering.

**D'Alton C. Coleman**, Assistant General Manager, Western Lines, C. P. R., was entertained to a dinner at the Hotel Palliser, Calgary, Alta., at the end of December, by a few friends, on leaving Calgary, where he had been General Superintendent, Alberta Division, C. P. R., to assume his new duties at Winnipeg. He was presented with a cigarette case, and with a jewel box for Mrs. Coleman.

**Abraham T. Hardin**, who has been appointed Vice President, New York Central Rd., in charge of the Operating Department, New York, is a graduate in civil engineering of the University of South Carolina, and commenced his railway career as a telegraph operator on the Richmond and Danville Rd., becoming an agent and stenographer with that company. After graduation he spent four years with the Southern Ry., and in 1898 was appointed Supervisor and Division Engineer, Eastern Division, New York Central and Hudson River Rd.

**Col. Herbert C. Nanton, R. E.**, who has latterly occupied the position of Deputy Director General of Military Works at Simla, India, has been attached to the headquarters of the British Expeditionary Forces in France as Colonel and temporary Brigadier-General. He is a brother of **A. M. Nanton**, director, C. P. R., Winnipeg, and was born at Toronto in 1863. He graduated from the Royal Military College, Kingston, Ont., in 1883, and saw service in the Northwest Rebellion in 1885, the Lushai Expedition in 1888-89, the Chitral Expedition in 1895, and in the South African war 1899-1901, when he took part in the relief of Kimberley and was mentioned in dispatches. He married a daughter of the late Sir Henri Joli de Lotbiniere, of Quebec.

**Edward J. Guthrie**, who has been appointed Superintendent, Southern Division, Central Vermont Ry., and Central Vermont Transportation Co., New London, Conn., was

born at Erie, Ont., Mar. 1, 1866, and entered railway service, Oct. 1, 1889, as switchman, G. T. R., remaining in that position for a year and a half. He was afterward telegraph operator for nine years, agent G.T.R. at various points for nine and a half years, and in 1907 was appointed Freight Agent, Central Vermont Ry., at St. Albans, Vt. Later in the same year he was transferred to Palmer, Mass., and subsequently to Brattleboro, Vt. He was afterward appointed General Agent, C. V. R., at New London, Conn., and four months later was transferred to New York as Agent of pier 29, East River.

**William Allan Mather**, whose appointment as Superintendent, District 1, Alberta Division, C.P.R., Medicine Hat, was announced in our last issue, was born at Oshawa, Ont., Sept., 1885; graduated B.Sc., McGill University, 1908, and entered C.P.R. service in May, 1903, since when his railway record has been:—May to Aug., 1903, axeman, Rush Lake, Ont.; Apr. to Aug., 1905, tapeman, Deception, Ont.; Apr. to Aug., 1906, rodman, Deception, Ont.; Apr. 21 to Dec. 19, 1908, instrumentman, Deception, Ont.; Apr. 1 to Oct. 1, 1909, instrumentman, Kenora, Ont.; Oct. 1, 1909, to Jan. 1, 1910, transitman, Laggan, B.C.; Mar. 15, 1910, to Mar. 1, 1912, Resident Engineer, Winnipeg and Portage la Prairie, Man.; Mar. 1, 1912, to Jan. 1, 1913, acting Superintendent, Kenora, Ont.; Jan. 1, 1913, to Jan. 1, 1915, Superintendent, District 1, Manitoba Division, Kenora, Ont.

**J. A. DeWolfe**, whose appointment as chief clerk to Vice President and General Manager, Western Lines, C. P. R., Winnipeg, was announced in our last issue, was born at Woodstock, Ont., Aug. 31, 1884, and entered railway service, July 10, 1899, since when he has been, to Apr. 16, 1900, stenographer to Locomotive Foreman, G. T. R., London, Ont.; Apr. 17, 1900 to May 12, 1903, not in railway service; May 13, to June 23, 1903, clerk to Car Foreman, C. P. R., Toronto; June 23, 1903, to May 22, 1905, clerk in offices of Trainmaster and of Superintendent, C. P. R., London, Ont., and Toronto; May 22, 1905, to May 7, 1907, clerk to Manager of Construction, C. P. R., Toronto; May 7, 1907, to June 21, 1909, secretary to General Manager, C. P. R., Montreal; June 23 to Aug. 24, 1909, assistant chief clerk, Second Vice President's office, C. P. R., Winnipeg; Aug. 24, 1909, to Dec. 31, 1914, chief clerk, Engineering Department, Western Lines, C. P. R., Winnipeg.

**James Neil Murphy**, whose appointment as Trainmaster, District 1, Alberta Division, Medicine Hat, was announced in our last issue, was born at Mooretown, Ont., May 10, 1879, and entered railway service in July, 1897, since when he has been, to June, 1898, operator, Manitoba and Northwestern Ry., Winnipeg; June 20, to Sept. 3, 1898, operator, C.P.R., Winnipeg; Sept. 3, 1898, to Dec. 15, 1899, ticket clerk, C.P.R., Brandon, Man.; Dec. 15, 1899, to Mar. 11, 1900, operator, Columbia and Western Ry., Smelter Jct., B.C.; Mar. 11 to Oct. 15, 1900, Division Engineer's clerk, C.P.R., Smelter Jct., B.C.; Oct. 15, 1900, to Feb. 2, 1901, storekeeper, Trail Smelter, Trail, B.C.; Feb. 2, 1901, to May 1, 1902, Division Engineer's clerk, C.P.R., Trail, B.C.; May 1, 1902, to Jan. 7, 1905, accountant, Construction Department, C.P.R., Winnipeg; Jan. 7 to May 21, 1905, clerk, C.P.R., Kenora, Ont.; May 21 to July 19, 1905, dispatcher, C.P.R., Lipton, Sask.; July 19 to Oct. 11, 1905, clerk, C.P.R., Kenora, Ont.; Oct. 11, 1905, to Feb. 1, 1909, chief clerk, C.P.R., Kenora, Ont.; Apr. 7, 1909, to Apr. 27, 1910, instrumentman, C.P.R., Alberta Division; Apr. 27, 1910, to Sept. 16, 1914, Resident Engineer, C.P.R., Alberta Division; Sept. 16 to Dec. 31, 1914, Trainmaster, C.P.R., Souris, Man.

**Sir Herbert S. Holt**, who was created a

knight bachelor, Jan. 1, was born in Dublin, Ireland in 1856, and was educated as a civil engineer. He came to Canada in early life and engaged in railway construction, being associated at various times with the late James Ross, Sir William Mackenzie and Sir Donald Mann. From 1875 to 1883 he was, successively, engineer, Credit Valley Ry., Victoria and Lake Simcoe Jct. Rys., Ontario and Quebec Ry., and other lines in Ontario, now incorporated in the C. P. R.; Engineer and Superintendent of Construction, Prairie and Mountain Divisions, C. P. R. He also carried out, in association with the other railway builders named, a number of contracts for the construction of C. P. R. lines in Quebec, Maine and in the Rocky Mountains, and also on the Qu'Appelle Long Lake and Saskatchewan Rd. and Calgary and Edmonton Ry. Since 1892 he has devoted his time to financial matters, and in addition to being President of the Royal Bank, is, or has been, connected with the Montreal Light, Heat and Power Co., Canadian General Electric Co., C. P. R., Ogilvie Flour Mills Co., Canadian Car and Foundry Co., London St.

J. M. Cameron.  
Assistant General Superintendent, British Columbia Division, Canadian Pacific Railway.

Ry., Detroit United Ry., Toledo Rys. and Light Co., Monterey Ry. and Light Co., Canadian Construction Co., Montreal Park and Island Ry., and many other concerns. He is a member of the Canadian Society of Civil Engineers, and of the American Society of Civil Engineers.

**John Murray Cameron**, whose appointment as Assistant General Superintendent, British Columbia Division, C. P. R., Vancouver, was announced in our last issue, was born at Lochaber, N. S., Dec. 18, 1867, and entered railway service, July 1883, since when he has been, to Dec. 1883, laborer, C. P. R., Moose Jaw, Sask.; Dec. 1883, to Apr. 1884, wiper, C. P. R., Moose Jaw, Sask.; Apr. 1884 to Apr. 1885, bridge and building laborer, Western Division, C. P. R.; Apr. 1885 to Feb. 1886, pump man, Western Division, C. P. R.; Feb. 1886, to Oct. 1888, brakeman and train baggage man, C.P.R., Medicine Hat, Alta.; Nov. 1888 to June 1889, brakeman and conductor, Northern Pacific Ry., Tacoma, Wash.; June 1889 to Dec. 1890, brakeman and conductor, Oregon and Washington Territory Rd., Walla Walla, Wash.; Dec. 1890 to

July 1892, conductor, Columbia and Puget Sound Rd., Seattle, Wash.; July 1892 to June 1893, brakeman and conductor on construction, Great Northern Ry., Seattle and Spokane, Wash.; June 1893 to Oct. 1895, conductor, G. N. R., Great Falls, Mont.; Oct. 1895 to Sept., 1899, conductor, Kaslo and Slocan Ry. (G. N. R.), Kaslo, B. C.; Sept., 1899 to May 1900, conductor and construction trainmaster, G. N. R., Bonners Ferry, Idaho; May 1900 to Aug. 1907, brakeman and conductor, C. P. R., Nelson, B. C.; Aug. 1907 to Oct. 1909, Trainmaster, C. P. R., Nelson, B. C.; Oct. 1909 to June 1910, Trainmaster, C. P. R., Vancouver, B. C.; June to Dec. 1910, Superintendent, C. P. R., Moose Jaw, Sask.; Jan. 1911 to Dec. 1914, Superintendent, C. P. R., Medicine Hat, Alta.

### Progress of Rogers Pass Tunnel Construction.

Canadian Railway and Marine World for January gave particulars of a new American hard rock tunnelling record of 817 ft. in one month at the C.P.R. tunnel in the Selkirk Mountains at Glacier, B.C. The previous American record was 810 ft. in 31 working days in the Canadian Northern Ry. Mount Royal tunnel at Montreal.

The following additional information has been furnished by the contractors, Foley Bros., Welch & Stewart: "The heading, 7½ x 10 ft. in section, was driven through slate, containing quartzite bands, by a gang consisting of 3 drill runners, 2 drill helpers, 8 muckers, 1 trackman, 1 pumpman, and 1 walking foreman for two headings. The grade was a 1% slope downward and the haulage was done by mules. A pump had to be placed at the face of the heading before dropping the drill bar for the lifter holes. This bar was 9½ ft. long and carried three Ingersoll-Rand water Leyner drills. After the machine men had finished drilling the top holes of the heading and were waiting for the muck to be cleared away before dropping the bar to drill the lifter holes, they would oil their machines and connect up the air and water lines so that they could start drilling 1½ minutes after the bar had been placed in its new position. Shooting was done 4 times in 24 hours on 12 days, 5 times in 24 hours on 16 days, and 6 times in 24 hours on 2 days. The record round was 3 hr. 40 min. Two complete rounds were fired in 8 hours on Nov. 27 and 28. The record day's work was 37 ft. on Nov. 27. The record week's work was 220 ft. from Nov. 23 to 29. While the record of 817 ft. in a month was made in November that month contained only 30 days. Including Dec. 1 a record of 852 ft. was made for 31 days."

Following is the record of the construction during December:

East end pioneer heading 544 ft.; quartzite with some schist.

East end centre heading 523 ft.; schist with some quartzite.

West end pioneer heading 852 ft.; slate with small quartzite bands.

West end centre heading 686 ft.; slate with small quartzite bands.

The advance of 852 ft. in the west pioneer heading in December, makes a new American record the previous record being 817 ft. as stated above.

A. C. Dennis, M.Can.Soc.C.E., is Superintendent for the contractors: Jos. Murphy is Assistant Superintendent East End, and Jos. Fowler, Assistant Superintendent West End.

A suggested cause of frame breakage lies in the drop, upwards of 3 ins. in many cases, that a locomotive must take in passing off a turntable.

## Canadian Northern Railway Construction, Betterments, Etc.

**Canadian Northern Quebec Ry.**—The Dominion Parliament is being asked to extend the time for the building of the following lines:—From Rawdon northerly to the National Transcontinental Ry., with a branch to Joliette, and from St. Jerome to St. Eustache, Que.

The company has under consideration a project for the building of a branch from Huberdeau, the terminus of the old Montfort and Gatineau Ry., to St. Remi, Que., eight miles.

**James Bay and Eastern Ry.**—The Dominion Parliament is being asked for an extension of time for the building of the projected line from Lake Abitibi easterly and south easterly, passing the south end of Lake St. John, to the mouth of the Saguenay River. About 30 miles of this line from Roberval, at the southern end of Lake St. John, westerly, is under contract, to J. P. Mullarkey.

**Canadian Northern Ontario Ry.**—The old locomotive house at North Trenton, Ont., with equipment, and considerable other property was destroyed by fire, Jan. 4. The damage is estimated at \$100,000. The company has under survey, a line from Toronto to Niagara Falls, Ont., 79.13 miles. The surveys are practically completed, and the negotiations with the local authorities are well advanced. The section has been reported on several occasions to have been put under contract, but nothing is likely to be done on it at present.

The Dominion Parliament is being asked to extend the time for the building of the following lines: From Washago to Kincardine; from Arnprior to Gananoque; from Pembroke to Cobourg or Port Hope; from Frenchman's Bay to Owen Sound; from Niagara River to Goderich; from Hawkesbury to or near Lanark; from Berlin through Guelph, Acton and Brampton to Toronto; from Berlin to St. Marys and Woodstock; from Sarnia to Chatham and from Orillia to Goderich, with a branch to Owen Sound, all in Ontario.

**Canadian Northern Ry.**—The ratepayers of Port Arthur defeated the bylaw confirming the agreement for the transfer of certain lands on the waterfront. The City Council has arranged to reconsider the agreement, with a view of having the matters about which there is a difference amicably adjusted.

The Board of Railway Commissioners has authorized the opening for traffic of the line between Grand Marais and Bird's Hill, Man., 50 miles temporarily.

The Board of Railway Commissioners has authorized the opening for traffic of the line from the junction with the Balke River subdivision, north of Camrose, Alberta, to a junction with the C. N. Western Ry. near Strathcona, 46 miles.

It was reported in Edmonton, Alberta, Jan. 12, that the bridge over the Pembina River, on the Onoway-Peace River line had been completed. The grading on Whitecamp, will, it is expected, be finished in the spring, and the track laid, so as to get the steel in for the bridge across the McLeod River. The approaches and abutments have already been completed for this bridge. A train service has been put in operation to Sangudo, at the Pembina River, 32 miles from Onoway.

The Dominion Parliament is being asked to extend the time for the building of the following lines:—From Strathcona southerly to Calgary; from near Swan River westerly to the Saskatchewan River; from Regina to Red Deer with a branch to Dalmeny; from

mileage 40 on the Oak Point branch, via Oak Point to Grand Rapids on the Saskatchewan River; from Winnipeg through Springfield to the eastern boundary of Manitoba; from Strathcona via Calgary to the confluence of the Little Bow and Belly Rivers, and on to Lethbridge. This latter line was originally authorized to be built by the Alberta Midland Ry., which has been amalgamated with the C. N. R. The section of the line from Strathcona to Calgary covers the same territory as the C. N. R. Strathcona-Calgary line mentioned first in the lines for the construction of which an extension of time is asked.

A Vancouver telegram says that track laying on the main transcontinental line in British Columbia was completed at Basque, on the North Thompson River, about 200 miles from Vancouver, Jan. 23, and that ballasting should be finished by April 15. There is now continuous track from Port Mann, B.C., to Port Arthur, Ont., where there is a gap of about 2 miles, the C.N.R. at present using C.P.R. tracks as a connection between its eastern and western lines. From Port Arthur east, track is laid to the west portal of Mount Royal tunnel, Montreal, except at Pembroke, Ont., Chats Falls, Riviere des Prairies, Que., where bridges are being built.

**Vancouver Terminals.**—Work is being prosecuted on the reclamation work on the site of the proposed terminals at False Creek, Vancouver. The bulkhead, which will form a barrier around 65 acres of the 164½ acre tract is practically completed. The bulkhead extends practically half way down the proposed terminal site to a point where it branches off diagonally to China Creek. The Pacific Dredging Co., which has the contract for excavating a deep-water channel in False Creek, and for supplying

material for the filling in of the C. N. R. terminal site, is working a short distance to the west of Granville St. bridge, and moved its dredge east of Connaught Bridge Jan. 14. More than 3,250,000 yards of filling will be required to reclaim the entire area owned by the C. N. R. Of this amount 1,100,000 has been deposited. (Jan., pg. 23.)

## Railway Expenditures in British Columbia.

—Sir Richard McBride, Premier of British Columbia, is reported to have said Jan. 2, that more than \$26,000,000 was expended upon railway construction in the Province during 1914. Of this, \$8,195,000 was expended by the Canadian Northern Ry.; \$12,885,000 by the Pacific Great Eastern Ry., and \$5,000,000 by the Kettle Valley Ry. With the completion of the work on these lines about 1,900 miles of new main line track would be added to the railways in the Province. It will be noted that the expenditure mentioned by the Premier only covers work done on lines for the construction of which the Province is guaranteeing bonds. It does not include the Grand Trunk Pacific Ry., the C. P. R. second track, Kootenay Central Ry., and other construction, or the Great Northern Ry. terminals construction expenditure in Vancouver, all of which are being carried out independent of financial aid from the Province.

Ralph T. Hatch, Sales Agent, National Malleable Castings Co., St. Paul, Minn., writes: "I have always been very much interested in Canadian Railway and Marine World, particularly during my residence in Montreal, in charge of the company's Canadian office, and I consider it one of the most complete, comprehensive and satisfactory publications on the continent covering railway and railway supply matters."

## Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

The following figures have been compiled by the Trade and Commerce Department, from official reports received by it:—

Week ended Jan. 14, 1915.	Wheat.	Oats.	Barley.	Flax.	Totals.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

**ACTON BURROWS, LIMITED** - Proprietors,  
70 Bond Street, Toronto, Canada.

**ACTON BURROWS, A. Can. Soc. C. E.,**  
Managing Director and Editor-in-Chief.  
**AUBREY ACTON BURROWS** - Secretary and  
Business Manager.

Associate Editor - **JOHN KEIR**  
Associate Editor - **DONALD F. KEIR**  
Mechanical Editor - **FREDERICK H. MOODY, B.A.Sc.**

Canadian Business Representative - **W. H. HEWITT**  
70 Bond Street, Toronto

United States Business Representative, **A. FENTON WALKER**  
143 Liberty Street, New York, N.Y.

European Business Representative - **J. MEREDITH MCKIM**  
3 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for  
Canada, for transmission as second class matter.  
Entered as second class matter, July 25, 1913,  
at the Postoffice at Buffalo, N.Y., under the Act  
of Congress of March 3, 1879.

**SUBSCRIPTION PRICE**, including postage  
anywhere, \$2 a year.

**SINGLE COPIES**, 20 cents each, including  
postage.

The best and safest way to remit is by express  
money order. Where one cannot be obtained, a  
post office money order, or bank draft, payable  
at par in Toronto, may be sent. Cheques or  
drafts not payable at par in Toronto cannot be  
accepted. Remittances should be made payable  
to Canadian Railway and Marine World.

## NOTICE TO ADVERTISERS.

**ADVERTISING RATES** furnished on applica-  
tion.

**ADVERTISING COPY** must reach the pub-  
lishers by the 10th of the month preceding the  
date of publication.

TORONTO, CANADA, FEBRUARY, 1915.

## Standard General Specifications for Con- crete and Reinforced Concrete.

At the Canadian Society of Civil Engin-  
eers, in Montreal, in January, the committee  
on concrete and reinforced concrete present-  
ed specifications for adoption by the So-  
ciety as a standard general specification.  
Following are extracts from the com-  
mittee's report, signed by W. J. Francis,  
(chairman):—

"Since the re-appointment of the com-  
mittee at the annual meeting in Jan., 1914,  
a great deal of consideration has been given  
to the draft then submitted. A certain  
amount of discussion took place at the an-  
nual meeting. Subsequently the various  
branches of the Society were specially re-  
quested to discuss the document, and many  
of the secretaries thereof forwarded discus-  
sions. A number of members took part in  
written discussion as individuals. In all,  
the written discussions approximated 30,000  
words. The views expressed varied from  
high compliments to such phrases as "utter  
nonsense." All of the discussion was tran-  
scribed and issued to every member of the  
committee.

"At the last annual meeting the com-  
mittee desired an extension of time in  
order that further consideration might be  
given to the question of shearing action in  
reinforced concrete beams. This series of  
tests was arranged for at informal meet-  
ings early in the year. The Atlas Construc-  
tion Co., through its President, C. M. Mors-  
sen, a member of the Committee, very  
kindly made sixty-four 8 x 12 in. concrete  
beams, 11 ft. long. In the McGill University  
laboratories these beams were tested under  
the direction of Prof. H. M. MacKay and  
Prof. E. Brown, both members of the society  
and of the committee. All the beams were  
tested to destruction, some at the age of  
two months and the balance at the age of  
three. The tests took 12 days of laboratory  
time. The results were most conclusive,  
and were subsequently considered by the  
committee. Later in the present season  
the details of these tests will be presented  
to the Society in the form of a paper, but it  
is incumbent upon me here to emphasize  
the great amount of labor that Mr. Mors-  
sen, Prof. MacKay and Prof. Brown have  
given the Society in this regard. After hav-  
ing all the discussion and the results of the  
tests, the committee resumed its regular  
weekly sessions in the early autumn, and I  
now forward the result of the deliberations  
which it is trusted will meet the Society's  
approval.

"In July last the committee was deprived  
of the wise counsel of one of its most en-  
thusiastic members by the death of Dean  
Galbraith. It is with the greatest pleasure  
that I refer to the cordial relations that  
have existed in the committee during the  
whole of its two years of existence, and to  
the great interest which every member of  
the committee has taken in the work. All  
have been in close touch with the delibera-  
tions, and I believe the draft may be taken  
as the unanimous view of the following  
representative engineers composing the  
committee,—S. Baulne, Consulting Engineer  
and Professor de Constructions Metalliques  
et Beton Arme, at Ecole Polytechnique,  
Montreal; E. Brown, Professor of Applied  
Mechanics, McGill University; E. Brydon-  
Jack, Consulting Engineer and Professor of  
Civil Engineering, University of Manitoba;  
P. Gillespie, President Canadian Cement  
and Concrete Association, and Professor of  
Applied Mechanics, University of Toronto;  
H. M. MacKay, Professor of Civil Engineer-  
ing, McGill University; E. S. Mattice, Presi-  
dent Structural Engineering Co., and Sales  
Manager Dominion Bridge Co., Montreal; C.

N. Monsarrat, Chairman Quebec Bridge  
Commission, Montreal; C. M. Morssen, Con-  
sulting Engineer and President Atlas Con-  
struction Co., Montreal; P. B. Motley, Chief  
Bridge Engineer, C.P.R., Montreal, and H.  
Rolph, Secretary, John S. Metcalf Co.,  
Montreal. While some have been unable to  
attend all the meetings for various good  
reasons, a number have not missed a single  
meeting during the two years the Committee  
has been in existence.

## Great Northern Railway Lines in Canada.

**Vancouver, Victoria and Eastern Ry. and  
Navigation Co.**—The Board of Railway Com-  
missioners has rescinded its order requiring  
the company to build overhead crossings at  
Pender, Keefer and Harris Streets, Van-  
couver, but reserving the rights of any  
person to apply to have the crossings suit-  
ably protected with signs, etc. This was  
the order against which the British  
Columbia Electric Ry. successfully appealed  
to the Imperial Privy Council, that company  
having been directed to pay a portion of the  
cost of the bridges named.

**Vancouver Terminals.**—Plans have been  
filed with the Vancouver City Council for  
the bridges across the Grand View cut at  
Clarke Drive and Woodland Drive, and also  
for the approaches. According to the  
agreement with the city, the first bridge  
has to be completed by April 1, and the  
second by Sept. 1. (Jan., pg. 14.)

## Corrections for the Erring.

"St. Johns, N. B.—St. Johns Ry. Co.  
plans to construct 1½ mile track during  
1915. W. D. Reid, Gen. Mgr., St. Johns."  
—From Engineering Record, New York.

There is no St. Johns in New Brunswick,  
and no St. Johns Ry. Co., but there is a St.  
John's in Newfoundland, also in Quebec.  
W. D. Reid is President and General Man-  
ager of the St. John's St. Ry. Co., St.  
John's, Nfld., which is owned by the Reid  
Newfoundland Co.

**The Canadian Ticket Agents' Associa-  
tion's** executive committee, at a meeting in  
Toronto, Jan. 21, accepted a joint invitation  
from the Chicago and North Western Line  
and the Union Pacific System, tendered  
through their representatives at Toronto,  
B. H. Bennett and J. J. Rose, to hold its  
next annual outing at Denver, Col., Oct. 11  
to 13. E. de la Hooke, who has been the  
association's Secretary-Treasurer contin-  
uously since its establishment, was presented  
with a travelling bag by a number of trans-  
portation men.

**Western Dominion Ry.**—Application is be-  
ing made to the Dominion Parliament for an  
extension of time for the building of this  
projected line, the route plans of which are  
under the consideration of the Minister of  
Railways, as described in our Dec., 1914,  
issue. O. E. Culbert, Calgary, Alberta, is  
Secretary. (Dec., 1914, pg. 545.)

One method of hardening high speed steel  
is to heat it slowly up to the sweating point,  
or 2,200 degrees Fahr., after which cool the  
cutting point of the tool in oil, and when  
thoroughly black, cool rapidly in a com-  
pressed air blast.

High temperatures increase the tendency  
in lead storage batteries to form the white  
insoluble sulphate in the plates, and in con-  
sequence, storage batteries should be care-  
fully watched in the extremely warm  
weather.

The Toronto Board of Control is opposed  
to a proposal by the Mayor, to ask for author-  
ity to spend \$50,000 on a motor omnibus  
system in the city.

## Canadian Pacific Railway Construction, Betterments, Etc.

**Winnipeg Terminals.**—Work has been started on the changes to be made at the Winnipeg station. The area formerly used as a dining room is being transferred into a ticket office. As soon as this is completed the present ticket office will be arranged for a telegraph office and information bureau. The present baggage room is to be converted into a waiting room, and at its west entrance will be located the new dining room and lunch counter. It is said that connection will be made with the Royal Alexander hotel kitchen, which will be utilized in supplying food to the station dining room. In order to give easy access to the subway beneath the new overhead tracks, a flight of broad stone steps will be placed, beginning near the centre of the present rotunda or main waiting room. The ladies' waiting room will remain as at present situated. It was stated at the City Hall, Jan. 15, that the estimated cost of the station alterations is about \$1,500,000.

**Rogers Pass Tunnel.**—Considerably more than two miles of the preliminary bore has been driven from both sides of Mount Macdonald, one of the principal peaks in the Selkirk range. From the eastern end, the drillers were recently 6,600 ft. into the heart of the mountain, and from the western end 4,300 ft. A large portion of the tunnel, which will be double track, has been finished ready for traffic. The acceleration of speed during the past few months will, it is expected, enable the contractors to complete the tunnel early in the summer of 1916, some six months ahead of the date called for in the contract.

**British Columbia Division.**—The Board of Railway Commissioners has authorized the opening for traffic of half a mile of second track on the Thompson Subdivision, B. C., mileage 0 to 0.5.

Press reports state that work will be started shortly on the building of an oil tank, with a capacity of 54,000 barrels, at Vancouver, by the Union Oil Co., which supplies the C.P.R. with oil for its oil burning locomotives.

H. Rindal, Division Engineer, had a conference with the New Westminster City Council, Dec. 22, in connection with the laying of industrial tracks along the north side of certain recently improved water lots. The city has asked him to prepare the necessary plans. (Jan., pg. 15.)

**Kootenay Central Ry.**—The total length of this line from Colvalli, on the Crownsnest branch, to Golden, on the main transcontinental line, is 166.7 miles. A mixed train service was put in operation over it, Jan. 1, the official authorization to run trains over the last completed section from Edgewater, mileage 59 south of Golden, to Wasa, mileage 131.7, having been given by the Board of Railway Commissioners, Dec. 23.

**Eastern Canadian Passenger Association.**—At the annual meeting in Montreal, Jan. 5 the following were elected as the executive committee:—R. L. Fairbairn, G. P. A., Canadian Northern Ry., Toronto; W. P. Hinton, A. P. T. M., Grand Trunk Ry., Montreal; J. F. Pierce, G. P. A., Canada Steamship Lines, Ltd., Montreal; W. Stitt, G. P. A., Canadian Pacific Ry., Montreal. J. F. Pierce was elected chairman of the association and R. L. Fairbairn, chairman of the executive committee. G. H. Webster was re-elected Secretary. The rules committee consists of R. L. Fairbairn, W. P. Hinton, W. Stitt, J. W. Hanley, G. C. Martin, N. Mooney, L. W. Landman, H. H. Melanson, and F. T. Grant.

## Railway Rolling Stock Notes.

The C. P. R. has ordered 3 steel frame box cars, 40 tons capacity, at its Angus shops.

The G. T. R. has received 10 first class cars from Canadian Car and Foundry Co.

The Intercolonial Ry. has received a 100 ton wrecking crane from the United States.

Armstrong, Whitworth and Co., Montreal, have ordered 6 industrial cars, 2 tons capacity, from Canadian Car and Foundry Co.

The Crossen Car Co. has completed 5 baggage cars for the Canadian Northern Ry., and is building steel underframe colonnade cars for the same company.

The C. P. R., between Dec. 15 and Jan 15, received the following additions to rolling stock: 1 steel first class car, 4 steel baggage and express cars, 39 flat cars and 1 class D4 locomotive, from its Angus shops; 2 double track snow ploughs from Canadian Car and Foundry Co., and 1 ore car from National Steel Car Co.

The Intercolonial Ry. has ordered 5 steel single track snow ploughs, C. P. R. standard type, from Canadian Car and Foundry Co. Following are the chief details:—

Length over all	32 ft. 1 9-16 ins.
Width over side sills	8 ft. 9 1-8 ins.
Height top of rail to top of eaves angle,	11 ft. 3 ins.
Height top of rail to top of cupola, approx.	14 ft. 10 ins.
Width over wings extended	16 ft.
Extreme width of cupola	8 ft. 9 ins.
Extreme length of cupola	4 ft. 11 1/4 ins.
Truck centres	18 ft.
Wheel base, leader truck	4 ft. 2 ins.
Wheel base, rear truck	5 feet. 3 ins.

## Railway Finance, Meetings, Etc.

**Canadain Pacific Ry.**—The company, desiring to anticipate repayment of the principal of its sterling 5% first mortgage debenture bonds, due July 1, has authorized Baring Bros. and Co., London, Eng., until further notice, to redeem them at par with accrued interest from Jan. 1 to date of payment, less income tax. Bondholders desiring to avail themselves of the offer must deposit their bonds with the July 1 coupon attached, at Baring Bros. and Co.'s London office.

**Canadian Pacific Ry.**—Application is being made to the Board of Railway Commissioners for a recommendation to the Governor in Council to sanction a lease to the C. P. R. of the New Brunswick Coal and Ry. Co.'s line, dated Oct. 8, 1914, and of the Fredericton and Grand Lake Coal and Ry. Co.'s line, dated Nov. 4, 1914. The last named extends from Fredericton to Minto, and the first named from Minto to Chipman, N. B. The F. and G. L. Coal and Ry. Co.'s line was built in 1913-14. The N. B. C. and Ry. Co.'s line was operated for some years prior to the lease in behalf of the Province of New Brunswick.

The company is applying to the Dominion Parliament for authority to lease or charter any of its steamships, ferries or other vessels to any incorporated company having for its object the owning or operation of vessels, and to subscribe for, or acquire, stocks, bonds or other securities of such companies.

**Grand Trunk Ry.**—The Dominion Parliament is being asked to authorize the company to make from time to time advances to any company the controlling interest of which is held for the benefit of the G. T. R. or the G. T. Pacific Ry.; to buy and sell the stock, bonds or other securities of any such company, and to use for that purpose the proceeds of any class of stock issued or to be issued by the G. T. R.

**Pere Marquette Rd.**—According to a re-

port prepared by M. E. Cooley, on behalf of the receiver and of the Michigan State Commission, the P. M. R. has a reproduction value of \$96,562,771. The reproduction cost, less depreciation, is given at \$78,545,241. The cost per mile of the road is figured at \$45,392, or, less depreciation, \$36,770. Of the mileage, 2,586 is in Michigan, and 2,966 in five other states and in Canada.

**Shuswap and Okanagan Ry.**—A meeting of shareholders was called to be held at Victoria, B. C., Jan. 25, to pass bylaws changing the date of the annual meeting, and removing the head office to Montreal. J. E. McMullen, C. P. R. offices, Vancouver, is acting Secretary.

**Temiscouata Ry.**—Aggregate gross earnings for six months ended Dec. 31, \$114,688; operating expenses \$91,541; net earnings \$23,147, against \$123,545 aggregate gross earnings; \$101,854 operating expenses; \$21,691 net earnings, for same period 1913.

**The Toronto, Hamilton and Buffalo Ry.** has, it is reported, passed the dividend on its \$3,500,000 stock, and the explanation is made that the funds which ordinarily would have gone out in the dividend were added to the proceeds of loans from various companies represented in the ownership of the road, including the C.P.R., New York Central, and Michigan Central, for the construction of the company's new line, the Erie and Ontario Ry. between Smithville,

**White Pass and Yukon Route.**—Gross earnings from Jan. 1 to Dec. 7, 1914, \$1,545,140 against \$1,089,345 for same period 1913.

**The Winnipeg Aqueduct Construction Co., Ltd.**, has been incorporated under the Dominion Companies Act, with \$250,000 capital and office at Winnipeg, to take over, in whole, or part, the interests of the Northern Construction Co., Ltd., and Carter-Halls-Aldinger Co., Ltd., or either of them, in contracts entered into with the Greater Winnipeg Water District, relating to the building of an aqueduct, and in connection therewith to build and operate construction railways, telegraph and telephone lines, etc. The provisional directors are, C. V. Cummings, W. H. Carter, J. B. McLean, F. E. Halls, G. H. Elliott and G. H. Davis, Winni-

**Balk Line on Railway Platforms.**—The Board of Railway Commissioners has ordered the New York Central Rd. to paint a balk line along its platforms in Canada, to show passengers the limit of safety when standing waiting incoming trains. An application to compel the company to raise the height of its platforms to conform to the standard height in the Dominion, viz., 9 ins., was dismissed. It was stated in the course of the hearing that two accidents had occurred on the St. Lawrence and Adirondack line recently, owing to waiting passengers standing too close to the edge of the platform.

**American Railway Engineering Association.**—R. Trimble, Chief Engineer, Maintenance of Way, Pennsylvania Lines west of Pittsburg, Northeastern System, Pittsburg, Pa., has been nominated for President for the ensuing year, and J. G. Sullivan, Chief Engineer, Western Lines, C.P.R., Winnipeg, has been nominated as Vice President. Among the nominations for directors, of whom three are to be elected, are H. R. Safford, Chief Engineer, G.T.R., Montreal, and F. H. Alfred, General Manager, Pere Marquette Rd., Detroit, Mich.

The genuine engineer, like the genuine man in any walk of life, will be preparing all his life. Each achievement he will value not merely for the wealth or glory it brings him, but as a preparation for some thing beyond. He who has got through all preparation work is dead.

## Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canada Steamship Lines, Ltd.**—J. J. PHELAN, formerly Purchasing Agent, Montreal, has been appointed Assistant Mechanical Superintendent, Montreal, not Assistant to Mechanical Superintendent, as stated in our January issue.

**Canadian Government Railways.**—S. B. WASS has been appointed Assistant Superintendent, St. John and Quebec Ry., in charge of station service, train service and track. Office, Fredericton, N.B.

On Dec. 19, F. P. Brady, General Superintendent, Canadian Government Railways, issued a circular announcing that J. J. McMANUS had been appointed Assistant Superintendent, National Transcontinental Ry., between Hervey Jct., and Parent, Que., in charge of station service, train service and track, with office at Hervey Jct., Que. On Jan. 22 we were officially advised that the Canadian Government Railways had discontinued operating the portion of the N.T.R. referred to, and that the appointment of Mr. McManus was therefore void.

**Canadian Northern Ry.**—S. E. LEGER, heretofore Travelling Freight Agent, Montreal, has been appointed City Freight Agent, Quebec, Que., vice A. A. Buckle, transferred.

A. A. BUCKLE, heretofore City Freight Agent, Quebec, Que., has been appointed Travelling Freight Agent, Montreal, vice S. E. Leger, transferred.

J. BARBOUR, whose appointment as Chief Claim Agent was announced in our last issue, will continue to perform the duties of Right of Way Agent, which position he held previous to his present appointment. Office, Toronto.

**Canadian Pacific Railway.** JAMES MANSON, heretofore Assistant to Vice President at Winnipeg, has been appointed Assistant to the Vice President of the Company (George Bury) at Montreal.

ARTHUR HATTON, heretofore Superintendent of Car Service, Western Lines, Winnipeg, has been appointed General Superintendent of Car Service, vice G. S. Cantlie, who, at his own request, has been granted leave of absence for an extended period, in order that he may take command of the Montreal unit to be organized for service with the Third Contingent of the Canadian Expeditionary Force. Office, Montreal.

G. WHITELEY, heretofore Master Mechanic, Alberta Division, Calgary, has been appointed Assistant Superintendent of Motive Power, Eastern Lines. Office, Montreal. This is a new position.

A. A. WHITE has been appointed Tie and Timber Agent, St. John, N.B., reporting to the General Tie Agent, Montreal.

C. KYLE has been appointed Master Mechanic, Atlantic Division, vice C. R. Ord, retired on account of ill health. Office, McAdam Jct., N.B.

W. EVANS, heretofore Roadmaster, Chapleau, Ont., has been appointed section foreman at Sturgeon Falls, Ont.

W. B. HALL, heretofore section foreman, Carling, Ont., has been appointed Roadmaster, White River Subdivision, Chapleau, Ont., vice W. Evans, transferred.

T. HIGGINS, heretofore Freight Shop Foreman, Fort William, Ont., has been appointed Car Foreman there, vice T. Spence, promoted.

D'ALTON C. COLEMAN, who has been appointed Assistant General Manager, Western Lines, Winnipeg, is announced in

our last issue, has charge of maintenance and operation.

H. J. HUMPHREY, heretofore Car Service and Fuel Agent, Moose Jaw, Sask., has been appointed Superintendent of Car Service, Western Lines, vice A. Hatton, promoted. Office, Winnipeg.

W. E. CLINE, heretofore Chief Dispatcher, District 4, Alberta Division, Edmonton, is reported to have been appointed Chief Dispatcher, District 2, Manitoba Division, vice G. T. Coleman, transferred. Office, Winnipeg.

A. E. DALES has been appointed District Master Mechanic, District 3, Manitoba Division, vice L. G. Fisher. Office, Brandon.

G. T. COLEMAN, heretofore Chief Dispatcher, District 2, Manitoba Division, Winnipeg, has been appointed Car Service Agent and Fuel Agent, Moose Jaw, Sask., vice H. J. Humphrey, promoted.

A. STURROCK, heretofore District Master Mechanic, Cranbrook, B.C., has been appointed Master Mechanic, Alberta Division, vice G. Whiteley, promoted. Office, Calgary.

R. J. COLLINS, heretofore dispatcher, Moose Jaw, Sask., is reported to have been appointed Chief Dispatcher, District 4, Alberta Division, vice W. E. Cline, transferred. Office, Edmonton.

JOHN McRAE, heretofore Locomotive Foreman, Revelstoke, B.C., has been appointed Shop Foreman, Kamloops, B.C., vice G. Dillard.

L. G. FISHER, heretofore District Master Mechanic, District 3, Manitoba Division, Brandon, is reported to have been appointed District Master Mechanic, District 5, Alberta Division, vice A. Sturrock, promoted. Office, Cranbrook, B.C.

W. C. MACKENZIE, heretofore storekeeper at Grand Forks, B.C., has been given a position in the Car Department there, the position of storekeeper having been abolished.

T. SPENCE, heretofore Car Foreman, Fort William, Ont., has been appointed General Car Foreman, Vancouver, B.C., vice W. C. Hodgson, transferred.

W. C. HODGSON, heretofore General Car Foreman, B.C., has been appointed Mill Foreman, B.C., vice T. Spence, transferred.

**Central Vermont Ry.**—E. J. GUTHRIE, heretofore agent, pier 29, East River, New York, has been appointed Superintendent, Southern Division, C.V.R., vice John McCraw, assigned to other duties, and also Superintendent, Central Vermont Transportation Co. Office, New London, Conn.

JOHN McCRAW, heretofore Superintendent, Southern Division, New London, Conn., has been appointed General Agent there.

**Delaware and Hudson Co.**—M. J. POWERS, heretofore chief clerk to General Passenger Agent, has been appointed General Passenger Agent, vice A. A. Heard, resigned. Office, Albany, N.Y.

**Grand Trunk Pacific Ry.**—C. E. BROOKS, heretofore Locomotive Foreman, Edmonton, Alta., has been appointed General Foreman in charge of Shops, Transcona, Man., vice M. B. Dube, who has left the service.

The headquarters of the Stores Department has been moved from Portage la Prairie to Transcona, Man. W. J. STURGES is Storekeeper.

J. GORDON, heretofore Foreman Electrician, Car Department, has been appointed General Electric Foreman, Motive Power Department, Transcona, Man.

A. C. TURTLE has been appointed Foreman Electrician, Car Department, Transcona, Man., vice J. Gordon, transferred.

H. McCALL, heretofore Superintendent, Edson, Alta., has been appointed Superintendent, with jurisdiction from Winnipeg to Watrous, and the Melville-Canora Branch, Sask., vice G. S. Cooke, resigned. Office, Melville, Sask.

J. A. MITCHELL has been appointed Locomotive Foreman, Biggar, Sask., vice A. S. Wright.

A. KILPATRICK has been appointed Superintendent, with jurisdiction from Edmonton to Prince George and intersecting branch lines, vice H. McCall, transferred. Office, Edson, Alta.

J. G. BROWN, heretofore Joint Car Inspector, Camrose, Alta., has been appointed Car Foreman, Jasper, Alta., vice W. B. McNiece, transferred.

W. B. McNIECE, heretofore Car Foreman, Jasper, B.C., has been appointed Car Foreman, McBride, B.C.

The following station agents have been appointed:—Elie, Man., W. J. Pelland; Loverna, Sask., F. A. Peacock; Ebenezer, Sask., D. W. McCarthy; Bickerdike, Alta., V. A. Scott; New Norway, Alta., F. F. Yerex.

**Grand Trunk Ry.**—J. W. FARRELL, Trainmaster, Districts 2 and 3, Eastern Lines, Richmond, Que., has had his jurisdiction extended over District 1, E. S. Cooper, formerly Trainmaster at Island Pond, Vt., having been transferred to Montreal, as announced in our last issue.

W. J. NIXON, heretofore Trainmaster, District 5, Eastern Lines, Montreal, has been appointed Trainmaster, District 4, Montreal.

F. W. WARREN, heretofore Locomotive Foreman, Coteau Jct., Que., has been appointed Locomotive Foreman, Southwark Terminal, Montreal, vice D. Ross, transferred to Western Lines.

E. B. MEEHAN has been appointed Locomotive Foreman, Coteau Jct., Que., vice F. W. Warren, transferred.

J. HENDERSON, Supervisor of Track, Brockville, Ont., who was on leave owing to ill health, has resumed his duties.

F. COOK, heretofore charge hand, has been appointed Foreman, Temder Shop, Stratford, Ont.

R. E. HOWICK has been appointed station agent at Welland Jct., Ont.

N. P. NORTH has been appointed Trainmaster, Durand, Mich., vice R. Kelley, deceased.

**Intercolonial Ry.**—See Canadian Government Railways.

**Lake Shore and Michigan Southern Ry.**—See New York Central Rd.

**Lake Superior Corporation.**—THOS. GIBSON, of Toronto, heretofore a director and Secretary, has been elected President, succeeding J. Frater Taylor, who continues as President, Algoma Steel Corporation, Ltd., and has also been appointed General Manager of the same. The Lake Superior Corporation has among its subsidiary companies, Algoma Steel Corporation, Algoma Central and Hudson Bay Ry. Co., Algoma Eastern Ry. Co., International Transit Co. and Trans St. Marys Traction Co.

**Lehigh Valley Rd.**—H. C. DAVIS, General Agent, New York, having resigned, that position has been abolished.

F. E. SIGNER has been appointed General Eastern Freight Agent, New York.

M. C. ROACH, Superintendent, New York Division, New York, has had his jurisdiction extended so as to assume charge of the operations and the handling of all freight on the piers in New York, Jersey City and National Stores, and of the movement of the company's floating equipment in New York harbor.

A. P. BEAM has been appointed General Baggage Agent. Office, South Bethlehem, Pa.

**C. T. O'NEAL**, heretofore Superintendent, Buffalo, N.Y., has been appointed Superintendent, Lake Division, vice F. G. Rogers. Office, Buffalo, N.Y.

**Midland Ry. of Manitoba.**—**J. L. KNIGHT** has been appointed acting Auditor and chief clerk, vice R. G. Thackray, who is on active service with the Canadian expeditionary force. Office, Winnipeg.

**National Transcontinental Ry.**—See Canadian Government Railways.

**New York Central Rd.**—The New York Central Rd. is the name of the new company which has taken over the New York Central and Hudson River Rd. and the Lake Shore and Michigan Southern Ry.

**IRA A. PLACE** has been appointed Vice President, in charge of the Law Department and of the Land and Tax Department. Office, New York.

**ALBERT H. HARRIS** has been appointed Vice President and General Counsel, and will perform such duties as may be assigned to him from time to time by the President, in addition to those of General Counsel. Office, New York.

**E. T. GLENNON** has been appointed Assistant Vice President, in charge of such matters as may be referred to him by the Vice President or General Counsel of the Company. Office, New York.

**A. T. HARDIN**, heretofore Vice President New York Central and Hudson River Rd., New York, has been appointed Vice President, N.Y.C. Rd., in charge of the Operating Department, embracing transportation, construction, roadway and equipment. Office, New York.

**J. J. BERNET**, heretofore Vice President, Lake Shore and Michigan Southern Ry., Chicago, Ill., has been appointed Resident Vice President, N.Y.C. Rd., and will act as the general representative of the company in the Illinois territory, and perform such other duties as may be assigned to him. Office, Chicago, Ill.

**P. E. CROWLEY**, heretofore General Manager, New York Central and Hudson River Rd., has been appointed Assistant Vice President, Operating Department, N.Y. C. Rd. Office, New York.

**New York Central Rd.**—Under the reorganization plan two grand divisions will be established—the Eastern, under the supervision of **W. J. Fripp** as General Manager, with headquarters at Albany, and the Western, under **D. C. Moon**, General Manager of the Western division, with headquarters at Cleveland. **A. S. Ingalls**, who will have charge of the line between Buffalo and Toledo, with headquarters at Cleveland, and **F. H. Wilson**, who will be in charge of the line between Toledo and Chicago, with headquarters in the last named city. Under Mr. Fripp there will be three general superintendents:—**T. W. Evans**, who will have charge of the line between Buffalo and Syracuse and from Montreal to Clearfield, Penn.; **E. J. Wright**, in charge of the line between Syracuse and the electric zone in New York, including the line into the Adirondacks and the Harlem division, and **M. Bronson**, who will have immediate charge of the electrical division.

**Pere Marquette Rd.**—**P. BIRREL**, heretofore Commercial Agent, Pittsburg, Pa., has been appointed Commercial Agent, Detroit, Mich.

**St. John and Quebec Ry.**—See Canadian Government Railways.

**Toronto, Hamilton and Buffalo Ry.**—**W. J. WARNICK**, heretofore Chief Dispatcher, Hamilton, Ont., has been appointed Trainmaster there.

**W. H. STANILAND**, heretofore Night Chief Dispatcher, Hamilton, Ont., has been appointed Chief Dispatcher there, vice **W. J. Warnick**, promoted.

**L. V. HARRINGTON**, heretofore dispatcher, Hamilton, Ont., has been appointed Night Chief Dispatcher there, vice **W. H. Staniland**, promoted.

**Wabash Rd.**—**HENRY MILLER**, General Manager for the Receiver, having resigned, all business heretofore handled by him is now dealt with by **S. E. COTTER**, General Superintendent, and all departments hitherto under the General Manager's jurisdiction have been transferred to the General Superintendent. Office, St. Louis, Mo.

**White Star-Dominion Line.**—The management of the Portland, Me., and Montreal offices has been merged, the company's operations at the former port are now directed entirely from Montreal. **JOHN TORRANCE** has been appointed Manager, and **P. V. G. MITCHELL**, Assistant Manager.

### Grand Trunk Railway Betterments, Construction, Etc.

**Montreal Track Elevation.**—It was reported, Jan. 15, that steps were being taken by the Montreal City Council to have the matter of the G.T.R. track elevation from Bonaventure station to St. Henri, pushed forward, with a view of construction being started during this year.

**Merriton to Thorold, Ont.**—We are officially advised that during 1914 the G.T.R. completed the construction of a three mile diversion between the above named points, necessitated by the new location of the Welland Canal. The Board of Railway Commissioners, Jan. 12, authorized the opening for traffic of a portion of this deviation, and to have a temporary crossover with the present line at bridge 11, Welland Canal.

**Port Huron Shops.**—The citizens' committee of Port Huron, Mich., are reported to have completed the purchase of the property of the Port Huron Engine and Thresher Co., in order to hand it over to the G.T.R. for the erection of new shops. The Thresher Co. is expected to vacate the property by June 1. Orders are reported to have been placed for \$250,000 of machinery for the shops, for early installation in such of the Thresher Co.'s buildings as will be retained. (Jan., pg. 14.)

### Great North Western Telegraph Co.'s Matters.

Consequent on the merging of the Great North Western and the Canadian Northern Telegraph Companies, the G. N. W. T. Co.'s principal office in Winnipeg in future will be in the premises heretofore occupied by the Canadian Northern Telegraph Co. at the corner of Main St. and Portage Ave. The office at 486 Main St., occupied by the G. N. W. T. Co. for many years, will be closed. **F. W. Lee**, heretofore Manager of the Canadian Northern Telegraph Co.'s Winnipeg office, has been given charge of the G. N. W. T. Co.'s office in Winnipeg Grain Exchange.

There will be no other consolidation of the G. N. W. and Canadian Northern Telegraph offices, except at a few small places in Ontario and Manitoba. In the west the G. N. W. T. Co. had only some half dozen small offices on the Canadian Northern lines, and in the east the Canadian Northern had commercial lines only from Toronto to Sudbury and Toronto to Ottawa. The G. N. W. T. Co. has for some time operated the telegraph lines on the Canadian Northern Quebec Ry., and the portion of the Canadian Northern Ontario Ry. in Ontario as far west as Ottawa. The two telegraph systems were not at all in competition, the G. N. W. operating in the east and the Canadian Northern in the west.

The Canadian Northern Ry. has a telegraph line between Toronto and Winnipeg, which has been used for railway purposes only. It is expected that the G. N. W. T. Co. will erect at least one copper wire from Montreal, or Toronto, to Winnipeg at a very early date, and this will be followed by continuing the through line to the Pacific Coast, after the completion of the Canadian Northern Pacific Ry. in British Columbia, which is approaching rapidly.

The Western Union Telegraph Co.'s lines in the Maritime Provinces east of Moncton, exclusive of those connecting from the International boundary to the cable landing stations, will be taken over by the G. N. W. T. Co. as soon as valuations can be made. The Western Union lines in British Columbia, now operated in the G. N. W. T. Co.'s name, will also be taken over as soon as details can be arranged. These lines extend from the Washington-British Columbia boundary to New Westminster and Vancouver, with cable connection to Victoria. The mileage is pole 140, wire 360.

### Special Cable Rates to the Expeditionary Forces.

By special arrangements between the telegraph and cable companies a cable service has been arranged, whereby week end letter cablegrams may be sent to soldiers, sailors and nurses serving with the expeditionary forces in the United Kingdom, or on the Continent, and also for the free transmission of messages relating to wounded combatants.

The special rates for the week end letters are:—From New Brunswick, Quebec and Ontario, 5c. a word; from Manitoba, 9c. a word, and from Saskatchewan and Alberta, 11c. a word. All such messages must have the letters EFM placed before them, which will be charged as one word, and if the persons to whom such messages are addressed are in France or Belgium, they will be forwarded by mail from London.

The arrangement for wounded soldiers' messages restricts the privilege to bona fide enquiries by relatives concerning persons officially reported to have been wounded or killed, and matter of a social nature must not be included in the messages. These messages must be addressed to the Minister of Defence at Ottawa, who will arrange their further free transmission. The letters WSM must be prefixed to such messages. The number of free messages which may be sent by relatives concerning any individual wounded combatant is limited to three. Persons offering such messages must present the original official advice or information about the particular casualty to which the message relates, and each message sent must be checked on the original advice. No free messages are allowed in respect of persons reported only slightly wounded. In all cases of special messages under these arrangements, whether free or not, the following particulars, considered essential by the British authorities, must be given as far as practicable:—regimental rank and name; squadron, battery or company; regiment or unit; expeditionary force concerned, whether British, Canadian, Australian, etc., or in case troops not with expeditionary forces, the name and place where stationed must be given. If the sender should not be in possession of all the required particulars, the message may still be sent, but all messages are at senders' risk and no enquiry concerning them can be undertaken. It is also stated that messages concerning persons officially reported to be suffering from disease or sickness come within the category mentioned.

## Interurban Passenger Cars on Nipissing Central Railway.

The two interurban cars for the Nipissing Central Ry., which were described preliminarily in Canadian Railway and Marine World for June, have been delivered, and a floor plan and exterior of one of them are given herewith: They have a total seating capacity of 52 in the three compartments. Following are some of the principal dimensions: Length over buffer, 51 ft.; over vestibules, 50 ft.; over body, 40 ft.; centre to centre of trucks, 28 ft.; width over sheathing, 8 ft. 9½ ins.; aisle width, 1 ft. 10 ins.;

The vestibule platform is dropped 10 ins. below the car level, the side sill knees being 3-16 in. plate 12 ins. deep at the end sill plate, reinforced top and bottom with 2 by 2 by ¼ in. angles, and secured to the underside of the sills. The centre sill knees are two 6 by 3½ by 7-16 in. angles, extending from the bumpers to 4 ft. back from the body bolster. The bumpers are 6 in. 8 lb. channels, bent to the contour of the vestibule end, and with the top bevelled back at 45 degrees and covered with sheet iron.

Exterior View of Interurban Car, Nipissing Central Railway.

height from rail to underside of side sills, 3 ft. 1 in.; height from rail over roof, 12 ft. 4 ins.; height from floor to top of window sill, 2 ft. 5 ins.; and height from vestibule platform to floor of car, 10 ins.

The underframing is of steel throughout, comprising essentially two centre sills of 7 in. 17½ lb. I beams spaced 12½ in. centres, extending from end sill to end sill, with a ¼ in. cover plate top and bottom, extending from bolster to bolster, and two side sills of 6 by 3½ by 7-16 in. angles extending from end sill to end sill, with a 3-16

The flooring is of 1 by 2½ in. yellow pine, laid longitudinally with a special mat surface. The platform flooring is hard maple, ¾ by 2½ in. The floor has trap doors. The body posts are of ash 2½ ins. thick. The car roof is of the single arch type, supported on 14 steel carlines, 1¾ by ½ in., with intermediate ash carlines at 10 in. centres. The roof boards are ½ in. thick, covered with no. 8 canvas.

There is a 24 in. swinging door between the general and smoking compartments, and a single sliding door in each bulkhead. The

whistles, etc. The car lighting is by two rows of pendant lights along the ceiling with a 3 lamp cluster in each vestibule.

The air brake equipment is the Westinghouse A.M.M. type, supplied by a D.I.E.G. compressor with a 600 volt motor. It has a type J governor, M. 15 D brake valves, B 6 feed valves, M 1 triple valve, a type R. 10 by 12 in. brake cylinder, B 3 conductor's valves and 3½ in. air gauges illuminated by a 6 volt lamp. There is also a geared hand brake equipment at each end of the car.

The trucks are Brill 27 M.C.B. type, with a 6½ ft. wheel base. The wheels are 33¼ ins. diam., steel tired with retaining rings, and with cast steel centres. The tires are 5 ins. wide by 3 ins. thick, and the axles have 4¼ by 8 in. journals. The motor equipment on these cars is the Westinghouse 306 double end control, with four motors, two on each truck, with a controller in each end of the car. The car is also equipped with an integrating wattmeter, rated at 600 volts, 400 amperes.

These two cars were built by the Preston Car and Coach Co., under order from the Timiskaming and Northern Ontario Ry. Commission, which also operates the N.C.R.

### Saskatoon Municipal Ry. Operating Results.

The financial statement of the city of Saskatoon, Sask., for the ten months ended Oct. 31, contains the following, covering the operations of the municipal railway and of its extension to Sutherland, operated under an agreement with the council of that town:—

Saskatoon Municipal Railways.	
Cash fares .....	\$73,468.12
Ticket sales .....	44,682.87
City departments .....	782.31
Chartered cars .....	269.55

in. truss plate, 30 ins. deep, extending from end sill to the baggage door post, with the side sills under the baggage door reinforced by a 6 by ¾ in. plate, 9 ft. long. Pine side sills resting on the short flange of the steel side sill, are bolted to the latter. The end sills are built up of a 9 by ¾ in. steel plate, having a 6 by 3½ by 7-16 in. angle along the bottom outer face. The wooden end sills are of oak. The side and centre sills are tied with 4 in. 6¼ lb. channels at each side of each bolster, and braced diagonally each side of the bolster with 4 in. channels. There are 5 intermediate cross bearers of 4 in. 6¼ lb. channels, evenly spaced, and two crossbearers of 4 in. 7½ lb. I beams, located 4 ft. each side of the car centre line, extending beneath the sill.

vestibule doors are folding, in two parts, hinged against the bulkhead, and fitted with automatic folding apparatus. The car steps are 36 ins. wide, double at each door, the lower one with a 10 in. tread, and the upper one with a 9 in. tread, with 10 in. risers. There are 14 reversible seats, 36 ins. long, on a single pedestal and spring upholstered in rattan. There are also 8 stationary cross seats of similar construction, and two folding seats, one along each side of the baggage compartment.

The heating is provided for by a forced draught heater in the baggage compartment, and there are 10 ventilators, five on each side of the roof. The equipment also includes destination signs, signal bells, hand straps, fare register, arc headlight, signal

### Fares on Lethbridge Municipal Railway.

Canadian Railway and Marine World for January contained a report presented to the Lethbridge, Alta., City Council by Commissioner A. Reid, recommending changes in fares on the municipal electric railway. The following fares were put into effect Dec. 15:—Regular fare 5c. cash or the following tickets: Regular tickets (lilac) 5 for 25c., good at all hours. Limited tickets (brown) 6 for 25c., good from 6 to 8 a.m., 12 noon to 2 p.m., 5 to 7 p.m. not good on Sundays or public holidays. Children's tickets (green) from 5 to 14 years, 10 for 25c. Two children can travel on 5c. cash or one regular ticket. Double fare after midnight, cash or tickets. City employees' tickets for use on city's business only, 25 for \$1.

The proposal made by the North Lethbridge Association to reduce the fares to 8 tickets for 25c. was decided against by the commissioners after a long discussion, during which it was shown that the railway would have had to carry 334,000 passengers in addition to the 917,000 carried during 11 months of this year, to give the same revenue.

We are advised that the one man one car system is giving good satisfaction and operating expenses were reduced \$9,000 during nine months of 1914. Of course that cannot all be credited to the one man system, because the car mileage has also been reduced. At present the operating expense is just about equal to the revenue.

### Door Operating Mechanism on the Montreal Tramways Company's Cars.

During the last three years, all the new cars added to the Montreal Tramways Co.'s rolling stock, have been of steel frame construction, of a design essentially the same as the first of the type which was described in detail in Canadian Railway and Marine World, Mar., 1912. Since the delivery of the first lot, a number of changes in detail have been made from time to time, and among these is the door operating mechanism.

In the original cars of this design, there was a single leaf swing door from the front vestibule. In more recent cars this has been replaced by a two leaf door, operating with the mechanism shown in the ac-

Door Operating Mechanism for Two Leaf Door on Montreal Tramways Co.'s Cars.

companying illustration. This door is of the folding type, operating without guides, thereby eliminating the possibility of the doors jamming. The inner leaf of the two leaf doors is hinged to the front corner post of the vestibule by a long rod, to which it is secured, and which passes through the vestibule floor, the lower end having a 7 in. crank fastened to it. The operating shaft is in the centre line of the car, midway between the controller and air brake valve. It is a 3/8 in. round shaft with a 7 in. crank handle on the upper end, and a 5 1/2 in. crank on the lower end, the latter connected to the door hinge shaft crank by a 3/4 in. rod, threaded on one end for adjustment. Through this link, the inner leaf of the door may be swung open or closed. To guide the outer leaf of the door, which is hinged to the inner leaf, at the top of this leaf there

is an A frame, standing out 12 ins. from the door, connected by a 22 1/4 in. adjustable rod to an anchor in the front vestibule wall. This restrains the movements of the outer leaf so that its outer edge is in a line approximately parallel to the car side, folding in place against the front vestibule wall.

The several links as mentioned may be adjusted as required, for close fitting of the door. The under floor link is made with an offset inner end, so that when the door is closed, that end is just over the centre 1/2 in., automatically locking in the closed position. This design of door operating mechanism has been worked out by D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., to whom we are indebted for the data on which this article is based.

### Windsor, Essex and Lake Shore Rapid Railway Appointments.

Consequent on the accidental death in December of A. W. Westman, Superintendent, A. Eastman, Vice President and General Manager, has made the following appointments:

C. P. Cooper has been appointed Superintendent, in charge of general operation. He has been with the company in various capacities from its construction days, and has been Chief Dispatcher for 4 years.

W. W. Chisholm, heretofore Chief Engineer of Power Plant, has been appointed Electrical Engineer, with supervision over power house, rolling stock and line Department. He has been with the company for 7 years.

A. Baltzer, heretofore Shop Foreman, has been appointed Master Mechanic, in charge of shops and all work in connection therewith.

A. R. Keele, heretofore Assistant Dispatcher, has been appointed Chief Dispatcher, in charge of train crews and train movements.

W. Long has been appointed Assistant Dispatcher. He was at one time with the company in the same capacity but has been in business for himself of late.

C. Loop, who has been acting Roadmaster for the past year, has been appointed Roadmaster, with charge of tracks and all work in connection with same.

J. L. Baird, heretofore Assistant Secretary and Treasurer, has also been appointed Auditor, in charge of accounts, Kingsville office, and all work in connection with same.

H. McDougall has been appointed Line Foreman, in charge of line department.

The Montreal Tramways Co.'s appeal against a judgment in favor of W. Lefevre was argued Jan. 19, in the Appeal Court, Montreal. Lefevre sought \$1,500 damages, claiming that on June 11, 1912, while a passenger on one of the company's cars, his arm came in contact with an obstruction which caused painful wounds and damage to clothes. The company contended that Lefevre imprudently put his arm out of a window while the car was in motion, the injury and damage resulting as a consequence. Lefevre rejoined that the company should have effectively protected the window on that side of the car. The lower court awarded \$999 damages. Judgment was reserved.

Motor omnibusses are, it is said, to be installed in Chicago, Ill., where \$3,000,000 will be spent on their inauguration. They will be owned by the municipality, and a 5c fare will be charged. It is reported that similar vehicles will be used in San Francisco, Cal., to ensure adequate transportation facilities during the Panama-Pacific Exposition.

## Toronto Suburban Railway Company's Appeal Granted by British Privy Council.

The Toronto Suburban Ry.'s appeal against the Ontario Railway and Municipal Board's order, requiring it to pave portions of Davenport Road, Toronto, has been granted by the Judicial Committee of the Privy Council, in London, Eng. The case came before the Ontario Board on the application of the city, dated April 25, 1912. The city asked that the railway company be directed to reconstruct and put in a proper state of repair its track and sub-structures on Bathurst St. and Davenport road, and also the roadway used for railway purposes, and 18 ins. on each side of the tracks. The Board ordered the railway company to dig out and pave the track allowance and 18 ins. on each side with such material as the Board's engineer should direct.

The company appealed to the Appellate Division of the Supreme Court of Ontario, which held that the Board had jurisdiction to order the railway to pave and to determine the character of the pavement, but that it could not delegate this power to its engineer, and referred the matter to the Board that it might direct what kind of material should be used. The company contended that under the agreement in force between it and the municipality it was obliged only to repair the portions of the roadway, not to construct a new roadway or pavement. The difference in the cost of repairs and the cost of construction as proposed by the city is estimated by the company at \$50,000.

A Canadian Associated Press cablegram of Jan. 20, stated that the Lord Chancellor, in delivering judgment that morning, said the question which presented the real difficulty arose on the construction of the agreement made in Sept., 1899, between York Tp. Council and the railway company. The land which formed the subject of dispute was included in 1909 within the limits of Toronto corporation, which succeeded to rights and obligations of the other corporation.

Under this agreement the railway company was given the right to construct a railway along roads, including Bathurst St. and Davenport Road. The controversy which arose was substantially as follows:—"Roads in which rails had been originally laid were at that time mud roads, or at all events unpaved. Respondent corporation desired that these roads should be dug out and paved with blocks. Appellant company did not contest their liability to keep the portion of the roads between the rails and 18 ins. on each side in repair, but maintained that they were under no obligation to reconstruct this space so as to make it a roadway of improved character such as the corporation designs for the rest of the roadway on each side.

In support of their case the city relied not only on the agreement itself, but on the Ontario Railway and Municipal Board Act, and as a result of an application by the city the Board made an order directing the railway company to put tracks in proper repair, also to dig out and pave the part of the roadway used for railway purposes, the city being ordered to pave the remaining parts and the Board's engineer to supervise the carrying out of this order.

On appeal to the Supreme Court it was declared that the Board had jurisdiction to make the order, and that the word "tracks" included all that part of any roadway occupied by the railway. The portion of the order appointing the engineer to deter-

mine the kind of pavement to be used was, however, varied on the ground that it did not, as it should, in the view of the court, have done, prescribe the kind of pavement which the company lay, and it was remitted to the Board to determine what kind of pavement it should be.

The Lord Chancellor proceeded: "Their Lordships cannot give to the word 'tracks' used in the context, in which it occurs in section, the wide interpretation placed on it by the court, which extends it not only to rails, but to ground occupied not only between rails, but up to 18 ins. on each side. They think the words in section indicate an interpretation of more restricted and literal kind, and exclude from the power given by section the general roadway itself, as distinguished from rails, etc., laid upon it."

In the opinion of their Lordships the other question which arises on interpretation of clause 6 of the agreement of 1899, presents a greater difficulty, and it is only after much consideration that they arrived at a conclusion on this point. It is argued that the obligation of the railway company extends to a portion of the travelled road which the company occupies in whatever improved condition that portion may have been put, the purpose of the section being to secure that the entire roadway shall be in the same condition throughout its entire breadth.

This argument does not, however, suffice to determine the question at issue. It may well be if the roadway has been improved by the city, that the standard of repair is what is contended for, but assuming this to be so the conclusion does not warrant the further inference that the company have bound themselves to change the condition of a portion of the roadway assigned to them by paving it, and so raise the standard of their obligation. It is one thing to undertake to keep what is handed over in proper repair on the footing of maintaining it in a state into which it has been put, and quite a different thing to interpret an agreement "to keep clean and in proper repair" as imposing an obligation to lay a new pavement of a kind which did not exist and was not provided for when the agreement originally was entered into, merely because the municipal authorities have themselves thought it right to improve the remainder of the roadway.

It may well be that if the city desires to pave the whole of the travelled road they may do so at their own expense, using the powers conferred by clause 17 to take up street or road for any purposes within the province and the privileges of the municipal corporation, but the restricted language of clause 6 which imposes an obligation on the railway company appears prima facie to confine that obligation to keeping in proper repair what is already there and not to extend it to doing works which would give a portion of the road between and beside the rails a new character.

"For these reasons their Lordships are of the opinion that the Ontario Railway and Municipal Board had no jurisdiction to make the order appealed from and that the Supreme Court of Ontario was wrong in affirming that order. They will therefore advise His Majesty that the appeal should be allowed and the orders in question be discharged. The city must pay the costs of the appeal and of the appeal to the Supreme Court."

## Single Truck Cars for the Toronto Civic Railway.

Three single truck, p.a.y.e., double end operation cars have been ordered by the Toronto Civic Railway for its new Bloor St. West line, which will be similar in most particulars to those in service on the other three lines except that the latter are double truck cars. The new cars will have steel underframes, with arch roofs. The body length will be 21 ft., with 6 ft. platforms 8 ft. wide, making an overall length of 33 ft., and 34 ft. over the buffers. The car floor will be 36 ins. above the rail level, the platform, 26 ins., and the steps, 14 ins. The body will be especially wide, viz., 8 ft. 5 ins. over side sheathing. The cars will be mounted on E21 trucks, having 33 in. cast iron wheels and an 8 ft. wheelbase. The total car weight will be about 25,000 lbs.

Each car will have seating accommodation for 32 persons, in 8 cross seats in the centre of the car, with 4 longitudinal seats, seating 4 each, two at each end. The platforms will have a single door on one side, and double doors on the other, with a folding step from each, the single door with its step, to be operated by the motorman, and the double doors with their steps, to be operated by the conductor from his position inside a pipe railing. The cars will each have two 40 h. p. Westinghouse 533 form L interpole ventilated motors, operated by a C. G. E. K10 controller at each end. The seats will be of rattan. There will also be 6 automatic ventilators in the roof. The cars will be painted a dark green color outside, with an interior finish of golden oak. The ceiling will be of painted agasote. Heating will be by hot air heaters. There will be hand straws suspended from the ceiling over each longitudinal end seat. The cars are being built by the Preston Car and Coach Co. We are indebted to D. W. Harvey, Assistant Engineer, Works Department, for the foregoing information.

## Substations on the Toronto Suburban Railway.

Contracts have been let by the Toronto Suburban Ry. for three substations on its Toronto to Guelph line, at Islington, Georgetown and Guelph, Ont., the latter at the corner of Dundas Road and Bay St. The Georgetown station will have 1,000 k.w. capacity, in two 500 k.w. units, while each of the other two will have a single 500 k.w. unit, with provision for the addition of a similar unit in the future. Power will be received at 25,000 volts, a.c., 3 phase, 25 cycle, and will be stepped down and passed through 500 k.w. rotary converters, which will deliver to the line at 1,500 volts, d.c.

The three stations will be of a brick and concrete construction. The Islington station will be provided with living accommodation for the operator, either above the station or in a building adjoining. The Georgetown and Guelph stations will also contain a waiting, baggage and express rooms, and dispatching offices, providing railway station facilities. These will not be added to the Islington layout, as it is not in a densely populated district.

**Motor Busses for Toronto.** At the Toronto City Council's inaugural meeting for 1915 Mayor Church suggested that the Legislature should be asked to authorise the city to spend \$50,000 on motor busses, without the consent of the people.

The man most in demand today is the one who combines thorough training with natural executive or administrative ability.

## Semi-Steel Cars for Niagara, St. Catharines and Toronto Railway.

The Niagara, St. Catharines and Toronto Ry. has received six 55½ ft. semi steel cars for its interurban service. They have an overall height of 13 ft., with a body width of 10 ft., with underframing and sides of steel. The total weight of each car is about 75,000 lbs., and they have a seating capacity for 67 persons each. They are designed for operation in two car trains, for which purpose the front car has in addition to the main and smoking compartments, common to both classes of cars, a baggage section. The leading car has high backed seats with head roll upholstered in green leather, and the rear car is upholstered in plush. A passage way, alongside the smoking compartment, leads from the car end into the main compartment without necessitating passage through the smoking room.

The cars are finished in polished quarter cut oak, inlaid with white holly, in a mission finish, agasote headlinings and empire decks, all carried on the steel framing. The trimmings throughout are statuary bronze. Special attention has been given to the ventilation and lighting. They are also equipped with the latest type of forced draught electric heaters with thermostat control. The exterior finish is a steel gray, with black and gold lettering, which has

pany whose trains are operated either by steam or electricity seeks the Board's approval for a crossing of its tracks over the tracks of an existing railway under the Board's jurisdiction, the expense of installing the crossing and the cost of maintaining protective devices is usually put upon the junior road. The trains of the senior road are given the right of way at the crossing over trains of a similar class of the junior road. For the purpose of ensuring the rights of the senior road at the crossing, it is usual to require that the man being placed in charge of the protective devices installed at the crossing should be nominated by, or acceptable to, the senior road; but, as all the expense is placed upon the junior, the man in charge of the crossing is paid by the junior road.

"In the case before us, the Winnipeg Electric Ry., while admitting its obligation to pay the flagman at the Logan Ave. crossing, objects to carrying him on its pay roll and suggests that he should be put upon the pay roll of the senior company and that the C.P.R. should be reimbursed by the Winnipeg Electric Ry. whatever amounts it has to pay the man in wages. It is evident that the railway companies are endeavoring to avoid any legal consequences which may flow from an act of negligence of the man in charge of the crossing, which might fasten responsibility on his employer. Without expressing an opinion as to

## Mainly About Electric Railway People.

Mrs. Thomas Ahearn, wife of the President, Ottawa Electric Ry., died at Ottawa, Jan. 3. She was very active in many prominent works of a philanthropical and educational nature.

A. E. Beck, K.C., Permanent Counsel, British Columbia Electric Ry., Vancouver, who has retired to re-engage in private practice, was presented with a cabinet of silverware by the head office staff at a farewell dinner, Dec. 30.

W. P. Cooke has been reappointed Chairman of the Port Arthur (Ont.) City Utilities Commission, which controls, among other utilities, the municipal electric railway. The commission consists of four elected members, with the mayor ex officio. In future, elections will be for two year terms, and two of the members will retire each year.

William Wesley Chisholm, who has been appointed Electrical Engineer, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont., was born at Caradoc, Ont., Oct. 17, 1876, and entered railway service in June, 1896, since when he has been, to Apr., 1897, switchman, Michigan Central Rd., St. Thomas, Ont.; Apr., 1897, to Mar., 1898, yard conductor and Assistant Yardmaster, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; Mar., 1898, to June, 1903, brakeman,

Two Car Train, Niagara, St. Catharines and Toronto Railway.

been adopted as standard by the company. They are also equipped with electric markers and classification lights.

The wheels are steel tired, with cast iron centres and M. C. B. journals. The electrical equipment consists of four GE219 75 h.p. motors, with type M.K. multiple unit control, the master controller having dead man release handle. The air equipment consists of the Westinghouse A.M.M. train control. They are equipped with Tomlinson radial automatic couplers, with the automatic air connecting feature. They are also equipped with straight air brakes. They were built by the Preston Car and Coach Co.

## Responsibility for Watchmen at Railway Crossings.

Following a hearing at Winnipeg, Nov. 16, 1914, D'Arcy Scott, Assistant Chief Railway Commissioner, gave the following decision, Dec. 31, respecting the responsibility for watchman at the Winnipeg Electric Ry.'s crossing over the C.P.R. at Selkirk.

"A difference of opinion as to which company should be responsible for the acts of a flagman having arisen between the Winnipeg Electric Ry. Co. and the C.P.R. Co., the matter has been referred to the Board. The question has been before the Board on several occasions. Where a railway com-

pany whose trains are operated either by steam or electricity seeks the Board's approval for a crossing of its tracks over the tracks of an existing railway under the Board's jurisdiction, the expense of installing the crossing and the cost of maintaining protective devices is usually put upon the junior road. The trains of the senior road are given the right of way at the crossing over trains of a similar class of the junior road. For the purpose of ensuring the rights of the senior road at the crossing, it is usual to require that the man being placed in charge of the protective devices installed at the crossing should be nominated by, or acceptable to, the senior road; but, as all the expense is placed upon the junior, the man in charge of the crossing is paid by the junior road.

"In cases of this kind I think the proper practice is to have the man in charge of the crossing on the junior company's pay roll. If the man nominated by the senior company is not acceptable to the junior company, it is a simple matter for the two companies to find a man who would be acceptable to both.

"It will probably be sufficient for a copy of this memorandum to be sent to the parties interested; but, if either of them requires a decision put in the shape of an order, an order can go accordingly. I want to point out that the above does not apply in the case of a street railway which is owned and operated by a municipality and is operated on a municipal highway. In such cases a different principle applies."

Michigan Central Rd., St. Thomas, Ont.; May, 1905, to Nov., 1907, Assistant Chief Engineer, City Pumping Station, St. Thomas, Ont.; Nov., 1907, to Jan. 1, 1915, Chief Engineer, Power Plant, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont.

A. W. Westman, Superintendent, Windsor, Essex and Lake Shore Rapid Ry., who was electrocuted at Kingsville, Ont., Dec. 21, as stated in Canadian Railway and Marine World for January, was born in London Tp., Middlesex County, Ont., Aug. 1, 1879. He started work with the London, Ont., Street Ry. in March, 1897, as a pitman, and in 1900 was put on overhead trolley construction and was subsequently appointed Line Foreman. In March, 1908, he went to the Windsor, Essex & Lake Shore Rapid Ry. as Superintendent of Shops at Kingsville and in July, 1909, was appointed Superintendent in charge of line, track equipment and operation, in which position he succeeded in solving some of the most important problems in connection with the operation of the single phase system.

The proper forging heat for high speed steel is said to be between 1,650 and 1,900 degrees Fahr., dependent on the different makes of alloys. Forging below these temperatures will cause the crystals to crush and rupture.

## British Columbia Electric Railway's Annual Report.

Following are extracts from the report of the year ended June 30, 1914, presented at the annual meeting in London, Eng., recently:—The directors regret that the report is not of so satisfactory a character as those which the shareholders have been accustomed to receive in the past, and that, in order to maintain the usual dividends, it will be necessary to supplement the profits by a transfer of £10,000 from the reserve. The directors recommend this course with some hesitation, in view of the extremely unfavorable outlook for the current year caused by the war, but they desire to avoid throwing any additional hardship upon the stockholders at this time, and for that reason propose to draw upon the reserve. At the last annual meeting it was pointed out that the earnings for the year now under review, were being adversely affected by the conditions then prevailing. The depression in trade, to which reference was then made, unfortunately became accentuated as the year advanced, and rigid economy has been necessary to achieve the results shown by the accounts. Further economies are still being effected wherever it is possible to put them into force.

The following charges have been made against the revenue account for the year:—

Provision for renewals maintenance .....	£149,921	10	8
Added to capital amortization .....	2,455	6	4
<b>Total .....</b>	<b>£152,376</b>	<b>17</b>	<b>0</b>

The net profit for the year, after making the above deductions, amounts to .....	£393,956	7	8
--	----------	---	---

Add—			
Balance brought forward from last year .....	9,518	19	4
Amount transferred from reserve fund .....	10,000	0	0
	<b>£413,475</b>	<b>7</b>	<b>0</b>

Deduct—			
Interest on debentures and debenture stock to June 30, 1914 .....	£132,990	19	5

Dividends already paid—			
On 5% cumulative perpetual preference stock for the year to June 30, 1914 .....	72,000	0	0
On preferred ordinary stock for the year to June 13, 1914 .....	86,400	0	0
On deferred ordinary stock for the six months to Dec. 31, 1913 ..	57,600	0	0
	<b>348,990</b>	<b>19</b>	<b>5</b>

Leaving available for further distribution .....	£ 64,484	7	7
From this the directors have recommended the payment of a dividend on the deferred ordinary stock at the rate of 8% per annum for the six months ended June 30, 1914, making 8% for the year .....	57,600	0	0

To carry forward to next account .....	£6,884	7	7
--	--------	---	---

Owing to the depression, the large employers of labor in British Columbia have been temporarily forced to postpone all new work, and as a result it is reported that there has been a decrease in the population of Vancouver and the neighboring districts of approximately 20,000 inhabitants; and there has consequently been a decrease of over 8,500,000 in the number of passengers carried during the year. The financial effect of this decrease in passengers would have been even more marked but for the small advance in fares put into force in Sept., 1913. The directors anticipated some

improvement during the latter half of the present year, but these hopes were extinguished on the outbreak of war. All companies operating in a new country have at times to face periods of severe reaction in the development of their business. As a result of the war commercial conditions in British Columbia could not well be worse than they are at present, and the revival in trade may be greatly retarded. Stockholders must consequently be prepared for a drastic reduction in future dividends, but the directors believe that the halt in the development of the Province will, in the end, result in more stable conditions.

During the past year the expenditure on capital account has been reduced to a minimum. A public utility company must continuously incur certain capital outlay to comply with its franchise obligations, but the policy of limiting expenditure to absolute necessities will be rigidly followed until the return of more prosperous times.

In reviewing the work which has been accomplished, the Chief Engineer reports that the plant is in a satisfactory state of efficiency, and that the company is in an excellent position to profit by the improvement in the business conditions of B. C. when it takes place.

It is with the greatest regret that the directors announce that J. Buntzen, who retires at the annual meeting, has decided not to seek re-election, owing to his continued residence in Denmark. Mr. Buntzen has, however, consented to accept the position of adviser to the directors, and they intend to appoint him. The benefit of his invaluable advice and experience will thus be available to the company. During the first eight years of the company's existence Mr. Buntzen was General Manager in British Columbia, and the company owes him a debt of gratitude for his many years of close devotion to its affairs and for the benefits secured by his clear judgment and foresight. In order to be kept in the closest touch with the conditions prevailing in British Columbia and with the details of the company's business, the board has appointed R. H. Sperling (who has for the past nine years held the position of General Manager in British Columbia) as Assistant to the Chairman and has elected him a director in succession to Mr. Buntzen. The Board has appointed to succeed Mr. Sperling as General Manager, Geo. Kidd, formerly Secretary and recently Comptroller to the Company. The board are confident that they have secured a very capable successor to Mr. Sperling. The directors again have pleasure in expressing their appreciation of the loyal and satisfactory services rendered by the management and staff in British Columbia.

Although the Directors recognize that the immediate future must be a period of adversity, during which a large reduction of dividends will be necessary, they see no reason to lose confidence in the future of the company's undertakings.

The comparative statement appended to the report shows the income, after charging renewals maintenance to have been \$410,229 in 1913-14 against \$401,836 in 1912-13. The number of passengers was 63,429,023 in 1913-14 against 71,973,822 in 1912-13.

The following expenditures were made on capital account:—Rolling stock, \$718,543.32; permanent and double tracking and sundry improvements, \$267,002.01; track extensions, \$206,988.11; lighting extensions, \$79,427.60; power extensions, \$50,477.45; steam plant, \$44,788.39; lands and buildings, \$512,900.07; electrical machinery, \$477,

995.77; extending light and power system, \$135,597.89; North Vancouver, rolling stock, meters, transformers, and initial installations, \$2,784.48; sundries, \$48,641.66; Transmission lines and railway feeders, \$25,856.59. Total, \$2,571,003.24. In addition to the above there was a capital expenditure of £317,386 9s. 9d. by subsidiary companies.

The chairman, R. M. Horne-Payne, was unable to attend the annual meeting, but had prepared some remarks, which were read by T. Blundell Brown. The report and accounts were adopted and the retiring directors, R. M. Horne-Payne and R. H. Sperling, were re-elected.

### Electric Railway Notes.

The City of Brantford has received six cars for its municipal electric railway, from the Preston Car and Coach Co.

The Regina, Sask., Public Utilities Committee has directed that monthly statements showing receipts and expenditures on the Municipal Ry. be presented.

The Niagara, St. Catharines and Toronto Ry. has received 2 suburban cars, 55½ ft. long, the balance of an order for six, from the Preston Car and Coach Co.

Mayor Spence, in his inaugural address to the Brantford, Ont., City Council, Jan. 10, urged the appointment of a Public Utilities Board to manage the municipal railways and other public utilities owned by the city.

The Toronto Suburban Ry. has installed a telephone dispatching system on its Weston and Woodbridge Division. Cars are being operated between West Toronto and Weston every quarter of an hour, and to Woodbridge every two hours.

The Mayor of Toronto proposes to ask the Ontario Legislature for legislation to nullify a recent decision of the Imperial Privy Council, which decided that the Toronto Ry. could not be compelled to build and operate lines outside the city limits as defined in 1891.

The British Columbia Electric Ry. started operating its cars in Victoria, B.C., on a new schedule, Jan. 4. One or two services have been abandoned, and on other routes the interval between cars is 15 instead of 10 minutes. On Sundays the service starts at 9 a.m. and ceases in the evening an hour earlier than formerly.

The Saskatoon, Sask., City Council, Jan. 7, in passing the street railway estimates for this year, desired to have the Commissioners bring in a detailed report on the public utilities, of which the municipal railway shows a loss. Press reports state that "a general shake up of far reaching importance is due very shortly." A telegraphic dispatch, dated Saskatoon, Jan. 10, and published in outside papers, states that notice of motion has been given for an early meeting of the Council, to consider the selling of the municipal railway and the granting of a franchise to a private company.

In connection with the recent negotiations between the Toronto City Council and the Toronto Ry. and Toronto Electric Light Cos., concerning the proposed purchase of the two companies by the city, John Mackay and Co., Toronto, have presented a claim on the city for \$42,546.50, including a personal fee of \$37,500, and also fees for counsels' opinions. City Counsel Geary has given his opinion that the city is not liable, claiming that Mr. Mackay was not legally retained. In addition to the foregoing amount, expenditures during the period negotiations were in progress, total \$25,123.44, including Bion J. Arnold \$10,744.49; J. W. Moyes \$2,200; W. A. Ross and Co. \$6,948.95; D. E. Thomson, K. C. \$5,200, and miscellaneous \$30.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—The Brantford City Council is operating the Brantford St. Ry. and the Grand Valley Ry., the latter of which extends from Brantford to Galt, Ont., under the title of the Brantford Municipal Ry. For legal purposes, the old titles are not affected. The official inauguration of the lines under municipal ownership was celebrated Dec. 18, when the Commissioners gave the Mayor and a large number of guests a trip and entertained them at luncheon. Hydro Electric Power Commission's power is used on the Galt section of the line, and over the Paris section from Jan. 1. In Brantford, power is secured from the Dominion Power and Transmission Co. Hydro Electric Commission's power. (Jan., pg. 28.)

**British Columbia Electric Ry.**—During 1914, the company expended about \$90,000 on laying down permanent tracks, principally on Fort St. and Pandora Ave., Victoria, B.C., and \$12,000 was expended on the betterment of other tracks in the city.

During 1914, the company laid 7.83 miles of permanent track in Vancouver and suburbs, to replace temporary tracks, all the work having been done in connection with the city's street paving operations. In Victoria, in addition to 1.05 miles of ordinary reconstruction work, the company replaced 2.49 miles of temporary tracks with permanent ones. New lines were built as follows:—Vancouver and suburbs, 2.13 miles; New Westminster and suburbs, 0.50 mile; Victoria and suburbs, 1.29 miles; interurban lines, 5.14 miles; total, 9.06 miles. The single track mileage of the company's lines at Dec. 31, 1914, was:—

	Miles.
Vancouver and suburbs .....	97.39
New Westminster and suburbs .....	16.66
Victoria and suburbs .....	41.55
North Vancouver and suburbs .....	11.07
Interurban lines .....	180.38
Total .....	347.05
(Nov. 1914, pg. 516.)	

**Eastern Ontario Electric Ry.**—The Ontario Legislature is being asked to extend the time within which this projected railway from Cornwall to Toronto, and from Ottawa to Brockville, with branches, may be built. The company was incorporated in 1909, with head office at Cobourg, Ont., the provisional directors being E. C. Rendell, Transportation Superintendent, Mobile and Ohio Ry., Mobile, Ala.; Jas. Duncan, President, Litchfield and Madison Ry., Alton, Ill.; W. A. Robinson, New York; C. H. Krause, St. Louis, Mo.; E. J. Krause, St. Louis, Mo.; W. H. Lincoln, Boston, Mass.; G. E. Smith, Boston, Mass. In 1913, an extension of time for construction was granted and the provisional directors changed by striking out all but E. C. Rendell, and G. E. Smith, and substituting the following:—H. Hastings, C. S. Foss, G. T. Taylor, Boston, Mass. The company now desires to substitute the name of L. R. Murdock, Boston, in place of H. Hastings. The notice of application is signed by G. E. Smith, for the company. (Mar., 1913, pg. 141.)

**Guelph Radial Ry.**—We are officially advised that a 1,200 ft. switch has been built on Suffolk St., Guelph, Ont., to connect with the G.T.R. It will not be used for traffic until the spring. (Dec., 1914, pg. 553.)

**Humber Valley Electric Ry.**—The Ontario Legislature is being asked to extend the time for the construction of this projected railway from Dundas St., Lambton Mills, along the west bank of the Humber River to Bloor St., Toronto, crossing to the east bank of the river and continuing to the Lake Shore Road, with branches not to exceed three miles in length. W. N. Ferguson, To-

ronto, solicitor for company. (May, 1913, pg. 235.)

**Hydro Electric Power Commission of Ontario's Projected Railways.**—The question of the building of an electric railway from the Niagara frontier, via Hamilton, to the Georgian Bay is under the Commission's consideration. Controller Morris, Hamilton, is reported to have stated, Jan. 4, that F. A. Gaby, Chief Engineer of the Commission, had shown him plans for a line from Queenston and Dunnville, through Hamilton, to Georgian Bay, and that the surveys had been completed for this and connecting lines from Dunnville to Beamsville, from Queenston to Beamsville, and from Guelph to Toronto; that preliminary surveys had been made on other sections of the district to be served, and that the surveys would be resumed almost immediately. The construction of the line, Mr. Morris said Mr. Gaby informed him, would depend entirely on the action Hamilton was prepared to take.

The hydro electric bylaw was defeated by the ratepayers of Newmarket, Ont., Jan. 3, by 398 to 287 votes. T. H. Lennox, M.L.A., is reported to have said: "Newmarket defeated the Hydro radial bylaw last summer, and this additional reverse would seem to exclude that area from the radial zone." The bylaws voted on at the recent municipal elections were enabling, and money by-laws for the power lines. Representatives of the municipalities which have accepted the radial railway bylaws are expected to meet at an early date to discuss the situation. Newmarket village and Uxbridge township are the only places where the by-laws were defeated last summer.

Arrangements are being made for a meeting at London, Ont., of representatives of the townships interested in the building of an electric railway from London to St. Marys and Exeter, under the Commission. (Dec., 1914, pg. 553.)

**Montreal and Southern Counties Ry.**—The Montreal City Council has decided to grant the company an extension of time for the laying of tracks across McGill St. indefinitely. The agreement called for the starting of work by Jan. 1. It was subsequently found that the Board of Railway Commissioners could not deal with the matter until after that date, and the Montreal Tramways Co. started proceedings to have the agreement set aside, hence the necessity for the postponement of date fixed for starting work. (Dec., 1914, pg. 553.)

**Montreal Tramways Co.**—The Quebec Legislature is being asked by the town of Mount Royal for an extension of time within which it may make arrangements with the M. T. Co. and the Montreal Public Service Corporation for the building of electric railways, etc.

The Montreal Board of Control, Jan. 4, in accordance with a resolution passed Dec. 30, began a systematic study of the M. T. Co.'s franchises, etc., with a view of reaching a definite solution of the whole question. The documents involved include 23 separate franchises, granted by the various municipalities now forming the city of Montreal; numerous engineering and statistical reports; and several suggested plans for settling the matters involved, and they make a volume of over 600 pages. At the discussion on Jan. 9, the City Attorney was directed to give an opinion as to the various franchises, the rights comprised in them, and the legal value of the same, exclusive of the renewal of bylaw 210 and its amendments.

The Board of Control has passed a resolution urging the City Council to arrange for the construction of a tunnel under the La-

chine Canal, near the present Wellington Bridge, and to arrange for the cooperation of the M. T. Co. and the Dominion Government in the work. The tunnel would replace the bridge. The Council, Dec. 11, voted \$1,500 to secure the service of an expert to aid E. R. MacLeod, the city engineer in charge of railway work, to prepare plans. (Dec., 1914, pgs. 554 and 555.)

**Niagara, Welland and Lake Erie Ry.**—Application is being made to the Ontario Legislature for the confirmation of an agreement granting the right to the company to operate a surface street railway in Welland, and the confirmation of a second agreement fixing the assessment of the company's property there at specific sums for five year periods, terminating in 1934. J. F. Gross, Welland, Ont., solicitor for company. (Mar., 1914, pg. 135.)

**Ottawa Electric Ry.**—The franchise for the operation of an electric railway, granted by the village of Hintonburg, Ont., which now forms part of the city of Ottawa, expires May 11. The lines affected by the franchise are those from the west side of Somerset St. bridge, along Holland Ave. as far as the G.T.R. bridge on the way to the Experimental Farm. From Holland Ave. to the city limits westerly, the company's lines are on their own right of way, so are not affected by the agreement. The city proposes to take up the consideration of the matter at once. (Dec., 1914, pg. 553.)

**Pictou County Electric Co.**—We are officially advised that the company has under consideration the building of an extension from Potiers bridge to Pardale, N.S., half a mile. L. T. Flaherty, New Glasgow, N.S., is Manager.

**St. John's, Newfoundland.**—Press reports state that the Reid Newfoundland Co. proposes to build about a mile and a half of additional track during this year. W. D. Reid is President and General Manager, St. John's, Nfld.

**Toronto.**—A proposition has been made by E. A. Wallberg, 11 Adelaide St. E., to the City Council for the construction, at an estimated cost of \$200,000, of an electric railway from Leaside to Merton Ave., North Toronto.

**Toronto Civic Car Lines.**—The estimates on capital expenditure prepared for the Toronto City Council include \$300,000 on account of street railway repairs and \$800,000 on account of the construction of new city owned lines.

At the municipal election, Jan. 1, the ratepayers voted in favor of raising \$105,000 for the building of a civic line from St. Clair Ave. southerly, by way of Lansdowne Ave., to Bloor St. West, to connect two of the car lines operated by the city; also, of raising \$320,000 to build and equip a line in North Toronto, from the C.P.R. tracks at Alcorn Ave., northerly by Mount Pleasant cemetery and Mount Pleasant Road to Randeigh Ave. The ratepayers also voted in favor of the purchase by the city of that portion of the Toronto and York Radial Ry. from Queen St. East, along Kingston Road, to Main St., about 1¾ miles.

The Toronto Lacrosse and Athletic Association and other ratepayers in North Rosedale, are applying to the Ontario Legislature for an act "to compel the city of Toronto to lay down and operate a municipal car line from the south limit of the North Glen Road bridge, Ward 2, along Glen Road to Summerhill Ave., south on McLellan and Scholfield Aves., east on Highlands Ave., and south on Glen Road to the place of commencement; to compel the city to reconstruct the North Glen Road bridge, so as to accommodate a double line of car tracks; and to enable the city to issue debentures for the cost of the car line and the reconstruction of the bridge, without the consent

of the ratepayers, inasmuch as the ratepayers voted before affirmatively for the said car line."

**Toronto Eastern Ry.**—Application is being made to the Dominion Parliament for an extension of time for completing the line authorized to be built from Toronto easterly to Cobourg, Ont., with branches as follows:—From Cobourg or Port Hope northerly to Peterborough; from Scarborough tp. to Markham, Stouffville or Uxbridge; from Oshawa northerly via Lake Scugog to Lindsay; from Oshawa southerly to Lake Ontario. Young and McEvoy, Toronto, solicitors for company. (July, 1914, pg. 356.)

**Toronto Suburban Ry.**—When work ceased for 1914 on the extension to Berlin, track had been laid from near Lambton to mileage 43.50, that is 41.50 miles of steel had been laid. Of this, 15 miles had been ballasted and the poles had been put up on 16 miles. We are officially advised that it is intended to start operations immediately and that it is hoped to have the line in operation to Georgetown by July and to Guelph by October. Power converter stations are to be built at Islington, Georgetown and Guelph.

Plans for the bridge over the Humber River have been prepared. It will have a total length of 502 ft. and will consist of four plate girder spans, resting on three steel towers and two concrete abutments. It will be 12 ft. lower than the C.P.R. double track bridge completed recently. E. T. Wilkie is Chief Engineer. (Nov., 1914, pg. 517.)

**Toronto and York Radial Ry.**—The Ontario Legislature is being asked to extend the time for the building of the various lines and branches authorized, and for power to lay out a double track line on Yonge St., Toronto, from the company's southerly terminus to the north limits of the city, subject to such an agreement with the city of Toronto as shall be approved by the Ontario Railway and Municipal Board. (Sept., 1914, pg. 431.)

**Tramways Limited.**—The agreement between the Edmonton, Alberta, City Council and the company was ratified by the ratepayers, Dec. 14, 1914, the voting being: For the bylaw, 8,849; against, 4,499; majority in favor, 4,350.

The directors are:—A. E. Farncomb, President; H. Stutchbury, S. D. Hogan, G. Creedwell, S. Carson, W. Golley, S. H. Smith.

Local press reports state that the company has already graded several miles from the city limits, and has bought right of way from the landholders along the side of the road allowance. (Jan., pg. 28.)

## Electric Railway Finance, Meetings, Etc.

**British Columbia Electric Ry.**—The percentages payable to Vancouver for 1914 were \$69,503.01, against \$81,166.73 for 1913. The number of passengers carried decreased from 46,731,449 in 1913 to 37,549,575 in 1914.

**British Columbia Electric Ry.** and allied companies.—Gross earnings for November \$648,485; operating expenses, maintenance, etc. \$501,224; net earnings \$147,261, against \$746,152 gross earnings; \$544,508 operating expenses, maintenance, etc.; \$201,644 net earnings, for Nov. 1913. Aggregate gross earnings for five months ended Nov. 30., \$3,324,836; net earnings \$762,931, against \$3,760,507 aggregate gross earnings; \$976,721 net earnings, for same period 1913.

**Cape Breton Electric Co.**—Gross earnings for November, \$30,044.59; operating expenses and taxes \$17,847.12; net earnings \$12,197.47; interest charges \$5,227.58; balance \$6,969.89; bond sinking and improve-

ment funds \$1,373.34; balance for reserves depreciation, etc. \$5,596.55, against \$34,848.93 gross earnings; \$18,080.19 operating expenses and taxes; \$16,768.74 net earnings; \$4,808.33 interest charges; \$11,960.41 balance; \$1,190 bond sinking and improvement funds; \$10,770.41 balance for reserves depreciation, etc., for Nov. 1913. Aggregate gross earnings for 11 months ended Nov. 30., \$321,510.99; net earnings \$130,004.17; interest charges, etc., \$71,540.07; net balance \$59,826.08, against \$343,371.06 aggregate gross earnings; \$150,218.49 net earnings; \$66,896.15 interest charges, etc.; \$83,322.24 net balance for same period 1913.

**Edmonton Radial Ry.**—The financial report for 1914 laid before the Edmonton, Alberta, City Council contains the following:—"The year's operations in the street railway department have added approximately \$220,000 to the accumulated deficit at the beginning of the year of \$504,000. This deficit includes over \$250,000 for depreciation. The total receipts during 1913 were \$632,008.82, and in 1914 \$643,055.53, an increase in passenger and freight receipts of over \$11,000."

**London St. Ry.**—Gross earnings for December, \$33,922.34; expenses \$24,058.86; net earnings \$9,863.48, against \$29,816.72 gross earnings; \$21,330.57 expenses; \$8,486.15 net earnings for Dec. 1913. Aggregate gross earnings for 12 months ended Dec. 31, \$373,184.72; expenses \$265,503.39; net earnings \$107,711.33.

**London and Port Stanley Ry.**—The London (Ont.) City Council, at its inaugural meeting, Jan. 11, made no change in the London Railway Commission, which has charge of the L. & P. S. Ry. The members are Sir Adam Beck, chairman, P. Pocock, M. D. Fraser and W. Spittal.

**Montreal Tramways Co.**—A report presented to the Montreal Board of Control, Jan. 7, claimed that the M.T. Co. was indebted to the city as follows:—Taking up snow in 1912-13, \$20,696.45; in 1913-14, \$95,703.12; company's share of St. Lawrence Boulevard tunnel, \$15,000; percentage on receipts for year ending Oct. 1, 1914, estimated, \$472,511; total, \$603,911.57. The City Treasurer stated that the city was being compelled to pay large sums in interest on account of the company not paying promptly.

E. A. Robert, President, and J. L. Perron, K.C., had a conference with the Board of Control, Jan. 20, to arrange a settlement of all financial matters in dispute between the company and the city.

**Moose Jaw Electric Ry.**—The directors announced, Jan. 7, according to a press dispatch, that owing to the general depression through the west, and the decrease in traffic, they were unable to declare the semi-annual dividend but that the resumption of dividend payments was not far off.

**Saskatoon Municipal Ry.**—The estimates for this year, presented to the Saskatoon, Sask., City Council, Dec. 31, show as estimated receipts, \$136,405, with an expenditure of \$173,405, distributed as follows:—Maintenance of ways and structures, \$5,600; maintenance of equipment, \$10,500; traffic expenses, \$900; conducting transportation, \$95,300; general and miscellaneous, \$7,905; capital charges—interest, sinking fund and depreciation, \$56,200. Estimated deficit, \$36,000.

Receipts for Dec., 1914, \$12,900.75, against \$14,039.58 for Dec., 1913; operating expenses, \$11,925.60; capital charges, \$4,424.10; deficit, \$3,448.95. Total car mileage, 58,781, against 60,133 in Dec., 1913. On the Sutherland line the receipts were \$713.97; operating charges, \$808.55; the capital charges, \$101; deficit, \$195.58; passengers carried, 13,631.

A statement made, Jan. 6, shows the result of the first four days operation of the street cars under the ticket system, as compared with the corresponding four days of Dec., 1914. The number of passengers carried was 31,612, representing \$1,375, against 29,489 passengers and \$1,483 under the cash fare system previously in operation. The \$1,375 mentioned represents the value in cash of the tickets deposited in the fare boxes, and not of the strips of tickets sold.

**Sherbrooke Ry. and Power Co.**—Gross earnings for five months ended Nov. 30, 1914, \$63,065.07; operating expenses \$37,482.45; net earnings \$25,582.62, against \$61,416.54 gross earnings; \$36,812.45 operating expenses; \$24,604.09 net earnings, for same period 1913.

**Toronto Ry., Toronto and York Radial Ry.** and allied companies.—Gross earnings for November \$824,634; operating expenses, maintenance, etc., \$431,109; net earnings; \$393,525, against \$849,279 gross earnings; \$409,973 operating expenses, maintenance, etc.; \$439,306 net earnings, for Nov. 1913. Aggregate gross earnings for 11 months ended Nov. 30, \$9,296,377; net earnings \$4,531,278, against \$8,893,984 aggregate gross earnings; \$4,438,524 net earnings, for same period 1913.

The Toronto Ry.'s gross receipts for December were \$497,424.20, compared with \$523,829.17 in Dec. 1913. The percentage paid to the city for December was \$59,610.68 against \$65,685.99 in Dec. 1913. The aggregate gross receipts for 1913, were \$6,134,912.15 against \$6,049,018.92 for 1913. The city percentage for 1914 was \$953,940.24, an increase of \$39,949.31 over the previous year.

**Winnipeg Electric Ry.**—Gross earnings for November, \$330,398; operating expenses \$206,394; net earnings \$124,004, against \$360,082 gross earnings; \$198,874 operating expenses; \$161,208 net earnings, for Nov. 1913. Aggregate gross earnings for 11 months ended Nov. 30, \$3,732,901; net earnings \$1,547,412, against \$3,698,831 aggregate gross earnings; \$1,658,193 net earnings, for same period 1913.

**Winnipeg Electric Ry.**—An issue of \$1,500,000 of one and two year 6% notes has been placed on the Chicago, Ill., Exchange by W. A. Read & Co. The notes have been issued to pay off the floating indebtedness.

The City Treasurer reported, Jan. 16, that the company's receipts, upon which the city is entitled to 5% amounted during 1914 to \$2,320,538.13, five per cent. on which is \$116,026.90. In addition to this the city is entitled to \$20 for each car operated, and it is estimated that 310 cars will be paid on, making \$6,200, or a total of \$112,226.90; about \$3,000 less than in 1913.

**Brandon Municipal Ry. Wages.**—As stated in Canadian Railway and Marine World for January, the management reduced the car hours from 18 to 17 hours a day and paid motormen 8½ hours each, not allowing for reporting time, which is 10 minutes. As stated, the motormen sent a request to the City Council to be paid for reporting, and also asked 9 hours' pay. We are officially advised that the City Council acceded to the request, and that the line is running 18 hours a day again. Ten minutes is allowed for reporting at the car barn only, and the rate of wages is 30c. an hour. Conductors are not employed, the one-man car system having continued in operation since Feb. 12, 1913.

Centre entrance stepless cars are to be put in operation as trailers on the Detroit United Ry., Detroit, Mich. They will be built of steel, the point of entrance being 14 ins. above rail level with an entrance step of 9 ins.

### Electric Railway Track Laid in 1914.

The following table gives information contained in replies received to Canadian Railway and Marine World's annual circular as to new track laid in 1914. The figures show a total of 80.60 miles against 204.19 in 1913 and 106.56 miles in 1912:—

	Miles.	Miles.
<b>British Columbia Electric Ry.</b>		
Vancouver and suburbs ..	2.13	
New Westminster ..	0.51

### Discussion of the Edmonton Municipal Railway Situation.

A summary of Commissioner Harrison's report to the Edmonton (Alta.) City Council on the Edmonton Radial Ry.'s affairs was given in Canadian Railway and Marine World for Dec., 1914, on pg. 551. The Edmonton Bulletin of Jan. 8 contained a page article by J. Chalmers, a former Commissioner, reviewing the history of the construction and operation of the line from its inception to Sept. 30, 1914.

The first section of the article deals with the earliest attempt made to obtain electric traction in Edmonton in 1893, the next attempt in 1904, when the Tretheway franchise was granted, and the subsequent resolution of the city in 1907 to undertake the construction of the line itself under the charter of the Edmonton Radial Ry. The construction of the various lines, with car barns and equipment, is then traced year by year down to the end of 1913, and for the first nine months of 1914. At that date the city owned 52.6 miles of track, for the construction and equipment of which it had issued bonds for \$3,242,538.33. On a population of 67,000 this represents a track mileage per 1,000 of 0.80 mile, and a cost of \$56,672 a mile of track. The mileage of line owned is distributed as follows:—Permanent double track, 30.9 miles; permanent single track, 1.2 miles; temporary double track, 8.8 miles; temporary single track, 10.4 miles; sidings, 1.3 miles; total, 52.6 miles.

The system has produced a deficit for every year since its opening, but Mr. Chalmers claims that this is not due to the past or the present management, but to too low a fare being charged in proportion to the cost of operation, and to the unwise and unwarranted extensions made at different times. On the first of these points Mr. Chalmers says there is really only a small part which is controllable expenditure. Out of the five cent fare 30.6% goes for capital charges; 34.1% for wages; 15%

for power charges; 12.9% for depreciation, leaving 7.4% for direct controllable charges. On the second point Mr. Chalmers refers to the Vermillion Ave. line, built in opposition to the recommendation of the Commissioner, and since removed; and the building of four extensions, on one of which there is a loss of \$16,000 a year; on another of \$17,000, and on a third the fares are not sufficient to pay for the power used on the route. Then there was the agreement with Strathcona, which when the two cities were amalgamated, called for the building of certain extensions, and necessitated the giving of one fare over the whole area.

Mr. Chalmers puts the total deficit from operation at \$574,000, and against this he places a book charge of \$246,000 for depreciations, which amount has not yet been spent. There has been paid in cash \$166,000 into the sinking fund, which will have a net shortage of \$162,000. The city charter provides the annual deficit may be liquidated in the general rate, and Mr. Chalmers thinks this might very properly have been done. He also points out that the entire cost of the system has been met by the issue of bonds, whereas in a company

### Canadian Electric Railway Association.

**PRESIDENT**—C. B. King, Manager, London Street Railway Co.

**VICE PRESIDENT**—James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Railway Co.

**HONORARY SECRETARY - TREASURER**—Acton Burrows, Managing Director, Canadian Railway and Marine World.

**EXECUTIVE COMMITTEE**—The President, Vice President, Secretary-Treasurer and

E. P. Coleman, General Manager, Dominion Power and Transmission Co.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co.

A. Eastman, General Manager, Windsor, Essex and Lake Shore Rapid Railway Co.

H. M. Hopper, General Manager and Purchasing Agent, St. John Railway Co.

Wilson Phillips, Superintendent, Winnipeg Electric Railway Co.

C. L. Wilson, Assistant Manager, Toronto and York Radial Railway Co.

**ASSISTANT SECRETARY**—Aubrey Acton Burrows, Business Manager, Canadian Railway and Marine World.

**OFFICIAL ORGAN**—Canadian Railway and Marine World, Toronto.

system, the bond issue would have been limited, and considerable common stock issued, upon which no dividends need have been paid for some years. On the other hand, when the bonds are redeemed the city will own the entire line.

In conclusion he deprecates the making of experiments, and expresses the opinion that even with the present weight of capital charges, and high cost of operation, the line can be made to meet operating costs, if further unwise extensions are not made, or other expenditures not called for.

### Equipment for London and Port Stanley Railway.

Contracts are being placed by the London Railway Commission for the electrical equipment outlined in Canadian Railway and Marine World for December and January. The substation equipment, to be supplied by the Canadian Westinghouse Co., consists of the complete equipment for two substations, one in London, at the local hydro electric power house, and the other at St. Thomas, in the Hydro Electric Power

Commission of Ontario's substation. Each plant will have two complete 500 k.w. 1,500 volt sets, with transformers and rotary converters for receiving 13,200 volt a.c. and delivering from the rotary converters at the line voltage of 1,500 volt d.c. This contract will include the switchboards and wiring, complete.

Three 60 ton, 1,500 volt locomotives, all steel construction, as described in our December issue, will be supplied by the Canadian General Electric Co. This company will also supply complete electrical and air equipments with multiple unit control for the six motor cars. These motor cars will each have four 125 h.p. motors with dynamotor control and lighting, and a 1,500 volt air compressor. The electrical and air equipment for the three trailer cars will also be provided by the same firm.

The car equipment will consist of six motor cars and three trailer cars. Five of the motor cars will be 59 ft. 3 compartment all steel cars, as described in our January issue, the bodies for which will be supplied by the Jewett Car Co., Newark, O. For these cars there will be 5 sets of high speed interurban car trucks, to be supplied by the Baldwin Locomotive Works, Philadelphia, Pa. The sixth motor car, also 59 ft. long, will be an express car, and this, with the trailer cars, also of wooden construction, and of the same size, will be supplied complete by the Preston Car and Coach Co.

Latticed steel construction poles, spaced at 180 ft. centres on tangents, are being erected. Catenary suspension is being used, consisting of a 300,000 c.m. supporting cable, carrying a 4/0 grooved trolley wire. The track renewal work, described in Canadian Railway and Marine World for September, is practically completed, with the exception of some of the side tracks and crossings.

### Among the Express Companies.

F. Deno, heretofore route agent, Dominion Ex. Co., has been transferred to the Superintendent's office at Winnipeg.

T. H. McGarrell, heretofore route agent, has been appointed Agent, Dominion Ex. Co., North Bay, Ont., vice H. H. Carr, transferred.

W. A. Gibson, heretofore Assistant Foreign Agent, American Ex. Co., Vancouver, B.C., has been appointed Foreign Agent, Winnipeg, Man., vice G. Mitchell, resigned.

C. N. Spooner, heretofore Assistant Superintendent, Western Division, Dominion Ex. Co., has been appointed route agent at Moose Jaw, Sask., and his former position has been abolished.

The Canadian Ex. Co.'s earnings, etc., for Aug., 1914, were as follows:—Charges for transportation, \$610,098; express privileges, \$310,850; total transportation revenue, \$299,228; non transportation revenue, \$10,636; total operating revenue, \$309,864; total operating expense, \$282,815; net operating revenue, \$27,049; taxes, \$8,000; operating income, \$19,049, against \$598,397 charges for transportation; \$284,113 express privileges; \$314,283 total transportation revenue; \$18,868 non transportation revenue; \$333,152 total operating revenue; \$291,664 total operating expense; \$41,488 net operating revenue; \$5,600 taxes; \$35,888 operating income for Aug., 1913.

The Beck Manufacturing Co., Ltd., has been incorporated under the Dominion Companies Act, with \$400,000 capital, and office at London, Ont., to take over the various businesses carried on there by Sir Adam Beck and the Beck Manufacturing Co., and in connection therewith to build, own and operate vessels, wharves, docks, tramways, railway sidings, etc.

# Marine Department

## Construction and Classification of Great Lakes Vessels.

Jos. R. Oldham writes Canadian Railway and Marine World, from Cleveland, Ohio, as follows:—Referring to the interesting correspondence in your excellent journal re construction and classification of Great Lakes vessels. As the author of the Great Lakes Register of Shipping, copyrighted by me in 1893, and the inventor of the modern type of arched girder vessels, patterned in 1902, possibly you will favor me with a little space to endeavor to throw some degree of light on this subject.

Lloyds' Register had no connection with the original design or construction of these vessels. Indeed, I unhesitatingly aver that no iron bulk cargo vessel had ever been classed, or even constructed, without hold beams or pillars, prior to the advent of the modern bulk cargo vessel about 11 years ago. I may go further and state that these ships are of purely American, even of local, design.

The longitudinal frame construction system tends to produce a strong ship, and possibly with economy of material, in vessels having two or more continuous decks, when supported by strong transverse bulkheads, spaced less than one and one half times the breadth of the hull apart. But for large bulk cargo ships, which have their deck cut away for more than 60% of the moulded breadth, to provide suitable hatchways for the Great Lakes trade, the absence of continuous vertical side framing, in metallic contact with the shell plating, appears to more than counterbalance the increase of longitudinal strength due to the disposal of more continuous material longitudinally, between the transverse bulkheads.

While numerous transverse bulkheads, having continuous metallic contact with the shell, may supply transverse strength to the hull, they, at the same time, destroy the continuity of the longitudinal framing, and though systematic bracketing, coupled with strong riveting, may produce efficiency, in combination with two or more decks, not abnormally cut away to provide large hatchways, no system of bracketing the abutment of frames on the bulkheads can give the same, or equal symmetrical longitudinal stiffening, to that provided by continuous stringer plates and bars. Moreover, bracket plates, with their riveting subject to tensional stress, cannot be compared with double strapped plates having rivets in double shear. As regards the transverses between the bulkheads, a notched plate, say as per accompanying fig. 1, while almost worthless to resist the vertical component of the transverse stresses, is about equally weak for resisting compression, though such notches are well adapted for resting the longitudinals on during fabrication. This, indeed, would seem to be the function par excellence of the notched transverses. An unnotched transverse plate, while not adapted to hold a frame in place during framing, as per fig. 2, does supply perfect support to the side plating in proportion to its sectional area.

Over the bottoms of lake vessels close spaced longitudinal frames are superfluous, as there is a redundancy of longitudinal strength provided by the deep plate girders between the lower and the heavy upper bottom. The deck stringer plates seem to require the assistance of strong longitudinal girders along their inner edges, as, notwithstanding their great strength, such

plates have frequently proved unequal to the work required of them. Possibly such girders as per fig. 3 would supply the requisite strength to these decks, while at the same time raising the hatches, though not beyond an impracticable height, say 22 ins. above the deck.

As regards general structural strength and weight, the longitudinal system does not appear to warrant the slightest reduction, to say the least, but such reductions as have been allowed appear to be due to the unprecedentedly favorable support accorded by Lloyds' Register to a novel system of construction, rather than to merit or structural design. This prompt and zealous approval of longitudinal construction is in marked contrast to the reception accorded to McIntyre's most excellent proposal to cut the transverse frames at the bilge and fit longi-

tudinal plates and bars, extending continuously through the bulkheads. This system only received the tardy approval of that most conservative classification association after many years had foolishly been spent to secure proper classification for vessels so constructed.

Lloyds' Register may be justified in recommending longitudinal construction for certain types of salt water vessels, provided they do not sanction such light framing as has been experimented with here. They have, however, no warrant, nor experimental illustration, to show that such construction, at least en masse, is safely applicable to the construction of Great Lakes vessels.

Two 1200 h. p. Diesel engines have been installed in two ocean-going torpedo-boat destroyers which will be launched before long on the Clyde in Scotland, for the Japanese Government. These engines will be used on cruises only, as the use of oil permits a great saving of fuel. In addition the ships have twin steam turbines, each of 1200 h. p. capacity.

## The Passage of Steamships Through the Panama Canal.

Vessels using the Panama Canal are towed through the locks, and do not pass through under their own steam. Ordinarily, six electric locomotives are used, two forward for towing and steadying the vessel in the lock chambers, two amidships for towing and afterwards checking the vessel's headway, and two aft for steadying her and checking headway. The average rise and fall in each lock is about 30 ft., so that when a vessel is at its lowest level the lead through the chocks to the locomotives on the lock walls is often very sharp, and unless the chocks are closed the line will have a tendency to slip out and damage the rail and other light construction in the vicinity. Experience has demonstrated the fact that most of the chocks and bitts are too light in construction, and that the chocks in particular should not only be made heavier and stronger so that their jaws may stand a vertical strain, but that they should be of a permanently closed character, and not be made with open jaws. In cases where open jawed chocks are installed, they should at once be replaced with closed ones, or be fitted with an appliance for closing them, taking care that the appliance itself will stand a heavy vertical strain in case the line slips from under the jaws.

With some minor modifications there are three general designs of chocks usually installed on ocean-going steamships, viz.—heavy cast iron open jawed, secured on deck or to the upper edge of the side plating; the same, but with rollers in each end, and oval closed chocks let into the side plating for leads to covered and well decks. The last mentioned give very satisfactory results, but the first two are liable to cause damage from the change both in the vertical and horizontal lead of the line, due to change in the level of the water, and the angle from the locomotives when shifting from a towing to a retarding position, or vice versa, and these should be replaced. In many cases the bitts have been found to be too light in construction, or poorly secured. They should be sufficiently strong to withstand the strain of a wire line 1½ ins. diam., with a pull of 50,000 lbs., and be firmly rivetted to the deck, and if necessary where the deck is of wood or light plating, they should have an under deck plate, or be secured between two deck frames. It has been noted that some vessels have light iron cleats rivetted to the inside of the side plating or to the deck plates in lieu of bitts. This is very unsatisfactory, as almost invariably they will not stand the strain owing to their light construction, or insecure fastening. They should be replaced by bitts.

In the installation of chocks and bitts for Panama Canal towing, attention should be given to placing the several sets in convenient and accessible places, and that in each set there should be but a short distance between the chock and its accompanying bitts. In some cases suitable bitts have been installed, but there were no convenient or accessible chocks, hence the bight of the tow rope has a tendency to slip off the bitts, and if the lead be under the rail, endangers carrying it away. In such cases chocks should be installed at once. While the Panama Canal assumes the liability for any damage to vessels during lockage, for which it may be responsible, yet it will not do so when vessels are not fitted with

proper appliances for canal towing, and where damage may result in consequence thereof, some steps should be taken immediately to remedy any defects. A vessel which presents herself for transit through the canal, which has complied with these recommendations, and which is thoroughly and strongly so equipped for towing, will not only have her passage through the several locks greatly facilitated, but will avoid the annoyance and expense due to possible damage to chocks, bitts, rail and other light equipment, for which the Panama Canal will not assume responsibility. The canal pilot will always examine each vessel's towing appliances before she enters the locks, and will not only call attention to any defects, but will gladly offer advice and suggestions toward remedying any that may be found, and at the same time will furnish the master or captain with a brief notice in reference to such alterations as in his opinion should be made before the vessel next passes the canal.

### The Kenora-Robert R. Rhodes Collision.

The investigation into the collision between the Canada Steamship Lines s.s. Kenora and F. E. Hall & Co.'s s.s. Robert R. Rhodes, near Archibald Shoal, in the St. Lawrence River, Aug. 4, was concluded recently before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Captains F. Nash and J. McGrath, as nautical assessors. After a considerable amount of evidence had been taken the court adjourned, and on reassembling it was found that the witnesses on behalf of the Kenora were not present, due to the fact that the vessel had been ordered away on the night previous. King, counsel for Canada Steamship Lines, Ltd., owners of the vessel, expressed to the court his surprise at such action by some official of the company without consulting him, and stated that he felt his position keenly, and wished to assure the court that he was not a party to such contempt of court as had been shown. The court, after carefully weighing the evidence which it had gathered, notwithstanding the fact that some of the witnesses had not testified, considered that it had sufficient data to arrive at a decision. The judgment read that the exchange of whistles prior to the actual collision were contradictory, but notwithstanding the lack of corroboration on one side or the other, the fact remained that the faster vessel, the Kenora, was also the overtaking vessel, and therefore it was the master's duty to keep clear of the other, and by passing her so close was a dangerous and reckless manoeuvre, as the displacement wave created by her passage could have no other result than to neutralize the steering power of the Robert R. Rhodes, as well as drawing her to the Kenora, which actually happened. As to the damage suffered by the Robert R. Rhodes, the court did not think it necessary to refer to it in this judgment, as it had only to judge as to the causes responsible for the accident. The court severely reprimanded both the master, William Brian, and the pilot, D. Charland, of the Kenora, as by their manoeuvres they invited disaster. As the Kenora did not collide with the Robert R. Rhodes, the certificate of the master of the Kenora was not dealt with, but he was cautioned to be more careful in future. The court found that the Robert R. Rhodes did not contribute to the casualty, and exonerated the master and officers of all blame.

**War Insurance.**—A recent official dispatch from the British Government, announced that the insurance rate for cargo under the Government war risks insurance scheme had been reduced from 2 to 1½ per cent.

### A Dominion Government Icebreaker for Russian Service.

The Dominion Government icebreaking steamship Earl Grey, which is illustrated on this page, was sold recently to the Russian Government, and has been utilized in the White Sea, more especially to keep the port of Archangel open to as late a date as possible. She arrived at Archangel, Oct. 23, after a remarkably good run. She has been renamed Canada by the Russian Government. She was built in 1909 by Vickers, Son and Maxim, Barrow in Furness, Eng., and is of the following dimensions,—length overall 279½ ft., length between perpendiculars 250 ft., breadth moulded 47½ ft., depth moulded 26½ ft., draught normal 17 ft. 7 ins., displacement 3,400 tons, i.h.p. 6,000, speed 18 knots. The hull is subdivided into numerous water tight compartments and the doors of the principal compartments are so built that they can be closed simultaneously from the navigating bridge. A water tight bunker bulkhead extends on each side of the vessel throughout the length of the boiler rooms, and a double

usual, and the whole of it, as was also the hull, was built to the requirements of the British Board of Trade, Lloyd's Registry of Shipping, and the Canadian Steamboat Inspection Act.

While in Canada, the Earl Grey was used in the winter service between Prince Edward Island and New Brunswick, for which she was specially built. The contract price for the construction, equipment and delivery of the vessel was £103,000.

The service to Prince Edward Island is being maintained during this winter by the Dominion Government steamships Minto and Stanley, both of which are efficient icebreakers, and no difficulty in maintaining regular communication is anticipated.

The icebreaking steamship J. T. Horne, which has also been acquired by the Russian Government, as announced in a recent issue, was expected to sail from Canada for Archangel during January.

A dispatch from Archangel, dated Jan. 21, stated that the icebreaker had been disabled, and that a number of vessels had been frozen in, with little likelihood of their being released before the general breakup of the ice.

Icebreaking Steamship Earl Grey, sold to the Russian Government.

bottom is fitted for almost the entire length of the vessel. The frames are very closely spaced to take up the thrust of the pack ice. The shell plating is thicker than usual and the outer skin is doubled along the water line right fore and aft and to the bottom of the keel in the forebody, where the friction of ice tends to wear away the material faster than in ordinary marine service. The procedure is to drive the vessel forward until the forebody glides on to the floe sufficiently to cause the vessel's weight to crush the ice. In order that the weight may be increased at will, large tanks are built into the structure, and the pumps for filling and emptying these tanks deal with 250 tons an hour. The vessel is also equipped for breaking ice when going astern, and the counter is suitably strengthened to resist shocks. The rudder takes the form of the vessel, so that the vessel's movements are in no way impeded by ice floes. The propelling machinery consists of engines of the triple expansion three crank type with cylinders 27½, 43 and 70 ins. diam. by 39 ins. stroke, supplied with steam at 180 lbs. by four boilers of the cylindrical type 15 ft. diam., two of which are double ended and 21 ft. long, and two single ended 11 ft. long, with suspension furnaces and equipped with forced draught. All the machinery, and the propeller blades are of considerably greater strength than is

### Shipping of War Office Supplies, Etc., From Canada.

When on the declaration of war the Dominion Government was asked by the Imperial Government to supervise the purchase and transport of commissariat supplies which Canada could provide for the expeditionary force in Europe, the Hon. R. Rogers, Minister of Public Works, was selected to take charge of the work. Among others, he consulted Sir Thos. Shaughnessy, who placed at his disposal, without cost to the Government, the services of A. H. Harris, Special Traffic Representative of the C. P. R., together with such of the company's staff as Mr. Harris might select, this staff eventually numbering nearly 20 picked men, and as a result a large tonnage has been moved to the seaboard and thence to French ports of call.

The value of expert handling was demonstrated by the prompt chartering of vessels on a minimum charter rate, enabling the administration to maintain an average freight on oats during the past three months of 25 cts. per hundred lbs., and \$7.50 a gross ton on hay. Although, owing to the scarcity of tonnage, freight rates have risen rapidly since September, five vessels cleared from Montreal for a French port the latter part of November, the charter parties averaging

28c. per 100 lbs. on oats and \$8 on hay, a saving of close on 50 per cent. on current commercial rates. The C. P. R. made no charge for use of its docks by the chartered vessels and has warehoused everything free—being helped in this by the Allan Line, which also placed portions of its sheds at the Government's disposal. Over 600,000 sacks have been stored in and passed through C. P. R. sheds, and in addition, vast quantities of sacked oats were piled in the upper sections of the C. P. R. dock warehouses and subsequently loaded into chartered vessels consigned to French ports of call. The Ontario, Manitoba and Alberta Governments received the same treatment in connection with the forwarding of their gifts.

The shipments handled by this Administration under Mr. Harris' supervision from Sept. 1 to Nov. 30, including flour, War Office supplies, and French army blankets, total 120,000 tons of freight, free of storage, dockage, or steamship demurrage charges. The rapidity with which supplies went forward was shown in a cable from England to "go slow," as they were arriving too fast to be properly handled. A record has been established which it will take a long time to beat, and those concerned have come in for well merited congratulation.

The season of St. Lawrence navigation being closed, War Office supplies are being forwarded during the winter via Maritime province ports under Mr. Harris' supervision.

### St. Lawrence and Chicago Steam Navigation Company's Annual Report.

Following is the 24th annual report issued over the signatures of W. D. Matthews, President, and A. A. Wright, Managing Director:—

"The season of 1914 was one of the most unprofitable to vessel interests in the history of the Great Lakes. The disorganization of business brought about by the greatest war in the world's history and consequent uncertainties as to its effect, along with local causes, cutrailed the movement of heavy freight like coal, ore and lumber to such an extent that so many vessels were thrown into the grain carrying trade that during a great part of the season rates were forced below the cost of transportation. We look forward, however, to a gradual improvement in lake business during 1915, and, with an average crop next fall in Canada and the United States, earnings should be materially increased.

"Our new steamer, the J. H. G. Hagarty, was delivered to us in Aug., 1914, and is fully up to expectations in every way and should increase the earnings very materially. We are pleased to state that the company's steamers had no accidents during the season worth mentioning, and the balance at credit of our insurance fund has been increased \$9,000 after taking care of the expenditure of a considerable sum, strengthening the deck houses and hatches on our old steamers, and we feel that our fleet is now among the best and most seaworthy on the lakes.

"The directors from the earnings of the season have paid a dividend of 3%, amounting to \$28,992, and carried forward the balance, \$9,018.98, to credit of profit and loss, which added to the previous balance, makes a total of \$231,169.55 at credit of that account."

#### ASSETS.

Five steamers: Iroquois, W. D. Matthews, G. R. Crowe, E. B. Osler, and J. H. G. Hagarty ..... \$1,310,000 00  
Cash in bank and office ..... 8,299 25

\$1,318,299 25

#### LIABILITIES.

Capital stock, fully paid .....\$ 966,400 60

The directors, who were re-elected for the current year, are:—President, W. D. Matthews; Vice President and Secretary, J. H. G. Hagarty; Managing Director, A. A. Wright; other directors, Jas. Carruthers, Capt. S. Crangle, G. R. Crowe, C. S. Gzowski and Sir Edmund Osler.

### Stranding of the s.s. Navarra.

The formal investigation into the stranding of the s. s. Navarra, near Holmes Island, N. S., Dec. 30, 1914, was held at Yarmouth, N. S., Jan. 7 and 8, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. B. R. Hilton and J. W. Anderson, as nautical assessors. The Navarra is owned by Donald and Taylor, Glasgow, Scotland, and was under charter to the Admiralty for carrying supplies to the allied troops in France. She was built in 1909, and is a steel vessel of 4,387 tons gross and 3,847 tons register. She sailed from St. John, N. B., Dec. 29 for Havre, France, and struck in the early morning of Dec. 30.

After reviewing the evidence, the court condemned the methods followed by both the master and second mate, as well as the mate, in navigating the vessel. The judgment was as follows.—First of all the master sails from St. John with an old chart of 1890, upon which there are very few buoys marked; thereupon he sets a course without, as he acknowledged, making any allowance for the influence of tides, but plotted the course on his charts in a similar manner as if he were navigating a vessel in mid ocean. The court admits the evidence having regard to his being on deck off and on until 11 o'clock. The weather at the time did not require his constant presence on the bridge, but according to the log and the evidence submitted, up to 12 o'clock the weather was very hazy or thick on account of the heavy rain, and therefore it was the ordinary prudence required of a master, especially one who is a stranger to this locality and to the Bay of Fundy. The court cannot accept the courses nor the positions he has given, as possible. On the other hand, admitting such to be the case, the course laid down to pass Seal Island was absolutely too fine for safety, as in all probability this vessel would have brought up on Blonde Rock instead of stranding where she did, and would likely have entailed loss of life as well as loss of property. The court has examined the deviation book and finds that at intervals observations were made to ascertain the error of the compass, but did not find that any observation had been taken from the time the vessel left Jamaica until she got to Halifax and back to St. John. On account of the weather and the overcast sky the day she left St. John it was impossible to obtain an observation, but on the whole it would appear that the compass was very nearly correct, with very little error on most courses, the greatest error being 6 degrees, which was not on the course that was being steered at the time of the stranding. As for the

second officer who was on the bridge from 8 to 12, in view of the conditions of the weather, the court is of opinion that from 11 to 12, there was a total disregard of the rules of the road, also of ordinary prudence which is demanded in navigating a vessel in this locality. The fact of seeing a light on his port bow, which he took as Great Yarmouth light, and not ascertaining the position of his vessel by looking at the chart and taking soundings, and wondering if it was possible in view of the distance intervening and the time elapsing between leaving Lurcher light, as he supposed, for his vessel to be there, and to have hauled his vessel out until the exact position could be found. If ordinary precautions had been taken there is not the least doubt that the vessel would be safely out to sea at the present time. Taking into consideration the direction from the Lurcher lightship to the place where the vessel stranded, with her speed and the time which elapsed, it is an impossibility for the vessel to have fetched into that place, that is, following the courses and positions given by the master and the second mate. With regard to the first officer, who came on deck at 12 o'clock, and who was on duty when the vessel stranded, if, as he stated, objects could be seen some two miles distant, a poor lookout must have been kept by himself and the man who was performing that duty, for them not to have observed a lull, or something which would have caused some uneasiness in their minds as to the location of the vessel. There was also a lack of judgment and indifference shown when he came on deck and accepted the second officer's course as leading to Seal Island, when had he plotted the course down by the bearing which had already been taken, he would have found that the course would have brought them on the Blonde Rocks, and in view of the condition of the weather, he likewise should have diminished the speed of the vessel, and observed the rule of the road with regard to fog signals. Therefore the court cannot come to any other conclusion than that there has been shown on the part of the master, first and second officers, a great amount of negligence in navigating the vessel, or it may explain their conduct as culpable errors of judgment, and it agrees that in view of the trust that had been placed in these men on this special occasion, when the vessel was loaded with provisions and material much needed by the allied armies in France, it was their duty as Britishers, if loyal, to take exceptional precautions, more than ordinary precautions, to bring this property safely to its destination. This is a case where the court will be justified in using great severity in its finding, but in view of the conflicting justice with mercy, and for the reasons enumerated, suspend the certificate, no. 026201, of the master, Robert Milliken, for 10 months from Jan. 8; the mate's certificate, no. 003,791, of the second officer, A. G. Alexander, for 6 months from Jan. 8, and the master's certificate, no. 025,230, of the chief officer, W. S. Miller, for 3 months from Jan. 8, without the option, in any case, of lower certificates being granted.

An order in council has been passed at Ottawa approving regulations for the prevention of the giving out of information calculated directly or indirectly to be useful to the enemy, covering the movements and disposition of vessels and war supplies, the photographing or sketching of any docks or harbors, or other marine facilities, including buoys, beacons, etc., the use of telegraph lines, telephones and wireless telegraph installations, damages to railway bridges and other transportation facilities.

## Changes in Bills of Lading Re Grain Overages and Shortages.

At a meeting in Detroit, Mich., on Jan. 6, Great Lakes vessel owners brought to a successful issue the fight they have been waging with the grain shippers of Canada and the United States for several years in the effort to secure relief from liability for shortage in the outturn of cargo. The bill of lading has heretofore thrown upon the vessels the full responsibility. The vessel owner got the benefit of any overrun in the outturn of his cargo, but, on the other hand, the actual cash value of any shortage was deducted from his earned freight. This "cut throat" clause in the bill of lading, as it was called, left the vessel owner ignorant of whether any particular cargo would show a loss or a profit.

In Sept., 1914, the vessel owners of both countries met at Buffalo, and agreed to refuse to carry in 1915 except upon new conditions which would throw the gambling chance upon the shipper, whose agent, the elevator weighs the grain. A conference with shippers in Nov., 1914, was adjourned until Jan. 6, at Detroit, and the firm fight of the vessel owner for the basic principle that the shipper, in this case, must take the risks, resulted in a fair compromise shown by a new clause to be inserted in the bill of lading.

The committees of the three associations of carriers, viz., The Dominion Marine Association, The Lake Carriers' Association and The Association of Lake Lines of Buffalo met in Detroit, Jan. 5, to prepare for the conference on the following day and simply decided to adhere to the position previously taken and to insist that vessel owners would no longer carry the risk of discrepancy in the loading and outturn weights. They appointed Francis King, of Kingston, the Dominion Marine Association's Counsel, to state their case to the conference on the 6th. The representatives of the shippers also held a preliminary meeting on the 5th to arrange their programme. The parties came together on the 6th and at this conference all the leading grain exchanges and boards of trade at shipping points in both countries interested in any way in the lake grain trade were represented, prominent among these being Winnipeg, Montreal, Toronto, Chicago, Duluth, Minneapolis, Buffalo, New York, Baltimore and other inland and seaboard ports. Individual shippers and elevator owners also appeared. The vessel owners were represented on the Canadian side by L. L. Henderson, President Dominion Marine Association, and A. E. Mathews, A. A. Wright, G. E. Fair and H. W. Cowan, of Toronto, and F. King, of Kingston. The Lake Carriers' Association was represented by its President, W. Livingstone, its General Counsel, H. D. Goulder, the chairman of its committee on the bill of lading, A. W. Thomson, and W. H. McGean, H. K. Oakes and A. E. R. Schneider. The Association of Lake Lines was represented by C. M. Heald, W. H. Smith, of Montreal, and J. Rogers, of Buffalo.

An exhaustive discussion took up most of the day and a happy conclusion was ultimately reached by the appointment of a small joint committee of shippers and carriers, who retired, and in a short time reported a solution whereby the shipper would underake the risk in outturn in consideration of the carrier allowing a fixed deduction of one-quarter bushel per thousand as tare. A committee of shippers is working on a scheme to carry the shortages and overages by insurance, or otherwise, and they will consult with a committee of the carriers. The carriers in the meantime have agreed to make charters, or issue bills

of lading, only upon the conditions set out in the new clause given below, which is to form part of every contract and supersede the old "cut throat" or gambling shortage clause in the bill of lading.

The vessel owners proposed to insert the following clause in the bill of lading:—

"Provided that the vessel shall not be responsible for shortage exceeding  $\frac{1}{4}$  bush. per thousand; the vessel to deliver all grain on board collect freight upon actual turn-out, and make no claim for any over-run; and that where grain is carried at the same time for more than one shipper the shortage, if any, shall be ascertained separately with respect to the grain carried for each of such shippers; save that where two or more of such shipments are carried in the same compartment of the vessel, the shortage, if any, resulting upon unloading the last of such shipments, over and above the  $\frac{1}{4}$  bush. per thousand on the total amount shipped in that compartment, shall be borne pro rata by such shipments."

At the conference with the grain shippers the following compromise clause was agreed on:—

"The vessel shall make no claim for any over-run in the out-turn of cargo, and assumes no responsibility for shortage, but shall allow a fixed amount of  $\frac{1}{4}$  bush. per thousand as tare, to be deducted from the freight. All grain on board is to be delivered and freight is to be collected upon actual out-turn. Where two or more shipments are carried in the same compartment of the vessel, the shortage, if any, resulting upon unloading the last of these, shall be borne pro rata by the shippers."

Notwithstanding the understanding arrived at at the Detroit meeting between the vessel owners and the grain shippers, C. B. Watts, of Toronto, appeared before the Dominion Grain Convention in Toronto on Jan. 13 and objected to the new clause which is to be inserted in bills of lading. F. King, Counsel, Dominion Marine Association, spoke in support of the clause, and others taking part in the discussion were A. A. Wright, Managing Director, St. Lawrence and Chicago Steam Navigation Co., also counsel for the Canada Steamship Lines, Ltd., Canadian Pacific Ry., the terminal elevator owners and the Dominion Government elevators. It was decided by the Commission that the application would have to be made in writing, and the Commission would then consider the request, and if it thought it advisable to do so, would recommend the Government to amend the Grain Act.

The following clause in the bills of lading heretofore in use is to be eliminated:—"All deficiency in cargo to be paid by the carrier, and deducted from the freight and any excess in the cargo to be paid for to the carrier by the consignee."

### Disposal of Captured Foreign Vessels.—

It is announced that the British Admiralty is offering for sale, to British subjects only, a number of steamships captured at various times during the war from foreign belligerents. With the object of getting a number of these vessels into service, with a view to relieving the shipping situation, exceptional terms of payment are being arranged. If the purchasers desire, payment may be made 25% in cash and the balance in three annual payments, the first being due one year from the date of purchase, with interest at 4%. Any purchaser will be required to give a bond with sureties, to the effect that none of the vessels will be resold to enemies or foreigners for a certain period after the termination of the war, and declarations will also have to be given that no enemy or corporate body consisting principally of enemies or foreigners are in any way interested in the purchase. Prize sailing vessels may be purchased by neutral foreigners on guarantee that they will not be resold to enemies of Great Britain, but the steamships are to be sold only to British subjects.

## Great Lakes Charts Placed Under Dominion Control.

The Department of Naval Service at Ottawa has received from the British Admiralty all the copper plates used for publishing the Admiralty edition of the charts of the Great Lakes, with an intimation that the Lords Commissioners think that the Canadian Hydrographic Office is in a better position than the British one to look after keeping the charts up to date. Owing to the fact that all these charts were engraved in England there has always been considerable difficulty and delay in keeping them properly corrected, but in future this will be more closely attended to in this country. About 50 copper plates valued at \$20,000 have been received and it is hoped that most of these will be reprinted in the early summer.

The first surveys on the Great Lakes, with any pretence to accuracy, were made by Admirals Bayfield and Owen about 1820, and until 1883 these were the only charts in existence of the Canadian shores. They delineated the shore line and islands with remarkable accuracy considering the times, but shoals and soundings were conspicuous by their absence. In 1883, as a result of the loss of the steamboat Asia, S. J. Dawson, then M. P. for Algoma, prevailed upon the Government to undertake a proper hydrographic survey of the Great Lakes and this has been continued ever since, with the result that Lakes Ontario, Erie, Huron and Georgian Bay have been completed, and work on Lake Superior is about half finished. Between 1883 and 1910 only one steamboat was employed in this work, the old Bayfield, which was succeeded by the new Bayfield, but in 1911 the Department placed an additional steamboat on Lake Ontario.

**Skagway Wharf Burned.**—The complete destruction by fire of the 1000-ft. wharf at Skagway, Alaska, was reported by wireless early in January. The loss is estimated at \$210,000, of which \$60,000 represents the value of the wharf; the warehouse and its contents accounting for the remainder. With the exception of the ore and bunker chutes all the structures on the wharf were gutted by the fire. The destruction of the wharf will cause great inconvenience to shipping, it is reported, as the wharf was used for handling all the freight transhipped at this port for the interior over the White Pass and Yukon Route. The wharf will be rebuilt, it is reported, but during its reconstruction shipping will be obliged to use an old wharf abandoned several years ago.

**C.P.R. Vessel Building.**—Press dispatches from Great Britain, which stated recently that the C.P.R. had acquired five additional steamships, all of which were on the stocks at various yards in the United Kingdom, were misleading. The impression conveyed was that the C.P.R. was about to add five more vessels to its fleet, than had previously been announced. The facts are that no additional vessels have been ordered. The s.s. Metagama, a sister vessel to the Mis-sanabie, will soon be in service; two Pacific Coast vessels, Princess Margaret and Princess Irene, just completed, have been requisitioned by the Admiralty, and two one-class cabin steamships to be named Melita and Medora are being built at Glasgow. All of these have been referred to previously in Canadian Railway and Marine World.

**M. Cussen, Assistant Comptroller, Canada Steamship Lines, Ltd., Montreal, writes:—**"I beg to enclose my renewal subscription to Canadian Railway and Marine World, and assure you that I always look forward to receiving each copy."

## Mainly About Marine People.

**A. A. Allan**, of the Allan Line Steamship Co., Montreal, has been appointed an honorary colonel.

**F. Gilchrist**, formerly of Port Colborne, Ont., has been appointed Manager of the New Ontario Dock Co. at Sault Ste. Marie, Ont, vice S. L. Penhorwood, resigned.

Miss Frances Hazen, second daughter of **Hon. J. D. Hazen**, Minister of Marine, was married at St. John, N.B., Jan. 1, to Major T. M. McAvity, 26th Battalion.

**G. W. C. Hensley**, of Pickford and Black, Ltd., Halifax, N. S., has been elected President of the Halifax Board of Trade, for this year.

**W. B. McAllister**, heretofore Passenger Agent, Allan Line Steamship Co., Boston, Mass., has been appointed Assistant Manager there, vice F. D. Lilley retired.

**F. D. Lilley**, Assistant Manager, Allan Line Steamship Co., Boston, Mass., has retired after 33 years service with the company. For the past 15 years he was located at Boston, prior to which he was at Montreal.

**E. J. Guthrie** has been appointed Superintendent in charge of the operation of the Central Vermont Transportation Co.'s steamers operating between New London, Conn., and New York, N.Y., with office at New London, Conn.

**John Fleetwood**, who retired recently from the position of Passenger Traffic Manager of the White Star-Dominion Line at Liverpool, Eng., was given a present by the local staff, Jan. 8, in recognition of his 40 years service.

**J. J. Phelan**, formerly Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, has been appointed Assistant Mechanical Superintendent, Montreal, not Assistant to Mechanical Superintendent, as stated in our January issue.

**Albert Ballin**, Director General, Hamburg American Steamship Co., has, it is stated, at the request of Emperor William, taken over the management of Germany's entire railway system and the work of delivering food supplies to the German army.

**Capt. James Carney**, and **Alex. McDonald**, master and chief engineer, respectively, of the C. P. R. car ferry Ontario, on the Detroit River, have retired from active service, after having served the company since the Ontario was first placed in service 25 years ago.

**W. C. Donaldson**, one of the Managing Directors of the Donaldson Line, died in Great Britain, Dec. 30, aged 45. He was one of the sons of the founder of the line, and was well known in Canada, where he made frequent trips in connection with the company's business.

**Calvin Austin**, President, Eastern Steamship Corporation, Boston, Mass., has been appointed receiver of the corporation, with office at Boston. In addition to other coast-wise services, the company has operated one between Boston and St. John, N.B., for several years.

**Capt. C. Troop**, who retired recently from the position of Marine Superintendent, C. P. R., London, Eng., was presented with an address by the local marine staff. Prior to entering C. P. R. service he was with Elder Dempster Co., and the Beaver Line, the latter being acquired by the C. P. R.

**Sir William Price**, who was created a knight bachelor, Jan. 1, has been at various times, director, Quebec Ry., Light and Power Co., and Quebec Steamship Co., President Quebec Board of Trade, and a provisional director of the projected Trans-Canada Ry. He is Chairman of the Quebec Harbor Commission.

**Capt. V. R. O'Reilly**, commander of the C. P. R. s.s. Montreal, was presented by the Quebec Board of Trade, Jan. 5, with a silver salver in recognition of his services in saving the crew of the brig Evelyn under difficult circumstances in the North Atlantic on Nov. 30, 1913. At the time of the rescue he was in command of the C. P. R. s.s. Monmouth.

**Capt. H. St. George Lindsay**, Superintendent of Pilots, and **W. I. Gear**, Steamship Agent, Montreal, have been appointed honorary colonels; and **Thomas Robb**, Manager, Shipping Federation of Canada, and **P. V. G. Mitchell**, Assistant Manager, White Star-Dominion Line, Montreal, have been appointed honorary majors, in connection with their work in the transportation of the Canadian contingent from Canada.

**Sir Thomas Sutherland**, Chairman, Peninsular and Oriental Steam Navigation Co.,

**J. F. Pierce**,  
General Passenger Agent, Canada Steamship  
Lines, Ltd.

has retired after occupying that position for 34 years. When he took hold of the company's affairs, the concern was practically bankrupt, and it was stated recently that if the business was to be wound up now the shareholders would receive a cash payment of at least three times the par value of their stock. He is one of the directors of the Suez Canal Co. He celebrated his 80th birthday recently.

The White Star-Dominion Line, in announcing the death of **James Thom**, reference to which was made in our last issue, makes the following comments:—"Mr. Thom has long been a highly esteemed and honored representative of the company in the conduct of its Canadian business, and his loss will be greatly lamented by all who knew him. It is fitting at this time that we record our appreciation of his long and faithful services, during which the company's interests under his charge have shown remarkable development and progress, and we are sure that all who knew him share the respect and esteem in which

we held him, and our sense of the loss we have all sustained."

**G. J. Desbarats**, who was created a Companion of the Order of St. Michael and St. George, Jan. 1, was born at Quebec, Jan. 27, 1861. He entered the civil service in 1879, as an engineer of canal construction and other public works. For several years he acted as assistant to the Chief Engineer of Canals, and from 1892 to 1896 was Inspector of Railway Construction in British Columbia; 1896 to 1899, Engineer in Charge, Galops Canal construction; 1899 to 1901, on hydrographic survey on the St. Lawrence River, and in 1901 he was appointed to supervise the work of rebuilding and enlarging the Government shipbuilding yards at Sorel, Que., and continued to act as Agent for the Marine Department, until his appointment as acting Deputy Minister of Marine, in 1908, being confirmed in that position in 1909, and appointed Deputy Minister of Naval Service in 1910. He has been a member of the Canadian Society of Civil Engineers since 1907, and was a councillor in 1907, and Vice President in 1909.

**C. P. R. taxation in Owen Sound.**—The Owen Sound Town Council is asking the Ontario Legislature to declare that the average value per acre of the land adjoining the C. P. R. tracks in the town shall be deemed to be the value per acre of the company's right of way, and that the company's docks and wharves shall be assessed for taxation. It is asked that an act shall be passed and made retroactive to Jan. 1, 1915.

**Empress of Ireland Fund.**—The fund which was opened for the relief of those dependent on the victims of the sinking of the C. P. R. s.s. Empress of Ireland, last year, was closed in London, Eng., Dec. 31. The total received is approximately \$427,000, about \$62,000 of which was forwarded through the Montreal Board of Trade. In addition to the foregoing, about \$3,000 has been sent by the Quebec Board of Trade.

**Submarine Construction in Canada.**—A press dispatch from Montreal, Jan. 15, states that Canadian Vickers, Ltd., is building eight first class submarines at their plant at Maisonneuve, and that these will be ready for service by August. The rumors which have been current to the effect that the plant is controlled by U. S. interests, or that such interests are concerned in its management, have been unequivocally denied.

**Niagara Dredging, Ltd.**, has been incorporated under the Ontario Companies Act, with \$40,000 capital and office at St. Catharines, Ont., to carry on a general dredging business, and deal in contractors' and shipping supplies, etc. **J. S. Campbell**, **C. Bowman**, **H. M. Campbell**, **M. M. Harris** and **V. S. Moyer**, St. Catharines, are the provisional directors.

**The Southern Pacific Co.**, early in January, placed in operation, what is stated to be the largest railway ferry steamboat in the world. It is being run on the Caraquez Strait, between Port Costa and Benicia, Cal. It is named Contra Costa, and is 433 ft. long by 116 ft. wide over guards, and will accommodate 2 locomotives and 36 freight cars, or 24 passenger cars.

**The British Admiralty** has announced that for the purpose of national defence, it has been necessary to close certain channels in the approaches to the port of Liverpool, Eng., and that all incoming vessels from all foreign and colonial ports must take a licensed Mersey pilot.

**The C. E. Deakin Co., Ltd.**, contractors, Montreal, have gone into liquidation, a winding up order having been granted.

### Atlantic and Pacific Ocean Marine.

The Allan Line s. s. Alsatian is being utilized as the flag ship of Rear Admiral Dudley de Chair.

The Allan Line s. s. Lavoisier, formerly Ludgate Hill, built in 1881, is reported to have been sold.

The Allan Line has chartered the steamships Ocean Monarch, Scottish Monarch and Verdun for its transatlantic freight service.

The C.P.R. has placed, through the Montreal office of Marsh & McLennan, Inc., insurance on its Atlantic and Pacific steamships, amounting to about \$25,000,000.

The C.P.R. s. s. Montrose, under charter to the British Admiralty as a transport, was reported to have been driven ashore at Dover, Eng., during a storm at the end of December.

The Ulster Steamship Co., operating the Head Line between ports in Ireland and Canadian and U.S. ports, is reported to have a vessel under construction in Belfast, to be ready for service this year.

Since the outbreak of war, and the taking over of all the C. P. R. transpacific vessels by the Admiralty, Canadian mails for the Orient have been carried across the Pacific by Japanese steamships.

The Great Northern Steamship Co.'s s. s. Minnesota, which has not been in service since Sept., 1914, is announced to re-enter the Pacific service, Feb. 6, when she will sail for Hong Kong.

The C.P.R. s. s. Tyrolia, formerly Lake Erie, has been sold to the British Government. She was built in 1900, and is 7,535 tons gross, 4,846 tons register, and was acquired by the C.P.R. from the Beaver Line.

The s. s. Navarra, under charter to the British Government, with a cargo of war supplies, bound from St. John, N.B., to France, ran ashore on Holmes Ledges, Tusket Island, Bay of Fundy, Dec. 30, and was reported to be a total loss. The cargo has been saved.

The s. s. Camino, which left San Francisco, Dec. 5, for Rotterdam, with relief supplies for the Belgians, was reported, Jan. 18, to be broken down and in a helpless condition, about 180 miles southeast of Sable Island. Dominion and U. S. vessels were sent to her assistance, and she was taken in tow and arrived at Halifax, Jan. 26.

The U. S. Government presented the captain of the Red Star Line s. s. Kroonland, recently, with a gold watch and chain, and various members of the crew with gold, silver and bronze medals, according to service, in commemoration of their rescue of 89 persons from the s. s. Volturno when she was burned at sea, Oct. 10, 1913.

It is announced that there is every probability of the inauguration of a steamship service between Vancouver and Bristol, Eng., via the Panama Canal. The City of Bristol sent a deputation to Vancouver recently to investigate the possibilities of such a service, and it is stated that some arrangement is being made with a well established company to supply it.

The Donaldson Line s. s. Tritonia, which was reported recently to have struck a mine off the Irish coast, and which report was afterwards denied, is now stated to have been abandoned after striking a mine about 38 miles west of Inistrahull, Ireland, when bound from the Manchester Ship Canal to St. John's Nfld. She was insured for £25,000, and was built in 1893.

The Union Steamship Co. of New Zealand's new steamship, for service between

Australasia and Canada, is expected to be ready for launching at Glasgow, Scotland, shortly, and will probably make her maiden voyage in May. She is larger than any other vessels of the company's fleet, and, it is stated, will be given a Canadian name, as was the last of the company's vessels, namely, Niagara.

The steamship companies are booking Russian and Finnish passengers through to Petrograd and Helsingfors and Abo, via Gothenburg, Karun and Tornea, which service was suspended on the outbreak of war. Passengers must have in their possession the necessary passports to enable them to travel through England and Scandinavia, and they must have sufficient money to pay for their maintenance while awaiting connections at various points.

The Hamburg American Line s. s. Dacia was reported recently to have been sold to E. N. Breitung, Marquette, Mich. It is said that she will be used in shipping freight to German ports under the U.S. flag. In view of the regulations under which Great Britain and the Allies are working, which, in the main, do not recognize the transfer of the ownership of the enemies' vessels in a neutral port, it is possible that the vessel will be captured by the British should she carry on such operations. The whole question of shipping by neutral countries is at present under

serious consideration by the British Government, and no doubt will be satisfactorily dealt with.

The British Admiralty, which, on the outbreak of war, requisitioned the whole of the C.P.R. Pacific fleet, has released the s. s. Monteaagle. She was expected to arrive at Vancouver from Hong Kong during January, when she would be given a thorough overhaul and replaced in the transpacific service. No indication is given as to where she has been operating during her service under the Admiralty. The Empress of Asia and Empress of Russia are on scout duty and holding German shipping in harbor, the Empress of Japan and Monteaagle have been acting as transports for troops, and the Empress of India has been purchased for use as a hospital ship for India by the Maharajah Scindia of Gwalior.

### Maritime Provinces and Newfoundland.

The s. s. Seal left North Sydney, Jan. 19, with the winter mail for Magdalen Islands.

The s. s. Bear River, which operates between Digby, N.S., and St. John, N.B., broke her main shaft while in the Bear River, Jan. 2. Repairs were made and the service resumed a week later.

It is reported that the C.P.R. s. s. St

### Sault Ste. Marie Canals Traffic.

The Canadian canal was opened April 20 and closed Dec. 14, 1914; season, 239 days  
The U.S. canal was opened April 20 and closed Dec. 14, 1914; season, 242 days.

George, which was taken over recently by the Government for patrol duty in the Bay of Fundy, has been laid up for the winter, and that the C.P.R. s.s. Montford is taking her place.

The Government wharf at Miscou harbor, Little Shippigan, N.B., has been completed. It is 860 x 20 ft., with a head block 30 x 40 ft., the L being on the east side. It extends out from the south end of Miscou Island.

Press reports from Newfoundland state that the Reid Newfoundland Co.'s s. s. Lintrose is to be sold for war purposes, and that the company's s. s. Kyle will replace her on the Port aux Basque and North Sydney route.

E. A. Labelle and F. Robinson, two of the Montreal Harbor Commissioners, inspected the harbor works at St. John, N.B., at the end of December, at the invitation of the Minister of Marine. The chairman of the commissioners, W. G. Ross, intended to be present, but was prevented through illness.

In referring to the car ferry service, which will be inaugurated shortly, between New Brunswick and Prince Edward Island, the President of the Charlottetown Board of Trade, stated recently that he believed that such service would before long, be supplemented by the operation of one or more improved aeroplanes.

A press dispatch from Halifax, states that the s. s. Wacousta, which arrived, Jan. 9 from Sydney, N. S., where she had been fitted out for icebreaking work for the Russian Government at Archangel, will be used locally for patrol work. It is stated that it was discovered that she was unable to carry sufficient fuel for the trip across the ocean, and the project was abandoned.

The ice breaking steam tug, J. T. Horne, which was sold some time ago to the Russian Government for use in the harbor at Archangel, and which made an unsuccessful attempt to cross the ocean, has had a number of necessary alterations completed at Sydney, N.S. A false deck has been built with heavy planking on a steel frame about 7 ft. high, running from the bow to abaft the deck house. She left Sydney, Jan. 7, for Halifax, where she is to provision and prepare for the trip.

The Kilkeel Co.'s s. s. Kilkeel, which went ashore early in January, on the Bald Rock shoal, near Canso, N. S., has become a total loss. She was chartered by the Inverness Ry. and Coal Co., which, with the vessel owning company, is closely allied with the Canadian Northern Ry. The Kilkeel was built at Paisley, Scotland, in 1895, and was screw driven by engine of 39 n.h.p. Her dimensions were,—length 135 ft., breadth 21 ft., depth 9.4 ft.; tonnage, 252 gross, 56 register.

### Province of Quebec Marine.

The Quebec Harbor Commissioners are asking the Government for a loan of \$1,500,000 in order to complete certain harbor works. At an interview in Ottawa, Jan. 15, the Minister of Marine promised that the application would receive the Government's attention.

The ship channel across the Horseback bar in the St. Lawrence, between Quebec and Montreal, has been changed slightly in direction, and a new channel 450 ft. wide by 30 ft. deep at extreme low water has been completed. The change will necessitate the abandonment of the Cap Charles range lights, and the establishment of a new range in the alignment of the Calvaire above Cap Charles. The new lights will be exhibited

on the reopening of navigation. The Cap Charles channel has also been widened and deepened, to the same dimensions as the foregoing channel, with the exception of a length of 1,250 ft. by the buoy 77Q, where the old depth of 27½ ft. at ordinary low water exists. This will be completed to 30 ft. during the year.

### Ontario and the Great Lakes.

The Northern Navigation Co.'s s. s. City of Midland suffered considerable damage to the interior, by a fire which broke out in the passenger saloon, while she was at her winter berth at Collingwood, Dec. 30.

A Collingwood press dispatch states that the Playfair interests have placed a contract with Pratt, Haney and Marfariane for the construction of a large cement coal dock, which is to be equipped with the most modern coal handling machinery, at Midland.

The United States Lake Survey reports the levels of the Great Lakes in feet above tidewater for December, as follows,—Superior 602.08; Michigan and Huron 579.62; Erie 571.31; Ontario 244.83. Compared with the average December levels for the past ten years Superior was 0.23 ft. below; Michigan and Huron 0.61 ft. below; Erie 0.45 ft. below, and Ontario 0.77 ft. below. It was anticipated that during January, Superior would be 0.3 ft. lower, Michigan and Huron 0.2 ft. lower, that Erie would remain stationary, and that Ontario would be 0.1 ft. higher.

The grounds in the vicinity of the Brockton Point light station are being improved for park purposes, a concrete retaining wall and a boulevard are being built and a new lighthouse is under construction. The lighthouse is a square tower with sloping sides and an octagonal lantern. The structure is 42 ft. from the base of the tower to the top of the lantern ventilator, with the light 40 ft. above high water mark. As soon as the lighthouse is completed the illuminating apparatus will be removed from the present wooden structure and installed in the new tower.

James Carruthers, President; J. W. Norcross, Managing Director, and C. A. Barnard, K. C., Solicitor, Canada Steamship Lines, Ltd., returned to Montreal, early in January, after a business visit to England. It is said that while they were there the company's operating results for the past season were discussed with the English committee, who are reported to have expressed their satisfaction, considering the state of business during the latter part of the year. Press reports state that the company has received \$1,250,000 for additional working capital, from the English committee.

### British Columbia and Pacific Coast Marine.

The C.P.R. s.s. Princess Charlotte has been withdrawn from service for the winter. She is to be thoroughly overhauled and re-

fitted in readiness for service on the Alaska route in the summer.

The C. P. R. has installed an elevating apparatus on its wharves at Vancouver, to enable cargoes to be handled with ease at any stage of the tide.

The Imperial Oil Co.'s oil tank steamer Azov is being repaired at North Vancouver, after suffering considerable bottom damage by running on reefs off the coast of Chili about three months ago.

The Department of Marine, which issued special regulations recently for the navigation of Barkley Sound, has announced that these have been cancelled and that navigation in all parts of the sound is again open to all vessels.

C. Gardiner Johnson, Secretary to the Vancouver Pilotage Authority, stated recently, after the annual meeting of the commissioners, that they were aiming at a reduction of the compulsory pilotage charges for Vancouver, Howe Sound and Powell River. Suggestions had been forwarded from time to time to the Marine Department for consideration, and approval will have to be received from Ottawa before any announcement as to the extent of the reduction can be made.

The Border Line Transportation Co. has been organized at Seattle, Wash., to take over the steamboats Dispatch and Fulton, heretofore operated by the Border Line Transportation Co., and the steamships Alki and Northland, heretofore operated by the Northland Steamship Co. The vessels will be run to southeastern Alaska and British Columbia ports. A. F. Haines, Manager of Dodwell & Co., steamship agents, Seattle, is Manager, and H. C. Bradford, heretofore Manager and Secretary, Northland Steamship Co., is Traffic Manager.

**C. P. R. Steamship Ownership.**—The C. P. R. is applying to the Dominion Parliament for authority to lease or charter any of its ships, vessels or ferries to any incorporated company having for one of its objects the acquiring and operating of such vessels, and to hold and dispose of shares and securities of such company. Press dispatches state that such a move indicates the placing of the company's vessels under subsidiary companies, which question has been before the directors for several years. In the annual report for 1913-14, the earnings from steamships, etc., were not included in the general accounts, but figured under the head of special income account.

**Canada to Russia.** To accommodate Russians who want to return to their own country, the C.P.R. has arranged a rate of \$ 4.25 from St. John, N.B., to Petrograd. The route is by C.P.R. steamships to Liverpool, thence to a port in Sweden or Finland, and from there to Petrograd.

When one considers that the true progress of the entire civilized world is due almost entirely to the work of its engineers, the importance of providing the engineering profession with the highest possible education in both theoretical and practical lines cannot be exaggerated.—Waddell.

### Shipments of Grain From Fort William and Port Arthur.

The Lake Shippers' Clearance Association, which has its headquarters at Winnipeg, has furnished the following statistics of grain shipped through it from Aug. 1 to the close of navigation in December for each year from 1909 to 1914. The figures given are bushels.

	Wheat	Oats	Barley	Rye	Total
1909	11,775,967	8,226,964	5,663,450	1,877,665	26,544,046
1910	17,132,391	9,726,262	586,609	2,041,126	29,486,388
1911	17,633,639	11,548,982	1,103,835	809,266	29,995,722
1912	26,782,157	11,409,349	3,215,322	5,692,951	46,900,889
1913	42,796,796	25,895,157	7,100,439	9,397,966	85,090,358
1914	53,579,911	8,916,971	1,876,176	3,611,806	67,984,864

## Telegraph, Telephone and Cable Matters.

James Rainnie, who has been in Western Union Telegraph Co.'s service since 1866, the past 47 years having been spent at Sackville, N. B., has retired.

L. Longmoore, who was night manager, Montreal Telegraph Co., at Montreal, about 30 years ago, and who retired from active service some 20 years ago, died at St. Lambert, Que., Jan. 10, aged 78.

The British military authorities advised telegraph and cable companies recently that plain language messages for Great Britain and beyond, containing only one text word, would not be passed.

Nelson McRae, who died at Wyebridge, Ont., Jan. 21, aged 76, was local manager of the Montreal Telegraph Co. at Wyebridge in 1872, and later acted for the Great North Western Telegraph Co. till the company closed its office there.

George Haddon Stead, whose appointment as Superintendent, District 5, Great North Western Telegraph Co., Saskatoon, Sask., was announced in our last issue, was born at Eccles, Lancashire, Eng., Apr. 29, 1875, and commenced his telegraph service in 1889, since when he has been, to Apr., 1902, successively, messenger, delivery clerk, counter clerk, operator, bookkeeper and chief operator, G.N.W.T. Co., Winnipeg; Apr., 1902, to Oct., 1910, local manager, Canadian Northern Telegraph Co., Winnipeg; Oct., 1910, to Dec. 31, 1914, Superintendent, Western Lines, C.N. Telegraph Co., Winnipeg.

The Montreal Telegraph Co.'s report for 1914 shows total assets of \$2,313,556, and liabilities consisting of, capital \$2,000,000; excess in value of property \$151,823; dividend payable \$40,000; unclaimed dividends, etc., \$4,214; contingent fund \$117,517. The property is operated by the Great North Western Telegraph Co., under a lease for 97 years from July 1, 1881, and the operation, maintenance and dividends are guaranteed by the Western Union Telegraph Co. The officers for the current year are:—President, Wm. McMaster; Vice President, W. R. Miller; other directors, B. McLennan, R. MacD. Paterson and H. E. Rawlings, the last mentioned succeeding the late W. Wainwright.

## Transportation Conventions in 1915.

Jan. 19-21.—American Wood Preservers' Association, Chicago, Ill.  
 Jan. 19-19.—American Railway Engineering Association, Chicago, Ill.  
 April.—American Association of Demurrage Officers, Boston, Mass.  
 Apr. 28.—Association of American Railway Accounting Officers, Atlanta, Ga.  
 May.—Association of Railway Claim Agents, Houston, Tex.  
 May.—Railroad Master Tinnors', Copper-smiths' and Pipefitters' Association, Chicago, Ill.  
 May 4-7.—Air Brake Association, Chicago, Ill.  
 May 12.—American Association of General Passenger Agents, Los Angeles, Cal.  
 May 17-19.—Railway Storekeepers' Association, Chicago, Ill.  
 May 17-21.—International Railway Fuel Association, Chicago, Ill.  
 May 19.—American Railway Association, Atlantic City, N.J.  
 May 20-21.—American Association of Railroad Engineers and Firemen, San Francisco, Cal.  
 May 21-22.—American Association of Freight Agents, Richmond, Va.  
 May 22-23.—Master Boiler Makers' Association, Chicago, Ill.  
 May 23-24.—American Railway Master Mechanics' Association, Atlantic City, N.J.  
 May 24-25.—Master Car Builders' Association, Atlantic City, N.J.  
 June 15.—Train Despatchers' Association of America, Minneapolis, Minn.  
 June 16.—Freight Claim Association, Chicago, Ill.  
 June 16-17.—Association of Railway Telegraph Operators, Rochester, N.Y.  
 June.—American Railway Tool Foremen's Association.

July 14-17.—International Railway General Foremen's Association, Chicago, Ill.

Aug. 17.—International Railroad Master Blacksmiths' Association, Philadelphia, Pa.

Sept. 14-16.—Roadmasters' and Maintenance of Way Association.

Sept. 14-17.—Master Car and Locomotive Painters' Association of the United States and Canada, Detroit, Mich.

Sept. 21-24.—Railway Signal Association, Salt Lake City, Utah.

October.—American Association of Dining Car Superintendents.

Oct. 4-8.—American Electric Railway Association, San Francisco, Cal.

Oct. 19-21.—American Railway Bridge and Building Association.

## Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—J. Reilly, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 502 Canada Building, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July, and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada—C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto, 3rd Tuesday each month, except June, July, and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—W. H. Burr, Chairman, Toronto.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July, and August.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

F. H. Hopkins & Co., railway and contractors' supplies, etc., Montreal, have opened an office at 1206 Union Trust Building, Winnipeg, in charge of J. W. Purcell.

Algoma Steel Corporation Ltd., Sault Ste. Marie, Ont., has reopened its Montreal office at 211 McGill St., and has appointed G. A. Irwin Sales Manager.

Northern Crane Works, Ltd., Walkerville, Ont., has issued a booklet, "Cranes and Hoists," illustrating and giving particulars of a number of cranes of various types for railway and other service.

Canadian National Carbon Co., Ltd.—W. H. Arkenburg, formerly Publicity Manager, Union Switch & Signal Co., has been ap-

pointed to the National Carbon Co.'s Sales Department, with charge of railway and signal work in Canadian territory.

The National Steel Car Co., Ltd., Hamilton, Ont., has, we are officially advised, received orders for about \$250,000 of work from the British Government and for over \$1,000,000 worth from the French Government.

The National Boiler Washing Co., Ltd., Montreal, which installs boiler washing plants in locomotive houses and in industrial heating plants, is now conducting its western business from 1206 Union Trust Building, Winnipeg, the office being in charge of J. W. Purcell.

Canadian Car & Foundry Co. The President, Senator Curry, who has been in Europe, was expected back in Montreal at the end of January. W. W. Bulter, Vice President, arrived in London from Canada on Jan. 5. A press cablegram says that the company is opening an office in London.

Wall calendars for 1915 have been received from Bird-Archer Co., manufacturers of boiler chemicals, New York; W. W. Butler Co., Ltd., railway, marine and mining supplies, Montreal; Hart-Otis Car Co., Ltd., Montreal; and Pratt & Whitney of Canada, Ltd., small tool manufacturers, Dundas, Ont.

Ohio Brass Co., Mansfield, Ohio, has issued O-B Bulletin for November and December, as a car equipment number, containing, among other matter, articles on Tomlinson couplers, a high speed third rail interurban railway, O-B trolley retrievers, and overhead construction at Atlantic City and Shore Ry.'s car barns.

The Herbert Morris Crane & Hoist Co., Ltd., Toronto, has issued book 46, a loose leaf binder containing a collection of bulletins illustrating and describing, with dimensions and price lists, a selection of its standard manufactures, including chain blocks, trolleys, travelling blocks, hand cranes, overhead runways and various lifting and shifting devices and accessories. It has also issued in separate form, but suitable for insertion in the binder, Bulletin B11, respecting its belt-driven friction hoist.

**Buoy Lighting.**—The Department of Marine has decided to establish a uniform system of characteristic for gas lighted buoys and gas beacons, making buoy or beacon lights which are to be left on the starboard side in going up stream, occulting red lights, and port hand lights occulting white lights. That is, red buoys will carry red lights and black buoys white lights. For special positions, such as middle grounds, fairways, etc., special arrangements will be made. White lights will, however, be favored where possible. It is proposed to make the changes on the opening of navigation, or by May 1.

The Ideal Incinerator and Contracting Co. has been incorporated under the Ontario Companies Act, with power among other things to build railway sidings and switches, and to carry on the business of general contractors, and to manage tramways, docks, harbors, piers, wharves, canals, etc., but the company is not to operate or control any public utility or municipal franchise. The provisional directors are:—J. T. White, K. W. Wright, G. R. Sproat, F. M. McDowell, Miss M. W. Allan, Toronto.

The writing of first class specifications and contracts is an art that cannot be acquired except through experience; but nevertheless its acquisition can be hastened materially by a thorough drill in the technical school in the underlying principles of such writing as well as in the practice of their composition.—Waddell.

**Railway Lands Patented.**—Letters patent were granted in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, in Nov., 1914, as follows:—

	Acres.
Calgary & Edmonton Ry. ....	1,765.68
Canadian Northern Ry. ....	7,030.44
Canadian Pacific Ry. ....	35.56
Qu'Appelle, Long Lake & Saskatchewan Rd. and Steamboat Co. ....	4,636.00
Total .....	13,467.68

**We Can Supply Promptly**  
your every requirement in the way of bare copper, copper clad, brass and bronze wire.

These products are rolled and drawn in our own mill and are of high quality and accurate gauge throughout.

*Write our nearest office for prices.*

**Standard Underground Cable Co.  
of Canada, Limited**  
Hamilton, Ont.

Winnipeg, Man. Montreal, Que. Seattle, Wash.  
Manufacturers of Electric Wires and Cables of all kinds, also Cable Accessories.

## CANADIAN NORTHERN RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct—

(a) The lines of railway authorized by the Statutes of Canada for 1910, chapter 80, section 6, paragraph (i), shortly described as follows:—

- (i) Strathcona southerly to Calgary.
- (b) Also the lines specified in section 7, paragraphs (b), (d) and (f) of the same chapter, namely:—
  - (b) From the company's line near Swan River westerly to the Saskatchewan River.
  - (d) From Regina to Red Deer River, with a branch to Dalmeny.
  - (f) From the end of the fortieth mile of the Oak Point Branch via Oak Point to Grand Rapids on the Saskatchewan River.

(c) Also the line of railway authorized by the Statutes of Canada for 1913, chapter 94, section 3, paragraph (b), shortly described as follows:—

- (b) Regina northwesterly to Elbow.
- (d) Also the line of railway which the Northern Extension Railway (since amalgamated with the company) was authorized to build by the Statutes of Manitoba for 1904, chapter 77, shortly described as follows:—

Winnipeg through Springfield to eastern or southern boundary of Province.

(e) Also the unfinished portion south of Calgary of the line of railway which the Alberta Midland Railway Company (since amalgamated with the company) was authorized to build by the Statutes of Alberta for 1909, chapter 45, shortly described as follows:—

Strathcona via Calgary to the confluence of the Little Bow and Belly Rivers, thence to Lethbridge.

GERARD RUEL,  
Chief Solicitor.

Toronto, 23rd December, 1914.

## ALBERTA CENTRAL RAILWAY.

NOTICE.—The Alberta Central Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time within which it may construct the following lines of railway: (a), from Rocky Mountain House to a point on the Grand Trunk Pacific in or near Yellowhead Pass; (b), three branch lines of 30 miles each, and two branch lines of 25 miles each into the Big Horn Range and along the Brazeau River, and for other purposes.

Dated at Montreal the 25th November, 1914.

H. C. OSWALD,  
Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

## CANADIAN PACIFIC RAILWAY.

NOTICE.—The Canadian Pacific Railway Company will apply to the Parliament of Canada, at its next session, for an Act authorizing the company to lease or charter any of its ships, vessels or ferries to any incorporated company having for one of its objects the acquiring, owning or maintaining or operating of ships, vessels or other water craft, and to subscribe for, acquire, hold, guarantee, pledge and dispose of shares, bonds and other securities of such company, and for other purposes.

Dated at Montreal, this 8th day of January, A.D. 1915.

W. R. BAKER, Secretary.

Pringle, Thompson, Burgess & Cote,  
Ottawa agents.

## THE TORONTO, HAMILTON AND BUFFALO RAILWAY COMPANY.

NOTICE is hereby given that The Toronto, Hamilton and Buffalo Railway Company will apply to the Parliament of Canada, at its next session, for an Act confirming the amalgamation agreement dated 11th November, 1914, between The Toronto, Hamilton and Buffalo Railway Company and The Erie and Ontario Railway Company; and authorizing the amalgamated company to make, issue and sell bonds, debentures, or other securities to the same extent as The Erie and Ontario Railway Company is authorized to do, and to secure same by a first mortgage on the railway of The Erie and Ontario Railway Company and by a third mortgage on the railway of The Toronto, Hamilton and Buffalo Railway Company; and also authorizing the amalgamated company to make, issue and sell bonds, debentures, or other securities to the extent of fifteen million dollars to provide for the retirement of all the outstanding bonds and securities of the amalgamated company, and to provide for betterments, and to secure same by a consolidated first mortgage upon the undertaking and property of the amalgamated company; and for other purposes.

Dated at Hamilton this 2nd day of December, 1914.

E. D. CAHILL,  
Solicitor for the applicants

# The Wonderful Single Service Chilled Iron Car Wheel

M.C.B. STANDARD 725 LB. CHILLED IRON WHEEL FOR 100,000 LB. CAPACITY CARS.

Single service means a wheel applied and allowed to run its life without any repairs whatever, such as turning.

Contrasted with multiple wear wheels this means that no heavy investment in lathes is necessary and the maintenance expense is assured, because all Chilled Iron Wheels carry a minimum guaranteed mileage or time service.

It is a recognized fact that no other type of wheel can carry as heavy a burden as the Chilled Iron Wheel and maintain its rotundity, and the reason is that Chilled Iron will not crush or flow under heavy loads.

**THE WONDERFUL SINGLE SERVICE CHILLED IRON CAR WHEEL.**

Twenty-five Million now running.

**Association of Manufacturers of Chilled Car Wheels**  
**1214 McCormick Building, Chicago**

Representing forty-eight wheel foundries located throughout the United States and Canada. Capacity 20,000 chilled iron car wheels per day.

OF THE WORLD'S WIRELESS  
STATIONS 80% ARE ON THE MARCONI SYSTEM.

LET US SUBMIT SUGGESTIONS!

## MARCONI WIRELESS TELEGRAPH APPARATUS

MADE IN CANADA.

Wireless equipment of all kinds supplied: Land, ship, railway and aeroplane, sets with ranges of from 50 to 2,000 miles.

Have you considered the advantages of connecting up factory or mine to head office by wireless telegraphy?

SHIP SETS—Suitable for liners, yachts, tugs and freight boats and scows—our specialty.

Our stations may be hired or bought outright.

CONCRETE  
REINFORCEMENT  
IN FLAT SHEETS

Can be supplied in  
rolls if preferred.

## FOR CONCRETE ROAD PAVEMENT, WALKS, BUILDING FLOORS, ETC.

We are the originators of this wire reinforcement in flat sheets, and it is coming into universal use wherever introduced. We have supplied many carloads of it this past season.

The standard mesh for road pavement is 6 x 12 inches; for bridges and building floors, the standard is 3 x 6 inches. Also, other meshes as desired. All sheets 4 feet wide, and any length specified that can be loaded in cars.

*Samples will be sent upon request.*

We also supply Iron Fences, Fire Escapes, Office Wire Work, and all kinds of Builders' Wire and Iron Work

# The Light of Day on the Right of Way

### HEADLIGHTS

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

### CAR LIGHTING

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency and economy. Standard cylinder supplies from one to two months' lighting of the average car.

### SIGNALS

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

## The Great Spare Time University

This university does not reserve its advantages for the wealthy or well-to-do—its privileges are within the reach of all. It does not ask a man to give up his job and leave home—it comes to him wherever he may live.

This university has students among all classes of men in every civilized country on the globe. It can truly be called "The World's Greatest University"—it enrolls a hundred thousand students every year—more than all the technical schools combined.

Two hundred and seventy-two courses are taught by this university—thirty of them are designed especially for men employed on the railroads and in ocean and lake navigation.

More than two hundred of the railroads in America have made co-operative agreements with this institution for the training of their employees.

This great Spare-Time University is the International Correspondence Schools with headquarters in Scranton, Pennsylvania, and London, Eng.

Full particulars will gladly be furnished upon request—either about individual courses for ambitious men who want to qualify for promotion or about the co-operative agreements for railroad officials who want to increase the efficiency of their employees.

Use the attached coupon for convenience in inquiring.

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

## COMPLETE HYDRAULIC EQUIPMENT FOR RAILWAY AND SHIP BUILDING PLANTS

Wheel Presses, Keel Plate Bending Presses, Riveters,  
Shears, Presses, etc., etc.

Centrifugal Pumps, Pumping Engines, Gas Plants, Gas Power  
Plants, Cast Iron Pipe, Hydrants, Valves & Fittings, etc., etc.

**R. D. WOOD & CO.**  
PHILADELPHIA, Pa.

**NICKEL** SHOT—HIGH AND LOW CARBON  
INGOTS—TWO SIZES, 25-LB., 50-LB.  
Electrolytic Nickel—99.80%

Prime Metals for the manufacture of Nickel Steel, German Silver, Anodes, and all remelt-  
ing purposes. Our Nickel is produced as rods, sheets, strip stock and wire.

**MONEL METAL** We are Sole Refiners of this natural stronger than steel, non-corrosible  
alloy. Produced as rods, flats, castings, sheets, strip stock and wire. Ask  
for descriptive booklet.

Send inquiries direct to us.

**THE INTERNATIONAL NICKEL COMPANY,** - 43 Exchange Place, New York

## HEADLIGHTS-We Make Them

for OIL for Pyle ELECTRIC equipment or SPECIAL to Blue  
Print, and carry a large stock of standard headlight reflectors,  
burners, burner parts, felt wicks and chimneys.

Winnipeg, Man.

Vancouver Office: 429 Pender St. W.  
Vancouver, B. C.

When you are depending upon a locomotive crane for handling your coal you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHOIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.

**THE BROWN HOISTING MACHINERY CO.**

# Why Dynamic Indication is the always-safe principle in G R S Electric Interlocking

The fundamental safety first principle of G R S Electric Interlocking Dynamic Indication remains as it was invented 13 years ago. This test of years is the most convincing evidence in the unfailing integrity of Dynamic Indication.

This indication is not secured from energy existent at the function prior to the movement of that function and dependent only on closing of a single break in the indication circuit, as is the case in A. C. and battery indication systems; but being a dynamic current generated by the momentum of the motor, it can be secured only after actual operation of the function. Since it is impossible to obtain an indication upon the lever controlling the function in any other way than by this generated current pro-

duced by the motor after the completed movement of the function, this system is **always safe**. Furthermore, dynamic indication is solely and only a G R S principle.

This **only always safe** principle of Dynamic Indication with several other features has brought this system into marked favor with the result that 80% of the power interlocking in use to day is G R S Electric.

This system is equally suited to the 8 and 24 lever plant as it is to the Grand Central Terminal which is the largest interlocking in the world.

Why not install the **only always safe** system, the G R S Electric Interlocking employing Dynamic Indication?

*"Safety First"*

**GENERAL RAILWAY SIGNAL COMPANY**  
**OF CANADA LIMITED**

Office and Works, Lachine, Quebec

Branch Office, Winnipeg, Manitoba

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

## THE NORTHEY-SIMMEN SIGNAL CO., Ltd. TORONTO

## To Parties Manufacturing, or Intending to Manufacture in Canada:

We are prepared to produce, upon a large scale, articles of metal and wood.

Our facilities are those necessary for the extensive and economical manufacture of the heaviest freight cars and the highest class of passenger cars. These facilities include plants for the manufacture of steel, malleable and grey iron castings—rolled steel and iron products—frogs, switches and track work for electric and steam railways—coil and elliptic springs—forgings—cabinet and other wood work—and all preparatory and finishing adjuncts.

The various plants are distributed from Amherst, N.S. to Fort William, Ont.

Correspondence invited.

## Difficult Frame Welding Made Easy with Thermit

Finished Thermit Weld on Engine No. 802 of the  
Grand Trunk Pacific, Transcona, Man.

Frame Welded with Thermit by the Illinois Central,  
Centralia, Ill.

You can weld a frame quickly and economically with Thermit, whether it is broken in the splice, under the fire box, close up to the cylinder, or at any other point. It is not necessary to take the frame down, as all welds can be made with the frame in place.

No other process of welding is so quick and uniformly efficient and economical in operation as the Thermit Process.

The proof is in the fact that to-day 435 railroad shops in North America are using Thermit and returning their engines to service in from 10 to 24 hours.

We have just issued a new pamphlet of instructions for the use of Thermit in railroad shops, known as Pamphlet No. 2144. This should be in the hands of every railroad man, as it tells how and why the Thermit Process of welding will save thousands of dollars every year in repair costs. Write for it to-day.

## Berry Brothers' Railway Varnishes

There is pride in ownership only when the thing owned looks new. No matter how valuable a service it may render, it is never satisfactory unless it has the right appearance. There is great self-satisfaction in owning things that look good, and we actually add to this value because appearance is an asset.

Service and appearance are both important factors in railway maintenance. Both service and appearance, in station and office interior finish, can be secured through the use of Berry Brothers' Varnishes.

### LIQUID GRANITE

The most durable varnish made. It is proof against the action of moisture and stands the maximum of rough usage.

### LUXEBERRY WOOD FINISH

A finish for general interior work, and unequalled for producing a handsome and durable finish on all woods.

The Grand Trunk System reaches all trade centres in Eastern Canada, and is now a large factor in Western Canada traffic through the Grand Trunk Pacific Railway, recently completed to the Pacific coast.

**W. P. HINTON,**  
Assistant Passenger Traffic Manager,  
Montreal, Que.

## The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is **Prevention** and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific “dope” compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We’d like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

**Dearborn Chemical Company of Canada, Limited**

Office and Works,

# Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## The Light of Day on the Right of Way

### HEADLIGHTS

Commercial Acetylene furnishes a strong, penetrating light without being blinding. Nothing to get out of order. Economical to maintain. Small gas cylinder supplies several weeks' lighting.

### CAR LIGHTING

Commercial Acetylene furnishes an ideal system for all kinds of passenger cars. It combines efficiency and economy. Standard cylinder supplies from one to two months' lighting of the average car.

### SIGNALS

Commercial Acetylene furnishes an absolutely reliable light. Failures eliminated and cost of maintenance reduced. Cylinder placed at foot of pole supplies several months' lighting without attention.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$  wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## What is the Capacity of a Single Track Railway Line?

By V. I. Smart, Vice President and General Manager, General Railway Signal Co. of Canada, Ltd.

The following paper has been written with a view to reducing to a concrete form, some methods of arriving at what is the capacity of a single track line. It is an attempt to show a means of arriving at the relative value of different elements, which tend to reduce the amount of tonnage that can be hauled in a given time.

A train moving along the track at a given speed has kinetic energy which would raise it vertically a definite number of feet, and every speed has an equivalent vertical height. The relation of speed to the vertical height is expressed by the formula  $0.035V^2$ , where  $V$  is the speed in miles per hour. That is, the kinetic energy of a train running 10 m.p.h., would be capable of raising that train 3.5 ft. If, therefore, ordinates be erected on the engineering profile equal to the vertical height—equivalent to the speed at different

is made at the end of this paper. The reduction in speed due to the application of breaks, is found from the formula,

$$0.035V^2W$$

$$L \quad \frac{W}{0.7fw} + Rt \quad 2000$$

$L$  is the distance in which the stop is made;  $V$ , the speed in m.p.h.;  $W$ , the weight of loaded cars;  $w$ , the weight of empty cars;  $f$ , the coefficient of friction taken here as 1-6; and  $Rt$ , the train resistance per ton.

The amount of tonnage which can be hauled over a single track is dependent on a number of conditions, among which are:— (a) Passing track facilities and train schedules. (b) The tractive effort of the locomotive. (c) Terminal facilities. (d) The full

amount of increase in the leaving interval, at every meeting point.

Fig. 4 shows the effect of attempting to run the same number of trains as in fig. 2, when the passing tracks are not all equally spaced. The result would be, that if the southbound trains are superior, the northbound trains could not get through at all.

Fig. 5 indicates the train schedule that would be necessary when passing tracks are unevenly spaced. It is apparent that the interval between the leaving times of the trains would now have to be twice the interval necessary to run between the two passing tracks which are spaced farthest apart, and that in addition delay is introduced at all other passing tracks equal to twice the difference between the closer spaced passing tracks and the greater.

Fig. 6 is the same as the above, except that

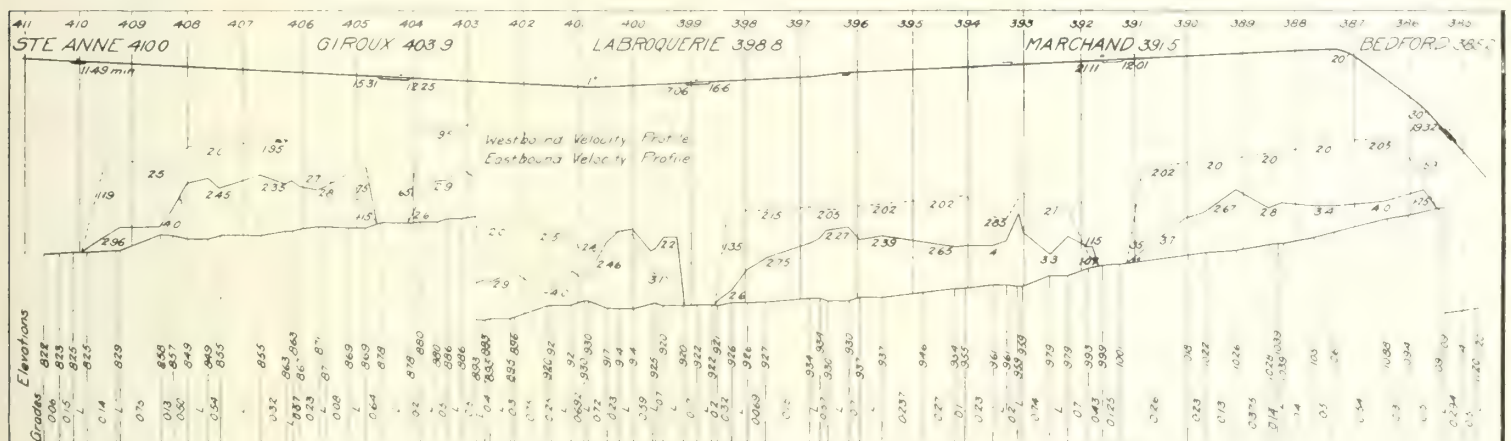

Fig. 1.—Engineering and Velocity Profiles of Line under Discussion.

points on the road, and the ends of these ordinates are joined up, a second profile, representing the operating conditions of the train, are secured. Such an operation is shown, dotted for westbound, and solid for eastbound, in fig. 1. From this a schedule of the train can be made.

The average speed of a train between any two points may be obtained by finding the area of the figure bounded by the line representing the engineering profile, and the operating, or velocity profile. Dividing this area by the horizontal distance between the two points gives the average velocity height between the two points, which is equivalent to a certain speed in miles per hour. On the profile, fig. 1, the average speed has been worked out between each mile post, and is shown on the bottom margin; below these are the number of minutes it would take the train to run between the two mile posts. Summing up these, the time taken between the passing tracks is noted below each station, that on the right showing the time taken in running from the passing track next to the right, to the station below which the figures show; similarly those to the left denote the running time from the next passing track to the left. An explanation of the process of working out this velocity profile

ing grade of the division. (e) The average rate of the grades.

The accompanying train sheets, figs. 2 to 8, develop the principles involved in the laying out of passing tracks on a single track line, and the effect on the train schedules. In drawing them up the same method is used as is employed by the superintendent in making up his schedules, and which is commonly known as "stringing" the trains. The heavy horizontal lines represent passing tracks, the vertical lines denote time; the interval between the passing tracks is measured in the time necessary to run between them, the diagonal lines represent the train movement.

In fig. 2 the passing tracks are equally spaced. The maximum train schedule would then be one where the leaving times of the trains would be twice the passing track interval apart.

Fig. 3 illustrates the effect produced on the north bound trains, by the disregard of the above relation between train schedule and passing track interval. The effect of increasing the interval between the departure times of certain of the southbound trains, is to introduce an element of delay on all northbound trains, which these irregularly spaced trains have to meet, by just the

there is but one irregularly spaced passing track; the law remains the same.

The effect of attempting to run more than the number of trains determined by the passing track intervals, is illustrated in fig. 7, the result being that an element of delay is introduced on the opposing trains equal to the regular schedule leaving interval at every meeting point, almost the amount of time necessary to run two trains over the division.

Fig. 8 shows the effect of introducing trains into the schedule of different speeds. It can be seen from this diagram that trains running 3, 5, 7, 9, etc., times as fast as the others, will eliminate a train in the opposing direction, every 3rd, 5th, 7th, etc., whereas trains running 2, 4, 6, 8, etc., times as fast will eliminate an opposing train every 4th, 8th, 10th, 16th, etc., and delay the intermediate trains by the amount of their leaving interval. The number of trains affected when the multiple of the speed is an odd number will vary inversely as the multiple. The number of trains affected when the multiple of the speed is even, will vary inversely as twice the multiple of the speed, therefore if different speed trains are in service they will produce the least objectionable effect when the speeds of the

even multiple.

Now it will be seen that the time of the full load train between stations is as follows:

	Eastbound.	Westbound.
St. Anne		
Labroquerie	15.31	11.49
Marchand	17.06	12.25
Bedford		

condition being reached when the time required to run between all passing tracks is equal.

The maximum tonnage over our particular district, assuming that no change is made in the passing tracks, can be determined as follows:—The time taken by an eastbound train between Labroquerie and Marchand is 21.11 mins., and by a westbound train 16.01

be reduced to 70,920 tons, a loss of 8,136 tons in the 24 hours.

The above is the result obtained by using one class of locomotive and with no interference from passenger trains. If we introduce one passenger train each way we will still further reduce the capacity of the line. For, assuming the speed of the passenger train will be 30 m.p.h. between the two sta-

Fig. 2.—Passing Tracks Equally Spaced, with Leaving Time of Trains at Twice the Passing Track Interval Apart.

7.3	21.11	16.61
Marchand		
6.3	19.32	12.01
Bedford		

It is evident that the capacity of this line is determined by the amount of traffic which can be handled between Labroquerie and Marchand, in 24 hours, for this piece of line is the determining element on this district, as it requires the longest time to operate

mins., and allowing 3 mins. for a train to head out of Labroquerie passing track, and 3 mins. to head in to Marchand passing track, the total time taken for two trains to run between these passing tracks is 43.72 mins., or an average of 21.86 mins. a train. If we let C be the tonnage capacity of the line in 24 hours; W, the average tonnage rating of the locomotive on the division; and T, the

tions above, the distance being 7.3 miles, it would take 14.6 mins. to run between the stations; that is the line between the two stations is tied up, so far as freight movement is concerned, for 14.6 mins. for each passenger, or in tons  $54 \times 14.6 = 776$  tons cut off the 24 hour capacity of the line for each passenger train.

If we assume in our example, two pas-

Fig. 3.—Effect on Northbound Trains of Increasing Intervals between Departure of Certain Southbound Trains.

Fig. 4.—Effect of Attempting to Run Same Number of Trains as in Fig. 2 with Passing Tracks Unevenly Spaced.

between these two stations, and no more tonnage can be hauled over the division, than can be hauled between these two points in a given time.

By a rearrangement of the passing tracks, this particular throat may be made to disappear, but the new throat will appear as the interval between passing tracks which takes the greatest time to operate, the ideal

average time for a train, between the passing tracks which require the longest time to operate on a given district, then in the case

$$60 \times 1200 \times 24 \text{ above } C = \frac{T}{T} = 79,056 \text{ tons, or } 54.9$$

tons a minute. If the clearance rule is in effect requiring inferior trains to clear superior trains by five mins., the tonnage will

Fig. 5.—Train Schedule when Passing Tracks are Unevenly Spaced.

senger trains each way, the reduction in tonnage would be  $776 \times 4 = 3,112$  tons, leaving now  $70,920 - 3,112 = 67,808$  tons. The effect of the passenger trains to cause additional delay in this particular case will be very slight, and could probably be made to show no further delay, by careful scheduling, as this section is too short to get the effect. If a full division is being considered,

this delay must be taken into account. The law has been stated above.

The delay occasioned to trains at other stations than the terminals, and the two stations between which the longest interval occurs, is as we found above, twice the difference between this longest interval and the other passing track intervals. In our example this delay would occur at Giroux

tonnage possible, and that the nearer this is approximated the more efficient is the operation.

We have now considered all of the elements tending to reduce traffic mentioned above, except the question of insufficient terminal facilities. It is self evident that the tonnage capacity of the line requires that at the two terminals there must be, at least,

be capable of taking care of 683 cars in 24 hours.

The usefulness of such a calculation as the above, consists in being able to determine what are the elements in the operation of a division which needs improvement, and their relative importance. If under existing conditions it appears that double track is necessary, a calculation as above gives a

Fig. 6.—Train Schedule with One Unevenly Spaced Passing Track.

Fig. 7.—Effect of Attempting to Run More than the Number of Trains Determined by the Passing Track Intervals.

and would be 8.42 minutes for every west-bound train. That is  $8.42 \times 54 = 454.68$  tons per train affected. The number of trains

would be  $\frac{67,808}{1,200 + 227} = 48$  trains, and the total

loss of tonnage would be  $24 \times 454.6 = 10,896$  tons, giving the capacity now of  $67,808 - 10,896 = 56,912$  tons.

The effect of the delay due to the delivery of 31 orders is an element which, with a line so short as the one we are considering, could be neglected, as the orders will be delivered at St. Anne and Bedford, therefore not affecting the running time in this section. However for illustration, assuming that the eastbound trains are given their meet orders at Giroux, the time taken in stopping, delivering and starting, will consume not less than 10 mins., or  $10 \times 54 = 540$  tons per train. The number of trains then would be reduced to 19 each way, and the maximum tonnage would be  $56,912 - 10,260 = 46,652$  tons.

There is one other element which we can value, that is the delay on slow trains by fast ones running in the same direction. It will be seen that in the above the passenger trains reduce the tonnage due to tying up the line between passing tracks for following movements until the fast train reaches the next station in advance, or a clearance of 10 mins. is allowed. Assuming that the 10 mins. rule is in force, the delay at such passing track for one passenger train each way will be 10 mins. at St. Anne,  $10 \times 8.42 = 1.58$  min at Giroux, 10 mins. at Labroquerie, 10 mins. at Marchand in the one direction, and 10 mins. at Bedford, 10 mins. at Marchand, 10 mins. at Labroquerie, and 10 mins. at Giroux, or a total of 71.58 mins., being equal to 7,730 tons lost in capacity for two passenger trains each way, leaving a maximum now of  $46,652 - 7,730 = 38,922$  tons per 24 hours.

While it is quite possible that the maximum tonnage may never be realized, yet it is quite evident that this is the maximum

capacity in the yards to handle the tonnage which can be handled over the line. As however the capacity of a yard is determined by the number of cars handled, rather than the tonnage, the unit which we have used must be translated into number of cars.

The average capacity of cars in service in Canada in 1910 was 28 tons per car. The ratio of empty car mileage to loaded car

Fig. 8.—Effect of Introducing Trains of Different Speeds into Schedule.

mileage was 30%. Assuming the tare as a third of the total car weight, then the average car would weigh  $28 + 9 = 37$  tons. This divided into half the total tonnage, and multiplied by 130% would equal the number

of cars,—i.e.  $\frac{38,922 \times 130}{2 \times 37} = 683$  cars. There-

fore the yard at each end must in this case

means of determining whether all the facilities of the single track have been worked out to their maximum, or if some improvement, costing less than double tracking, can be undertaken in lieu of the second main track, thus indefinitely delaying the capital outlay, and increase in fixed charges.

Moreover such a calculation gives for a division the ratio of efficiency, by dividing the tonnage actually hauled, by the calculating maximum, thus as between different divisions, giving efficiency ratios, which are comparable. By such a means the operating forces on different divisions may be compared.

Further with respect to the dispatching method. It is seen from the above, that in order to obtain the maximum, every minute of lost time must be eliminated. The time sacrificed on account of delivering 31 orders, the clearance rules, flagging rules, etc., must be reduced to a minimum. The only method that will do this safely is a proper designed block system, one on which the block for head on movement is the distance between the passing tracks, but which will permit of the movement of trains in the same direction closer than the passing track interval, as with trains of different speeds considerable delay is introduced if the slow trains being passed are compelled to wait until the train passing has reached the next passing track in advance. I do not believe that fleet-trains, or running certain trains closer together than the schedule based on the passing train intervals, will tend toward maximum traffic, on account of the effect of these fleet-trains on the opposing trains, but it is absolutely necessary to allow permissive movements in the same direction, between passing tracks, to take care of the variation in speeds of different trains, and the greater the number of speed trains, the greater the necessity for such permissive movement.

The possibility of permitting two trains to approach each other head on, even if the possibility of collision is prevented by inter-

mediate signals, must be carefully avoided, as this introduces the possibility of additional delay which would materially reduce the capacity.

If the above reasoning is correct, that is that the necessity for following or permissive movements is due to running trains of different speeds on a division, then the advisability of putting in signals between passing tracks is dependent on the proportion of high speed trains to slow speed trains on a division, and therefore proportional to the amount of tonnage loss due to the inability of slow trains to get away from the passing tracks quickly, after having been passed by a high speed train.

This loss in tonnage means a loss in possible revenue, and when this potential loss in revenue is equal to the cost of maintenance and operation of the signals necessary to eliminate this tonnage loss, plus the inter-

district illustrated in the above —=11.8

tons per signal in the 24 hours. It has been shown above that the tonnage lost due to this inability to follow was, on this district 7,730 tons, enough tonnage to pay for 65 signals on 24 miles of track.

The question naturally arises how many signals could be used economically? It is quite evident that if the slow speed train is to get away as soon as possible after the fast train has passed, that the first block out from the passing train must be short enough to permit the entrance signal to assume, at least, the 45 degree position, in the least possible time, bearing in mind that the minimum length of block must not be less than the braking distance of the maximum speed train, and that the next block length would be such as to allow the high speed train to

296.9

25

the block lengths succeeding the first block out would be about 9,200 ft. in length. This would determine all succeeding block lengths, except that in order to facilitate meets the distant signal indication for the next passing track should be set as close in to the passing track as possible, or it would be probably located out a distance equal to the maximum train length plus its braking distance. This would be approximately 3,500 ft. The above is illustrated in figs. 9 to 11.

Now if we summarize the different values in tons lost for the different elements which we have considered we can approximately show the relative value of each.

Operating:	Tons.	Ct.
Clearance rules .....	8,136	20.5
Lack of ability to follow .....	7,730	19.5
31 orders .....	10,260	25.5
Irregularly spaced passing tracks .....	10,896	27.0
Passenger trains .....	3,112	7.5
		100.0

65.5% of the tonnage loss on this line is due to the method of operation, 27% is due to the irregularity of the passing track spacing and 7.5% is due to the passenger train service. The introduction of automatic signals on this line would apparently have the greatest effect in increasing the tonnage, spacing of the passing tracks being next in order, assuming that the terminal yards are sufficient to take care of the tonnage when increased.

The tractive effort of the locomotive is

$$O 8 P d s$$

found from the formula  $T = \frac{O 8 P d s}{D}$  where

T is the tractive effort; P, boiler pressure; d, diameter of cylinders; s, stroke; and D, the diameter of the locomotive driving wheels.

In working out the data for the profile here shown, I assumed that the class of locomotive being used on the district was of the following dimensions:—

Weight on drivers .....	131,200 lbs.
Locomotive and tender .....	152 tons.
Boiler pressure .....	185 lbs.
Cylinders .....	22 x 26 ins.
Dia. of drivers .....	63 ins.

The tractive effort of this locomotive with full cut off would be 31,400 lbs. When however the locomotive reaches a certain speed the cut off must be changed, so as to admit less steam to the cylinders, and this will cause a reduction in the tractive effort of the locomotive. The point where the cut off will be modified is a function of the speed, and will be found by the formula, Speed

factor =  $\frac{56.02 V s}{D}$  The speed factor is given

in revolutions per minute of the driving wheels. Up to a value of 250 the locomotive will be operated with full ports; above this the cut off is reduced, and there is a rapid drop in the tractive effort of the locomotive. Fig. 13 gives the tractive effort curve for the locomotive above. The tractive effort curve is a straight line to 10.8 m.p.h., the rest of the curve is a hyperbola, that is the product of the ordinates and abscissae is constant, in the case of our locomotive this product is 339,120. This curve gives the theoretical tractive effort, but the actual tractive effort which it is possible to utilize at low speeds is dependent on the friction between the drivers and the rails. Using 0.2 as the coefficient of friction, and with 131,200 lbs. as the weight on the drivers, the actual tractive effort available is  $131,200 \times 0.2 = 26,240$  lbs. This value is shown on fig. 13, the balance of the curve being found by drawing a tangent from this point to the curve already found. This curve then gives the tractive effort of the locomotive from 10 to 40 m.p.h.

The resistance which the locomotive must

Fig. 9.—Fast Train Passing Slow Train at Siding. Fig. 10.—Trains Meeting at Siding.  
Fig. 11.—Distribution of Blocks between Sidings.

est on first cost and depreciation, then the point has been reached when the introduction of signals can be justified economically.

The average freight earnings on Canadian railways for 1913 was 0.753 cts. per ton mile; of this 70% was expended in cost of operation, leaving as net revenue 0.227 cts. per ton mile. Assuming that an automatic signal will cost \$800, and that the cost of operation and maintenance will be \$150 per year, the yearly charge for an automatic signal would be: Interest at 5%, \$40; depreciation at 7%, \$56; maintenance and operation, \$150; a total of \$246 per signal per year, or 67.4 cts. a day, as the cost per signal. If we divide this amount by 0.227 cts. we will get the ton miles over the division that must be added to the capacity of the line to justify the installation of one signal. This

is  $\frac{67.4}{0.00227} = 296.9$  ton miles, or in tons for the

pass the outgoing signal of the block before the following train has reached the outgoing signal of the first block.

As an illustration, assuming the speed of the fast train is 30 m.p.h., and that the braking distance for the maximum train, at its maximum speed, is 2,000 ft., the signal marking the end of the first block would be located 2,000 ft. out from the siding, the entrance signal of this block being located just beyond the siding switch, this 2,000 ft. would be run in 0.76 mins.

The train which has been passed can now head out and will pass the entrance signal at 45 degrees. Assuming that it takes this train 6 mins. to open the switch and head out on to the main line and close the switch, and an additional minute to run to the next signal, or 7 mins. in all, the fast train would have run  $3\frac{1}{2}$  miles, and therefore if the slow train is to be given a clear signal, the fast train must have passed two signals, or

overcome in running along a straight and level track is found by the formula:

$$R = 3.5 \times 0.0055 V^2 \frac{16}{(V-1)^2}$$

This is shown as the bottom curve fig. 12.

If the train has to be hauled up a grade, the additional resistance due to the grade is found from formula  $R = 20 \times$  rate of grade. These two formulae give the resistance in pounds per ton.

The ruling grade on the profile fig. 1 is 0.75%. Assuming that it is desired to load our locomotive for this ruling grade at a minimum rate of 10 m.p.h. the resistance which will have to be overcome will be  $R_t$  for 10 m.p.h., plus  $R_g$  for a 0.75% grade, i.e.  $4.2 + 15 = 19.2$  lbs. per ton. 19.2 divided into 26,200 (the tractive effort for 10 m.p.h.) gives 1,360 gross tons as the weight of the train that can be hauled over this district.

This locomotive being loaded for a speed of 10 m.p.h. on a 0.75% grade, would be able to operate with this load on a level track, or a less rate of grade than the ruling one, at a greater rate of speed than 10 m.p.h. If it is operating on a level track, there being no grade resistance, the 15 lbs. per ton of this resistance is no longer in evidence, therefore, there is 15 lbs. per ton of this tractive effort left available for acceleration.

0.75% grade, but that above this speed the rate decreases. It will be sufficiently accurate for our purpose if we use increases of speed of 5 m.p.h. The speed of 15 m.p.h. is equivalent to a velocity head of 8 ft., and by again referring to the curve in fig. 12, we find that at a speed of 15 m.p.h. this train can operate up a 0.85% grade. Using this new value, we continue our line to a point where it is 8 ft. above the engineering profile, here we can change the rate to that given on the curve for 20 m.p.h. This new rate could be used until the lines of the profiles had diverged 14 ft., but that at the foot of the grade we find that we have only risen 9.5 ft. above the engineering profile and that beyond this point the two lines are converging. When they have approached each other to 8 ft. we again change our rate to that given for 15 m.p.h., the two lines continue to converge however and when the distance between them is 3.5 ft. our train is capable of operating up a 0.75% grade. This also being the rate of the engineering grade the two profiles will parallel each other to the top of the grade. Continuing in this manner we secure a continuous operating profile of the line, which takes into consideration the tractive effort of the locomotive, the effect of the ruling grade, and the effect of the average grades, thus pro-

## The Alaskan Railway Surveys.

The commission of engineers appointed by the United States President to survey and report on possible routes for Alaskan railways has returned to Washington and will in a short time submit its plans and estimates. Four coast points, Cordova, Valdez, Seward and Portage Bay, have been considered as possible termini. Cordova, on the east shore of Prince William Sound, has a population of about 1,100. It is the terminus of the Copper River & Northwestern Rd., which could be extended from Chitina, 132 miles distant from Cordova, up the Copper River Valley and through the Alaskan Range to the Tanana and Fairbanks, a total distance of about 445 miles.

Valdez, from which now runs the government wagon road to Fairbanks, is situated on the north shore of Prince William Sound and has a population of about 1,500. The total distance from Valdez to Fairbanks over this route is about 380 miles.

Seward, on Resurrection Bay, has a population of about 600. It is the terminus of the Alaska Northern Rd., which extends northerly across the Kenai Mountains for 72 miles to the eastern end of Turnagain Arm, and which could be extended around Turnagain and Knik Arms to the Susitna Valley

Fig. 12.—Equivalent Grade of Available Tractive Effort, Train Resistance and Tractive Effort Curves.

In fig. 13, the tractive effort is shown in pounds per ton for the locomotive with the gross load of 1,360 tons. Below this curve is the train resistance curve; then the intercepts cut off between the tractive effort curve and the resistance curve, is the amount of tractive effort unused if the train is on a level track, or if we divide the value of these intercepts by 20 (the resistance of a 1% grade) we have the rate of grade up which this locomotive can haul 1,360 tons and the speed in miles per hour which it can make on these grades. The upper curve gives these rates of grade for the different speeds.

With this combination curve in fig. 12, we can proceed to construct a velocity profile on the engineering profile, producing the operating profile shown in fig. 1. The method of constructing this operating profile is as follows:—Assuming that we are starting our full tonnage train from St. Anne. The locomotive is capable of operating up a 0.75% grade, and this was the basis of loading; then if we draw a line, rising above the engineering profile, fig. 1, at the rate of 0.75% from the starting point, and continuing this line until it is 3 ft. 5 in. above the engineering profile. A velocity head of 3 ft. 5 in. is equivalent to a speed of 10 m.p.h. Referring to fig. 12, we find that at this speed the locomotive is capable of operating up a

ducting what is to all intents and purposes an indicator card of the train operation. Such a velocity profile gives a simple means of locating signals, showing the spacing of signals on the engineering alignment in feet, measured in the time of running.

**Steel Ties** made of rolled channels, with wood blocks under the rails, are being tried on the Northern Pacific Ry. About 100 were laid in 1911, but some of them have been removed on account of difficulties in shimming track. During 1914 about 320 were put in, mainly at water stations where wooden ties were burned by cinders dropping from the locomotives. Ties of this general type, but under various names and with various modifications in the rail fastening, have been used experimentally at different times within the past 30 years.

**Steam Railway Fatalities.**—During December there were 15 fatal accidents to railway employes in the Dominion. Of these, 5 were due to collisions, 2 to being struck by trains or locomotives, 2 to being run over, 4 to electrocution and 1 to being shot.

**Revised passenger and station regulations** for the Intercolonial Ry. and the Prince Edward Island Ry. were approved by order in Council, Jan. 12.

Fig. 13.—Tractive Effort Curve of Locomotive under Discussion.

and thence up to Broad Pass in the Alaskan Range and down the Nenana to the Tanana and Fairbanks, a total distance of about 460 miles.

Portage Bay is situated on the west coast of Prince William Sound, where no settlement now exists. It can be connected by a 15-mile line, in which there are about 3 miles of tunnel, with Turnagain Arm, and thence northerly through the Susitna and Nenana Valleys to the Tanana and Fairbanks, a total distance of about 410 miles.

In addition to the main trunk lines, branch lines to the Matanuska and Bering River coal fields are being considered. During the past summer the commission, with a large force of engineers, has been engaged on the survey and examination of these routes.

**Heavy rails** have developed some new physical weaknesses, one of the most notable being failure through crescent shaped pieces breaking out of the rail flanges, followed by at least one, and in many cases several, ruptures across the whole section of the rail.

**The C.P.R. and the G.T.R. shops** are reported to be adding the necessary extra plant to enable them to turn out steel shell jackets for the British Government.

# Railway Mechanical Methods and Devices.

## A Handy Planer Stop.

A handy stop for the planer, in use in the Toronto, Hamilton and Buffalo Ry. shops, Hamilton, Ont., is shown in the accompanying illustration. The planer has the usual T slots the length of the table, with round stop holes in rows between. In these holes pins can be fitted, with set screws through the upper end for bearing against the work.

Planer Table Stop to Fit in the T Slots.

As the holes are some distance apart, it frequently happened that intermediate blocking was required to hold the work being planed. The result of this disadvantage was the introduction of the stop, shown herewith, which fits in the table slot, intermediate to the ordinary stop holes. The upper portion is the same as the usual pin stop. We are indebted to E. Glavin, Foreman, Machine Shop, for this information.

Jig on Planer for Planing Outside Faces of Shoes and Wedges.

## Planing Shoes and Wedges.

A method of machining shoes and wedges on the planer with a minimum of time required in setting up the work has been developed in the Toronto, Hamilton, and Buffalo Ry. shops, Hamilton, Ont. In the first stage of the machining they are laid in a row on the planer table, and the inner faces planed out, the locating of the shoes and wedges for this operation not requiring a great deal of accuracy, as there are no finished surfaces up to this stage. The next operation consists of planing the sides of the shoes and wedges, an operation that is performed in the manner shown in the accompanying illustration.

Bolted to the planer table there is a casting, roughly of a base and upright form, the upright section being finished on the outer face to the inside dimensions of the shoe or wedge. Against this face the inside finished

face of shoe or wedge is placed and held in position by planer stops and set screws, and in this position one face of the shoe or wedge is finished. Reversing the position, the other face is finished. Both these operations can be performed on several shoes or wedges at a setting.

For the final operation of finishing the backs of the shoes or wedges such a jig cannot be used, as, due to the inequality in wear on the mating faces of the shoes and wedges, where they are used in repair work, as in this shop, it is necessary to lay out lines on the ends of the shoes and wedges to which to plane. We are indebted to E. Glavin, foreman machine shop, for this information.

## Calipering Driving Wheel Boxes.

In the Toronto, Hamilton, and Buffalo Ry. shops, Hamilton, Ont., for the purpose of calipering the inside diameter of driving wheel boxes, there is in use a most excellent method, which is in many ways superior to anything the writer has seen in use elsewhere. Good as it is, a still better method is being developed which will supersede the first, more on account of speed than want of accuracy. As the crown bearing of the driving wheel box is only a half circle it is impossible to caliper in the inside diameter while boring in the boring mill, the method followed in these shops. In some shops it is considered better practice to slot the inside diameter, instead of boring, but the boring appears to have certain advantages. The method followed in these shops is as follows: After setting up the work on the boring mill table, and centring, the boring tool is set as closely as possible by judgment, to bore the correct diameter. The tool is then fed down into the work just far enough to present a

calipering shoulder is cut in the box the table is swung around until the tool is opposite the flat head of the bolt, the latter being adjusted until it just touches the tool. This gives the other side of the boring diameter, which can thus be calipered, the crown of the box as one side of the diameter and the flat head of the bolt as the other side. The tool can be adjusted after this preliminary calipering until finally correct, when the calipering jig may be removed. In the above method plain

Chamfering Tool for Safe Ends.

inside calipers are employed.

In the method now being introduced the calipering frame is eliminated, and instead an unusual pair of calipers of the shape shown in the accompanying illustration is used. After passing through the preliminary calipering shoulder, cut as in the previous instance, the table is swung around so that the tool is opposite the crown. Placing the tip of the straight caliper leg on the tip of the tool

Calipering Driving Wheel Boxes, Old Method.

calipering shoulder. In the open side of the box there is fitted a special calipering jig. This latter consists of an open frame of the shape shown herewith, and which is a forged member. This frame is held in po-

Calipering Driving Wheel Boxes, New Method.

sition in the box opening by two set screws on each side, bearing against the box walls. In the centre of the frame there is a flat head bolt, the head projecting inwards towards the tool, and the outer end carrying a lock nut. After the

gives the diameter to which the tool is set, from which an adjustment of the tool may be speedily made if found necessary. These two methods have been developed under E. Glavin, foreman machine shop.

## Chamfering Tool for Safe Ends.

In the Toronto, Hamilton, and Buffalo Ry. shops, at Hamilton, Ont., a very handy method of chamfering the tube pieces that are used in safe ending is in use. Its advantage lies largely in the fact that the tool can be used in the bolt machine without much special fitting. The tool consists of a steel disc, which can be secured by four cap screws to the head of a bolt machine. Concentric in this disc there is a pin of the same inside diameter as the tube, the outer end of which is fluted like a reamer, for removing inside burrs in the tubes. On one side of the pin there is a radial projection, to one

face of which there is attached a shaving tool, the edge of which at the face of the supporting disc, touches the centre pin, tapering outwards to the other end, which is out a depth equal to the tube wall thickness. The tube safe end piece, held in the bolt machine vise, is forced over the centre pin, and on the shaving tool, which chamfers the edge as desired. We are indebted to E. Glavin, foreman machine shop, for this information.

### Drilling Speeds.

In a machine shop there are always a number of mechanics who have drilling to do but who possess little or no idea of the proper speeds to employ. In many cases it depends entirely upon the operator's judgment whether or not the machine is run at the highest speed that is consistent with good work. If the mechanic's judgment is poor—mere guesswork—a satisfactory rate of production combined with good work cannot be reasonably expected. When such a mechanic is given a table of drilling speeds expressed in revolutions per minute, it frequently happens that he does not know how to use it, and the average foreman does not have much time to explain details of this kind. A table of the form given herewith represents a simple means of conveying the required information in regard to suitable drill speeds. It can be made on tracing cloth so that blueprints may be made from time to time. These prints should be pasted

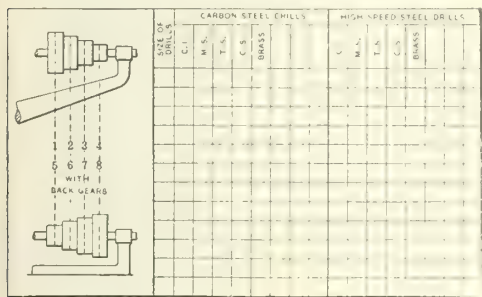

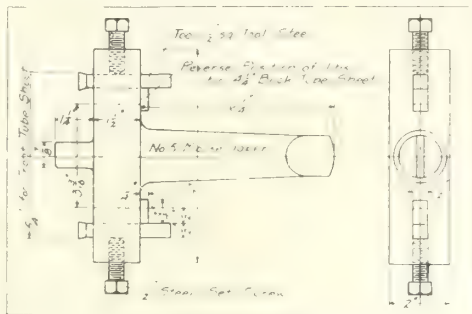

Diagram and Table of Drilling Speeds.

on a piece of board and given a coat of shellac or varnish to keep them clean. They can be hung near the drilling machines for ready reference.

The diagram at the left of the table shows the belt positions with and without the back gears, these positions being numbered 1, 2, 3 and 4 for the direct drive, and 5, 6, 7 and 8 when the drive is through the back gears. It will be obvious that each one of these belt positions corresponds to a certain number of revolutions per minute of the drill spindle. By calculation or from data taken from a machinists' handbook, the table at the right hand side may be filled in with the numbers of the belt positions, giving the speeds nearest the correct ones. With this the mechanic only has to know the size and kind of drill he is using and material he is drilling, in order to determine the correct drilling speed to employ. The preceding information refers to the application of a table of this sort to drilling machines, but similar tables could be compiled for lathes, milling machines, boring mills and any other machines that make use of cone pulleys and back gears to provide the necessary speed variations. The table could be made to include the proper feed to employ with each speed and material, but great care must be used or the entire object of the scheme will be lost. The average machinist has difficulty in using any but the simplest of tables, and his judgment in regard to the feeds is generally more accurate than his ideas of the correct cutting speeds.—Machinery, New York.

### Superheater Tube Sheet Borer on Canadian Northern Railway.

The Canadian Northern Ry. has adopted as standard the tube sheet boring tool, shown in the accompanying illustration. It consists of a cross bar of steel, on the upper face of which there is a no. 5 Morse taper

Superheater Tube Sheet Borer.

shank, and concentric with it on the other side, a  $\frac{3}{8}$  x  $1\frac{1}{4}$  in. guiding tip. Through the cross bar there are two rectangular holes, of a size to take a cutting tool and key, and held in position by  $\frac{1}{2}$  in. steel set screws. The keys are collared on the upper end, to prevent them from falling through while adjusting. This key feature makes it possible to use the same tool for both tube sheets, the larger holes being cut with the keys inside the cutting tools, and the smaller holes with the positions of the cutting tools and keys reversed. The tube sheet is laid out for all the holes, which are drilled 15-16 in. diam. These holes form guides for the tool tip, which has a 1-16 in. working clearance. The cutter forms a hole  $\frac{1}{8}$  in. smaller in diameter than the finished size, this remaining  $\frac{1}{8}$  in. being finally reamed out the same as the usual practice with the smaller tubes.

### A Substitute for Files for Triple Valve Work.

When triple valves have been in service for a considerable time and are removed from cars or locomotives to be cleaned and repaired, a good many of them have leaky slide valves, on account of elevations and depressions at the face of the slide valve and the slide seat, due to uneven wear between the two surfaces. When repairing them, it is necessary to first file the face of the slide valves as well as the slide valve seat perfectly straight before the work of grinding in the slide valve is commenced. Common, flat, smooth files are not suitable for this work, and it therefore has become

Device for Triple Valve Repair Work.

a practice in many shops to use special cut square files at an average cost of about \$1.50 each.

G. L. Van Doren, Superintendent of the Central Rd. of New Jersey shops at Elizabethport, N.J., has designed a simple device, as shown in the accompanying illustration, which does away with the expense of purchasing special files, and the results are in every way just as satisfactory as if the work had been done with a special file. A is a piece of T iron planed off on the under side to receive a strip of emery cloth of the proper width. The ends of the T iron are finished to receive a file handle.

B is a piece of emery cloth and C is a little clamp to hold the emery cloth stretched to the T iron. The expense of the emery cloth in comparison with a special file is insignificant. Special grades of emery cloth may be used. The device is useful for different kinds of jobs besides triple valves, such as slide valve feed valves, distributing valves, etc. F. J. Borer, Airbrake Foreman, Central Rd. of New Jersey, in Railway Master Mechanic.

### Spark Arresters for Locomotives Burning Non-Coking Coals.

The Board of Railway Commissioners issued the following circular, Jan. 25:—"During the past two years, numerous complaints have been received by the Board as to fire danger resulting from the use as locomotive fuel of certain classes of western coals. A careful investigation of this situation by the Board's officers reveals the fact that excessive sparking results from the use of such coals, and that, even when kept in perfect order, the spark arresting devices prescribed in regulation 2 of General Order 107 are inadequate to reduce within reasonable limits the number of live sparks thrown from the stack. The existence of this situation has been recognized by some of the western railways, which have voluntarily discontinued the use of such coals during the fire season.

"It appears from analyses made by the Mines Branch that the coals in question are not lignites, but that in each case where such trouble has occurred the coal has poor coking properties, or is non coking, while the use of coals which exhibit good coking properties results in only a normal amount of sparking. The Board does not desire to hamper in any way the legitimate development of any phase of the important industry of coal mining. It is, however, considered essential that some steps be taken to reduce to normal proportions the fire hazard resulting from the use of such coals as are above described. To meet this situation, the Board has under consideration the advisability of amending Regulation 2 of General Order 107 by adding thereto the following:

"(c) There shall be such special spark arresting device, other than the above, as may be approved by the Board, on every engine burning coal which has poor coking properties, or is non coking, the use of which, as locomotive fuel, is not prohibited by regulation 7 of this order."

"All parties interested are requested to submit their comments to the Board, in writing, not later than Feb. 20, 1915. If an order dealing with this matter is issued, it is expected that it will be made effective on and after April 1, 1915. In such event, arrangements will be made by the Board, upon application by any railway company concerned, for the prompt testing, jointly with the company, of any spark arresting device which it is claimed will meet the above conditions."

The Webster Construction Co. has been incorporated under the Ontario Companies Act, with offices at Hamilton, Ont., and an authorized capital of \$40,000, to build railways, canals, bridges, docks, wharves, roads, etc., and to carry on a general contracting business, and in connection therewith to take over the business heretofore carried on in Hamilton and London, Ont., by McKay, McKay and Webster. The provisional directors are, W. G. Webster, J. G. Smallman, Mrs. M. H. Smallman, Mrs. A. B. Webster, A. H. M. Graydon, London, Ont.

The restrictions in the area of the grate openings in locomotives are more generally found as due to failure to clean clinkers from between the bars than from faulty design.

## Canadian Northern Railway Company's Annual Report.

At the annual meeting in Toronto Feb. 1, the following directors were elected:—Sir William Mackenzie, President; Sir Donald Mann, Vice President; Z. A. Lash, Fred-eric Nicholls, R. M. Horne-Payne, R. J. Mac-kenzie, E. R. Wood and D. B. Hanna. All but Messrs. Wood and Hanna were members of the former board. E. R. Wood, as stated in the report, has been added to the board, and D. B. Hanna, who is Third Vice Presi- dent, has also been added.

The following directors' report, over the signature of Sir William Mackenzie, was submitted at the annual meeting:

The results of the operations for the fis- cal year ended June 30, 1914, are as follows:

GROSS EARNINGS.	
From Passenger traffic .....	\$ 3,719,946.94
From freight traffic .....	18,316,055.73
From express, mail, telegraph, in- terest and profits from elevators and other subsidiary companies, investments, etc. ....	1,745,326.17
	\$23,781,328.84
WORKING EXPENSES, (including taxes, etc. ....)	
	16,450,763.09
Net earnings .....	\$7,330,565.75
Deduct: fixed charges .....	5,776,060.34
Surplus .....	\$ 1,554,505.41
From this deduct interest at 5% per annum paid on income charge convertible debenture stock out- standing .....	1,250,000.00
Net surplus for the year .....	\$ 304,505.41

The gross earnings show a decrease, com- pared with the previous year, of \$496,149.63, or 02.04%. Whilst your directors regret that this year, for the first time in its his- tory, they have to report a decrease of gross earnings, it is gratifying, due to substantial economies effected in the operation of the various undertakings controlled, that the net earnings from all sources show an in- crease of \$556,697.85, or 08.22%, over the preceding year. The working expenses were 72.02% of the gross earnings of the railway proper, and including taxes 69.18% of the gross earnings from all sources, com- pared with 74.64% and 72.10% respectively in the previous year.

During the year 413 miles of newly con- structed track were added to the railway, the average mileage operated being 4,563 miles, compared with 4,297 the preceding year.

The land sales during the year were 3,692 acres for \$56,220.94, an average of \$15.23 an acre, compared with an average of \$15.36 for the preceding year. Land grant bonds of the issue of 1909, amounting to £122,600, were retired, leaving in respect of this issue outstanding £634,400. During the year £3,500,000 5% land mortgage debentures, repayable in or before 1923, have been created and £1,500,000 sold to public. Hav- ing regard to the fact that the National Trust Co. holds cash in its hands in excess of the amount required to retire the issue of 1899 land grant bonds, that the deferred payments when collected on the land actu- ally sold will retire the balance of the issue of 1909 and leave a surplus of over \$4,800, 000, that there are 857,356 acres of land still to sell, it will be seen that the redemp- tion of these 5% land mortgage debentures in due course is amply provided for. In addition to the equities referred to above and the unsold lands, there has also been assigned to the trustees of these debentures as additional security \$10,000,000 of shares and \$10,000,000 4½% debenture stock of the Canadian Northern Town Properties Co. In addition to the issue of 5% land mortgage debentures, short term issues of secured notes and temporary loans were made at different times during the year, the pro- ceeds of which have been or will be applied

to construction and betterment of the sys- tem generally. There have also been cre- ated during the year, under conditions here- inafter explained, \$45,000,000 of 4% debenture stock guaranteed unconditionally by the Dominion of Canada; this \$45,000,000 under ranks for security the existing issues of bonds and debenture stocks, including the 5% convertible income debenture stock. Car trust obligations were created to the extent of \$8,126,596.14, for the purchase of locomotives and passenger and freight cars of different kinds. During the year \$5,604, 596.14 was repaid in respect of previous obligations, thus making a net increase on this account for the year of \$2,522,000.

As a result of the satisfactory grain crop of 1913 in Manitoba, Saskatchewan and Alberta, your company handled not less than 80,000,000 bush. of grain, or its equiva- lent in flour and other mill products. The gross revenue, therefore, for the first half year under review, showed a very sub- stantial increase over the same period of the preceding year, and it was confidently felt because of this fact that, although there had been a perceptible slowing down of business generally throughout the Domin- ion, the expected falling off of traffic re- cepts for the succeeding six months would not approximate the increased revenues for the first half of the year. Notwithstanding the unexpected heavier loss in gross re- cepts, there are favorable features in cer- tain classes of traffic handled which, with a return of business to normal conditions, must be of substantial advantage to your company in the future. At several points on the system, the mining of coal is being carried on with success. During the past year your company handled over 1,100,000 tons of commercial coal, in addition to which an average of 700 tons a day have been purchased from mines served by our own lines and used in the operation of our trains. Reference should also be made to an increase of 150,000 head of live stock over the preceding year. The increase is on account of the development of this in- dustry in Saskatchewan and Alberta, which assures to the farmer a steady and regular income, quite apart from the profits in the growing of grain, and ensures to your com- pany the movement of profitable traffic at all times of the year. The development of these features is the natural outcome of the policy which has been consistently followed by your company, and also to the fact that its lines have been constructed in territory particularly adapted to mixed farming.

During the year an important revision of the main line between Winnipeg and Port Arthur, across Rainy Lake, was completed. The revision is over 2½ miles long and re- places a part of the original line, which was largely on timber trestles, by permanent work, at the same time reducing the gradi- ent to a maximum of 4-10 of 1%. The new line is built for double track and is laid with 80 lb. steel rails. The work includes some heavy excavation, a rock embankment over 1½ miles long and from 20 to 70 ft. in height above the bottom of the lake, and two permanent steel and concrete bridges, one of them a bascule lift bridge over the navigation channel. In addition to this other betterment work, representing large expenditures, was done over the entire sys- tem, which has so increased the efficiency of the service that the need for further ex- penditure in that regard may with safety be delayed until a return of normal business conditions.

As you are aware, the object of the board has been to secure a transcontinental rail- way system across Canada, and with that object the ownership or control of a num-

ber of independent companies was secured. The lines of some of these railways are so located that, being joined with your com- pany's main line, they constitute a through and very direct route connecting Quebec, Montreal, Ottawa, Toronto, Winnipeg, Ed- monton and Vancouver and Victoria by car ferry. The lines of the other companies constitute valuable branch lines and feeders. The problem of financing the completion of this main through line, and the develop- ment and betterment of this system gener- ally, had to be solved. It did not seem prac- ticable or desirable to continue as hereto- fore and complete the system while many of the separate or subsidiary companies constituting it remained in law, corpora- tions independent of the C.N.R. company. Your directors, after careful consideration, decided that the time had arrived for the formal acquisition by your company of the control of the entire system and for the raising of money on the security of the general system, in order that the main through line might be completed and the construction, equipment and betterment of the works and undertakings of the system generally might be provided for. Owing to the public nature and importance to the people of Canada of the C.N.R. system, and that in the public interest it should be com- pleted without delay, your directors ex- plained to the Dominion Government their intentions with respect to the consolidation and completion of the system, and applied for a Dominion Government guarantee of securities to the extent of \$45,000,000, se- cured by a general charge upon the under- takings of the C.N.R. and upon the stocks of the subsidiary companies. The applica- tion having been favorably entertained by the Government, and the statute having been passed by Parliament, an agreement between the Government and the company was made and the control of the shares in the capital stocks of the subsidiary com- panies which had not previously been ac- quired by the C.N.R. Co. was transferred to it. The statute authorizes any railway com- pany comprised in the Canadian Northern system to enter into arrangements and agreements with the Canadian Northern respecting the operation by the C.N.R. of its undertaking. This provision will greatly facilitate the consolidation of the system, and your directors intend to take advantage of it, so that, as far as possible, the whole system may be operated directly by the C.N.R. Co., and that a single or consolidated yearly balance sheet may be prepared. By the statute the capital stock of the C.N.R. is fixed at \$100,000,000, subject to increase only by the Dominion Parliament; provided that for the purpose of exchange of income charge convertible debenture stock, \$25, 000,000 of which is now outstanding, there may be issued to such holders who exercise the option of exchange, the amount of cap- ital stock over and above the \$100,000,000 required for the purpose. The statute also provides that no further issue of income charge convertible debenture stock shall be made under the trust deed securing the same. No shares in the capital stocks in the subsidiary companies beyond the amounts heretofore issued can be issued without the consent of the Government. As part of the terms upon which the Gov- ernment guarantee was authorized, the statute required that there should be trans- ferred to the Dominion of Canada \$33,000,000 par value of the C.N.R. Co.'s capital stock, in addition to the \$7,000,000 which was issued under the authority of the statute of 1913. The shareholders furnished this amount, and the Government is now a share- holder to the extent of \$40,000,000, out of a total of \$100,000,000 of stock. The pro- visions of the statute relating to the guar- antee of the \$45,000,000 were all complied

with, and the issue of the guaranteed securities was duly authorized and secured by trust mortgage. These having been completed subsequent to the close of the fiscal year, the effect of the arrangement does not appear in the present statement of accounts.

Since the close of the fiscal year, business conditions have become exceedingly bad, owing to the war now in progress. Every industry has been affected to a greater or less extent, and this is reflected, so far as all the railways in the Dominion are concerned, in reduced gross revenue from week to week, especially in the Prairie Provinces. To meet these unparalleled conditions your directors have enforced sweeping economies in the handling of such business as is being offered as will in a measure offset the serious loss in gross revenue.

Owing to conditions which have arisen, the completion of your line across Canada has been delayed. It is expected, however, that a physical connection between the east and the west will be made early in the coming year, and that a regular through service will be in full operation by midsummer of 1915.

E. R. Wood, Toronto, President, Dominion Securities Corporation, and identified with other important financial interests, has been elected a member of your company's board.

The accounts and statistical tables appended were submitted by D. B. Hanna, Third Vice President:

#### CONDENSED BALANCE SHEET.

##### Assets.

Cost of railway and equipment	\$239,688,998.27	
Acquired securities (cost)	17,309,634.77

Total passenger revenue	\$3,591,054.32	3,590,313.39
Average amount received per passenger	1.78.64	1.80.87
Average amount received per passenger per mile	.02.270	.02.284
Total passenger train earnings	\$4,353,721.55	4,381,668.92
Passenger train earnings per train mile	\$1,22,702	1,28,088

#### Freight Traffic.

	1914.	1913.
Revenue tons carried	6,537,416	6,821,811
Revenue tons carried one mile	2,419,604,849	2,366,393,799
Revenue tons carried one mile per mile of road.	530,266	550,708
Average distance haul of one ton	370.12	346.88
Total freight revenue	\$18,125,874.76	18,261,130.13
Average amount received for each ton of freight	2.77.264	2.67.687
Average revenue per ton per mile	.00.749	.00.772
Total freight train earnings	\$18,316,055.73	18,561,026.90
Freight train earnings per train mile	\$2,95,153	2,83,210

#### Passenger and Freight, Etc.

	1914.	1913.
Gross earnings per mile of road	\$5,211.77	5,649.87
Operating expenses per mile of road	\$3,605.25	4,073.45
Net earnings per mile of road	\$1,606.52	1,576.42
Amount required per mile of road to pay fixed charges, including leased lines	\$1,027.29	993.01

#### Train Mileage.

	1914.	1913.
Mileage of passenger trains	3,548,219	3,420,821
Mileage of freight trains	6,205,620	6,553,100

#### Expenses Per Traffic Train Mile.

	1914.	1913.
Maintenance of way and structures	cts. 32.72	32.33
Maintenance of equipment	cts. 26.28	33.10
Traffic expenses	cts. 04.62	04.29
Transportation expenses	cts. 94.31	97.26
General expenses	cts. 10.73	08.51
Total	\$1.68.66	1.75.49

#### Summary of Equipment.

	June 30, 1914.	1913.
Locomotives	663	534
Sleeping and dining cars	80	76
Passenger coaches	412	376
Baggage and mail and express cars	112	115
Business cars	16	16
Freight, refrigerator and stock cars	27,018	23,759
Conductors' vans	433	396
Boarding, tool, auxiliary cars, steam shovels and snow equipment	818	701

The total mileage owned and operated, including leased lines, at June 30, 1914, was 4,965.90, located as follows: Ontario, 342.07; Manitoba, 1,836.70; Saskatchewan, 2,052.24; Alberta, 691.17; Minnesota, 43.72.

**Railways and Forestry.**—The Canadian Forestry Association passed a resolution at its annual meeting recently, thanking the railway companies for the assistance given the association in various ways in carrying on the work of forest conservation, and stating that without such aid the association's work would have been much curtailed.

## Application for a General Increase in Freight Rates.

The Canadian Freight Association, on behalf of all the railway companies under the Board of Railway Commissioners' jurisdiction, filed the following application with the Board, on Feb. 17:—

The companies propose to file with the Board tariffs bringing into effect increases in freight charges as shown in the schedule hereto attached.

In order to obviate the enormous expense of printing tariffs and filing same, prior to their consideration by the Board, the companies desire to submit a memorandum thereof, showing the increases proposed to be made effective, for the Board's approval. Copies of this application and of the schedule attached have been forwarded to the secretaries of the principal boards of trade and to the Canadian Manufacturers' Association.

In support of the application the applicants state that it is in the interest of the country at large, as well as of the companies and their shareholders, that further revenues should be obtained from the carriage of freight traffic.

That the rate of return in net operating income upon the companies' property investment has seriously declined.

That the principal cause of this decline is the steady and constant increases in operating expenses, due to matters of continuing character, such as wage increases, legislative requirements and the necessity of maintaining a higher standard of track equipment and facilities generally.

That the return upon money invested in railway facilities in the territory in respect of which increases in rates are asked, is unreasonably low and inadequate.

The effect of these factors is to seriously diminish the companies' borrowing powers and compel the obtaining of necessary capital at much higher rates of interest, thereby increasing fixed charges, which must be met out of the net earnings, which have been decreased, and will in all likelihood be further decreased, by the necessity of paying higher rates of interest on any monies borrowed.

That in consequence of the exceptional conditions at present existing, various money markets previously open to the companies are now closed, the result being to very materially limit the sources from which money may be obtained.

That among other grounds the companies will urge as a reason for the proposed increases the fact that after a full hearing the Interstate Commerce Commission made an order recently increasing the rates in the Official Classification territory to the South, notwithstanding the fact that in the applicants' opinion the conditions under which the companies were there operating were much more favorable than those which apply to the applicants.

The applicants propose to submit to the Board, on the hearing of the application, statistics to support the grounds upon which the application is based. These statistics are in course of preparation and will be filed with the Board before the date set for the hearing, if at all possible. At the same time copies will be forwarded to the secretaries of the boards of trade and other interests.

### Schedule of Increases Proposed.

To meet in some measure the conditions outlined in the foregoing application the following changes in various freight tariffs, class and commodity, are proposed:—

1. CLASS RATES.—That goods carried under Canadian Freight Classification ratings and class rates will be advanced 2c. per 100 lbs. 1st class, and 1c. per 100 lbs. 5th class; rates for other classes to be fig-

ured on the usual basis, subject to standard mileage class rates as a minimum.

2. COMMODITY RATES.—On freight traffic carried on commodity rates the following advances are proposed:—

Coal and coke, 10c. a ton. Sand, gravel and crushed stone (except stone for fluxing), 5c. a ton.

Billets, pig iron, wire rods, rails, crop ends, ferro silicon, iron ore concentrates, crude oxide of iron, mill cinder.

Where present rate is	Proposed advance
\$1.49 a ton or lower	5c
\$1.50 a ton to \$2.49	10c
\$2.50 a ton to \$3.49	15c
\$3.50 a ton to \$4.49	20c
\$4.50 a ton to \$5.49	25c
\$5.50 a ton to \$6.49	30c

Pulpwood, cordwood, paving blocks, logs, stone, artificial stone.

Where present rate is	Proposed advance.
7½c or lower	¼c
Over 7½c but not exceeding 12½c	½c
" 12½c but not exceeding 17½c	¾c
" 17½c but not exceeding 22½c	1c
" 22½c but not exceeding 27½c	1¼c

Alum, tan bark, stone dust, cooperage stock, gypsum rock, shafts, magnesite, final molasses, salt, drain tile, wire fencing, wrapping paper cores, china clay, beer packages, charcoal, nitre cake, hubs, spokes, mica scrap, pitch, salt cake, potatoes, wire netting, sulphur in packages, cement, petroleum coke, grinding pebbles, rims, lime, lumber and forest products, rags, slag, wrapping paper, woodpulp, articles of iron and steel manufacture, car lots.

Where present rate is	Proposed advance.
15c or lower	½c
Over 15c but not exceeding 25c	1c
" 25c but not exceeding 35c	1½c
" 35c but not exceeding 45c	2c

Wood alcohol, excelsior, petroleum, marble, tar, ale and beer, gas liquor, rice and rice flour, car loads, sludge, tin cans, glass bottles, granite, green hides, sulphur in bulk, metal shingles and siding.

Where present rate is	Proposed advance.
25c or lower	1c
Over 25c but not exceeding 35c	1½c
" 35c but not exceeding 45c	2c

Grain and grain products, flax seed, beans.

Where present rate is	Proposed advance.
7½c or lower	½c
Over 7½c but not exceeding 12½c	1c
" 12½c but not exceeding 17½c	1½c
" 17½c	2c

3. Rates on grain and grain products from Fort William, all rail and lake and rail; also from Bay ports to Montreal, will be advanced 1c. per 100 lbs. Rates from Fort William and Bay ports, and Ontario points to points in the Maritime Provinces, will be advanced 1c. per 100 lbs., plus the difference in the present and proposed arbitraries east of Montreal.

4. Sewer pipe as follows, viz:—Where present rate is 7½c. or lower, 1c. per 100 lbs. Where present rate is over 7½c., 1½c. per 100 lbs.

5. In connection with iron and steel articles, it is proposed to advance the l.c.l. rates to the proposed 4th class rates.

6. Rates on binder twine from Welland, Ont., will be advanced from 1c. to 4c. per 100 lbs., to correspond with similar advances made from twine factory points in the United States.

7. Proposed advance in rates on canned goods. To Montreal and Ottawa 1½c. to 2½c. per 100 lbs., points in the Maritime Provinces being figured by adding established arbitraries to the Montreal rate.

8. Cheese.—Rates on this commodity to Montreal will be advanced 2c. per 100 lbs., but not higher than the 4th class rates, which basis already applies from a very large territory.

9. Proposed to advance the present rates on livestock from 1c. to 2c. per 100 lbs.; also corresponding advance is proposed in the rates on livestock to Buffalo, N.Y., and United States generally.

10. Proposed to advance rates on dry earth paints from Argalls, Champlain and Red Mill, Que., to the 10th class rates.

11. Proposed to advance rates on paper, starch and glucose, to correspond with the advance made in the 5th class rates.

12. It is proposed to place acids on the 7th class basis.

13. Some commodities such as confectionery, corn oil, cotton piece goods, stoneware, gin, lard compound, leather and soap will be advanced to Classification basis.

14. On certain commodities such as fertilizers, ore, stone for fluxing, sugar beets, beet pulp, etc., no advance has been proposed.

The above takes care of a great majority of the changes proposed. There are a few others of less importance which have been submitted to the Board in detail.

The Board has given notice that the application will be heard in Ottawa on March 1.

## Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,594,300	\$1,163,800	\$430,500	x \$83,800
Aug.	1,367,700	1,123,000	244,700	x 163,900
Sept.	2,109,000	1,519,000	590,000	65,800
Oct.	1,895,300	1,332,100	563,200	x 440,900
Nov.	1,670,200	1,123,100	547,100	x 417,700
Dec.	1,329,100	908,000	421,100	200,900
	\$9,966,500	\$7,167,200	\$2,799,300	x \$1,241,400
Decr.	\$3,398,400	\$2,157,000	\$1,241,400	.....

x Decrease.

Approximate earnings for January, \$950,800, against \$1,570,900 for Jan., 1914; and for two weeks ended Feb. 14, \$499,200, against \$615,800 for same period 1913.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Decrease
July	\$10,481,971.72	\$6,732,525.89	\$3,749,445.83	\$388,347.85
Aug.	8,917,764.38	6,554,616.62	2,363,147.76	597,981.54
Sept.	10,754,139.67	6,387,091.25	4,367,048.42	48,580.30
Oct.	9,282,928.49	5,361,600.13	3,921,328.36	2,281,529.45
Nov.	8,067,358.89	5,413,867.72	2,653,491.17	2,244,173.89
Dec.	7,443,962.43	5,244,438.62	2,199,523.81	2,127,297.90

	\$55,938,125.58	\$36,264,549.32	\$19,673,576.26	\$7,537,860.41
Dec.	\$19,348,036.45	\$11,810,176.04	\$7,537,860.41	.....

Approximate earnings for Jan., \$5,903,000, against \$7,719,000 for Jan., 1914; and for two weeks ended Feb. 14, \$3,074,000, against \$3,485,000 for same period 1913.

## Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., G.T.W.R., and D.G.H. & M.R. for January, compared with Jan., 1914:—

	1915	1914	Incr.	Decr.
G.T.R.	\$2,661,080	\$3,028,783	.....	\$ 367,703
G.T.W.R.	559,638	555,434	\$4,204	.....
D.G.H. & M.R.	192,131	190,295	1,836	.....
Totals	\$3,413,149	\$3,769,512	.....	\$ 356,363

Approximate earnings for two weeks ended Feb. 14, \$1,603,413, against \$1,741,770 for same period, 1914.

## Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for January were \$247,011, against \$368,318 for Jan., 1914.

## Birthdays of Transportation Men in March.

Many happy returns of the day to:—

W. G. Annable, General Passenger Agent, C.P.R. Atlantic Steamship Lines, Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

C. H. Bowes, Assistant General Passenger Agent, C.P.R., Vancouver, B.C., born at Bangor, Me., Mar. 22, 1877.

George Bury, Vice President, C.P.R., Montreal, born there, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

F. G. J. Comeau, General Freight Agent, Dominion Atlantic Ry., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car and Foundry Co., Montreal, born in King's county, N.S., Mar. 26, 1851.

C. T. Delamere, Assistant Engineer of Construction, C.P.R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President, Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

G. R. Fairhead, District Freight Agent, Canadian Northern Ry., Hamilton, Ont., born at Toronto, Mar. 6, 1882.

W. R. Fitzmaurice, Assistant Superintendent, Moncton and Ste. Flavie District, Intercolonial Ry., Newcastle, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forrester, Superintendent, Stratford Division, Ontario Lines, G.T.R., Stratford, born at Wanstead, Ont., Mar. 5, 1876.

Jas. D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Ry., Ottawa, Ont., and Vice President, Canadian Electric Railway Association, born at St. Andrews, Que., Mar. 26, 1851.

H. M. Gain, Trainmaster, Districts 6 and 7, Belleville Division, Eastern Lines, G.T.R., Belleville, Ont., born at Lindsay, Ont., Mar. 21, 1879.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

E. P. Goodwin, ex Inspecting Engineer, National Transcontinental Ry., Baie Verte, N.B., born there, Mar. 17, 1865.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M. Can. Soc. C.E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, General Traffic Manager, Canadian Government Railways, Moncton, N.B., born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M. Can. Soc. C.E., Mackenzie, Mann & Co., Toronto, born at Truro, N.S., Mar. 14, 1870.

Joseph Hobson, M. Can. Soc. C.E., Consulting Engineer, G.T.R., Hamilton, Ont., born at Guelph, Ont., Mar. 1834.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk

Pacific Ry., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M. Can. Soc. C.E., Principal Assistant Engineer, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

A. K. Leighs, Car Foreman, G. T. Pacific Ry., McBride, B.C., born in Great Britain, Mar. 6, 1883.

R. W. Long, Division Freight Agent, G. T. R., Hamilton, Ont., born at Appin, Ont., Mar. 20, 1873.

T. W. Lowe, General Boiler Inspector, Western Lines, C.P.R., Winnipeg, born at Montreal, Mar. 30, 1858.

J. M. McKay, Superintendent, District 1, British Columbia Division, C.P.R., Revelstoke, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M. Can. Soc. C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross tp., Renfrew co., Ont., Mar. 13, 1848.

M. Magill, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, Vice President, Mackenzie, Mann & Co., Ltd., and Vice President Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, General Passenger Agent, Canadian Government Railways, Moncton, N.B., born at Scadouc, N.B., Mar. 9, 1872.

T. Milne, Locomotive Foreman, C.P.R., Windsor, Ont., born at Arbroath, Scotland, Mar. 3, 1856.

J. V. Murphy, General Agent, C.P.R., Portland, Ore., born at Bowmanville, Ont., Mar. 5, 1885.

Peter Paton, Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, born at New Lowell, Ont., Mar. 13, 1869.

R. Patterson, Master Mechanic, G.T.R., Stratford, Ont., born at Brantford, Ont., Mar. 13, 1860.

F. W. Peters, General Superintendent, British Columbia Division, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., Mar. 12, 1861.

E. H. Sewell, City Passenger Agent, C. P. R., Sherbrooke, Que., born at Quebec, Mar. 17, 1875.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee, Assistant District Passenger Agent, C.P.R., Toronto, born at St. John, N.B., Mar. 29, 1876.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, born at Montreal, Mar. 21, 1866.

A. T. Weldon, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, General Freight Agent for Ontario, Allan Line Steamship Co., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

H. K. York, Car Foreman, C.P.R., North Transcona, Man., born at Victoria Corner, Carleton co., N.B., Mar. 20, 1881.

**Railway Lands Patented.**—Letters patent were issued during December, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary and Edmonton Ry. ....	481.00
Canadian Northern Ry. ....	312.00
Canadian Pacific Ry. ....	49.86
G.T. Pacific Branch Lines Co. ....	159.84
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	5,561.60
Total .....	6,565.69

## Spark Arresters for Locomotives Using Non-coking Coals.

With reference to the Board of Railway Commissioners' circular, published on pg. 87 of this issue we are officially advised that the Board's present standard of spark arresting device, which is  $2\frac{1}{2} \times 2\frac{1}{2}$  of no. 10 Birmingham wire gauge, has been found not to give satisfactory results with certain non coking western coals. The object of the proposed modification of the board's order is to induce the various railway companies, which desire to use non coking or poorly coking coals, to conduct experiments and develop spark arresting devices which will enable these coals to be used without excessive sparking. This is practically a new proposition, and the officials are not aware of any spark arresting devices which have been tested with these coals and found to give satisfactory results from the point of view of sparking and steaming capacity.

The Canadian Coal and Coke Co., of which H. A. Lovett, of Montreal, is President, has for some months been conducting experiments in co-operation with the Grand Trunk Pacific Ry. However, on account of the accidental death of O. M. Terry, who was conducting the experiments, the work was temporarily discontinued in December, but has again been taken up by Mr. McConachie, who has been loaned by the G. T. P. R. for the work. The Canadian Coal and Coke Co. owns the Pacific Pass mine at Lovett, Alberta. Pacific Pass coal is one of several non coking or poorly coking western coals with which there has been difficulty due to excessive sparking. Some two years ago, the G. T. P. R. voluntarily discontinued the use of these coals during the summer, on account of fire danger. The object of the Canadian Coal and Coke Co. in carrying on these experiments is, of course, to develop the summer railway market.

In connection with the circular above referred to, the board has no particular spark arresting device in mind, and it has not been shown that any of the spark arresting devices on the market will meet the particular conditions in question. It is hoped that by co-operation between the railway companies and the coal companies concerned, some method may be found which will enable these poorly or non coking coals to be used during summer with a reasonable degree of safety. The proposition is not to prohibit the use of these coals, but simply to require some definite kind of spark arresting device in connection with them, the details of such device to be developed experimentally and the results checked by the board's inspectors. The coal companies in question have already to a very considerable extent lost their summer railway market, and the idea is to develop some plan, if possible, by which this market may be regained. In this work the board's operating and fire inspection departments are co-operating as fully as possible.

**Vancouver Elevator.**—It is announced that active construction of the Government elevator at Vancouver will be commenced in April, and everything rushed so that the elevator will be ready for operation in the autumn. Preliminary work is in progress on the site, and the contractors, Barnett and McQueen Co., are organizing their plant. The total storage capacity of the elevator will be 1,250,000 bush., and the sacking plant will be able to deal with from 2,000 to 4,000 sacks an hour. Grain in bulk will be discharged at the rate of 60,000 bush. an hour, and grain will be taken into the elevator at the rate of about 30,000 bush. an hour.

### Passenger Rate Meetings at Toronto.

The annual meetings of the International Water Lines Passenger Association, the Niagara Frontier Summer Rate Committee and the Great Lakes and St. Lawrence River Rate Committee were held at Toronto in January. The rate representatives met on Jan. 26 and 27, and prepared the rates for submission to the general meetings of the three associations, at which they were confirmed without alteration.

At the Niagara Frontier Summer Rate Committee's meeting, Jan. 28, the chairman, F. T. Grant, G.P.A., Rutland Rd., Rutland, Vt., stated that the meeting had been called for the purpose of compiling for the information of interested lines, summer fares from Niagara Falls, Toronto, Montreal, Quebec, Detroit, Port Huron, Boston and miscellaneous points for season of 1915.

Mr. Grant was presented with a gavel, the head of which was made of marble from a mine under the Rutland Rd.'s right of way at North Rutland, Vt., and the handle of rosewood taken from the last wooden car used on that company's line.

R. L. Fairbairn, G.P.A., Eastern Lines, Canadian Northern Ry., was elected chairman for this year, and presided over the remainder of the meeting. The Erie Rd. was readmitted to membership.

The fares, as compiled by the rate representatives, were adopted, and it was understood that summer excursion tickets would be on sale May 1 to Oct. 15, and bear final limit of Oct. 31, inclusive, except where otherwise stated.

It was decided that the proceedings be issued by the Secretary for the information of interested lines, which are to understand that the publication is not a tariff or substitute for one, and consequently will not be accepted by the Board of Railway Commissioners for Canada, the Interstate Commerce Commission, or the New York State Public Service Commission as a legal tariff covering the fares shown therein.

The Secretary was instructed to compile and issue a Division Book, which will show divisions of all fares shown in the Niagara Frontier Summer Rate Sheet by all routes interested in same. The expense of compiling and issuing the summer rate sheet and division book, including Secretary's salary, will be assessed on the basis of mileage of each line over which fares are quoted in the sheet.

At the Great Lakes and St. Lawrence River Rate Committee's meeting, Jan. 28, W. F. Herman, G.P.A., Cleveland and Buffalo Transit Co., presided until the election of J. F. Pierce, G.P.A., Canada Steamship Lines, Ltd., as chairman for this year. The Indiana Transportation Co., Chicago, was admitted to membership.

The representatives of the various steamer lines were invited to announce their fares for the season of 1915, which the Secretary was instructed to embody in the proceedings.

James Morrison, A.G.P.A., Eastern Lines, Canadian Northern Ry., Montreal, is permanent Secretary of the Niagara Frontier Summer Rate Committee and the Great Lakes and St. Lawrence River Rate Committee.

The next annual meeting of the three associations will be held in Buffalo, N.Y., in January, 1916.

The International Water Lines Passenger Association met Jan. 27, the President, O. H. Taylor, P.T.M., Eastern Steamship Corporation, New York, in the chair. He was presented, on behalf of the Chicago, Duluth & Georgian Bay Transit Co., with a gavel made from wood used in the construction of the s.s. South American for that company, and which was placed on the Chicago-Duluth route in June, 1914.

The following lines were admitted to membership:—Great Northern Pacific S. S. Co., Indiana Transportation Co., United Fruit S. S. Co., Victoria Navigation Co., Ltd.

The subjects listed for discussion were dealt with and officers for the current year were elected as follows:—President, W. P. Hinton, A.P.T.M., Grand Trunk Pacific S. S. Co., Montreal; Vice President, F. B. Hibbard, G.P.A., Hudson River Day Line, New York; Secretary, M. R. Nelson, C.C.G.P.D., Northern Steamship Co., New York; Executive Committee—P. Robbins, G.P.A., Goodrich Transit Co., Chicago, Ill., 2 years; H. H. Cudworth, G.P.A., Eastern Steamship Corp., Boston, Mass., 1 year; E. W. Holton, G.P.A., Northern Navigation Co., Sarnia, Ont., 1 year.

### Special Dominion Taxation.

The Minister of Finance introduced a series of resolutions in the House of Commons, Feb. 11, to impose special taxation to meet deficiencies in revenue. The following are the principal items affecting transportation companies:

Every cable and telegraph company shall pay for Consolidated Revenue Fund 1 cent upon each dispatch or message originating at the offices of the company in Canada and transmitted thence over the company's lines for which a charge of 15 cts. or more was imposed, the company having the right to charge the 1c. to and collect the same from the person paying or liable to pay the regular charges for the transmission of the dispatch or message;

Every purchaser of a railway passenger ticket or right to transportation over a railway to any place in or outside of Canada, a steamboat passenger ticket or right to transportation by steamboat between ports or places in Canada or from a port or place in Canada to a port or place in Newfoundland, the West Indian Colonies or the United States, a ticket or right entitling the passenger to transportation over a railway and by steamboat to a port or place in Canada, Newfoundland, the West Indian Colonies or the United States, whether such transportation be by railway and steamboat or by steamboat and railway or by railway, steamboat and railway, shall pay for Consolidated Revenue Fund, in addition to the regular charge for the ticket or right, in respect of a ticket or right costing—over \$1 and not more than \$5—five cents, over \$5—for each \$5 and in addition for any fractional part of \$5—five cents;

Every purchaser of a berth in a sleeping car or seat in a parlor car shall, in addition to the regular charge for the berth or seat, pay for Consolidated Revenue Fund, 10 cts. in respect of each berth bought, 5 cts. in respect of each seat bought;

Every company carrying passengers by vessel from any port or place in Canada to any port or place outside of Canada, except Newfoundland, the West Indian Colonies and the United States, shall pay for Consolidated Revenue Fund in respect of each passenger carried—\$1, if the amount chargeable for the passage exceeds \$10; \$3 if the amount chargeable for the passage exceeds \$30; \$5 if the amount chargeable for the passage exceeds \$60, and the company may charge to the passenger and may collect from him the sum so payable;

No person shall issue a cheque at or by a bank and no person shall negotiate a bill of exchange through a bank or deliver a bill of exchange to a bank for collection unless he affixes thereto a stamp of the value of 2 cts.; a cheque or other bill of exchange made or drawn out of Canada in the possession of a bank in Canada shall before payment or pre-

sentment for payment have affixed thereto a stamp of the value of 2 cts., and the value of the stamp shall be chargeable to the person entitled to the proceeds of the cheque or bill; Every customer of a bank shall affix to a receipt for money paid to him by the bank and chargeable against a deposit to his credit in the bank a stamp of the value of 2 cts.;

Every express company carrying on business in Canada shall, before the issue of a money order or a traveller's cheque, affix thereto a stamp of the value of 2 cts. chargeable to the purchaser of the order or cheque or to the payee thereof;

No money order or postal note shall be issued under the provisions of the Post Office Act until there is affixed thereto a postage stamp of the value of 2 cts. and 1 ct. respectively, to be paid for by the purchaser of the order or postal note, and upon such stamp there may be printed or impressed the words "war tax";

On every letter and post card for transmission by post a tax of 1 ct. shall be levied and collected, such tax to be payable by affixing to the letter or card a postage stamp of that denomination, upon which there may be printed or impressed the words "war tax";

Every person by whom goods are received—to be exported or carried coastwise, or to be transported by railway, shall attach to the bill of lading or other evidence of receipt a stamp to be furnished by the shipper or consignor, of the value of 2 cts.

### Railway Route Maps Approved.

The Minister of Railways and Canals approved of the following railway route maps, Feb. 3:—

Edmonton, Dunvegan and British Columbia Ry., from Tp. 78, R. 7, w. 6 m., Alberta, to Tp. 78, R. 13, w. 6 m., about 48 miles.

Peace River Tramway and Navigation Co., from Fort Smith to Smith's Landing, Alberta, about 17 miles; also from south of Vermillion in Tp. 108, R. 6, w. 5 m., to the Peace River, north of Vermillion Falls, about 10 miles.

The Canadian Transfer Co.'s officers and directors elected recently for the current year are:—President, C. Cassils; other directors, Hugh Paton, G. R. Starke, Sir Montagu Allan, F. W. Molson; General Manager and Secretary, F. M. McRobie.

New Brunswick & Prince Edward Island Ry.—In the Senate, Feb. 12, in answer to Senator McSweeney, Senator Loughheed stated that there is an agreement for the purchase by the Dominion Government of the N.B. & P.E.I.R., which is 36 miles long, the owners being "The New Brunswick & Prince Edward Island Ry." the price to be \$270,000. The line is being operated by the Intercolonial Ry.

The Southampton Ry. Investigation.—The Minister of Railways laid on the table of the House of Commons, Feb. 8, the report of the investigation made into the construction of the Southampton Ry. in New Brunswick. The Commissioner, C. A. Pringle, K.C., finds that the Government had over paid a subsidy of \$34,607, and reprimands E. V. Johnson, Inspecting Engineer, Railways Department, for having accepted the construction engineer's word as to the cost of the line, but adds that it was a physical impossibility for Mr. Johnson to personally investigate the cost of construction of all the lines he had to inspect. Correspondence brought down with the report shows that the Department of Justice is taking steps to recover the amount of the overpaid subsidy.

### Attempt to Destroy Bridge Over St. Croix River.

Early on the morning of Feb. 2, Werner Vanhorn, (or Van Horn, or Von Horn), who subsequently claimed to be a German army officer, attempted to destroy by dynamite, the C.P.R. bridge over the St. Croix River, between St. Croix, N.B., and Vanceboro, Me. The bridge, which is designated no. 5.6, Brownville Subdivision, is 5.6 miles west of McAdam Jct., N.B., and is a 150 ft. through truss span. Originally it was a simple truss span, with the usual 2 trusses and floor beams and stringers. In 1906 the span was reinforced by the addition of similar trusses outside each existing truss, supported on spare space on bridge seats. New special floor system of the required capacity was also put in.

The attempt, which was made at the Canadian end of the bridge, affected the inner north truss, which had the end post damaged, and the adjacent stringer crippled, besides some other small damage. The substructure was not damaged. One passenger train was delayed 20 minutes, after which cars were pushed over without locomotives. A small amount of falsework was put under the damaged end, after which trains passed over under slow orders. Permanent repairs were effected within a few days. We are indebted to P. B. Motley, M. Can. Soc. C.E., Engineer of Bridges, C.P.R., for the information about the bridge, structure, etc.

After making the attempt Vanhorn returned to Vanceboro, where he had made his temporary headquarters, and was arrested there. On a charge of damaging property there by the shock of the explosion he was sentenced to the county jail at Machias, Me. An application for his extradition to Canada was made immediately by the British Ambassador at Washington, and is still under consideration.

After the attempt the C.P.R. placed special guards at the bridge, and on Feb. 16 a military guard was placed at the New Brunswick end, and an application has been made to the U.S. Government to similarly guard the Maine end.

### Proposal for Increased Passenger Fares in United States.

A campaign has been started in a number of Western States to obtain higher passenger fares on the railways. It is being carried on by the principal railways centreing on Chicago, and was inaugurated, so far as Illinois is concerned, on Feb. 3, when a committee of railway presidents, with C. H. Markham, of the Illinois Central, as chairman, had a conference with the Governor of the State. The committee applied for an increase in the passenger fares on the several lines from 2 to 2½ cts. a mile. The statement made to the Governor on the part of the railways sets out that for some years the railways have been facing a condition of stationary or declining rates for their services, and a steadily increasing cost of operation. The investigation of the Interstate Commerce Commission into the subject of railway operation and revenue is referred to. At this investigation, the generally unprofitable character of railway passenger service was emphasized to such a degree that the commission was impelled to give it special consideration, although the question of passenger fares was not specifically before that body. As a result of the findings of the commission upon passenger fares, the railway presidents are presenting the facts to the public and requesting that action be taken through the different State legislatures to obtain the relief suggested by the commission. The

Interstate Commerce Commission has authorized 2½ cts. as an interstate rate, and in the New England States legislative action is being taken to grant a similar rate within the several States. It is proposed to present a similar bill in Illinois.

In preparation for the presentation of this bill, the railways are circulating petitions throughout the State; and considerable statistical literature bearing on the subject, and are arranging for the holding of meetings all over the State. The petition quotes the following from the report of the Interstate Commerce Commission:—"The travelling public is giving expression to its demands for better service, better accommodation, and for the adoption by carriers of all devices that make for safety. A public that demands such service cannot reasonably object to the payment of a reasonable compensation therefor."

Similar campaigns are in progress in Ohio, Indiana, and Michigan, whilst in Nebraska an increase to 3 cts. a mile is asked; but a bill now before the Legislature proposes to increase the rate to 2½ cts.

### Locomotive Feed Water Heating.

At a meeting of the American Society of Mechanical Engineers recently, in discussing a report on "Steam Locomotives of Today," H. H. Vaughan, Assistant to Vice President, C.P.R., Montreal, said that considerable has been heard as to the experiments made on feed water heating by Mr. Trevithic on the Egyptian railways, in which he used not only exhaust steam heaters, but waste-gas heaters in the front end. With the latter he has been able to put the water into the boiler at 230 deg. and obtain 20% economy. The Central of Georgia Ry., has done a little with feed water heaters, as well as the New York Central,

the Canadian Pacific, and the Central Rd. of New Jersey.

"On the C.P.R. we have been experimenting with feed water heating for six years. We have tried open heaters in a tank with fairly good satisfaction. We also applied exhaust steam injectors, and got fair results. We have since been advised by the manufacturers that our troubles were because of our having applied too large size an injector for ordinary work on the locomotive. However, I am of the opinion that while the exhaust steam injectors would work fairly well under certain conditions, yet there would be some difficulties where the amount of water consumed is large. We found on experiments with an open heater that the temperature obtained was due to the exhaust steam from the feed pump, so, assuming a temperature of 200 deg. in the feed water, it would really be the equivalent of 160 deg. when the water was put into the boiler by an injector with 100% efficiency. By heating the water at the injector suction to 120 deg., we got 6% economy, and used injectors as against 10 or 12% economy with the feed water heater, and using a pump. We thought 6 or 7% with the injector was preferable to 10 or 12% with the pump, and we have been experimenting on that in recent years with reasonable results. Lately we have experimented with an ordinary closed feed water heater, and it is giving fair results.

"This is a subject which American railway people have largely neglected. It has the advantage of not only saving in coal, but increasing the capacity of the boiler. In careful experiments we found an economy of 12% in the use of the heater, and we feel that that justifies our going into the device more thoroughly. I feel that we will see feed water heating coming into larger use, not only with exhaust steam, but with waste gas."

### Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—Track was reported, Feb. 6, to have been laid to Lac du Beau, mileage 137 from Carbondale, the starting point on the Edmonton, Dunvegan and British Columbia Ry. Construction is being pushed forward on the bridge across the arm of the lake at the track end, and it is expected to have the line completed to Fort McMurray by the end of this year. (Feb., pg. 56.)

**Brule Lake Ry.**—The Alberta Legislature is being asked to extend the time for the building of the projected railway from mileage 994 on the Grand Trunk Pacific Ry., on the east shore of Brule Lake, Alberta, south easterly through sections 26 and 24, tp. 49, range 27 west, and then north easterly through sections 19, 20 and 27, tp. 49, range 26. The provisional directors of the company, which was incorporated in 1913, are: G. G. S. Lindsey, K.C., Toronto; S. B. Woods, K.C., O. M. Biggar, E. W. Fula and J. T. J. Colisson, Edmonton, Alberta.

**Burrard Inlet Tunnel and Bridge Co.**—The British Columbia Government, which is being asked to guarantee the company's bonds for the erection of a bridge across the Second Narrows of Burrard Inlet, is considering, in connection with the application, the decision of the directors to accept a tender put in by C. A. P. Turner, Vancouver, for the erection of the bridge. The resolution accepting the tender states that the price of the bridge as contained in the offer is \$1,744,837, and sets out that the acceptance of the offer is conditional as follows: That the contractor agrees, as offered, to conform with the recommendations of R. Modjeski's report, and meet the requirements regarding the design therein contained, also, that the plans be approved by the Dominion Government. Further, provided that the structural steel required for the whole construction be purchased from B. C. structural steel manufacturers and the contractors agree to purchase all material and have all work possible done in B. C., and to employ to the maximum extent B. C. workmen on the work. Further, provided that the bridge company shall not assume any obligation with C. A. P. Turner, and that the work shall not be actively proceeded with until satisfactory financial arrangements have been made by the company. (Feb., pg. 56.)

**Canadian Terminal Ry.**—The New Brunswick Legislature is being asked to extend the time for the building of this projected railway from L'Etang Harbor to St. Croix, with branch lines. The company was originally incorporated in 1907, and in 1912 the provisional directors were changed to J. S. Clark, G. W. Ganong, H. I. Taylor, G. W. Marsh, W. L. E. Marsh, J. L. Clark, W. A. Mitchell, G. J. Clarke. (June, 1912, pg. 299.)

**Central Canada Ry.**—The Alberta Legislature is being asked to amend chapter 46 of the statutes of 1913 by authorizing the building of a railway from north of the line between tps. 64 and 65 on the Alberta and Great Waterways Ry., easterly and south easterly to the eastern boundary of the Province. The line at present authorized and under construction extends from McLennan, on the Edmonton, Dunvegan and British Columbia Ry. to Peace River Landing, with a branch to Battle River.

A press report states that on Feb. 6, track had been laid on 15 miles of the 28 miles of grading completed and is expected to have the remaining mileage laid early in March. The construction of the line to Peace River Crossing, a further distance of

22 miles, is being pushed forward with dispatch. (Feb., pg. 56.)

**Dominion Government Ry. to Hudson Bay.**—The report of the Chief Engineer on the construction of the line, presented to Parliament by the Minister of Railways, states that the located line shows a variation of only 24 miles from being an air line between Pas and Port Nelson, Man. About 350 out of the 412 miles have been graded, on which 204 miles of track has been laid. The telegraph line has been completed for 175 miles.

The estimates laid before the House of Commons include \$5,500,000 for construction of railway, terminals and elevators. (Feb., pg. 56.)

**Edmonton, Dunvegan and British Columbia Ry.**—A. T. Kerr, of the Board of Railway Commissioners' engineering staff, inspected the line to McLennan, mileage 245 from Edmonton, Alberta, at the end of January and is said to have favorably reported upon it. The contractors are operating a train service to McLennan, but it is expected that the line will be taken over and placed in the charge of a permanent operating staff early in March. (Feb., pg. 56.)

**Entwistle and Southern Alberta Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the Grand Trunk Pacific Ry. at Entwistle, Alta., southerly to the Saskatchewan River near the boundary between tps. 17 and 18, west of the 5th meridian, 50 miles. Pringle, Thompson, Burgess and Cote, Ottawa, solicitors for applicants.

**Greater Winnipeg Water District Railway.**—The City of Winnipeg is building an aqueduct for 97.2 miles to secure water from Shoal Lake, adjoining Lake of the Woods. The located line runs south of the C.P.R. and National Transcontinental Ry. and north of the Canadian Northern main line, through an undeveloped section of the country. In order to take in the supplies and machinery required for the aqueduct construction it was necessary to build a railway along the aqueduct right of way. This road is of standard gauge, with 60-lb. rails and substantial roadbed. Including yards, spurs to gravel pit and sidings, there will be in all about 102.4 miles of track. The maximum grade is 0.5 ft. per 100 ft., and the standard minimum curvature is four degrees. The contractors' working tracks will be located between the railway and the trench, from which the track is distant 110 ft. The railway will cost approximately \$1,200,000, and is being built by the Northern Construction Co., of Winnipeg. Tracklaying was completed Dec. 17, 1914. There are still some seven miles to be ballasted. This will be carried out early in the spring in order to have the road in shape for the main aqueduct work, which will be commenced as soon as the frost leaves the ground. The clearing of the right of way was done by E. J. Bawlf, of Winnipeg. This cost \$79,360, and comprised: Clearing, 2,586 acres; salvage, 7,900 cords of wood, 349,000 lin. ft. poles; 14,467 fence posts.

A telephone line has been completed by the city from Winnipeg to Indian Bay. Residences have been erected for the engineers. Offtake drainage ditches have been dug. Roads have been built and other small works have been carried forward to prepare for the aqueduct construction.

The Commissioners, Feb. 15, let a contract

to the Progress Construction Co., Winnipeg, for the erection of a three stall locomotive house, with concrete pits, at Deacon, Man., at a cost of \$3,996.87.

Three trains a day each way are being operated over the line, construction supplies being taken in and cord wood being hauled out. (Feb., pg. 57.)

**Intercolonial Ry.**—The estimates laid before Parliament recently ask for the authorization of the following expenditures on capital account, among others:—

Dock and wharves, \$30,000; new terminal facilities, \$3,000,000 (which includes a revote of \$750,000); to increase accommodation and provide new machinery, \$3,500 (revote), and for Willow Park service, \$39,500 (revote). These expenditures are proposed to be made at Halifax, N.S.

Elimination of level crossings and grades at Moncton, N.B., \$125,000, of which \$85,000 is a revote, and a revote of \$22,500 for roofing at the same place is also included.

General improvements at Levis, Que., \$200,000.

To bring the New Brunswick and Prince Edward Island Ry., and the International Ry. of New Brunswick up to Intercolonial branch line standard \$25,000 and \$11,200 respectively. These two lines were taken over by the Railways Department, July 31, 1914.

For construction of a railway from near Dartmouth via Musquodoboit Harbor, and the Musquodoboit River Valley to Dean's Settlement, N.S., \$510,000, of which \$210,000 is a revote. (Feb., pg. 56.)

**Kettle Valley Lines.**—We are officially advised that track is laid continuously on the extension of the line from Midway to Penticton, 133.7 miles, and from Penticton to Osprey Lake Summit, 39 miles; from Otter Creek summit to Merritt, 30 miles; from a point on this stretch 25 miles west of Merritt, to the Coquihalla River, 16.4 miles, and from the Fraser River to a junction with the C.P.R., 1.9 miles. The work now being done covers the connecting up of these various sections, and includes the deviation from the original route to a junction with the Vancouver, Victoria and Eastern Ry., at Princeton, which company's line is to be used as a joint section to the Coquihalla River; and the section along the Coquihalla River Valley to Hope, which is also to be a joint section with the V. V. and E. Ry. The grading on the entire mileage is finished, and it is expected to lay the 31 miles of uncompleted track between Midway and Merritt, and the 35 miles on the Coquihalla River section, early in the summer. During 1914, track was laid on 58.1 miles, grading was completed on 65 miles, ballasting was done on 103 miles, and 46.52 miles of fencing were put up.

The bridge under construction at Hope, over which the connection with the C.P.R. will be made, is under construction. This bridge will consist of four steel spans, each 238 ft. long, resting on three concrete piers and two concrete abutments. The piers are sunk down in the bed of the river to solid foundation, one to solid rock, and the others to heavy boulders. The substructure has been completed, and the steel superstructure is being erected. Armstrong, Morrison & Co., Vancouver, put in the substructure, and the Canadian Bridge Co. is putting up the steel work. (Feb., pg. 56.)

**Montreal and South Western Ry. & Power Co.**—The Quebec Legislature is being asked to extend the time for the building of this projected railway from Adirondack Jct., on the C.P.R., along the St. Lawrence to the International boundary, and another line from Adirondack Jct., on the New York Central Rd., to Sunder, Que. The provisional directors are: V. Casson, L. Dansereau, A.

Geoffrion, G. N. Cusson, R. Gange, Montreal. The company has power to operate its lines by steam or electricity. (June, 1911, pg. 557.)

**Pacific Great Eastern Ry.**—J. W. Stewart, President, is reported to have stated in Vancouver, B.C., Feb. 4, that the contractors expected to have the uncompleted portions of the grade between Squamish and Fort George, linked up by Mar. 1. Track is reported to have been laid into Lillooet, mileage 120 from Squamish. Between Lillooet and Clinton, 50 miles, there is considerable bridge work. The foundations for the 2,600 foot bridge over the Fraser River are finished. It is expected to have track laid to Clinton by Aug. 1.

A regular train service is being operated from Squamish to Anderson Lake.

We are officially advised that track laying is to be started early in May from Fort George southerly, towards Clinton, and that the Squamish-Fort George section will be completed this year. This section involves the building of a high level bridge across the Cottonwood River.

Nothing has been decided as to the starting of construction from Fort George towards the British Columbia-Alberta boundary, where a junction is to be effected with the Edmonton, Dunvegan and British Columbia Ry.

The residents of the vicinity of North Vancouver decided, Feb. 3, to send a delegation to the Provincial Government asking that pressure be put on the company to push forward the construction of the section of the line from North Vancouver to Squamish. This piece of line is in operation from North Vancouver to Horse Shoe Bay, 12 miles, and the distance from the latter point to Squamish is 26 miles. (Feb., pg. 57.)

**Pacific, Peace River and Athabasca Ry.**—C. F. Law, Vancouver, is reported as stating, Feb. 1, that work in connection with this and its allied concerns will be started in the spring; that the company is applying for a change in the location of its projected terminals on the Pacific coast, and is completing its survey work. The first piece of work which will be put in hand will be a section of the Peace River Tramway and Navigation Co.'s undertaking. This will consist of a tramway at Vermillion Chutes on the Upper Peace River, which will connect two important navigable stretches of river and lake. A steamboat will be built at Peace River Crossing for the 550 miles of navigation to be opened up to Vermillion Chutes. (Jan., pg. 11.)

**Prince Edward Island Ry.**—The amounts chargeable to capital for which estimates have been submitted to Parliament for this year are:—Original construction, \$800 (revote \$200); to strengthen bridges, \$10,000; power plants, \$125; surveys and inspections, \$10,400; to increase accommodation and facilities along the line, \$17,600 (revote \$1,800); to provide car ferry, construct terminals and necessary connections, \$1-900,000 (revote \$800,000). (Jan., pg. 11.)

**Regina North Western Ry.**—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Regina, Sask., to Tuxford, on the C.P.R., thence northwesterly to Red Deer, Alberta; with a branch to Battleford, Sask., and on to Fort McKay. The provisional directors are: G. L. Kavanagh, O. L. Brunelle, J. Whitesell, J. Clyma, G. Bordeau, Montreal.

**Simcoe, Grey and Bruce Ry.**—The Dominion Parliament is being asked to extend the time for the building of this projected railway from Southampton via Owen Sound and Meaford to Collingwood and from Southampton via Port Elgin and Tiverton

to Kincardine, Ont. The provisional directors named in the act of incorporation, which was obtained in 1911, are: C. M. Bowman, Southampton; J. B. Tudhope, Orillia; W. T. Torres, Collingwood; H. Pedwell, Thornbury; H. Cleland, Meaford; S. J. Porter, J. W. McLaughlin, C. Eaton, E. Lemon, R. McDowall, B. Allan, A. G. Mackey, Owen Sound. (Jan., 1914, pg. 22.)

**Toronto, Hamilton and Buffalo Ry.**—A conference of engineers interested in the elimination of grade crossings in Hamilton was held Feb. 11, when G. A. Mountain, Chief Engineer, Board of Railway Commissioners, discussed the matter with them. A number of alterations were suggested, which necessitate the preparation of an almost entirely new set of plans. These alterations, it is stated, will result in the saving of about \$300,000 in the cost of the work. The new plans will be ready for approval early in March. (Feb., pg. 57.)

**Toronto Terminals Ry.**—The Dominion Parliament is being asked to amend the company's act of incorporation by increasing the limits of its bonding powers, to authorize it to acquire lands, and to maintain and operate in Toronto freight and other facilities in such manner and to such extent as the business of the company may render expedient. (Aug., 1914, pg. 371.)

### Railway Finance, Meetings, Etc.

**Boston and Maine Rd.**—A bill has been introduced in the Maine Legislature to provide for the reorganization of the B. & M. R., by the amalgamation of the parent company with the subsidiary lines operating in the State. The matter is not being proceeded with at present, pending the investigation of the alleged possibility of a transportation monopoly by its passage.

**Canadian Northern Ry.**—A London, Eng., press dispatch states that the C.N.R. guaranteed 4% debenture stock has been placed on the list of securities, approved by the Treasury, in which trust funds may be invested.

A lease of rolling stock from the Imperial Rolling Stock Co. to the C.N.R., dated Oct. 1, 1914, and numbered series K 1, 1914, was deposited with the Secretary of State at Ottawa, Jan. 22. This refers to the rolling stock covered by recent bonds to the value of \$2,000,000 placed on the Philadelphia market, recently. The bonds are to be redeemed by half yearly payments of \$150,000, the first payment being due in October.

A London, Eng., cablegram of Feb. 12 says the C.N.R. has privately placed an additional £500,000 sterling, 4% guaranteed debenture stock.

**Grand Trunk Ry.**—London, Eng., cablegram, Feb. 19:—Announcement was made today that the G.T.R. will pay a final dividend of only 1½% on the 4% guaranteed stock, making 3½% for the year, whereas for the previous year full dividends were paid on first and second preferences, together with 2½% on the third preference. This caused a great weakness in G.T.R. issues, the notes alone being unaffected. In order to make this distribution, the carry forward has to be drawn on to the extent of £12,400.

**Great Northern Mining and Ry. Co.**—Notice has been given of the redemption of a number of bonds on Mar. 1, at 5% premium and accrued interest, under the terms of the trust deed of Feb. 8, 1911.

**International Ry. of New Brunswick.**—The New Brunswick Legislature is being asked to authorize the conveyance of the line to the Dominion Government. The transfer of the property was arranged in July, 1914, and the line has been operated since Aug. 1, as a branch of the Intercolonial Ry.

**Michigan Central Rd.**—Application was filed in the U. S. District Court, Detroit, Mich., Feb. 1, on behalf of a number of shareholders asking for the appointment of a receiver. The petitioners allege that the company's business is being diverted by the New York Central and Hudson River Rd. control for the benefit of other railways under the same control, and ask for an injunction to prevent the N.Y.C. and H.R. Rd. vote being used in the control of M.C.R. affairs. The petition alleges among other things that the M.C.R. credit is being used for the purchase of rolling stock for competing lines.

**Toronto, Hamilton and Buffalo Ry.**—The agreement under which the Erie and Ontario Ry. becomes merged in the T.H. and B. Ry. was filed with the Secretary of State, Ottawa, Jan. 30.

**White Pass and Yukon Route.**—Gross earnings for two weeks ended Jan. 14, \$2,961, against \$3,736 for same period 1914.

### Commodity Rates to U. S. Pacific Coast Terminals, Etc.

The Interstate Commerce Commission has decided the applications for relief from the provisions of the fourth section of the Act to Regulate Commerce, as amended June 18, 1910, with respect to commodity rates from eastern defined territories to Pacific Coast terminals and intermediate points as follows:

Carriers authorized to establish certain carload commodity rates from Missouri River territory to Pacific coast terminals lower than to intermediate points, provided rates contemporaneously applicable on like traffic to intermediate points do not exceed 75 cts. per 100 lbs.

Carriers authorized to establish certain carload commodity rates from points in zones 2, 3, and 4 to Pacific Coast terminals lower than to intermediate points, provided rates from Missouri River territory to intermediate points are not exceeded by more than 15, 25, and 35 cts. per 100 lbs. from points in zones 2, 3 and 4, respectively.

Carriers authorized to establish certain less than carload commodity rates from Missouri River territory to Pacific Coast terminals lower than to intermediate points, provided the rates contemporaneously applicable on like traffic to intermediate points do not exceed \$1.50 per 100 lbs. on articles classified as first or second class and \$1.25 per 100 lbs. on articles classified as third or lower class in western classification.

Carriers authorized to establish certain less than carload commodity rates from points in zones 2, 3, and 4 to Pacific Coast terminals lower than to intermediate points provided the rates to intermediate points do not exceed the rates contemporaneously applicable from the Missouri River territory to the same points by more than 25, 40, and 55 cts. per 100 lbs. from points in zones 2, 3, and 4, respectively.

Suggestion made that carriers readjust rates to back haul points by either adding to the full terminal rates something less than the full local from terminals to destination or by the publication of basing rates to the terminals less than the terminal rates to be used in connection with local rates from the terminals in determining rates to intermediate points.

**Fitzhugh.**—The Grand Trunk Pacific Ry. division point, 1,027 miles west of Winnipeg and near the Yellowhead Pass, which was named after E. H. Fitzhugh, formerly Vice President, G.T.R., is now known as Jasper, it being the headquarters of the Jasper Park officials.

## Railway Rolling Stock Notes.

The G.T.R. has received two first class cars from Canadian Car and Foundry Co.

The Canadian Northern Ry. has received three baggage cars from Crossen Car Co.

The C.P.R., between Jan. 15 and Feb. 15, received 8 steel baggage and express cars, 5 steel frame box cars and 49 flat cars, from its Angus shops, Montreal.

New Glasgow, N.S., press reports indicate that the Eastern Car Co. has representatives in Russia at present, and that there is a possibility of that government placing orders shortly for cars of various types.

The estimates for the current year submitted to the House of Commons, ask for \$2,250,000 (of which \$380,000 is a revote) for rolling stock; \$24,000 for safety appliances for equipment, and \$3,400 to improve triple valves of air brakes for the Intercolonial Ry.

Press reports recently stated that the G. T. R. was building freight cars at its Elsdon, Ill., shops, but we are officially advised that some four or five cars, which were partially destroyed by fire about a year ago are being rebuilt there, and that the company is not contemplating building any cars there at present.

The 12 side dump cars which the Greater Winnipeg Water District Commissioners have ordered from the Canadian Car and Foundry Co., are to be of 6 cub. yds. capacity, with running gear of steel or iron to conform to standard M. C. B. specifications. The body is to be of oak with steel reinforcements, and the couplers are to be of the standard railway link and pin type, and the cars are to have hand brakes.

The Canadian Car and Foundry Co., since Jan. 15, has received orders for 50 steel underframe express refrigerator cars for the G.T. Pacific Ry.; 12 wooden side dump cars, for the Greater Winnipeg Water District, and 40 two way air steel dump cars, through F. H. Hopkins & Co., for the Greater Winnipeg Water District; 3 pairs of 50 ton trucks for the St. Lawrence Bridge Co.; 1 pair 50 ton trucks for the Confederation Construction Co., and 6 ore cars, 50 tons capacity for the Mond Nickel Co.

The chief details of the 40 dump cars which the Greater Winnipeg Water District Commissioners have ordered from F. H. Hopkins and Co., and which will be built by Canadian Car and Foundry Co., are as follows,—type of car, 16 cubic yard, or 20 cubic yard automatic two way air side dump, standard gauge; trucks and draft gear couplers, M.C.B. type; brakes, air, and auxiliary hand; safety appliances to conform to the Board of Railway Commissioners' requirements; construction, entirely of steel or iron except the floor, which may be of wood.

The Greater Winnipeg Water District Commissioners have ordered 4 locomotives, two of which are to be equipped with superheaters, and 1 saddle tank dinky locomotive, from Montreal Locomotive Works; 40 twenty yard air dump cars, from F. H. Hopkins and Co.; 12 six yard dump cars, from Canadian Car and Foundry Co.; and have purchased 20 flat cars and 4 cabooses, from O'Brien, Fowler and McDougall Bros., contractors, Ottawa; 10 box cars from J. A. McTaggart, Winnipeg, and 1 combination passenger and baggage car, from W. H. Wilson and Co., Philadelphia.

The G.T. Pacific Ry. has ordered 50 express refrigerator cars from the Canadian Car and Foundry Co. Following are the chief details:—

Length between end sills ..... 41 ft. 0% ins.  
Length inside between ice tanks ... 35 ft. 5 ins.  
Width over all ..... 9 ft. 8% ins.  
Width inside ..... 8 ft. 7% ins.

Height top of rail to top of running board ... 13 ft. 3 ins.  
Height top of rail to centre of coupler ..... 2 ft. 10% ins.  
Draft gear and buffing device .... Friction type  
Air brakes ..... Westinghouse KC-1012  
Couplers ..... Climax  
Trucks ..... Diamond arch bar  
Wheel base ..... 6 ft. 6 ins.  
Journals ..... M.C.B. 5 x 9 ins.  
Wheels ..... Rolled steel, 36 ins.  
Truck bolsters ..... Simplex  
Brake beams ..... Simplex  
Side bearings ..... Wood

The four locomotives which the Greater Winnipeg Water District Commissioners have ordered from Montreal Locomotive Works, are required to have a tractive effort of from 20,000 to 24,000 lbs., with a maximum speed of 25 miles an hour on a level grade, with a trailing load of 1,000 tons gross behind the tender. The weight of each locomotive is not to exceed 65 tons. They are to be fitted with standard straight and automatic air brakes, air signal and air sander. The dome is to be provided with a 1 in. air connection including valve fitted for steam hose, with 50 ft. of 1 in. steam hose with two couplings. The boilers must conform to the Manitoba and Ontario rules and regulations. Ash pans of the dump type, extra headlight on rear of tender, Detroit lubricators, Ohio injectors, C.N.R. standard boiler feed and check valves. The driving wheels must be equipped with hard grease cellars, and cups for hard grease supplied for the side rods. The tender axles are to be fitted with standard brasses interchangeable with those used on cars. Standard safety devices must be supplied for the locomotives, and the front of the locomotive and rear of the tender must be equipped with stub pilot braced to the body, and on this must be attached a foot board, and seat boxes must be furnished in the cabs. Spare parts to be supplied, include lubricator cup, complete injector, set of injector tubes, boiler feed check valves, complete driving box, grease cellar for driving box complete, set of tender brasses, 2 jacks, pair car replacers, 2 pinch bars, coal hammer and shovel and complete set of engineer's small tools. The dinky locomotive must have a tractive effort of 7,000 lbs., and is not to exceed 20 tons. It is to be equipped with M.C.B. automatic couplers with slotted knuckles, front and back, and two head-lights.

### Canadian Pacific Railway Construction, Betterments, Etc.

**Montreal Subways.**—The Montreal City Council has under consideration tenders for the putting of subways under the C.P.R. tracks at St. Denis and Ontario Streets, at a cost to the city of about \$500,000. These are to replace existing subways which are not sufficiently large for the present traffic.

**Sault Ste. Marie Bascule Bridge.**—The bridge connecting the C.P.R. lines in Canada with its subsidiary the Minneapolis, St. Paul and Sault Ste. Marie Ry., at Sault Ste. Marie, across the ship canal, is said to be the longest of its kind in the world. It is 356 ft. long between pier centres, and 336 ft. long between trunnions. Each leaf is composed of two rivetted trusses, 168 ft. long and 55 ft. deep, spaced 20 ft. apart, and counter balanced by heavy overhead masses of concrete. Each leaf, with its machinery, is carried on a tower, the trunnion being at the base of the framing which carries the counterweight and the accompanying mechanism. Expansion and contraction is allowed for by one central tower with its leaf and counterweight being placed on rollers, so

that it is free to move when the bridge is closed. The weight of structural steel in the bridge is 1,400 tons, and each of the leaves, with its floor system, weighs 400 tons. The bridge is operated by electricity, and it can be opened and closed in 1 1/4 minutes.

**Western Lines.**—Grant Hall, Vice President and General Manager, returned to Winnipeg, Feb. 15, after having completed his first inspection over the lines west of Winnipeg since his recent promotion. The various lines, he said, are in good condition. Work at Rogers Pass tunnel is progressing faster than was anticipated, and it is expected to finish the work within two years. So far as the construction plans for the year are concerned he said there is nothing to add to the general statement made on his return from Montreal, and which appears on page 101 of this issue.

**Second Track on Western Lines.**—The details of the second track work completed in 1914 on Western Lines show that 20 miles of grading, 100.2 miles of tracklaying and 125 miles of ballasting were done, distributed as follows:

	Miles graded.	Miles track laid.	Miles ballasted.
<b>Manitoba Division:</b>			
Kemnay-Virden .....	1.5	2.4	2.4
Whitewood-Broadview ..	..	6.8	18.1
	1.5	9.2	20.5
<b>Saskatchewan Division:</b>			
Broadview-Grenfell ..	0	16.0	16.0
Indian Head-Regina ..	0	13.5	21.0
Chaplin-Swift Current ..	0	11.0	11.0
	0	40.5	48.0
<b>British Columbia Division:</b>			
Revestokle-Taft .....	13.0	24.0	24.0
Pritchard-Kamloops ..	2.5	25.5	25.5
Kamloops-Tranquille ..	3.0	3.0	9.0
	18.5	50.5	56.5

**Vancouver Hotel.**—F. Swales, architect in charge of construction at the hotel, is reported to have stated that he had received instructions to proceed with the finishing, decoration and furnishing of the main building and the Granville St. Annex, and to start construction on the new Marpole wing. This wing is to be built on a part of the site now occupied by some of the hotel buildings, which are to be cleared as soon as the main part of the building is opened. This wing will correspond with the 10 story wing on the east side. The main part of the hotel is expected to be opened about May 1. (Feb., pg. 62.)

**Spark Arresters for Locomotives Burning Non Coking Coals.**—Referring to the Board of Railway Commissioners' circular, printed on page 87 of this issue, we are officially advised that, owing to several requests made by parties interested, the date set for the submission of comments to the Board has been extended from Feb. 20 to Mar. 16.

**The Canadian Society of Civil Engineers' Ottawa Branch** was addressed, Feb. 4, by W. Sanford Evans, Chairman of the Georgian Bay Canal Commission, on the economics of engineering problems. In referring to his work in connection with the Georgian Bay Canal project, he stated that a preliminary report will be presented shortly, in which there will be a great deal of useful information.

**Locomotive Fuel Oil Tanks at Vancouver.**—The Union Oil Co. is erecting a large oil tank in the C.P.R. yards at Vancouver, similar in size and construction to the two already completed. Each of the tanks has a capacity of 55,000 barrels, so that the three will have a total storage capacity of practically 7,000,000 gals. A berthing slip for the steamships bringing in the oil is under construction at the tanks. The completion of this will obviate the use of the long pipe line and auxiliary pumping station now on pier A.

## Mainly About Railway People.

**Sir Wm. Mackenzie** has retired from the National Trust Co.'s board.

**Sir Thos. and Lady Tait** are spending part of the winter at Bellairs, Florida

**W. J. Hammond**, station agent, Canadian Northern Ry., Colborne, Ont., died suddenly there, Jan. 27.

**R. Marpole**, General Executive Assistant, C.P.R., Vancouver, B.C., left there Feb. 3, for a short holiday in California.

**Miss J. A. Drayton**, who died at Toronto, Jan. 29, was a sister of **H. L. Drayton, K. C.**, Chief Railway Commissioner, Ottawa.

**G. M. Bosworth**, Vice President, Traffic Department, C.P.R., has been re-elected a director of the Provincial Bank of Canada.

**D. B. Hanna**, Third Vice President, Canadian Northern Ry., has been elected a director of the company.

**A. G. Penny**, Assistant Advertising Agent, Canadian Northern Ry., Toronto, was married at Montreal recently to **Miss E. L. Benton**.

**D. B. Hanna**, Third Vice President, Canadian Northern Ry., and **Mrs. Hanna**, spent about a fortnight in Florida and other southern places in February.

**J. R. W. Ambrose**, Chief Engineer, Toronto Terminals Ry., read a paper on Toronto grade separation before the Canadian Railway Club in Montreal, Feb. 9.

**W. D. Scott**, General Manager, Spokane, Portland & Seattle Ry., Oregon Trunk Ry., Oregon Electric Ry. and United Rys. Co., died at Portland, Ore., recently, aged 56.

**Jules Hone**, Dominion Government Director, Grand Trunk Pacific Ry., is included in the estimates submitted to Parliament recently for \$2,000 as yearly remuneration.

**Mrs. Ross**, widow of the late James Ross and mother of **J. K. L. Ross**, director, C.P.R., died in Montreal, Feb. 22, after a brief illness.

**L. B. MacFarlane** has been elected President, Bell Telephone Co. of Canada, Ltd., Montreal, succeeding **C. F. Sise**, who remains on the board.

**C. J. Harris**, Foreman Brass and Tool Shop, Intercolonial Ry., Moncton, N.B., was presented with a Morris chair, by his associates, recently, on his retirement after 27 years service.

**H. H. Vaughan**, Assistant to Vice President, C.P.R., Montreal, gave an address on shell manufacture, illustrated by lantern slides, before the Canadian Society of Civil Engineers in Montreal, Feb. 4.

**J. H. Johnston**, Superintendent, Bridges and Buildings, G.T.R., Montreal, has been appointed a member of the American Railway Bridge and Building Association's committee on crossing gates, towers, etc.

**A. K. Grimmer**, A.M.Can.Soc.C.E., who resigned the position of City Engineer of Medicine Hat, Alta., recently, was, in 1906, engineer in charge of the Glenn extension of the York and Carleton Ry., in New Brunswick.

**Stewart Gordon**, who was formerly connected with the Hotel Department, C. P. R., has been appointed Secretary-Treasurer of one of the larger hospitals being organized by the St. John's Ambulance Association for service in Europe.

**A. E. Doucet**, M.Can.Soc.C.E., District Engineer, National Transcontinental Ry., Quebec, was entertained to dinner, Feb. 5, by a number of the divisional engineers who formed the engineering staff during the construction of the railway.

**George Beckingham**, Superintendent of Track, Eastern Lines, G.T.R., Montreal, has

been appointed a member of the Roadmasters and Maintenance of Way Association of America's committee on new and experimental track accessories and tools.

**W. McNab**, Principal Assistant Engineer, G.T.R., Montreal, addressed the Canadian Society of Civil Engineers, Toronto Branch, Feb. 25, on the construction of the Grand Trunk Pacific Ry., the address being illustrated by lantern slides and motion pictures.

**G. Blackbird**, Locomotive Foreman, G.T.R., Richmond, Que., who has retired under the pension rules, after 49 years of continuous service with the company, was presented with a case of silver and an address by the local staff and a number of residents, at Richmond, recently.

**Lt.-Col. Lacey R. Johnson**, M. Can. Soc. C.E., General Superintendent, Angus Shops District, C.P.R., Montreal gave an informal talk, illustrated by lantern slides, before the Canadian Society of Civil Engineers, in

**R. L. Fairbairn**, General Passenger Agent, Eastern Lines, Canadian Northern Ry., and Chairman, Niagara Frontier Summer Rate Committee.

Montreal, Feb. 15, on "Heavy guns used in the field."

**John B. Laurie**, Purchasing Agent and General Storekeeper, Central Vermont Ry., St. Albans, Vt., who died there recently, was born at Sarnia, Ont., Feb. 22, 1862, and entered railway service with the G.T.R., as storekeeper at London, Ont., transferring to the C.V.R. in Sept., 1899.

**John Murphy**, Chief Electrical Engineer of the Department of Railways and Canals, and Electrical Engineer, Board of Railway Commissioners, was a passenger in the I.R. C. train which left the track near Campbellton, N.B., Jan. 29. Neither he, nor any of the other passengers were seriously hurt.

**David McCoole**, Superintendent of Track, Toronto Terminals, G.T.R., has been appointed a member of the Roadmasters and Maintenance of Way Association of America's sub committee no. 3, on the proper organization of section forces and methods for maintaining and policing track for large terminals.

**W. L. Fagan**, who died at Vancouver, B.C., Jan. 28, aged 74, was in railway service in Ontario many years ago, on the Great Western Ry., and went to British Columbia in 1886. He was the first agent for the C. P.R., at Port Moody, and also the first agent for the same company at New Westminster.

**Stewart Gordon**, at one time Manager of the C.P.R. hotels at Banff, Alta., and Victoria, B.C., and who has been living in England for several years, has been appointed Secretary-Treasurer of a large hospital which is being organized by the St. John Ambulance Association for service on the European continent.

**Sir James Bell**, who has been appointed Chairman of the Glasgow and South Western Ry. (Scotland), vice **P. T. Caird**, resigned, has been a director since 1896, and acted as Deputy Chairman since 1900. He is a principal of Bell Bros. and Co., steamship owners and exporters, Glasgow, and a former Lord Provost of the city.

**A. T. Genest**, A.M.Can.Soc.C.E., who died at Ottawa, Jan. 27, was born at Fermont, Que., July 10, 1859, and was engaged, in his early days, on railway location and construction in the Laurentians, on what is now part of the Canadian Northern Ry. Later he was an engineer in connection with the projected Georgian Bay Canal.

**John Leslie Knight**, who was appointed acting auditor and chief clerk, Midland Ry. of Manitoba, Winnipeg, as announced in our last issue, was born at Kensington, Eng., Apr. 28, 1889, and entered M.R. of M. service, Sept. 1, 1912, since when he has been, to Feb. 1, 1914, timekeeper; Feb. 1 to Aug. 14, 1914, accountant, General Superintendent's office.

**W. D. Reid**, President, Reid Newfoundland Co., has presented the Newfoundland Regiment, with two machine guns. One of his sons is serving in the regiment as a private, and another is a lieutenant in the second contingent, and it is stated that he will, on reaching England, be transferred to the army flying corps, for which service he volunteered.

**L. V. Harrington**, whose appointment as Night Chief Dispatcher, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was announced in our last issue, was born at Attercliffe, Ont., Mar. 17, 1884, and entered T.H. & B.R. service, July, 1901, since when he has been, to July, 1909, agent and operator at different points; July, 1909 to Jan. 1, 1915, dispatcher, Hamilton, Ont.

**Brigadier-General H. C. Nanton**, in regard to whom some information was given in our last issue, has been made a Companion of the Order of the Bath, by the King. He started his professional career as an Engineer, on C.P.R. location in the Rocky Mountains in 1884, Sir Herbert Holt being a member of the same party. He is now Chief Engineer Officer of the Indian Forces in active service in Europe, in the neighborhood of Ypres and La Bassee.

**W. J. Warnick**, whose appointment as Trainmaster, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was announced in our last issue, was born at Hamilton, Ont., Mar. 20, 1880, and entered T.H. & B.R. service Jan. 9, 1896, since when he has been, to Mar. 1897, clerk in General Office; Mar., 1897, to July, 9, 1902, operator and freight clerk; July 9, 1902, to 1910, dispatcher; 1910 to 1912, Assistant Chief Dispatcher; 1912 to Jan. 1, 1915, Chief Dispatcher.

**William Henry Staniland**, whose appointment as Chief Dispatcher, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was announced in our last issue, was born at St. George, Ont., July 3, 1878, and entered T.H. & B.R. service, Sept. 21, 1895, since when he has been, to May 1, 1902, agent and

operator at various points; May 1, 1902 to Mar. 1, 1914, dispatcher, Hamilton; Mar. 1, 1914 to Jan. 1, 1915, Night Chief Dispatcher, Hamilton.

**Arthur Hatton**, whose appointment as General Superintendent of Car Service, C.P.R., Montreal, was announced in our last issue, was born in London, Eng., Apr. 12, 1869, and entered railway service, June 1888, since when he has been, to July 1890, station agent, Central Ontario Ry., at various points; June 1891 to July 1896, telegraph operator, C.P.R., Eagle River, and Kenora, Ont.; June 1896 to Sept. 1901, dispatcher, C.P.R., Kenora, and Fort William, Ont.; Sept. 1901 to Jan. 1907, Chief Dispatcher, C.P.R., at various points on the Western Lines; Jan. 1907 to Mar. 1912, Inspector of Transportation, C.P.R. Winnipeg; Mar. 1912 to Jan. 1915, Superintendent of Car Service, C.P.R., Winnipeg.

**Silas B. Wass, A.M.Can.Soc.C.E.**, whose appointment as Assistant Superintendent, Intercolonial Rys., Fredericton, N.B., in charge of station service, train service and track, St. John and Quebec Ry., was announced in our last issue, was born in Perth County, Ont., July 11, 1880, and entered railway service, July 1906, since when he has been, to Jan. 1908, Resident Engineer, C.P.R., Walkerton, Ont.; Jan. 1908 to Jan. 1909, Assistant Engineer, C.P.R., Durham, Ont.; May 1909 to Sept. 1910, Chief Engineer, Aroostook Valley Rd., Presque Isle, Me.; Sept. 1910 to Jan. 1912, Assistant Engineer, C.P.R., Montreal; Jan. 1912 to Apr. 1914, Assistant Chief Engineer, St. John and Quebec Ry., Fredericton, N.B.; Apr. to Dec. 1914, Chief Engineer, same road.

**John Ross**, who died at Montreal, Feb. 4, aged 70, was born in Scotland, came to this continent in early life, and worked for some time on railway construction in the United States. During the building of the C.P.R. through the Rockies, he obtained some contracts there, in partnership with the late D. McDermott. These contracts covered a good portion of the snow shedding through the Rogers Pass. He subsequently was engaged on railway construction for the C.P.R. and other companies in the east. As a partner in Ross, Barry and McRae, he was one of the builders of the Canadian Northern Ry. between Joliette and Quebec, and in the Ross Harris Co., carried out a contract on the C.P.R. Toronto-Sudbury Line, while in conjunction with G. McComb, he built a portion of the Montreal and Southern Counties Ry., and was interested in many other contracts on the C.P.R., C.N.R. and G.T.R. He was also interested in contracts on the Welland Canal.

**H. J. Humphrey**, whose appointment as Superintendent Car Service, Western Lines, C.P.R., Winnipeg, was announced in our last issue, was born at Berry's Mills, N.B., Jan. 26, 1879, and entered railway service June 1896, since when he has been, to Aug., 1897, telegraph operator, Intercolonial Ry., at various points; Aug. 1897 to Aug. 1901, telegraph operator, Boston and Maine Rd., at various points; Aug. 1901 to Apr. 1902, telegraph operator, Intercolonial Ry., at various points; May 9, 1902 to Sept. 6, 1903, telegraph operator, C.P.R., Calgary, Alta.; Sept. 6 1903 to June 1, 1907, dispatcher C.P.R., Calgary, Alta.; June 1, 1907 to Nov. 1, 1909, dispatcher, C.P.R., Medicine Hat, Alta.; Nov. 1, 1909 to Apr. 10, 1911, dispatcher, C.P.R., Calgary, Alta.; Apr. 10, 1911 to July 1, 1912, Chief Dispatcher C.P.R., Macleod, Alta.; July 1, 1912 to Jan. 8, 1915, Car Service and Fuel Agent, C.P.R., Saskatchewan Division, C.P.R., Moose Jaw.

**R. Marpole**, General Executive Assistant, C.P.R., Vancouver, B.C., sent, as mentioned in our February issue, 20 recruits for the Welsh Army Corps being raised in Wales.

They sailed by the s.s. Grampian from St. John, N.B., Jan. 29, for Liverpool, and were to go from there to Llandudno or Cardiff, as the Welsh Army Corps executive committee might decide. Mr. Marpole paid their entire transportation expenses to their destination, and gave each man sufficient to visit his home four days after joining the battalion. He has also undertaken to pay the expenses to Vancouver of any of the men who may be incapacitated while in active service, or within 90 days after peace is declared, and after being properly released from active duty by the commanding officer. The private secretary of the Chancellor of the Exchequer, Right Hon. D. Lloyd George, has written Mr. Marpole thanking him for his timely assistance and stating that the men will be included in the Gwent Battalion, under Col. Sir Hamar Greenwood, M.P.

**Allan Kilpatrick**, whose appointment as Superintendent, G. T. Pacific Ry., Edson, Alta., was announced in our last issue, was born at Closeburn, Dumfriesshire, Scotland, Apr. 20, 1863, and entered railway service in Oct., 1878, since when he has been, to May, 1881, freight clerk, Glasgow and South Western Ry., Maybole, Scotland; July, 1881, to Apr., 1882, clerk in Audit Office, G.T.R., Montreal; Apr. to Aug., 1882, freight clerk, G.T.R., Coteau Jct., Que.; Sept., 1882, to 1890, chief clerk, Mechanical Department, Canada Atlantic Ry., Ottawa; 1890 to 1892, audit clerk in charge of car records and passenger accounts, same road, Ottawa; 1892 to 1897, General Agent in charge of operations during construction, Ottawa, Arnprior and Parry Sound Ry., Scotia Jct. and Parry Sound, Ont.; 1897 to 1900, Assistant Trainmaster, Canada Atlantic Ry., Madawaska, Ont.; 1900 to 1905, Assistant Trainmaster, same road, Depot Harbor, Ont.; 1905 to 1911, Assistant Trainmaster, G.T.R., Depot Harbor, Ont.; 1911 to Jan., 1915, Superintendent on Construction, National Transcontinental Ry., Cochrane, Ont.

**W. M. Ansley**, who has been appointed acting Superintendent, District 2, Alberta Division, Lethbridge, during the absence on leave of F. Walker, was born at Flesherston, Ont., June 15, 1873, and entered railway service Apr. 6, 1897, since when he has been, to Dec. 1900, with Canada Atlantic Ry. at Depot Harbor, Ont.; Dec. 1900 in service of Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; Aug. 4, 1901 to Mar. 17, 1903, brakeman, C.P.R., Kenora, Ont.; Mar. 17, 1903 to Aug. 19, 1907, conductor, same road; Aug. 19 to Nov. 3, 1907, Assistant Trainmaster, same road, Brandon, Man.; Nov. 3, 1907 to completion of construction, Trainmaster, Sheho Extension, same road, Saskatoon, Sask.; from then to Oct. 1, 1908, Trainmaster, same road, Saskatoon Sask.; Oct. 1, to Dec. 1, 1908, Trainmaster, same road, Souris, Man.; Dec. 1, 1908, to May 1909, Trainmaster, same road, Brandon, Man.; May 1909 to July 1911 Trainmaster, same road, Revelstoke, B.C., and during a portion of this period, acting Superintendent there; July 1911 to Nov. 1913, Trainmaster, same road, Grand Forks, B.C.; Nov. 1913 to Feb. 1915, Trainmaster, same road, Macleod, Alta.

**R. L. Fairbairn**, General Passenger Agent, Eastern Lines, Canadian Northern Ry., Toronto, who has been elected Chairman, Niagara Frontier Summer Rate Committee for the current year, and whose portrait appears in this issue, was born at Stillwater, Minn., Nov. 24, 1880, his parentage being Canadian. He entered railway service in July, 1899, since when he has been, to Mar., 1904, in office of Auditor of Passenger Receipts, G.N.R.; Mar., 1904 to May 1, 1906, in Passenger Traffic Manager's office, same road; May 1 to Dec. 1, 1906, as-

sistant rate clerk, Passenger Department, same road; Dec. 1, 1906 to June 1, 1908, chief rate clerk, Passenger Department, same road; June 15, 1908 to Oct. 1910, chief clerk, Passenger Department, Canadian Northern Ry., Winnipeg; Oct. 1910 to Apr. 1911, District Passenger Agent, C.N.R., Saskatoon, Sask.; Apr., 1911, to May, 1912, Assistant General Passenger Agent, lines east of Port Arthur, Toronto; May 1912 he was appointed to his present position as General Passenger Agent, Eastern Lines, C. N.R., and Canadian Northern Steamships, Ltd.

**Thos. Swinyard**, President, Dominion Telegraph Co., who died in New York, N.Y., Feb. 25, aged 83, was born at Guildford, Surrey, Eng. In 1850 he was appointed Secretary to the General Manager, London & North Western Ry. of England, and was Secretary of the Railway Officers Monthly Conference in London. In 1862 he came to Canada as General Manager, Great Western Ry., with office at Hamilton, Ont., and in connection therewith was Vice President, Detroit & Milwaukee Railway. In 1874 he was appointed by the Dominion Government to take over, complete and organize the Prince Edward Island Ry. In 1875 he was appointed General Manager, Dominion Telegraph Co., and subsequently became its President. For some years he was Vice President, New York, Ontario & Western Ry. In 1897 he represented the Dominion Government in the arbitration case at Vancouver between the Government and the C.P.R.; of late years he lived at The Hall, Gilbertsville, N.Y., his second wife, who survives him, being a daughter of the late G. Y. Gilbert of that place. He was buried at Gilbertsville.

**Davenant Rodger** who died at Brooklyn, N.Y., Jan. 19, aged 62, is spoken of by Engineering News, New York, as "a prominent Canadian civil engineer." The News says: "Col. Rodger was connected with the construction of the Canadian Pacific Ry. and the Cape Cod Canal and was commissioned by the Canadian Government to observe the construction of the Croton aqueduct and the siphon under the Harlem River. He was for many years Chief Engineer of the Chilean Government. At the time of his death, he had been engaged as prospective chief engineer of an irrigation project on the Colorado River in Arizona." The Mr. Rodger referred to is no doubt "Dave" Rodger, as he was known some 30 years ago. In 1875 he went from Montreal to the west and was section engineer at Ingolf, Ont., on section 15 of the C.P.R., which extended from Keewatin to Cross Lake and was under contract from the Dominion Government to the late Jos. Whitehead, the Division Engineer being Henry Carre, M.Can.Soc.C.E., now of Belleville, Ont. In 1881 he joined H. N. Ruttan, M.Can.Soc.C.E., of Winnipeg, as a member of the firm of Ruttan, Rodger & Co., and P. J. Brown & Co., who built the Manitoba and Southwestern Colonization Ry. from Winnipeg to Elm Creek, and as engineers and contractors built the Portage, Westbourne and Northwestern Ry., from Portage la Prairie to near Neepawa. He left Manitoba in 1883 for New York.

**A New Transcontinental Railway** has gone into operation. It is a working combination of the St. Louis & San Francisco Rd. and the Santa Fe system. The route is via the St. Louis & San Francisco from New Orleans to Houston, Tex., and then over the Santa Fe to San Francisco, including the Coleman and Belen cut offs in Texas and New Mexico. This gives New Orleans and the South two transcontinental railway lines, the other being the Southern Pacific system.

## Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Algoma Central and Hudson Bay Ry., Algoma Eastern Ry.**—The position of Purchasing Agent has been abolished, the duties being undertaken by F. W. ACHESON, Chief Storekeeper, Sault Ste. Marie, Ont.

**Canadian Government Railways.**—A. DION has been appointed Assistant Superintendent, National Transcontinental Ry. between Edmundston, N. B., and St. Jean Chrysostome, Que., vice H. A. Ryan. Office, Monk, Que.

**Canadian Northern Ry.**—W. PRATT, Jr., heretofore Superintendent Hotels, Sleeping and Dining Car Service, has been appointed General Superintendent, Sleeping, Dining, Parlor Cars and Hotels, Lines East and West. Office, Winnipeg.

E. TREMBLAY, heretofore Foreman, Quebec Yards, has been appointed Supervisor of Track, Lake St. John Division, Quebec Grand Division, vice J. Frigon, resigned to enter another company's service. Office, Chicoutimi, Que.

W. R. KELLY, heretofore Assistant Superintendent, Toronto Division, Toronto, has been appointed Assistant Superintendent, Ottawa Division. Office, Trenton.

H. B. SHERWOOD, Superintendent, Quinte, Kingston and Brockville Districts, Napanee, Ont., has been granted three months leave of absence.

R. S. DERBYSHIRE, heretofore Assistant Superintendent at Trenton, Ont., and S. J. KITCHEN, Trainmaster at Trenton, Ont., have returned to train service as conductors, with headquarters at Trenton and Deseronto respectively.

P. H. FOX, heretofore Chief Dispatcher, Toronto Division, Rosedale, Toronto, has been appointed Chief Dispatcher, Ottawa Division. Office, Trenton, Ont.

J. E. CATHER, heretofore dispatcher at Toronto, has been appointed Chief Dispatcher, Toronto Division, vice P. H. Fox, transferred. Office, Rosedale, Toronto.

The positions of Assistant Superintendent, Toronto Division, and Trainmaster, Ottawa Division, have been abolished.

R. A. MILLER has been appointed General Foreman, Trenton, Ont., vice W. G. Rodden.

F. McKAY, heretofore Bridge and Building Foreman, Toronto, has been appointed Bridge and Building Inspector there, vice W. H. See deceased.

W. WALSH, heretofore Supervisor of Track, Toronto, has been appointed section foreman there.

S. J. SHARP, who has a general ticket agency at 79 Yonge St., Toronto, has been appointed City Ticket Agent for the C.N.R. The company's city ticket office, at 52 Yonge Street, in charge of F. V. Higginbotham, will continue to be maintained.

A. H. DAVIS has been appointed City Passenger Agent, Winnipeg, vice G. A. North transferred.

G. A. NORTH, heretofore City Passenger Agent, Winnipeg, has been appointed City Ticket Agent, Brandon, Man., vice W. Stott on leave of absence.

A. G. HANNA has been appointed ticket agent, Portage la Prairie, Man., vice E. A. Williams.

**Canadian Pacific Ry.**—J. W. LEONARD retired from the position of Assistant to Vice President, Jan. 31, and is devoting his time to his duties as General Manager of the

Toronto Terminals Co., which will build the new Union Station, etc., at Toronto.

F. L. HUTCHINSON, heretofore Manager, Windsor Hotel, Montreal, has been appointed Manager in Chief, C. P. R. Hotels, vice Hayter Reed, from Apr. 1. Office, Montreal.

The position of General Master Mechanic, Eastern Lines, Montreal, heretofore held by C. KYLE, whose appointment as Master Mechanic, Atlantic Division, was announced in our last issue, has been abolished. His office is at St. John, N. B., not at McAdam Jct., N.B., as previously announced.

J. H. FORBES, heretofore Resident Engineer, Smiths Falls, Ont., has been appointed Resident Engineer, District 3, Montreal, vice T. B. Ballantyne transferred.

T. B. BALLANTYNE, heretofore Resident Engineer, District 3, Montreal, has been appointed Resident Engineer, Smiths Falls, Ont., vice J. H. Forbes transferred.

H. DIBLEY, heretofore Assistant Car Foreman, Transcona, Man., has been appointed Freight Shop Foreman, Fort William, Ont., vice T. E. Higgins promoted.

T. W. MARSHALL has been appointed Assistant Car Foreman, Transcona, Man., vice H. Dibley promoted.

JOHN O'BRIEN, heretofore night clerk at Sutherland, Sask., has been appointed Storekeeper, Regina, Sask., vice T. H. Horton, who has been granted leave of absence to enlist for active military service.

J. F. PLOTT has been appointed Roadmaster, Swift Current Subdivision, Moose Jaw, Sask., vice A. J. Wolfe, transferred.

A. J. WOLFE, heretofore Roadmaster, Swift Current Subdivision, Moose Jaw, Sask., has been appointed Roadmaster, Outlook Subdivision, Outlook, Sask.

R. J. COLLINS, heretofore dispatcher, District 1, Saskatchewan Division, Regina, has been appointed Chief Dispatcher, District 4, Alberta Division, Edmonton, vice W. E. Cline, transferred to Winnipeg as announced in our last issue.

W. M. ANSLEY, heretofore Trainmaster, District 2, Alberta Division, Macleod, has been appointed acting Superintendent, District 2, Alberta Division, vice F. Walker on leave of absence. Office, Lethbridge.

L. J. FISHER has been appointed District Master Mechanic, Cranbrook, B. C., vice A. Sturrock promoted.

E. RALSTON, formerly Yardmaster at Vancouver, B. C., has been appointed Yard Foreman there, on account of the former position having been abolished. By an error in our January issue it was stated that he had been appointed Yardmaster.

**Central Vermont Ry.**—J. W. WARDLAW has been appointed Assistant to the President, and Purchasing Agent, having, in addition to other duties, the charge of purchases and stores, vice J. B. Laurie deceased. Office, St. Albans, Vt.

**Grand Trunk Pacific Ry.**—W. E. MOHER, heretofore locomotive driver, has been appointed Travelling Locomotive Foreman, with headquarters at Melville, Sask.

The position of Superintendent of Water Service, at Melville, Sask., heretofore held by C. R. HEATH, has been abolished.

G. H. LAYCOCK has been appointed Locomotive Foreman at Endako, B. C., vice G. McNeil assigned to other duties.

C. E. STEWART has been appointed Locomotive Foreman, Edmonton, Alta., vice C. E. Brooks appointed General Foreman, Transcona, Man., as announced in our last issue.

O. CARLSON, heretofore Roadmaster, District 10, McBride to Prince George, B. C., has been appointed Roadmaster, District 9,

from Jasper, Alta. to McBride, B. C., vice J. Moriarty resigned. Office, McBride, B. C.

B. BRADY has been appointed Roadmaster, District 10, from McBride to Prince George, B. C., vice O. Carlson transferred. Office, McBride, B. C.

The following station agents have been appointed,—Juniata, Sask., H. F. Jones; Yorkton, Sask., G. C. Smart; Ebenezer, Sask., T. J. Shields; New Norway, Alta., T. J. Leslie.

**Grand Trunk Ry.**—F. W. WARREN, recently appointed Locomotive Foreman, Southwark Terminals, Montreal, has returned to his former position as Locomotive Foreman, Coteau, Que., vice E. B. Meehan transferred, the Southwark Terminals having been closed temporarily.

A. BEARDSHAW has been appointed Locomotive Foreman, Richmond, Que., vice G. Blackbird, retired under the pension rules.

E. B. MEEHAN, heretofore Locomotive Foreman, Coteau, Que., has returned to his former position as Locomotive Foreman, Brockville, Ont., vice F. Foster.

H. M. McPHERSON, heretofore in Division Engineer's Office, Montreal, has been appointed Assistant Engineer, Belleville, Ont., vice C. S. Ogilvie, now on active military service.

R. WOODS, heretofore Foreman Painter, Port Huron, Mich., has been transferred to the car shops at London, Ont., in a similar position.

D. ROSS, heretofore Locomotive Foreman, Southwark Terminal, Montreal, has been appointed Locomotive Foreman, Durand, Mich.

A. COPONY, Master Car Builder, Western Lines, has had his office moved from Port Huron, Mich. to Elsdon, Ill.

The following station agents have been appointed,—Gore, Que., R. Desjardins; Summertown, Ont., G. A. Butzer; Wales, Ont., J. A. McMillan; Otter Lake, Ont., H. W. Mayhew; Kingsville, Ont., outside, A. R. Keele; Stratford, Ont., outside, Feibig and Heagy.

**Intercolonial Ry.**—FRANK DUNBAR, formerly Mechanical Foreman's clerk, at Gibson, N. B., has been appointed storekeeper there, and C. L. BURGESS has been appointed Mechanical Foreman's clerk. In our January issue it was stated in error that C. L. Burgess had been appointed storekeeper at Gibson, instead of F. Dunbar.

**The Irondale, Bancroft & Ottawa Ry.** having been taken over by the Canadian Northern, and now being operated as part of the Ontario Grand Division, the positions of Superintendent, General Freight and Passenger Agent and Master Mechanic have been abolished. R. S. Derbyshire, formerly Superintendent, is running as conductor on the C. N. R., out of Trenton. W. A. Ward, formerly General Freight and Passenger Agent, is acting as accountant on the C. N. R. agents staff at Bancroft, and J. Webb, formerly Master Mechanic, is in charge of the locomotive house at Bancroft.

**Michigan Central Rd.**—L. J. BRINKMAN has been appointed Freight Claim Agent, vice J. M. Eedson resigned. Office, Detroit, Mich.

W. R. PATTERSON has been appointed General Foreman of Shops, Detroit, Mich., vice A. K. Galloway.

**National Transcontinental Ry.**—See Canadian Government Railways.

**Roberval-Saguenay Ry.**—J. FRIGON, heretofore Supervisor of Track, Lake St. John Division, Canadian Northern Ry., has been appointed Superintendent, Roberval-Saguenay Ry., Chicoutimi, Que.

**Toronto Terminals Ry.**—J. W. LEONARD, heretofore Assistant to the Vice President,

C. P. R., Montreal, has been appointed General Manager, Toronto Terminals Ry. Co., which has been incorporated to build the new Union Station, etc., in Toronto, and he will open an office at 38 King St. East, in the near future.

**Wabash Rd.**—G. B. INGERSOLL, heretofore Westbound Agent, Chicago, Ill., has been appointed Local Freight Agent there.

**W. BOCKSTAHLER**, heretofore Travelling Freight Agent, Buffalo, N. Y., has been appointed Westbound Agent, Chicago, Ill., vice G. B. Ingersoll promoted.

**H. EICKE** has been appointed Superintendent Transportation, vice F. E. Bolte resigned to accept service elsewhere. Office, St. Louis, Mo.

**J. L. HARRIS** has been appointed General Live Stock Agent, in full charge of live stock and live poultry traffic. Other duties will also be assigned to him in connection with the handling of packing house products and perishable freight. Office, Kansas City, Mo.

**E. E. STOWELL**, heretofore Travelling Freight Agent, Rome, Watertown and Ogdensburg Rd., has been appointed Travelling Freight Agent, Wabash Rd., Buffalo, N. Y., vice W. Bockstahler promoted.

### Traffic Orders by the Board of Railway Commissioners.

#### Special Rates for Farmers' Conventions.

Jan. 5. The Board has refused the application of A. Roy for an order directing railway companies to issue tickets at a special rate of 1c. a mile to farmers desiring to attend agricultural conventions, conferences and exhibitions. In concluding his judgment the Chief Commissioner said:—"Under the Act, it is, of course, impossible for the Board to order special privileges for any one class. To do so would be to directly violate the provisions of the Act. It is not open to the Board to consider whether a farmer or a doctor, on the one hand, should or should not travel cheaper than a mechanic or a lawyer on the other."

#### Freight on Mixed Carloads of Grain Products and Hay and Straw.

23153. Jan. 13. Re application of the Central Convention of Farmers' Institutes of British Columbia, for an order to grant the privilege of shipping mixed carloads of flour and feed (in sacks) and baled hay and straw at carload rates. Upon hearing the application in Vancouver, Oct. 27, 1913, in the presence of counsel for the C. P. R., no one appearing for the applicants, and reading the report of the Chief Traffic Officer of the Board—it is ordered that the application be refused.

#### Joint Rates for Shingles Over Western Canada Power Co.'s Ry. and C. P. R.

23213. Jan. 26. Re application of Stoltze Manufacturing Co. for an order requiring joint rates to be charged on shingles over the Western Canada Power Co.'s Railway and the C. P. R. It is ordered that the C. P. R. and the Western Canada Power Co. jointly publish and file supplements to the C. P. R. Special Joint Tariffs, C. R. C. Nos. W-1615 and 1806, providing joint rates from the applicant's mill to the destinations shown in the said tariffs, via Ruskin, B. C., which shall not exceed the rates from Ruskin by more than 2 cts per 100 lbs.; the W. C. P. Co. to receive 3 cts per 100 lbs. as its proportion of the joint rates so made.

#### Suspension of Tariffs Increasing Freight Rates.

23231. Feb. 2. Re certain freight tariffs published and filed by the New York Central Rd. and the Ottawa & New York Ry. increasing the rates to be charged between

stations in Canada. It is ordered that the said tariffs, in so far as they increase the rates now being charged from stations in Canada to stations in Canada, be suspended until further ordered by the Board.

#### Suspension of Boston & Maine and Maine Central Tariffs.

23232. Feb. 2. Re certain freight tariffs published and filed by the Boston & Maine and Maine Central Railroads. It is ordered that said tariffs, in so far as they increase the rates now being charged between stations in Canada, be suspended until further ordered by the Board.

#### Switching Charges at Fort William.

23281. Feb. 9. Re application of Fort William, Ont., Board of Trade, for abolition of charge of 1 ct. per 100 lbs., minimum \$5 a car, for switching goods for or from steamboats between sidings and docks at Fort William, as shown in C.P.R. tariff, C.R.C. no. 17, 1919, page 6. It is ordered that the application be refused.

#### Rates from Head of Lake Superior.

23282. Feb. 10. Re application of Fort William, Ont., Board of Trade, for an order requiring the railway companies to lower all rates from the head of the lakes to points west  $2\frac{1}{2}$  cts. per 100 lbs., and to make the tariffs read 'Rates are exclusive of wharfage at Fort William, Port Arthur and West Fort.' It is ordered that the application be refused.

#### Standard Regulations re Opening of New Lines.

General order 134. Jan. 25. Re amendment of the Board's standard regulation as to the opening of new lines, so as to provide that, in addition to filing the standard mileage tariff applicable to traffic on the portion of the railway to be opened, the appropriate special tariffs also be filed. It is ordered that railway companies making application to open for traffic under sec. 261 of the Railway Act (as distinct from obtaining, under subsec. 7, as amended, of the aforesaid section, leave to carry traffic where, because of the needs of settlers or other urgent condition, public convenience will be served thereby,) be, required, before opening for the carriage of traffic any extensions of their existing railway systems west of Lake Superior, to publish and file the appropriate supplementary special class or "town" tariffs, mileage commodity tariffs, and special tariffs on grain to the Lake Superior terminals, and on lumber from British Columbia, as these may be applicable to the territories to be served by the said new lines, in addition to the standard mileage tariffs therefor.

**The Asbestos & Danville Ry.**, the freight tariffs of which have been approved recently by the Quebec Public Utilities Commission, is about 4.4 miles long, connecting the village of Asbestos, Que., with the G.T.R. at Danville. It carries freight only, and has 2 locomotives, 1 freight car and 10 dump cars. T. F. Mannville is President, and J. R. Pearson, General Manager. It is a subsidiary of the Asbestos & Asbestos Co., Ltd., which has its headquarters in London, Eng., and its Canadian office at Asbestos, Que.

**Full Crew Laws.**—Efforts will be made to bring about repeal of the full crew laws in Pennsylvania and New Jersey at the present sessions of the legislatures in those states. Thirteen railways operating in the two states have joined together to make a public appeal to the people for their support in accomplishing this object.

The C.P.R.'s downtown freight office in Vancouver is being removed from 440 Hastings Ave. to the new station.

### Grand Trunk Railway Betterments, Construction, Etc.

**Lachine, Jacques Cartier and Maisonneuve Ry.**—The Board of Railway Commissioners, on Feb. 15, granted the company permission to carry its tracks over those of the Montreal Tramways Co., to connect its projected line with the G.T.R. near Jacques Cartier Jct.

**Track Elevation in Montreal.**—The consideration of the question of the enlargement and modernization of the Wellington St. subway has been postponed until the general plan of G.T.R. track elevation from Bonaventure Station to St. Henri is settled.

**Peterborough and Chemong Lake Branch.**—The City of Peterborough is asking the Ontario Legislature to authorize the making of an arrangement with the G.T.R. for a lease to the Canadian General Electric Co. of a portion of the right of way of the Peterborough and Chemong branch line, as a right of way for a testing track for electric locomotives. This branch line extends from Peterborough to Bridgenorth, and has not been operated for a number of years.

**Hamilton Improvements.**—It is said that some considerable improvements are to be made at the King St. station in the near future. The matter was discussed between J. H. Gordon, G.T.R. Superintendent, and the city officials, Jan. 30. The question of building the subway at Kenilworth Ave. was also discussed.

**Guelph, Ont.**—Press reports state that arrangements are being made for the establishment of a divisional point at Guelph. (Feb., pg. 64.)

**The G. T. R. is reported to have taken special precautions for the safeguarding of its shipping facilities at Portland, Me., and its railway bridges and connections between that point and the International Boundary, in view of the report that a plot had been formed in California, to destroy the same, and that four men were on their way to carry it out.**

**The Intercolonial Ry. Efficiency Association** at its usual monthly meeting, at Sydney, N. S., Feb. 7, dealt with a number of questions under the operating rules relating to train operation. A. C. Barker, Inspector of Stations, Trains and Train Dispatching, Canadian Government Railways, attended, and explained a number of the details which were not clearly understood.

**An Arbitration Board** has been appointed, consisting of Justice Hyndman, Edmonton, Alta., Chairman, and O. M. Biggar, K.C., and Wm. McAdams, Edmonton, to enquire into the dispute between the Edmonton, Dunvegan and British Columbia Ry. and its shop employees at West Edmonton. The trouble relates to a proposed reduction in wages.

**The Quebec Cartage and Transfer Co.'s** annual meeting was held at Quebec, Feb. 9. The officers and directors for the current year are: President, Hon. R. Turner; Vice President, C. J. Baillargeon; other directors, Hon. A. Turgeon, H. D. Barry, Jules Hone, J. T. Ross and N. Belleau. R. L. Jess is Manager.

**The Toronto, Hamilton and Buffalo Ry.** Freight Department held its seventh annual dinner at Burlington, Ont., Feb. 10. Addresses relating to railway work were given and discussed.

**Central Railway & Engineering Club of Canada.**—C. McNair, representative, Galena Signal Oil Co., read a paper on lubrication before the club at Toronto, Feb. 23.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

## General Construction Work on Western Lines.

Grant Hall, Vice President and General Manager, Western Lines, C.P.R., has made the following statement regarding the works undertaken by the company during recent years:—"Since 1908 the C.P.R. has in the West taken over for operation 3,088 miles of new lines. These figures include the portion of the Kettle Valley Ry., from Midway to Merrit, which we will probably commence to operate under lease during next summer. In the same period we have taken over for operation 789 miles of second track, and have completely rebuilt the lines between MacLeod and Lethbridge, Alta., and between Field and Hector, B.C. Practically every terminal we have has been rebuilt, including Vancouver. A new terminal has been built at Transcona, and a double track cut-off constructed around the city of Winnipeg. We have built very large high level bridges at Lethbridge and Edmonton, and have built new passenger stations at many points, notably Fort William, Regina, Calgary, Edmonton, Banff, Lake Louise and Vancouver. The Ogden shops have been built, hotels constructed at Calgary and Balfour, and extensive additions made at Banff, Lake Louise, Winnipeg and Vancouver hotels. This brief survey of work done does not include extensive improvements to the track and roadbed, but will sufficiently demonstrate the fact that the past seven years have been busy ones.

"It would hardly be expected that the work of construction and reconstruction would continue at such a breathless pace, and the quieter business conditions will be reflected this year in our programme. It is the intention to push ahead vigorously the work on the Rogers Pass tunnel, the magnitude of which is probably not fully grasped by many. The task of piercing the Selkirks is one of the most formidable we ever tackled, but is progressing most favorably. Its progress is being watched with interest by engineers all over the world, as special problems have been met, and, we believe, satisfactorily solved. The extensions to Winnipeg station will also be pushed vigorously, and the general scheme will now begin to unfold itself day by day as the work progresses. It is our intention to spend a considerable sum on betterments on operated lines, notably in the way of building stockyards at small centres. This we are doing with a view to the encouragement of mixed farming and stock raising, in which we are greatly interested. We are not pressing this year the construction of new lines or double tracking, outside of the Rogers Pass tunnel, which is a part of our general scheme of double tracking, but if crop prospects and other business conditions appear favorable early in the summer, there may be some revision of our estimates in connection with such work."

The Largest Simple Locomotive yet built has been delivered at the Panama Pacific Exposition grounds at San Francisco, where it forms part of the exhibit of the Chicago, Burlington & Quincy Rd. It is 88 ft. long over all, weighs 206.9 tons and is fitted with automatic stoking apparatus, both steam and air power reverses and electric generating set. It was accompanied across the continent from Philadelphia by an attendant who converted the tender into temporary quarters with separate cooking and sleeping apartments. Hauling it as freight cost more than \$1,000 and the journey occupied 37 days owing to the necessity of routing it over lines whose curves were not too sharp for its long rigid wheelbase.

## Rogers Pass Tunnel Construction Pro- gress.

Following is the footage made in January for the headings in the C. P. R. Rogers Pass tunnel:

East end centre heading, 443 ft., schist and quartzite.  
East end pioneer heading, 594 ft., schist and quartzite.  
West end centre heading, 701 ft., slate and quartzite.  
West end pioneer heading, 932 ft., slate.

The latter is 122 feet over the American record established by the Canadian Northern Mount Royal tunnel heading, and will probably stand as the new American record for many years. A. C. Dennis, M. Can. Soc. C. E., is Superintendent for the contractors, Foley Bros., Welch & Stewart. Jos. Murphy is Assistant Superintendent on east end, and Jos. Fowler is Assistant Superintendent on west end, with W. Fowler and J. Young as walkers and A. Adams, J. Stewart and D. Hamer as shift foremen on pioneer heading.

G. H. King, Car Inspector, G.T.R., Palmerston, Ont., writes: "I think Canadian Railway and Marine World is a good publication for any railway man."

T. McHattie, Master Mechanic, G. T. R., Montreal, in renewing his subscription, writes:—"I find the matter contained in Canadian Railway and Marine World interesting and instructive each month, in fact more so than in any other technical journal that comes to me. I wish you continued success."

The Manitoba Public Utilities Commission has issued six orders affecting the Winnipeg Electric Ry. The first provides for the purchase of a sufficient number of fire hose, bridges for use on the tracks at fires, and also that such bridges shall be carried by the fire apparatus so as to be available for use by the street cars at all times. The second provides for the regulation of the company's employees' watches; the third for the inspection and control of waiting rooms and shelters; the fourth that the company shall so arrange signs on the front and side of cars so that the immediate destination of the cars shall be shown; the fifth that cars going to the barns shall be indicated, but passengers may ride in such cars; and the last order relaxes the previous order relating to the measure of protection to be afforded at the St. James St. subway by directing the installation of the General Railway Signal Co.'s light signal. The company is asking for a reconsideration of the fourth order.

Toronto Ry. Stub Line Operation to Exhibition Camp.—During the Canadian National Exhibition at Toronto each autumn the Toronto Ry. operates its cars along Danforth St. to the Exhibition Park, from Queen and King Sts. Latterly the park is being used as a military camp and training ground, and a section of the local press has been castigating the company for not operating a service over the line. Following this the City Council wrote to the Ontario Railway and Municipal Board, calling its attention to the lack of service and asking for an order for such service to be put in force forthwith. The Board took the matter up with the company, from which a reply was received to the effect that no application had ever been made for the service until the Board brought it up, that the company had previously offered to put on such service, and all the Board need do was simply to mention it in order to obtain what was desired. The company's position in this matter was grossly misrepresented by the local press.

### Canadian Northern Railway Construction, Betterments, Etc.

**Montreal Tunnel and Terminal Co.**—Sir Donald Mann, Vice President, is reported to have stated, after a recent inspection of the work at the tunnel under Mount Royal, Montreal, that at the present rate of progress it will be completed to the full double track width by the end of April, and will be ready for operation in the early autumn. The power house at the back of the tunnel is reported completed, and the erection of the Mount Royal Heights station is being proceeded with.

**Montreal-Ottawa-Port Arthur Line.**—The work of finishing up the stretches of the line from Montreal to Hawkesbury, and from Ottawa to Capreol, are being proceeded with, and it is expected to have the whole of this ready for the through operation of trains by the autumn.

It is expected that a through train service will be put in operation between Toronto and Port Arthur in June. There is a train service already in operation from Toronto to Ruel.

**Ontario-Niagara Connecting Bridge Co.**—The President of the United States has signed a measure providing for the building of a bridge across the Niagara River, just north of Niagara Falls, N.Y. F. A. Dudley, Niagara Falls, N.Y., is one of the incorporators. The Dominion Parliament is being asked to incorporate a company for the Canadian part of the undertaking. The Canadian Northern Ry. interests are said to be behind the project.

**Canadian Northern Ry.**—Following the defeat of the C.N.R. bylaw by the ratepayers at the January municipal elections, negotiations were opened for a compromise, and the Mayor reported that M. H. MacLeod, General Manager, and other officers, were going to Port Arthur to discuss the situation, and he hoped that the new proposals to be made would result in a settlement being effected.

A press report, Feb. 15, states that work was begun that morning on the extension of the coal dock controlled by the company at Port Arthur. The work to be done includes the placing of solid concrete abutments for foundations at the coal hoists, and the facing of the dock with concrete. The cost is estimated at \$30,000. The contractors are the Barnett and McQueen Co.

The Manitoba Legislature is being asked to increase the capital stock of the Winnipeg River Ry. Co. from \$50,000 to \$500,000. This is a subsidiary of the C.N.R., and has power to build a line from Lac du Bonnet along the Winnipeg River valley for 10 miles.

The Board of Railway Commissioners has authorized the opening for traffic of the line from a junction with the Camrose-Strathcona line to a junction with the Edmonton, Yukon and Pacific Ry. at Strathcona, Alberta, 0.6 of a mile.

**Canadian Northern Pacific Ry.**—The last rail on the line between the B. C. eastern boundary near Yellowhead Pass and Port Mann, was laid Jan. 25, at Basque, on the North Thompson River, 188 miles north easterly from Port Mann. It is expected to have the ballasting and other work so far completed by May 1 that the formal ceremony of driving the last spike may take place then, though possibly a through train service will not be started until July or August. All the bridges, with the exception of that at Wallachin, have been completed, and a temporary bridge has been erected there.

Nothing definite has been settled as to the construction of the line from Port Mann to the False Creek terminus in Van-

couver, 15 miles. According to the agreement with the Vancouver City Council, all the terminal work has to be completed within five years from the signing of the document, about two years ago. The company owns about 164 acres at the upper end of False Creek, and is reclaiming about 60 acres of the creek. It has erected a large bulkhead for 1,500 ft. easterly from the Morris St. bridge, then 2,000 ft. southerly, behind which has been pumped about 1,000,000 cubic yards of sand. A large culvert for drainage purposes has been constructed to deep water. This work of continuing the filling in was restarted Feb. 1, but nothing has been decided as to the actual start on building the permanent sea wall. The Vancouver City Council has passed a resolution urging the immediate putting in hand of this work.

The members of the British Columbia Legislature were given a special trip over the section of the C.N.P.R., from Port Mann to Cisco, 140 miles, Feb. 12. T. H. White, Chief Engineer; D. O. Lewis, Divisional Engineer on Vancouver Island; and J. M. Mercer, engineer for the Northern Construction Co., accompanied them.

The British Columbia Minister of Finance, replying to a question in the Legislature, Feb. 1, said none of the Canadian Northern Pacific Terminal bonds guaranteed by the Province had been hypothecated, but bonds to the value of \$1,770,000 had been sold, realizing \$1,645,577. The prices realized ranged from 92 to 95%. The following amounts had been expended upon terminals:—Port Mann, \$337,420.88; New Westminster, \$1,370,642.42; Vancouver, \$148,045.05; Steveston, \$201,715.85; Patricia Bay, \$898.57; total, \$2,148,722.77. (Feb., pg. 60.)

### National Transcontinental Railway Construction.

The total track mileage of the N.T.R. is as follows:—Main line, Moncton, N.B., to Winnipeg, Man., 1,803.42 miles; second track and line from Quebec to site of Quebec bridge, 20.79 miles; sidings and yards, 423.26 miles; total track mileage, 2,247.47. The total cost of the line, to Mar. 31, 1914, as stated in the ninth annual report of the Commissioners, was \$142,967,999.02, which does not include interest on capital expenditure, nor any expenditure made by the Government on the approaches to the Quebec bridge, before that work was taken over as a part of the N.T.R. undertaking. At that date the steel bridges on the line were 97.2% completed, the Quebec bridge being regarded as a separate undertaking. Since the date of the report, the bridge work has been practically finished, and the other finishing up work has been practically completed. The fitting up of the shops and the provision of other equipment for operation is being proceeded with.

We are officially advised that the contract for the erection of nine travelling cranes for the Leonard shops, Quebec, has been awarded to the Dominion Bridge Co., Montreal.

The estimates for this year, which have been laid before the House of Commons, include the following items:—N.T.R. construction, \$5,000,000; Quebec Bridge construction, \$3,500,000, and towards the construction of a railway to connect Montreal with the National Transcontinental Railway, \$750,000 (revote). (Jan., pg. 19.)

Divisional shop forces on railways have demanded a considerable reorganization during the past few years with the advent of the newer types and arrangement of running gear and valve motions, from a resultant new maintenance situation.

### Great Northern Railway Lines in Canada.

**Vancouver, Victoria and Eastern Ry. and Navigation Co.**—J. H. Kennedy, Chief Engineer, visited St. Paul, Minn., Feb. 6, to consult A. H. Hogeland, Chief Engineer, G.N.R., in connection with the Hope Mountain and other sections of the line at present under construction. The first section connects up the already constructed part of the line with the Hope Mountain section, which is being built by the Kettle Valley Ry. for joint use. The line from Hope to a junction with the Canadian Northern Pacific Ry. has already been built, and the V. V. & E. Ry. operates over that line to New Westminster, where connection is made with its own lines to Vancouver, Port Guichon and the ferry to Vancouver Island, and the line formerly known as the New Westminster Southern Ry. to the U.S.

**Vancouver Terminals.**—R. Budd, Assistant to the President, G.N.R., and G. R. Martin, Comptroller, left Vancouver, B.C., Feb. 4, after having spent some time there in discussing the False Creek terminal plans. The agreement with the city provides for the erection of station buildings, the laying out of yards and other terminal facilities by the end of 1916. Up to the present time, several hundred acres of the False Creek flats have been filled in under the terms of the agreement, and the visit of the company's officials had to do with the arrangements for starting building operations. The city council passed a resolution calling upon the company to proceed with the building of the station and the laying out of the terminal yards at once. (Feb., pg. 61.)

**Canadian Shipping and the German Submarine Menace.**—In common with the ship owners of Great Britain, those of Canada, while appreciating the possibility of some damage to their vessels, or even an occasional total loss, are not in any sense panic stricken, at the recent German threat to carry on a wholesale attack against all vessels trading to and from Great Britain and Ireland. The consensus of opinion amongst Canadian shipowners is that there is no more danger than there was a month ago.

**The United States and the Proposed Purchase of Interned Foreign Steamships.**—In connection with the ship purchase bill which Congress has passed recently, the U. S. Secretary of the Treasury has stated that in view of false rumors and statements he deems it advisable to say that at no time had a communication from, or discussion with any banking house or institution, in or out of the U.S., been had, in connection with the purchase, sale or disposition in any manner whatsoever, of the German vessels interned in U. S. ports or elsewhere, or in connection with any other vessels of belligerent or neutral nations for any purpose whatever.

**British Government Sells German Vessels.**—In accordance with the recent announcement, the British Government has sold five of the German vessels captured since the commencement of the war. The vessels, their purchasers and the amounts realized, are as follows:—Schlesien, Thomas Sons and Co., London and Liverpool, £65,200; Ulla Boog, J. W. Baird and Co., West Hartlepool, £23,150; Marie Glaeser, J. W. Baird and Co., West Hartlepool, £13,225; Franz Horn, F. Jones and Co., Cardiff, £11,600; and Nauta, Roberts and Cooper, Brierley Hill, £12,550. Later, another German vessel, Wilhelm Behrens, was sold to A. Calbert, Goole, for £11,550. Under the conditions of sale, only 25% of the purchase price need be paid immediately, the balance being spread over three years at 4%.

# Electric Railway Department

## Portable Oxy-acetylene Plant in Dominion Power and Transmission Co.'s Shops.

A portable oxy-acetylene plant for general shop use, a view of which is shown herewith, was built in January for service around the Dominion Power and Transmission Co.'s shops, at Hamilton, Ont. There are two distinct generators, both of the same size and design, one for generating acetylene, and the other for oxygen. Each generator consists of a lower cylinder made of 6 in. steel tubing, flanged top and bottom, and with cover plates, and a similar cylinder of 4 in. steel tubing, flanged and with cover plates mounted above. The lower cylinder is the generator, and the upper cylinder, the water reservoir. In the lower cylinder, there is a basket arrangement containing the chemicals from which the gases are generated. Between the two cylinders there is a  $\frac{1}{4}$  in. pipe, with globe valve, which permits the water to trickle down in the desired quantity from the water reservoir above. Connecting the tops of the two cylinders, there is a  $\frac{1}{4}$  in. pipe by-pass, with globe valve, by opening which the pres-

Portable Oxy-Acetylene Outfit.

sure in the two cylinders is equalized, thereby permitting the water to drain out of the reservoir. Attached to the top of the lower cylinder, there is a small pressure gauge. The gas is drawn off through the top of this cylinder.

For generating the oxygen, peroxide of sodium is used, and for the acetylene, calcium carbide, the combination of water with each of which produces the respective gases. The baskets in each of the lower cylinders are filled by removing the lid of the lower cylinder. Similarly with the water above. The two gases are combined in a torch, which communicates with the cylinders by a rubber hose. We are indebted to J. O. Binkley, Shop Superintendent, for this information.

The Board of Railway Commissioners has approved a clearance of  $7\frac{1}{4}$  ins. for the poles on the electrified London and Port Stanley Ry. This applies to the 150 poles already erected, the clearance for the balance of the poles has been approved at  $7\frac{1}{2}$  ft. The Board's standard regulations for clearance of this kind calls for 8 ft. between the trolley wire and the pole, but owing to the great expense necessary to meet this change, a special privilege has been granted in this case.

## Car Straightening Frame, Montreal Tramways Company's Shops.

In the M. T. Co.'s new shops at Youville, a suburb of Montreal, which were described in Canadian Railway and Marine World, Mar. 1913, provision was made over one of the row of car hoist pits, for a car straightening frame, to remove any warps or bends which might develop in the steel equipment used, through collisions or accidents. This frame, with a car in it, is shown in the accompanying illustration. The frame consists of a row of five I beam posts set vertically in the concrete floor about 8 ft. each side of the car track, rising to a height of about  $3\frac{1}{2}$  ft., with a similar heavy I beam extending along the top of these vertical posts, overhanging slightly at the end posts. The car body to be straightened is run in on the track, and by means of screw jacks and blocking from these posts applied at the required points on the car frame, the body can be straightened out. We are indebted to D. E. Blair, Superintendent of Rolling Stock,

Steel Car Straightening Frame in Montreal Tramways Co. Shops.

Montreal Tramways Co., for this information.

The new requirements of steel equipment in maintenance, have been felt by both electric and steam roads, different methods being required to keep the equipment in a state of repair. Steel equipment, when injured, usually bends or twists, whereas similar shocks to wooden equipment tend to break the frame members, requiring replacement. For straightening out the steel frame box cars now in general use on the system, the C.P.R. has in service at least two frames, one of which was described in Canadian Railway and Marine World, Nov. 1913.

**Experiments with Front End Collection.**—Desiring to get its cars through the congested district in shorter time during rush hours, between 4 and 6 p. m., the Detroit United Ry. is experimenting with the front end collection system and finds it is working satisfactorily. Passengers who have the exact fare ready board the car in the front, but when transfer tickets or change are required the passengers must board the car in the rear.

## Overcrowding on the Toronto Railway.

The conviction of the Toronto Ry. Co., in Nov., 1914, for overcrowding its cars, when sentence was suspended pending the disposition of a stated case in the Appeal Court, has been responsible for the preparation of a draft bylaw by the company for the approval of the Ontario Railway and Municipal Board, limiting the number of passengers which the company may carry on any of its cars. Following is the draft of the bylaw as submitted to the Board:—

"Whereas complaints have been made that the cars of the company in operation in the city of Toronto have been overcrowded, and whereas the company is desirous of avoiding overcrowding upon its cars, and of regulating the number of passengers to be carried thereon, and whereas the City Council on May 4, 1895, adopted the following recommendation of the City Engineer:—

"I beg to recommend and determine, under the requirements of clause 38 of the contract and agreement between the Toronto Ry. Co. and the city, that the carrying capacity of closed cars be limited to 50% above the seating

capacity (allowing a space of 18 ins. on the seat for each person), and that open cars be limited to their seating capacity. In order to avoid disputes, notices should be placed in each car, stating the exact number of passengers it is allowed to carry."

"Be it therefore enacted, That in the operation of the company's railway, that the carrying capacity of closed cars be limited to 50% above seating capacity (allowing a space of 18 ins. on the seat for each person), and that the carrying capacity of open cars be limited to the seating capacity."

The Board at a sitting on Feb. 12 approved of the draft on the understanding that the bylaw be redrafted, that it do not become operative until a date to be fixed, and that the company adopt a device to show when the cars are full. This decision was given by the Chairman, D. M. McIntyre, K.C., with the concurrence of H. N. Kitson, the Vice Chairman, A. B. Ingram, dissenting. The Chairman said that it was clearly the company's duty to carry out the law as indicated by the courts and it was the Board's duty to support the company in doing so. The question came up as to whether it was practicable to enforce this bylaw, and whether there should not be certain physical barriers or mechanical devices. The disposition was

to approve the bylaw subject to the condition that immediately on it coming into force similar machinery should be devised notifying the public when, in the opinion of the officials and the company operating the car, the car was legally full, and if it is found that the company reports or the city reports that it is impossible to enforce the bylaw, resting merely on a notification to the public that the car is full, and trusting to their obedience and instinct not to violate the bylaw, then the Board must reserve to itself the right to require the company to adopt some physical means, the erection of gates or barriers of some kind controlled by the employee in charge of the car.

Vice Chairman Ingram, in dissenting, said: "I have satisfied myself that unless gates or doors are provided, worked by motormen or conductors, it is utterly impossible to carry out this bylaw without creating a good deal of dissatisfaction. As soon as the company makes these alterations in its rolling stock, I am quite willing to support a bylaw of this character. I would be glad indeed if that could be done as soon as possible. Otherwise I cannot see my way to support this bylaw at this particular stage."

### The London Street Railway Company's Annual Report.

The 40th annual report for the calendar year 1914 shows the following results:—

	1913.	1914.
<b>EARNINGS:—</b>		
Passengers .....	\$327,075.64	\$370,915.62
Miscellaneous .....	4,890.92	4,979.66
Gross earnings .....	\$331,966.56	\$375,895.28
<b>EXPENSES:—</b>		
Maintenance:—		
Way and Structures ..	\$26,539.70	\$31,732.73
Equipment .....	30,306.91	34,669.66
Transportation:—		
Power .....	45,992.83	42,291.79
Car service .....	99,817.00	123,796.29
General .....	32,260.15	35,410.36
Total operating expenses ..	\$234,916.59	\$267,900.83
Net earnings .....	\$97,049.97	\$107,994.45
Interest on bonds .....	\$28,848.00	\$31,908.59
Interest on overdraft ..	265.79	40.35
Total Deductions ....	\$29,113.79	\$31,948.94
Net income .....	\$67,936.18	\$76,045.51

\$47,911.77 was expended in construction and equipment.

#### COMPARATIVE STATISTICS.

	1913.	1914.
Expenses, per cent. of earnings	70.07	71.02
Net income, per cent. of capital .....	12.22	13.6
Passengers carried .....	1,462,562	1,697,963
Receipts per passenger ..	3.12c	3.09c
Car mileage .....	1,583,840	1,908,175
Gross earnings, per car mile	20.96c	19.69c
Operating expenses, per car mile .....	14.83c	14.03c
Net earnings, per car mile ..	6.13c	5.66c
Miles of track .....	34.97	35.19
Net earnings, per mile of track .....	\$9,492.89	\$10,681.88

The directors for the current year are:—E. W. Moore, Cleveland, O., President; T. H. Smallman, London, Ont., Vice President; P. W. D. Broderick, Toronto; Sir Herbert Holt, Montreal; W. M. Spencer, C. H. Ivey and C. B. King, London, Ont. The only change made was consequent on the retirement of H. A. Everett, Willoughby, O., who has been President for many years, his place on the board being taken by C. B. King, Manager. G. G. Holding is Secretary-Treasurer.

## Toronto and Its Electric Railway Franchises.

Following on the declaration of the Mayor of Toronto in his inaugural address to the City Council recently, and the recent judgment of the Imperial Privy Council in connection with the Toronto Suburban Ry. Co.'s appeal relative to track repairs on its Davenport Road line within the city limits, the city is applying to the Ontario Legislature for legislation declaring that the true meaning of the agreement of Sept. 4, 1899, between York Tp., and the Toronto Suburban Ry. Co., as set forth in chap. 124, Vic. 63, is that the company is obliged to keep clean and in proper repair and to build a new roadway or pavement on the part of Bathurst St. and Davenport Road, occupied by and between the rails and for 18 ins. on each side of the rail or rails, and that such new roadway or pavement shall be of a character similar to that built or to be built upon the other portion of the said highways by the municipality having jurisdiction over said highways, and that in default of the company keeping clean and in proper repair, and building a new roadway or pavement on the portion of the said highways when requested to do so by the city the work may be done by the city at the company's expense. It is also desired that a declaration be made that the word "tracks" wherever used in the agreement shall include the roadway or roadbed on which the rails are placed, between the rails and 18 ins. outside of each rail. The effect of this legislation would be to nullify the judgment of the Privy Council, as published in Canadian Railway and Marine World for February, which stated that the Ontario Railway and Municipal Board had no jurisdiction to make an order on the company to lay a new pavement of a kind which did not exist and was not provided for when the agreement was originally entered into, and the Supreme Court of Ontario was wrong in affirming that order. As to the interpretation of the word "tracks," the Lord Chancellor said that they could not give the wide meaning placed on it by the lower court, which extended it not only to the rails, but to the ground occupied not only between the rails but up to 18 ins. on each side, and they think that the words in the section referred to indicate an interpretation of a more restricted and literal kind and exclude the general roadway itself as distinguished from the rails, etc., laid upon it.

Authority is also being asked for the city to expropriate and take over the portion of the Toronto Suburban Ry. and the company's real property within the city limits and such personal property in connection therewith, as the Ontario Railway and Municipal Board may fix, upon payment of its value to be determined by arbitration by the Board, and that in determining such value, the franchise or control of the tracks upon the highways shall not be estimated as of any value whatever, and also to declare that the Toronto Suburban Ry. Co.'s rights and privileges to operate railways or to exercise any other franchise rights within the city limits are cancelled and forfeited.

So far as the Toronto Ry. is concerned, the Legislature is being asked to declare that the proper construction of the agreement between the City of Toronto and G. W. Kiely, of Sept. 1, 1891, as set forth in chap. 99, Vic. 55, and the award, conditions and bylaw attached thereto, is that in respect to what new lines shall be established and laid down and tracks and services extended by the company, whether on streets in the city as existing at the date of the agreement or as afterwards extended, it is for the city and not the company to determine and direct what new lines shall

be established and tracks and services extended, and further that the privilege to the city to grant to any person or company for failure of the company to establish new lines and open same for traffic, is not the only remedy the city can claim, but it may, in addition, build and operate such lines, and that the company shall pay the cost of construction and operating, and that the city may collect such cost by distress on the company's property, and for imposing a penalty of \$1,000 a day for failure to comply with the requirements of any such bylaw as above provided for. Authority is also being asked by the city to compel the Toronto Ry. Co. to build and equip 13 miles of new track within the city limits and to build and place in operation 180 new cars to afford adequate and proper street car accommodation for citizens.

The city is also applying for an amendment to the Ontario Railway Act to provide that no greater sum than 5c may be charged on any street railway as fare within the limits of an urban municipality, and also for such legislation as may be necessary to provide that 5c. be the maximum fare upon the Metropolitan Ry. to and from points within the city limits. On the Toronto and York Radial Ry.'s Metropolitan Division there are four miles of the line within Toronto city limits, the fare to the farthest point being 7c.

The question of the Toronto Ry. building approximately 13 miles of new track, along with other recommendations as to connections and track repairs, with additional new and rebuilt cars, was dealt with in a report on the conditions made, at the instance of the Ontario Railway and Municipal Board, by C. R. Barnes, and summarized in Canadian Railway and Marine World for July, 1914. The Board's opinion or judgment on this was published in full in our Dec., 1914, issue. The matter came before the Board again, Feb. 9, when the company applied for an extension of the time within which it may carry out some of the work recommended. The time for the construction of the new tracks was extended to July, but the time for equipping 50 new cars was not extended beyond that originally set, viz., June 1. The company's counsel stated that the cars could not be completed by the time stated and he would have to ask for an extension later. Lack of available funds for the work was given as the chief cause of the inability to comply with the Board's requirements.

### Ottawa Traction Co.'s. Annual Meeting.

This company's first annual meeting was held in Ottawa, Feb. 1. The report, including the Ottawa Electric Ry. Co.'s operations, which appears in full on pg. 118 of this issue, shows that notwithstanding the business stringency during the greater portion of the year, and the war during the last five months of it, every month showed an increase in gross receipts, the net earnings also increasing.

The directors were re-elected.

The percentage of operating expenses to gross receipts, compares as follows, for various years,—1899, 57%, 1900, 57%, 1901, 63%, 1902, 60%; 1903, 61 4-5%; 1904, 62%; 1905, 59 2-5%; 1906, 57 4-5%; 1907, 59 4-5%; 1908, 66 2-5%; 1909, 63 1-2%; 1910, 63%, 1911, 57 2-5%; 1912, 57 1-5%; 1913, 60 2-5%; 1914, 60 3-5%.

Following is a comparison of the number of passengers carried:—1894, 2,797,281; 1904, 8,717,205; 1914, 25,321,547.

## Toronto Railway Co's. Annual Report.

The report for the calendar year 1914, presented at the annual meeting, Feb. 3, says that the operations for the year do not show the usual increases, but when taking into consideration the conditions which prevailed in the early part of the year, when business generally was suffering from general depression, and latterly from the effects of the European war, the results must be considered satisfactory.

Gross earnings were ..... \$6,127,096.77  
Charges for operating, maintenance, etc. .... 3,529,546.22

Net earnings ..... \$2,597,550.55

Dividends ..... \$923,901.31  
Bond interest, etc. .... 182,499.85

Payments to city:—  
Percentage on earnings ..... \$955,740.24  
Pavement charges .... 95,756.96  
General taxes ..... 71,416.46

1,122,913.66  
\$2,229,314.82

The passenger earnings, \$6,043,512.15, increased \$62,816.27 over 1913. The various charges against the earnings for operation, maintenance, etc., were \$3,529,546.22, or 58.4% of said earnings, an increase of 6.2%.

The payments made to the city were \$1,122,913.66, an increase of \$33,205.60.

Four quarterly dividends of 2% each were paid.

Passengers carried 152,966,153, against 151,263,925 in 1913. Transfers 65,778,022, against 63,083,118.

The percentage of charges, etc., to passenger earnings, 58.4, is the highest of any year for which figures are given, the record for 11 years being:—1904, 58.2; 1905, 56.8; 1906, 52.9; 1907, 53.09; 1908, 52.9; 1909, 51.4; 1910, 51.6; 1911, 55.2; 1912, 53.4; 1913, 52.2; 1914, 58.4.

The directors, who were re-elected, are:—Sir Wm. Mackenzie, President; Frederic Nicholls, Vice President; Sir Rodolphe Forget, Sir Henry Pellatt, Jas. Gunn, W. D. Matthews, E. R. Wood.

## The Street Railway Situation in Saskatoon.

A report on the street railway situation prepared by the commissioners has been under discussion by the Saskatoon, Sask., City Council. The report states that the total capital debt of the city in respect of the street railway, incurred and authorized, is \$725,000. The estimated cost of extending the railway from Second Ave. along Twenty-Fifth St., across the new bridge to connect with the street railway to Clarence Ave., is \$58,250; and the estimated cost of extending the railway through the Nineteenth St. subway to connect at the corner of Twentieth St. and Avenue A is \$79,143. The total debt of Saskatoon is \$6,159,153 or \$205 per capita, or deducting local indebtedness, \$114 per capita.

In discussing the manner in which the deficit on the system may be reduced, it is pointed out that \$55,000 has been allowed in the estimates for wages. The following is an approximate saving of wages if any of the schedules quoted were adopted in Saskatoon; Winnipeg rates, \$9,000; Vancouver rates, \$8,500; Moose Jaw rates, 10 per cent. off, \$9,900; Lethbridge, \$10,456; Edmonton, \$4,200; Calgary, increase, \$1,000.

The report concludes with three recommendations: 1. That the present rates for motormen and conductors be cancelled and a new schedule of rates in accordance with one of the cities quoted in the report be adopted, and that the bylaw be amended accordingly. 2. That, as previously recom-

mended, an experienced street railway superintendent be appointed, and the Electrical Engineer's superintendence be discontinued. 3. That the power rate to be charged by electrical power and light department for 1915 be 1½ cts. per k.w.h.

At a council meeting held Jan. 26, it was decided to employ an expert street railway man to take charge of the operation of the system; to reduce the charge for power from 2 cts. to 1½ cts. per k.w.h. A special committee was appointed to meet representatives of the employees to discuss the question of the adjustment of the schedule of wages so as to bring it into harmony with the rates paid in other cities.

The annual statement of the City Auditor for 1914 shows that the surplus on the operations of the railway was \$33,477.56.

At another council meeting, held Feb. 1, the following new wage schedule, to come into operation at once, was adopted:—26 cts. an hour for the first six months, 28 cts. for the second six months, 33 cts. for the second year, and 35 cts. for subsequent years. Coupled with the reduction is the rescinding of the suggestion made last September that the regular men lay off occasionally in order to provide more work for the spares. An amendment to bring the new schedule in operation May 15 was defeated.

The council also decided to continue the ticket system for another month.

Following are the audited figures covering the operations of the line for 1914, in comparison with 1913:—

Operating charges:—	1914.	1913.
Total revenue .....	\$153,972.66	\$158,947.33
Operating expenses ..	134,360.74	137,334.11
Excess of revenue over operating expenses ..	19,611.92	\$21,163.22
Capital charges:—	1914.	1913.
Interest .....	\$29,926.91	\$22,632.77
Sinking fund .....	11,091.71	3,048.79
Depreciation .....	12,070.86	15,136.49
	\$53,089.48	\$40,818.05
Less profit from operating account .....	19,611.92	21,163.22
Total deficit on system ..	\$23,477.56	\$19,654.83

The operating expense per car mile in 1914 was 19.348 cts., against 21.431 cts. in 1913. The traffic receipts per car mile last year were 22.172 cts., while in 1913 they were 24.733. Total passengers carried for the year 3,242,914, against 3,401,351.

The net deficit on the Sutherland line is \$168.87, the passengers carried being 159,485.

The Mayor and Commissioner Yorath received applications for the position of Superintendent for the railway to Feb. 25.

## Halifax Electric Tramways Co's Annual Report.

The report presented at the annual meeting in Halifax, Feb. 8, contained the following figures:

	1914.	1913.
Tram .....	\$319,880	\$301,771
Power .....	251,043	244,530
Gas .....	64,678	62,046
Miscellaneous .....	6,637	9,531
Total gross .....	\$645,241	\$605,923
Expenses .....	525,922	517,008
Profit .....	\$119,319	\$88,915
Balance .....	\$244,504	\$155,589
Retained .....	7,780	2,811
Dividends .....	\$112,000	\$112,000
Surplus .....	\$110,284	\$73,785

After the usual 8% dividend, \$126,813 remained to be carried forward to surplus.

against \$118,306 a year ago. Dividends were earned slightly better than twice over.

The surplus account, with \$126,813 from 1914, stands at \$921,735. The directors were re-elected.

## Cape Breton Electric Co's Report.

The report for 1914 shows gross earnings \$349,893.58; operating expenses and taxes \$211,119.24; net earnings \$138,774.34; interest charges \$62,849.19; balance \$73,925.15; bond sinking and improvement funds \$14,730; net balance \$61,195.15. Dividends were paid on the 6% preferred stock, absorbing \$14,040, and a 6% dividend was paid on the common stock, \$67,500, and for these purposes the surplus was drawn on to the extent of \$20,344.85. In 1913 the gross earnings were \$380,951.86; the net earnings, after deducting operating expenses and taxes, \$170,998.54, and the balance for sinking and improvement funds, reserves, depreciation and dividends \$112,365.65.

The authorized bonds amount to \$1,500,000, of which there are outstanding \$1,027,000; in the treasury, \$6,000; cancelled for improvement fund, \$2,000, and unissued, \$465,000. They are first mortgage 30 year 5% gold, due Jan. 1, 1932. The improvement fund consists of payments of 1% per year of the bonds issued. The authorized stock is \$500,000 preferred 6% non cumulative, of which \$234,000 is outstanding; and \$1,125,000 common stock.

The company does the entire electric lighting and electric railway business in Sydney, N. S., and the entire electric lighting business in North Sydney, the ferry business between Sydney and North Sydney, and operates an interurban electric railway between North Sydney and Sydney Mines. It also owns \$220,000 of the \$398,000 outstanding first mortgage bonds, and the capital stock of the Sydney and Glace Bay Ry. Co., an interurban line of 19 miles between Sydney and Glace Bay, which is operated under lease for 99 years from Jan. 1, 1911, and it guarantees the payment of the latter company's bonds as to principal, interest and sinking fund. The General Managers of the company are the Stone and Webster Management Association, Boston, Mass., and the Manager at Sydney is E. L. Milliken.

## Electric Locomotives for the London and Port Stanley Railway.

Some details of the three electric locomotives for the London and Port Stanley Ry., a general description of which appeared in Canadian Railway and Marine World for Nov., 1914, are now available. They will be of the box type, mounted on two 4 wheel trucks, the latter equipped with 36 in. rolled steel wheels. The general dimensions are as follows:—

Length inside knuckles .....	37 ft. 4 ins.
Length over all .....	37 ft.
Height to top of locked pantograph, 15 ft. 2 ins.	
Height to top of cab .....	11 ft. 9 1/2 ins.
Width over all .....	9 ft. 7 1/2 ins.
Total wheel base .....	26 ft. 8 ins.
Minimum curve .....	30 ft.
Weight, total .....	120,000 lbs.
Weight, electrical equipment .....	78,000 lbs.
Weight, airbrake and compressor .....	6,000 lbs.

Each locomotive will have two pantographs, supplying power to four 245 h.p. 750 volt d.c. motors, arranged two in parallel on the 1,500 volt line, and operated through a multiple unit control.

The Wentworth St. Mounting Co., Hamilton, Ont., has replaced its steam plant with an electric plant, and electric power is being used.

## The Jitney Omnibus Situation.

Within the last few months electric railways, particularly in the Western cities of the United States, have been given a competition by what is termed the "Jitney" omnibus. The principal field of operations of the jitney has been in the Pacific coast cities from San Diego, Cal., to Vancouver, B.C., but it has extended east as far as New Orleans and Kansas and neighboring States in the United States, and an endeavor is being made to introduce it into Saskatoon, Sask. The term jitney seems to have been coined offhand, various accounts being given of its origin, and is applied indiscriminately to auto busses and to itinerant autos carrying passengers at a five-cent fare upon any temporary route that seems likely to produce profits. "The expression jitney," says the Electric Railway Journal, "is said to be the side show barker's slang for a 5 ct. piece, and (as applied to this particular traffic) three months ago was hardly known outside the place of its origin, Los Angeles."

The genesis of the jitney bus seems to have been as follows: In 1914 the Pacific Motor Coach Co. was organized in Los Angeles, and 33 buses were put in operation in July. The company ran its buses mainly in competition with the Pacific Electric Ry. cars, cutting the round fare trip between Los Angeles and Venice from 50 cts. to 40 cts., and then to 25 cts. The company did an extensive business, but in time was given a competition in the shape of what is the real jitney, the 5 ct. itinerant car. As a result the Pacific Motor Coach Co. is now in liquidation with a total indebtedness of \$86,788, and assets valued at \$3,026, exclusive of cars.

The 5 ct. car competition began in Nov., 1914, and it was reported that by Christmas about 200 small cars were in operation in Los Angeles, and that the owners, who in most cases drove their own cars, were making from \$10 to \$12 a day. The idea seems to have spread with considerable rapidity, particularly in the coast cities, and in the inland cities where there was considerable tourist traffic. Different types of vehicles were used, and at present they range from the large double deck bus to the ordinary two seated touring car. In some cases the lighter motor trucks were provided with seats, and put on the streets.

It was not long before the necessity of regulating this new class of traffic became evident, and the city councils in Los Angeles, San Francisco, Oklahoma and other places put in force temporary regulations for the protection of the public. This brought about the organization of the jitney bus owners in the several cities, with a view of squeezing out the undesirable owners, and of obtaining better conditions from the councils. The regulations provided for the licensing of the cars at varying fees; the putting up of bonds for the protection of passengers from injury, etc., amounting to as high as \$10,000; and regulations as to traffic, with penalties for breaches of the rules. The result of the putting in force of the regulations was such that the traffic was practically killed in Oklahoma, and at Denver practically none but well organized companies, having considerable capital, can obtain a license.

The extent to which the traffic developed may be gathered from the report that at Jan. 30, jitneys were reported to be in operation in 39 cities in the United States; that there were 2,375 busses in operation in five of the Pacific Coast cities, and that in San Francisco alone from 15 to 20 new licenses were being issued daily. This new traffic development has been engaging the attention of the electric railway associa-

tions in the United States, as well as the city councils, and the question of the complete regulation of the traffic has been under consideration of the state legislatures in California, Kansas and Massachusetts. The San Francisco City Council is considering a proposition to operate a municipal jitney service in certain sections of the city, while the Olympia, Wash., Light and Power Co. is considering the adoption of the jitneys as an adjunct to its electric railway service.

The first jitneys in Canada appeared in Vancouver and Victoria, B.C., early in January, and they had become so numerous that on Jan. 27, the Vancouver Public Service was formed, with over 100 jitney drivers as members, and on Feb. 6, a similar association was formed in Victoria with 101 out of the 157 jitney drivers in the city as members. The councils in both cities took up the matter of the traffic at an early stage, and made temporary bylaws for its regulation, and in the case of Vancouver application was made to the British Columbia Legislature for an amendment to the city's charter of incorporation to authorize the

### Canadian Electric Railway Association.

PRESIDENT—C. B. King, Manager, London Street Railway Co.

VICE PRESIDENT—James D. Fraser, Director and Secretary-Treasurer, Ottawa Electric Railway Co.

HONORARY SECRETARY-TREASURER—Acton Burrows, Managing Director, Canadian Railway and Marine World.

EXECUTIVE COMMITTEE—The President, Vice President, Secretary - Treasurer, and

E. P. Coleman, General Manager, Dominion Power and Transmission Co.

Patrick Dubee, Secretary - Treasurer, Montreal Tramways Co.

A. Eastman, General Manager, Windsor, Essex and Lake Shore Rapid Railway Co.

H. M. Hopper, General Manager and Purchasing Agent, St. John Railway Co.

Wilson Phillips, Superintendent, Winnipeg Electric Railway Co.

C. L. Wilson, Assistant Manager, Toronto and York Radial Railway Co.

ASSISTANT SECRETARY—Aubrey Acton Burrows, Business Manager, Canadian Railway and Marine World.

OFFICIAL ORGAN—Canadian Railway and Marine World, Toronto.

regulation of jitneys. The Victoria City Council took steps, Feb. 11, to obtain similar powers, and the B. C. Government decided to have the Municipal Act amended in such a way as to meet the conditions arising. The three bills are being given consideration by the Legislature's Municipal Committee at the sittings of which representatives of the British Columbia Electric Ry. and of the jitney bus owners have been present.

The Auto-Public-Service Corporation of B. C. has been incorporated under the B. C. Companies Act to carry on this kind of traffic. Victoria has two women who run jitneys.

A jitney service has been started in Toronto's Rosedale suburb.

The Superintendent of the Edmonton, Alberta, power plant offered, Feb. 12, to supply power for the Edmonton Radial Ry. at 1½ cts. per k.w. hour, instead of 2 cts. as then being charged.

The Regina, Sask., City Council has issued instructions to the police to stop the practice indulged in by boys, of attaching their sleds to the electric cars, owing to the danger to the traffic generally.

## The Ottawa and St. Lawrence Electric Railway Project.

From time to time Canadian Railway and Marine World has published statements which have been put forth as to intended construction on this line, but none of which have been fulfilled and it has never been possible to obtain any complete or satisfactory information about the company from the promoters, J. A. Morden & Co., Toronto. As far as we can judge the project is still in the promotion stage and we have been unable to ascertain what its financial position is, or what its prospects are.

The following letter from W. B. Russel, M. Can. Soc. C.E. Toronto, has been published in Saturday Night: "It has come to my knowledge today for the first time, that my name has been used in connection with and as being on the advisory board of the Ottawa & St. Lawrence Electric Ry., and that in connection with some request from some one to your paper for information some months ago, my name was given as being one of the advisory board. This certainly was without my knowledge or consent, that is, I mean that the railway company had no authority to use my name in this capacity, and I am notifying them today to this effect. I would ask you to kindly state that I am not connected in any shape or form with this enterprise, and I was not aware that they were using my name as being connected with their enterprise."

### Mainly About Electric Railway People.

C. W. Colvin is reported to have been appointed Transmission Engineer, British Columbia Electric Ry.

B. R. Jenkins, inventor of the Jenkins automatic fender for street cars, died in Toronto, Feb. 18, after two years illness.

E. Anderson, K.C., gave an address on the history and development of the Winnipeg Electric Ry., at a luncheon of the Jovian Order, at Winnipeg, recently.

E. A. Evans, M. Can. Soc. C.E., formerly General Manager, Quebec Ry. Light & Power Co., has been elected Grand Master of the Quebec Grand Lodge of A. F. and A. M., for the current year.

Allan Purvis, Manager, Interurban Lines, British Columbia Electric Ry., has resigned. It is stated that a successor will not be appointed, but that the duties will be merged with those of the General Superintendent.

Lieutenant-Colonel E. W. Rathbun, President, Oshawa Ry., was given a farewell by the citizens of Deseronto, Ont., Feb. 13. He has been appointed to the command of the 6th Artillery Brigade, and will sail with the second contingent for service in Europe.

W. H. Hazlitt, who has retired from the position of Purchasing Agent, British Columbia Electric Ry., after having been in the company's service since 1900, was presented with a gold watch and chain by the staff of the general offices, Vancouver, Feb. 1.

It is reported that information has been received in Toronto as to the whereabouts of J. W. Moyes, responsible for the tangle in the construction of the Ontario West Shore Ry., and that a new warrant has been sworn out, under which he can be extradited to the Dominion. It is stated that the previous warrant did not allow of extradition proceedings being taken.

William Parker, heretofore Inspector, Hamilton St. Ry., Hamilton, Ont., has been appointed Superintendent. Since the accidental death of Duncan Miller about two

years ago, the duties of Superintendent have been carried out by J. Pearson, one of the Chief Inspectors, who now resumes his former position, and will in addition act as Assistant Superintendent.

### Electric Railway Finance, Meetings, Etc.

**Brantford Municipal Ry.**—The new cars commenced to run in Brantford on Dec. 17 and the revenue from Dec. 18 to Jan. 16, both inclusive, was \$4,188.24, against \$3,104.21 for the corresponding period of 1913-4. These figures are for the lines in Brantford only, and do not include the Grand Valley Ry. between Brantford and Galt, as a bridge at Blue Lake was down and there was other trouble, consequent upon the bad state of the line, which affected the traffic.

**Brantford Municipal Ry.**—Earnings for January for city lines and interurban line Brantford to Galt, \$6,676.94.

**British Columbia Electric Ry.**—Gross earnings for December, \$674,063; operating expenses and maintenance \$512,663; net income \$161,400, against \$793,219 gross earnings; \$548,535 operating expenses, maintenance, etc.; \$244,684 net earnings, for Dec., 1913. Aggregate gross earnings for seven months ended Dec. 31, \$3,998,899; net earnings, \$924,331, against \$4,553,726 aggregate gross earnings; \$1,221,405 net earnings, for same period 1913.

**Berlin and Waterloo St. Ry.**—The report for 1914 of this municipally owned railway shows total receipts of \$72,973.69. There was a decrease of over \$4,000 from 1913, but a net profit of \$405.70 was shown for 1914, of which 75% is paid to Berlin and the balance to Waterloo.

**Calgary Municipal Ry.**—Total receipts for January \$47,550.86 against \$55,827.06 for January, 1914.

**Calgary Municipal Ry.**—The financial condition of this railway has been under discussion for some weeks by the Board of Commissioners at Calgary, Alberta. Replying to a suggestion that the system should be run as if owned by a private company, Commissioner Greaves said it was impossible, as it would involve the cutting off of service over some 10 or 20 miles of track, which the citizens would not submit to. Commissioner Garden expressed the opinion that the railway was getting the better of a private corporation in escaping paving and other charges. The matter is still under consideration.

P. S. Fitter, Publicity Commissioner, in a communication to the press on the finances of the line, points out that although the loss on operation for the 11 months ended Nov. 30, 1914, was \$44,284, during the four years operation of the line, a surplus of \$300,000 had been built up over and above all fixed charges. The loss in operation is practically on two lines only, the Bowness Park line, which the city operates in consideration of a park site which had been granted, and the other the line to the C.P.R. Ogden shops. The present loss on this latter line is \$50 a day. (Aug., 1914, pg. 384.)

**Detroit United Ry.**—The Board of Street Ry. Commissioners has under consideration a proposition to acquire the system of electric railways in Detroit, Mich. So far as the proposition has been discussed only the lines within the city area are included. The company owns the Sandwich, Windsor and Amherstburg Ry., operating lines in and between Windsor, Walkerville, Sandwich and Amherstburg, Ont. It was stated at the annual meeting of shareholders, Feb. 3, that a definite announcement upon the question of the proposed purchase would be made as soon as possible after the meet-

ing of the directors of the D. U. Ry. and the Municipal Commissioners, Feb. 15.

**Dominion Power and Transmission Co.**—A Hamilton, Ont., press dispatch says that at the annual meeting it was announced that the company had a surplus of \$65,559 after paying dividends of \$461,392. The receipts of the street railway and radial lines fell off \$106,000.

**Edmonton Radial Ry.**—The estimates for this year submitted to the Edmonton, Alberta, City Council, Feb. 10, contain the following respecting the E. R. Ry. Estimated receipts, \$582,000. Expenditures, maintenance, operation and power charges will be \$444,000, leaving a surplus of \$148,000 of revenue over operation alone. Fixed capital charges, however, amount to \$240,000, leaving a deficit of \$92,000, without taking into consideration the depreciation charges of \$102,000. With this included the Superintendent estimates the total deficit of the railway for this year at practically \$200,000.

**Edmonton Radial Ry.**—The City Auditor's report that the operating expenses for 1914 increased \$45,000 while the revenue only increased \$13,000 as against the figures for 1913, has been questioned by Commissioner Harrison and Superintendent Larmonth. The Superintendent has been instructed to make a report showing in what respect he claims the auditor's figures are not correct.

**Hamilton St. Ry.**—The percentage paid to the city for the three months ended Dec. 31, was \$12,702.97. The total paid during 1914 was \$54,712.08, against \$59,290.56 in 1913.

**Moncton Tramways, Electricity and Gas Co.**—The Eastern Trust Co. received offers recently for the sale to it, under the terms of the trust deed, bonds to the amount of \$12,000 at a price not exceeding 5% premium. The \$12,000 is at the credit of the sinking fund, and failing to receive offers of bonds, the trustees will draw bonds for redemption to the amount necessary.

**Montreal Tramways Co.**—Three cheques aggregating \$508,665.51 were given by the company to the Montreal City Treasurer, at the end of January. The balance of the \$603,911.57, which was claimed to be owing at Dec. 31, is in course of adjustment, which involves the consideration of the merits of a counterclaim.

**Regina Municipal Ry.**—Unofficial reports in Regina, Sask., are to the effect that the deficit upon the operation of the electric railway for 1914 will reach \$96,000, including debenture interest and all overhead charges. The actual loss arising from operation was \$10,000 in May, but with economies effected this had been reduced to \$6,000 at the end of the year. The interest and other charges were \$90,000.

**Sandwich, Windsor and Amherstburg Railway.**—The report of the Detroit United Ry., which owns all the capital stock of the Sandwich, Windsor and Amherstburg Ry. Co., which in turn owns the capital stock of the Windsor and Tecumseh Electric Ry. Co., shows the mileage of these latter lines at Jan. 1, 1914, as 39.9312, to which was added during the year, 0.3466 mile.

Statistics of the year's operations are as follows:—Revenue passengers, 5,068,191; transfer passengers, 679,015; employee passengers, 17,160; total, 5,764,366; receipts per revenue passenger, 0.0512c.; receipts per passenger, 0.045c. Car mileage, 1,037,467; earnings per car mile, 0.2582c.; expenses per car mile, 0.1663; net earnings, per car mile, 0.0919.

During the year \$110,577.16 was spent on extension to lighting plant, new track and additional equipment.

**Sherbrooke Ry. and Power Co.**—Gross earnings for six months ended Dec. 31, \$74,819.29; operating expenses \$44,617.97;

net earnings \$30,201.32, against \$75,914.87 gross earnings; \$46,337.61 operating expenses; \$29,577.26 net earnings, for same period 1913.

Earnings of Toronto Ry., for January, \$471,226 against \$501,843 for Jan. 1914.

**Winnipeg Electric Ry.**—Gross earnings for December, \$368,400; operating expenses \$230,719; net earnings \$137,681, against \$379,863 gross earnings; \$211,969 operating expenses; \$167,894 net earnings, for Dec. 1913. Aggregate gross earnings for 1914, \$4,101,302; net earnings \$1,685,093, against \$4,078,694 aggregate gross earnings; \$1,826,087 net earnings, for 1913.

The percentage payments to the city for 1914 were \$122,226.90.

### Electric Railway Notes.

The Toronto Suburban Ry. is applying to the Ontario Legislature for power to operate cars on Sundays.

British Columbia Electric Ry. employees in Vancouver, New Westminster and North Vancouver, contributed \$839.12 to the local war relief fund for the month of December.

The City Commissioners of Saskatoon, Sask., received applications for the position of Superintendent of the municipal railway, to Feb. 25.

The Moose Jaw Electric Ry. has made a special issue of tickets, 8 for 25 cents, to the members of the 46th Battalion Third Contingent, in training at Moose Jaw, Sask.

A London, Eng., cable states that owing to the scarcity of labor in Great Britain the managements of a number of street railway systems are considering the advisability of employing women as conductors.

The Saskatchewan Supreme Court has awarded a Regina Municipal Ry. conductor named Schell \$2,000 damages against the city. He was knocked off the step of his car by coming in contact with one of the iron standards of the Broad St. subway.

One of the judges of the Ontario High Court of Judicature has decided that W. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co., must answer certain questions in a suit brought by C. W. Moodie, against the directors, who Moodie claims have voted themselves excessive fees.

The Brantford, Ont., Municipal Ry. Commission is preparing to issue school children's tickets at 10 for 25 cts. The council has authorized the commission to carry the liability of the employees under the Workmen's Compensation Act, and also to the general public, from the operation of the street railway, by setting aside annually a sum to provide a fund to meet claims.

The London St. Ry. is asking the city for a renewal of the agreement allowing the operation of cars on Sundays. It is reported that the Board of Control is looking into the question with a view to obtaining some concession from the company, either a percentage of earnings, or extra mileage payments. The company claims that Sunday cars do not pay, but are run as a public convenience.

The Calgary, Alberta, Street Railway Men's Association, Feb. 12, accepted the new wages schedule, which provides for a reduced rate of pay consequent upon war conditions. The new schedule comes in operation at once and provides as follows: While operating on the spare list: First year, 28 cts. an hour; second year, 30 cts.; after two years, 32 cts. Regular runs—First six months, 32 cts.; second six months, 33 cts.; third six months, 34 cts.; fourth six months and thereafter, 35 cts. The new schedule is estimated to effect a saving of about \$10,000 during the year.

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford and Hamilton Electric Ry.**—The company is applying to Parliament for an extension of time for building the branch from Langford to Galt, Ont. (Nov., 1914, pg. 516.)

**Brantford Municipal Ry.**—The Brantford, Ont., City Council is asking the Ontario Legislature to confirm a number of bylaws, among them being one for borrowing upon debentures \$270,000 for the purchase, improvement and equipment of the Grand Valley Ry. (Feb., pg. 70.)

**Brantford Municipal Ry.**—The Commissioners, on Feb. 13, approved of plans for a new street railway station to be built on the site of the old power house on Colborne St., opposite Clarence St., Brantford. Work is to be started at once. (Feb., pg. 70.)

**British Columbia Electric Ry.**—A steel span replacing the old wooden one has been erected in False Creek bridge, on the Lulu Island branch line, Vancouver. The new bridge consists of one span of 125 ft., which was erected on scows and floated to the site, and raised by the tide to the new pile foundation. The other half of the bridge consists of a swing span, which has always been of a permanent character. The contractors were J. Coughlin and Son, Vancouver, and the work was done under the direction of H. P. Peterson. (Feb., pg. 70.)

**Cornwall St. Ry., Light and Power Co.**—The Cornwall Town Council is applying to the Ontario Legislature for the confirmation of a bylaw granting an extension of the company's franchise for a further period of 20 years. (Dec., 1914, pg. 553.)

**Forest Hill Electric Ry.**—The Ontario Legislature is being asked to extend the time for the building of this projected electric railway on Forest Hill Road, Toronto, northerly and northwesterly to 2.50 miles north of Eglinton Ave., also on Eglinton Ave., to one mile west of Dufferin St., and northerly on Dufferin St. for 2.50 miles. W. E. Grierson, T. J. Glover and J. Hales, Toronto, are the provisional directors. (June, 1914, pg. 282.)

**Hamilton Mountain Electric Ry.**—Application is being made to the Ontario Legislature for an extension of time within which to build the projected electric railway from the Hamilton Mountain road, Ancaster tp., at the crossing of the Brantford and Hamilton Electric Ry., to Mount Albion, Barton tp., and from northerly boundary of Hamilton at the Hamilton and Caledonia Road, to Ryckman's Corners, three miles. T. H. Crerar, L. R. E. Awrey, S. B. Thomson, G. E. Armstrong and T. H. Stinson, Hamilton, Ont., are the provisional directors.

**Hamilton St. Ry.**—The question of the extension of the company's tracks on Birch Ave. extension across Coal Oil Inlet was considered Jan. 26 by G. A. Mountain, Chief Engineer of the Board of Railway Commissioners. The City Engineer proposed that the company divert its tracks and this suggestion was approved by Mr. Mountain, who recommended the use of 10 ft. ties instead of 8 ft. ones. The work will, it is said, be done early in the spring. (Jan., pg. 28.)

**Hull Electric Co.**—The citizens of Gatineau Point, and of Hull, Que., are negotiating with the H. E. Co. to secure an extension of the company's line to Gatineau Point. (Sept., 1914, pg. 431.)

**Hydro-Electric Power Commission of Ontario.**—At a Board of Trade dinner in London, Ont., Jan. 29, Sir Adam Beck said he did not think he was visionary in saying that if the Dominion Government subsidizes radial lines Ontario will build 1,000 miles that will

pay from the day operation is started. The making surveys and estimates was one involving a great deal of anxiety to the Commission. In referring to the projects for the building of electrical lines centering on London, he said the development of such a system would mean much for the city. The lines referred to included a belt line round the city, a line to Aylmer, and one to St. Marys, connecting with one to Stratford, Berlin and Toronto, with lines to Arkona and Sarnia, Chatham and Windsor.

A deputation from Tillsonburg waited on Sir Adam Beck, Feb. 2, urging the inclusion of Tillsonburg in the project.

The Collingwood, Ont., Board of Trade has been informed by F. A. Gaby, Chief Engineer, that the Commission's engineers are completing their surveys in that district, and that the plans will be laid before the municipalities at an early date. (Feb., pg. 70.)

**Lacombe and Blindman Valley Electric Ry.**—Grading is reported completed on this railway from Lacombe to Rimbey, 37 miles. Nothing has been decided as to when track will be laid. This is one of the light railways authorized to be built under provincial guarantee of bonds to the amount of \$7,000 a mile. (Dec., 1914, pg. 553.)

**Lethbridge Municipal Ry.**—The Lethbridge, Alberta, Board of Trade is pressing the City Council to undertake the extension of this railway to Hardieville. The council has the matter under consideration.

The question of the cost of lifting and relaying the electric railway tracks under the 18th St. subway, \$465.61, is in dispute between the City Council and the C.P.R. No provision was made in the agreement for this work, and the C.P.R. now wants to collect it. The City Council referred the matter to the City Solicitor, Feb. 1. (Dec., 1914, pg. 553.)

**London and Lake Erie Ry. and Transportation Co.**—W. N. Warburton, General Manager, had a conference, Jan. 22, with representatives of Malahide, Aylmer, Yarmouth, and St. Thomas municipalities with reference to a proposition to extend the company's line from St. Thomas to Aylmer and from Union to Sparta, Ont. This proposition has been under discussion for several years. (Sept., 1914, pg. 431.)

**London St. Ry.**—The committees of the London, Ont., City Council met C. B. King, Manager L. S. R., Feb. 15, to discuss street railway matters. The two questions about which the discussion chiefly centred were the matter of track extension and that of the renewal of the bylaw allowing the operation of Sunday cars. The company offered to extend the Hamilton Road line to West St., on condition that some arrangement was made by the city to aid in financing the work. The committees wanted something better than this and adjourned its consideration for a week. The committees offered to renew the Sunday bylaw on condition that 9 tickets be sold for 25 cents, and that 10% of the proceeds be paid to the city. Mr. King said it was a waste of time to consider such a proposition. (Jan., pg. 28.)

**Montreal and Southern Counties Ry.**—We are officially advised that it is expected to start work early in the spring upon the 1,700 ft. extension to Youville Square, Montreal. It will start from the present track ville St., to St. Peter St., on that street to Youville Square, and along that square to McGill St., with a Y in front of the central fire station. (Feb., pg. 70.)

**Ottawa and St. Lawrence Electric Ry.**—An unconfirmed press report states that work on the Perth and Smiths Falls section of this projected railway will be started early in the spring. It is stated that the line will run through Rideau Ferry, and not as originally planned. (Jan., pg. 28.)

**Pictou County Electric Co.**—We are officially advised that the extension to Parkdale will be started about April 1, and that it will be completed about three weeks thereafter. L. L. Flaherty, Stellarton, N.S., is Manager. (Feb., pg. 70.)

**Regina Municipal Ry.**—We are officially advised with reference to the press reports that a mile and a half of new track would be laid this year in Regina, Sask., that it is unlikely that any such construction will be undertaken, though it might be found possible, later on in the year, to arrange for it. (June, 1914, pg. 283.)

**St. John's (Nfld.) Ry.**—We are officially advised that there is no truth in the recent press report that the company is preparing to extend its tracks. (Feb., pg. 70.)

**Three Rivers Traction Co.**—Press reports state that the Three Rivers, Que., City Council has granted a 20 years franchise for the operation of a street railway in the city. The terms have been under consideration for over a year. (Nov., 1914, pg. 517.)

**Toronto, Barrie and Orillia Ry.**—The Ontario Legislature is being asked to authorize the reduction of the company's capital stock, and to extend the time for the building of the projected railway in Barrie, northerly to Orillia, and southerly to Toronto. Bicknell, Bain, Macdonald and Gordon, Toronto, solicitors for the company. (May, 1914, pg. 232.)

**Tramways Limited.**—We are officially advised that while there was a large majority in favor of ratifying the bylaw and agreement between the company and the Edmonton, Alberta, City Council, there was not the necessary two-thirds majority required for its ratification. The action to be taken under these circumstances is being considered. (Feb., pg. 71.)

**Transcona.**—The application of the Town Council of Transcona, Man., for the annulment of the contract with J. H. Kern, for the building of an electric railway in the town was heard by the Manitoba Public Utilities Commissioner, Feb. 5. The town claims that the contractor has failed to live up to his agreement, while Kern claims that he was granted an extension of time until the spring to begin work, and says he is prepared to build the line as agreed upon.

**Winnipeg Electric Ry.**—The Manitoba Legislature is being asked to amend the company's charter by adding to its powers. The notice of application does not state the additional powers to be asked for.

It is said that the tracks laid on Arlington bridge when it was built are to be torn up and relaid, and that a car service will be operated over it in the summer. The Arlington cars now run along William Ave. to Arlington St. (Jan., pg. 28.)

**Sunday Car Service in London, Ont.** The London St. Ry.'s annual report states that Sunday service was started Feb. 22, 1914. The service has been approximately 70% of that of an ordinary week day, whereas the earnings have been only approximately 40%. The amount of service each Sunday has been varied as requirements seemed to justify, so that this service has proved to be ample for the present at least. It is obvious from the above that the profits on the Sunday car service are not nearly so much as from the week day service, and that therefore the percentage of operation will be slightly increased.

# Marine Department

## Canadian Lake Protective Association Annual Meeting.

At the annual meeting in Ottawa, Feb. 16, the President, L. Henderson, Managing Director, Montreal Transportation Co., occupied the chair. The report, which is given in full below, was unanimously adopted.

The following were elected as the executive committee:—A. E. Mathews, Mathews Steamship Co., Toronto, Chairman; W. J. Bassett, Bassett Steamship Co., Toronto; W. E. Burke, Canada Steamship Lines, Montreal; H. W. Cowan, Canada Steamship Lines, Toronto; W. L. Reed, Canadian Northwest Steamship Co., Toronto; G. E. Fair, Farrar Transportation Co., Toronto; R. Fraser, Montreal Transportation Co., Kingston, Ont.; J. T. Mathews, Mathews Steamship Co., Toronto; Jas. Playfair, Great Lakes Transportation Co., Midland, Ont.; H. W. Richardson, Great Lakes Transportation Co., Kingston, Ont.; A. A. Wright, St. Lawrence and Chicago Steam Navigation Co., Toronto.

### Annual Report.

Following is the annual report signed by the committee: L. Henderson, Chairman, W. J. Bassett, W. E. Burke, H. W. Cowan, S. Crangle, G. E. Fair, R. Fraser, J. T. Mathews, J. Playfair, H. W. Richardson, and A. A. Wright:

The season of 1914 presents, on the whole, a very favorable casualty record. There were no total losses. Several strandings or groundings, and two or three collisions, contributed fairly large individual amounts to the season's total claim upon underwriters, yet even these cases have been of only moderate consequence compared with corresponding casualties in previous years, and an outstanding feature of the season's record is that no vessel was withdrawn from service on account of damage for more than a limited period. In one or two cases the damage might have been much greater but for fortunate circumstances, and the vessels in question have been in serious peril which under more careful management they would not have encountered, yet nevertheless the season must be judged by actual results and it is a fact that in number and character the recorded casualties are comparatively light.

The appendix at the end of this report contains an analysis of the accidents reported. There were 18 strandings or groundings. As the worst of these occurred in the rivers and without stress of weather, other than fog, and the vessels were quickly released, it has been thought better not to attempt to distinguish them from cases of less importance, by classification as strandings, as that term has a meaning broad enough to include most of the minor cases of groundings. All 18 cases are therefore grouped together. Four of them, including one of the most serious, occurred in Lake St. Louis, and further reference to these will be made later in this report in connection with remarks regarding the pilots of the Upper St. Lawrence, and relating to aids to navigation. In five of these cases fog was the chief, or at least, a contributing cause. In two, spar buoys were not satisfactorily placed; in two others gas buoys were out, and in one, red buoys were mistaken for black. In two cases the steering gear had jammed, in one case for unascertained cause, and in the other through obvious negligence in storing cargo. In another case smoke had obscured inefficient range lights. Stress of weather was responsible in another case; a sunken

ship partly blocked a channel in another, in another the master blamed the wheelsman and investigation is still pending. Another afforded a glaring instance of failure to check the course the wheelsman was following which was given to him verbally as S 80° W, and steered till the ship brought up on soft bottom as N 80° W; and in another, one of the worst, no excuse whatever could be found. In three of these cases the master was censured by your committee. In two others the pilot was censured. In one an official enquiry as to the pilot's conduct was asked for, but for a variety of reasons postponed, and in one the master is now in default as to enquiries made of him by your committee, and further action must be taken. In one case a master was relieved of his vessel and let go.

Twenty-three collisions appear in the list. The great majority of these are of minor importance, occurring in crowded quarters in harbor, or else in canals and in any case at slow speed. In a number of these the fault is clearly attributable to a vessel not enrolled in your association. Of the others, only four cases are of importance, and in none of these has your committee yet endeavored to place the blame upon the master of either vessel, as in each of the four cases the question is in litigation. Two of these four important collisions occurred in the canals, with only a moderate damage, the vessel in each case being able to proceed to destination; one occurred while approaching the St. Clair Flats Canal in Lake St. Clair, when a ship was struck by an overtaking vessel, and one in the open water of Lake Ontario, in fog. No vote of censure has yet been recorded in any collision case.

There are 11 cases of damage from striking bridges, docks, piers and harbor and channel banks, and in none of these has your committee thought it well to find fault, as it has appeared that the accidents occurred under circumstances over which the master could not be expected to have complete control. Only one case of striking canal docks or gates is reported. In this respect the record is incomplete, and the fact is that canal navigation by vessels of 43½ ft. beam through locks of 45 ft. width is necessarily attended by so many collisions of minor importance with lock walls and wing walls, that masters have found some excuse for failing to report the ordinary run of accidents of this nature and may naturally enough be tempted to refrain from reporting similar cases involving greater damage. The matter is made the subject of further remark later in this report with special reference to the question of development of power from canal water. Your committee for 1915 will require to consider the question of reports of minor accidents and it is recommended that all accidents should be reported and the committee constituted the sole judge of their importance, the master in each case exercising his privilege of reporting fully his opinion of the character of the damage. It is important to note that none of the frequent accidents in which lock gates have been broken have been occasioned by vessels enrolled in your association. At the same time these accidents have placed vessels of your association in peril and in addition to being a constant source of delay to traffic are a menace to the safety of all vessels in the vicinity. Your committee has

therefore renewed the requests heretofore made for the installation of some sufficient safety device on all lock gates to prevent the possibility of their breaking away under water pressure when forced slightly out of mitre.

It is a matter of great regret that while the association appears to be able to fulfill the very important purpose of supervising the navigation of the vessels enrolled, and while undoubted progress has been made in this respect and substantial advantage has undoubtedly been gained, nevertheless, no satisfactory method has been devised for compiling records of premiums and losses. At the last annual meeting a plan recommended by your committee of 1913 was adopted, which all hoped would provide the required record in a simple and satisfactory manner. Dale & Co., Ltd., were to write 5% of the risk on each vessel and provide the association every year with tabulated statements of all premiums and all losses. An agreement was made with that company and was observed by a large number of members of the Association who caused their insurance to be placed with due regard to this agreement. But unfortunately unforeseen difficulties arose. One member with a very long list of insurable tonnage appears to have been able to procure a special policy containing better terms than those written for the majority of members, and again the scheme was launched so well on towards the opening of navigation that some members failed to instruct their brokers with definiteness before arrangements were made which precluded the possibility of placing the required proportion of insurance with Dale & Co. It was therefore apparent that at least for the present this plan could not succeed and at a meeting later in the year your committee regretfully acknowledging this fact.

Realizing, however, that the close supervision of navigation and enforcement of the maxim safety first constituted the chief duty of the association your committee has tried to secure strict compliance with the rules formulated for that purpose and to obtain the co-operation of masters in this endeavor. In dealing with reported casualties your committee has of course kept in mind the difficulties with which navigators contend, and every allowance has been made for the circumstances over which the man in charge of a vessel has no positive control. Where doubt existed the committee has erred on the side of justice to the navigator and the votes of censure recorded have been passed only with respect to perfectly apparent cases of negligence or mismanagement. In a number of doubtful cases the committee has contented itself with investigation of the casualty by correspondence, and suggestions have been made to the master in such cases calculated to show that his actions are the object of close scrutiny and that future negligence once proved would be followed by reprimand. In all cases where the circumstances appeared to require assistance by the committee action was taken by way of seeking the installation of improved aids to navigation, or lodging complaint in the quarter from which the trouble arose. This question of aids to navigation has engaged the attention of your committee on a number of occasions and the casualties reported have proved a fruitful source of suggestion for improve-

ment in the system of buoying or lighting in a number of places. Correspondence has followed and the Marine Department or the Lighthouse Board has taken action to improve faulty conditions wherever the need has been brought to their attention. A number of the cases referred to in the report of the Dominion Marine Association's Committee have come first under the consideration of your committee and the fact that the President of the Dominion Marine Association, who holds a seat ex officio on the Dominion Lighthouse Board, is also ex officio chairman of your committee, has contributed largely to the satisfactory settlement of many suggestions for improved aids to navigation raised by the casualties above referred to.

The difficulties arising in the canals from the development of power have been prominently brought to your committee's attention. That strong currents are developed, and that water levels are interfered with, are statements for which further support is found in a number of accidents, and while some action has been taken in the matter by the Dominion Marine Association from time to time and it is again referred to in the report of that association's committee, your committee feels compelled to urge the importance of the subject and the necessity for further vigorous protest at every opportunity.

Another important subject arising from the consideration of casualty reports is that concerning the pilots engaged in river navigation between Montreal and Kingston. Early in the season of 1914 your committee realized that a number of casualties in the upper St. Lawrence were occurring while the direct and immediate control of the navigation of the vessels damaged was in the hands of these pilots, and that, as the primary fault in many cases lay with the pilots, means must be taken to subject them to control, as otherwise the supervision and disciplining of masters in this part of the river would be a most ineffective measure. The Dominion Marine Association, actuated by the unfortunate experience of its members in connection with the association of pilots in the lower St. Lawrence, had during 1913 filed an emphatic protest against the establishment of a pilotage district under the Shipping Act for the upper section of the river, and therefore, after careful consideration your committee determined that the pilots in question should be simply subjected to the same regulations and discipline as the masters. It developed that a small number of these pilots were without masters' certificates, and as a first step a rule was adopted prohibiting the engagement of a pilot, other than a member of the crew, who does not hold a master's certificate, and requiring all engaged pilots to submit themselves to the committee's jurisdiction by signing an agreement to that effect. The requirement that a pilot must hold a master's certificate was made for the double purpose of avoiding the surrender of the ship to an uncertificated man, and to enable the assistance of the Wreck Commissioner to be invoked for the purpose of penalizing men deserving punishment, that commission having authority only over the certificates issued. The pilots interested did not at first appear ready to conform to this proposal, but a deputation which called at the offices of your association and discussed the question went away expressing themselves completely satisfied and convinced that the plan was one which should be carried out and should receive support from all parties. Your committee wishes to emphasize the importance of strict adherence to the rule that only men with masters' certificates be engaged hereafter and it is recommended that your committee for 1915 give this mat-

ter special attention. Recently the Deputy Minister of Marine has submitted a recommendation made by the Wreck Commissioner that something should be done to require licensing and supervision of these pilots. The action of your committee has been reported to the Deputy Minister as an answer to this and it is hoped that fair opportunity will be given to test the effectiveness of the present arrangement.

For various reasons your committee has not lodged any formal applications during 1914 for the investigation of casualties by the Dominion Wreck Commissioner. The two cases in which masters were censured by your committee did not require investigation, as the facts were abundantly clear, and the fault in each case was of a nature that did not justify any action with respect to the master's certificate. In one or two cases of collision, where it appeared that fault should be imputed to one or both masters involved, it was found that litigation was pending and would develop the required information fully. Your committee, in such cases, has felt it necessary to avoid prejudicing the interests of a party by asking for an official investigation. The cases in which river pilots were censured occurred early in the year, before your committee had definitely decided upon any policy with reference to such casualties, and at that time there was also an objection to asking for a wreck investigation, on account of pending action referred to in the Dominion Marine Association's last report looking to a reorganization of the Wreck Commissioner's court.

Very little trouble was experienced with ice in 1914 and only one casualty report is filed with reference to damage received in this way. In this case the only damage was the blocking of a circulating pump with soft ice, but with engines out of commission the vessel was in some peril and a salvage claim arose for the services of another ship in towing to port with a gale of wind blowing. At one time towards the close of the season the services of ice breakers seemed desirable to assist vessels to port and steps were taken by members of your committee to have assistance sent, but the weather moderated and the season closed without any serious ice trouble.

There was no special rate agreed upon in 1914 for extensions of insurance after the close of November. The fact is that practically no one was anxious for it, as it may very well be said that at the rates of freight prevailing no one could well afford to pay for extensions of insurance. In one or two cases individual vessels were covered after the close of the regular season at rates agreed upon in each case by the owners of the vessels. In this connection reference may also be made to the general insurance rate of 1914. For full cover above the Welland Canal it was  $4\frac{1}{2}\%$ , and the customary additional rates applied to voyages extending to the foot of the lakes and to Montreal.

Your committee was instructed at the last annual meeting to accept wooden tonnage for enrolment in a special class on terms which were to be fixed by your committee. Accordingly provision was made in due course for enrolment of wooden vessels in a separate class on terms identical with those in force respecting steel hulls, and notice of this was given to members of the association. Thereupon one wooden steamer, the Sarnor, was presented for enrolment, and tonnage dues upon her were paid to the association. In July last this vessel was ashore in the St. Lawrence and later she caused substantial damage in the Welland Canal and was ultimately surrendered by her owners to the Dominion Government as security for this damage claim. Mortgage, salvage, damage, wage

and supply claims are now pending against her.

During the year your committee received reports from superintendent engineers of canals, regarding the available draft of water, and the information has been duly circulated. Special correspondence has taken place with reference to the draft of water available in the Welland and St. Lawrence Canals, and the question has had particular attention in connection with the use of canal water for power development. The serious difficulties occasioned by the conflict between power and navigation interests are referred to in this report, and in the Dominion Marine Association's reports. The subject has been brought to the attention of the International Joint Commission at a session in Detroit in Nov., 1914, and it is recommended that it be made a prominent feature in representations addressed to the ministers at Ottawa on the occasion of your association's annual meeting. Special correspondence has also taken place with reference to minor collisions in the canals occasioned apparently by insufficient attention to the regulations and to the advice given from time to time by your committee. The matter was called particularly to the attention of masters by a bulletin issued during the summer, in which the annoyance, delay and expense occasioned were called to the attention of masters, and an appeal was made for strict adherence to the rules and implicit obedience to the dictates of caution and good seamanship.

A nice question arose in connection with casualty reports regarding collision cases, and your committee decided that in these cases the casualty reports might be sent direct to the offices of the owners of the respective vessels, to be used at the owners' discretion, and to be withheld by them, so far as exact particulars of the collision are concerned, if litigation was likely to arise. Masters were notified of this in a bulletin and were instructed that they might simply notify the association of the time and place of the collision, and the names of the vessels, provided full and detail reports were sent in to the owners. Owners at the same time were required to advise the committee of the general circumstances, so that action might be taken which would be fair to both parties. The usual amount of general correspondence with underwriters, brokers, individual members of the association and other parties has also been carried on. The bulletin has been regularly issued after each meeting of the committee, and has been sent to all members of the association and to the masters of all vessels enrolled.

Special attention is again called to the rule requiring that casualty reports should be filed in all cases, and the members of the association are asked by your committee to endeavor to see that it is carried out. Complete obedience to the rule will furnish the association with a complete record of casualties and it will also tend to make the system of reporting generally satisfactory to all parties. The failure to note an important casualty in the bulletin will very naturally encourage masters to withhold reports, as it will not seem fair to them that one accident should escape mention and another be made the subject of discussion. During 1914, at least with reference to casualties of any importance, it may be said that the majority of the cases were duly reported, and that but few masters are in default. Nevertheless, it is known that some few casualties of some importance were not duly reported, and your committee recommends that hereafter in all such cases mention should be made of the fact in the bulletin, with due comment on the master's failure to obey the rule. In one or two more important cases of this nature

during 1914 the failure to report did not make so much difference, as it appeared to the committee that the master had already been disciplined by the owners of the vessel, and in at least one case had been dismissed. Yet, notwithstanding this, for the reasons named above the bulletin and the association's records should be made as complete as possible.

Early in the year it was found that the limited number of the committee rendered it difficult to obtain a sufficient attendance at meetings to give fair consideration to the business on hand, and at a general meeting of the association at Toronto, July 17, it was resolved to add to the committee W. J. Bassett, G. E. Fair, and A. A. Wright.

**Use of Neutral Flags on Belligerent Merchant Vessels.**—Since the use of a neutral flag by the British s. s. *Lusitania* when approaching England recently, there has been a little misunderstanding as to the recognized use of a neutral flag under international laws. The intention conveyed in the German notice regarding shipping to Great Britain is a flagrant breach of the international rules, and the shipping of all nations, whether neutral or not, is endangered, to the extent of Germany's ability to carry out its threat. Whatever protection, however, there may be in the use of a neutral flag under the extraordinary conditions created by Germany, even a belligerent nation is entitled to claim, under the international rules, in order to protect the lives and property of neutrals on board. The right of search is not denied to the Germans, and the use of a neutral flag may, or may not, cause them to carry out such a search before proceeding to extremities. It is not considered, by those in authority generally, that the use of a neutral flag on belligerent merchant vessels will add in any way to such danger to neutral vessels as may now exist.

## Dominion Marine Association's Annual Meeting.

The annual meeting was held in Ottawa, Feb. 16, the President, L. Henderson, Managing Director, Montreal Transportation Co., in the chair.

The executive committee presented a comprehensive report over the signatures of L. Henderson, President, and F. King, Counsel, showing that the tonnage enrolled continues to increase, the steam tonnage now being approximately 200,000 net registered tons, and the barge or sailing tonnage remaining about the same at approximately 33,500 tons. The report dealt in full detail with the past year's work, including the following subjects:—Legislation; Canada Shipping Act; Marine Conventions Act, 1914; Workmen's Compensation Act; bill to place inland vessels under the Board of Railway Commissioners; Seamen's Union Bill, United States; development of power at Sault Ste. Marie, Ont., and Waddington, N.Y.; pollution of navigable waters; grain cargoes, discrepancies in weighing and the bill of lading, grain trimming, dispatch in loading and Lake Shippers' Clearance Association, automatic weighing machines; canals, lock entrances, bridge semaphores, canal gates, canal draught, occasional canal damages; canal statistics; customs report of entry by Canadian vessels into Lake Michigan; load lines and deck loads; rules of the road; rules for life saving appliances international convention on unification of certain rules of law relating to the limitation of liability of owners of sea-going vessels; pilotage on the Upper St. Lawrence; Dominion Wreck Commission; masters' and mates' certificates; shipping coal ex warehouse; screening bituminous coal in bond; Montreal harbor improvements; aids to navigation; lake disaster fund.

The report was unanimously adopted. Of the four members of the executive committee who retired by effluxion of time, A. E. Mathews, Mathews Steamship Co., Toronto, and Dennis Murphy, Ottawa Transportation Co., Ottawa, were reelected. W. L. Reed, Canadian Northwest Steamship Co., Toronto, and W. E. Burke, Canada Steamship Lines, Montreal, were elected in place of F. S. Wiley, Canadian Northwest Steamship Co., and J. W. Norcross, Canada Steamship Lines.

The other members of the committee, whose terms expire in 1916 and 1917, are:—L. Henderson, Montreal Transportation Co.; H. W. Richardson, Great Lakes Transportation Co.; H. H. Gildersleeve, Northern Navigation Co.; G. E. Fair, Farrar Transportation Co.; H. W. Cowan, Canada Steamship Lines; C. B. Harris, Canadian Lake and Ocean Navigation Co. and Merchants Mutual Line, Toronto; S. V. McLeod, Algoma Central Steamship Lines, and A. A. Wright, St. Lawrence and Chicago Steam Navigation Co.

The executive committee elected A. E. Mathews, President; H. W. Richardson, First Vice President; and W. E. Burke, Second Vice President.

The association, in conjunction with the Canadian Lake Protective Association, voted \$750,000, to be divided between the Red Cross Society and the Belgian Relief Fund.

The Department of Marine has issued notice to mariners relative to the closing of certain Canadian ports, should occasion arise, and the establishment of examining stations at Halifax, Quebec and Esquimaux. Detailed instructions are given, which must be followed by all vessels making port.

## The Future of Canadian Pacific Railway Steamship Operations.

In an interview in New York recently, Sir Thomas Shaughnessy, President, C.P.R., is reported, when questioned with reference to the company's application to Parliament for authority to lease or charter its vessels to a company to be formed for the purpose, to have made the following statement:—"What is planned is merely an organization for simplifying management. We are proposing, indeed we are now forming a shipping company which will take over our own ships and probably some others. This shipping company will, in reality, be a subsidiary company for the handling of our ocean traffic, so as to keep this part of our business quite apart from the management of the railway. It is merely an internal arrangement—we want to put our steamship business in the same relation to the railway company as if it were an independent steamship company. This, we are sure, will mean increased efficiency and prove beneficial to our shareholders."

It is probable that the "close working agreement" which has been in operation for some time, will be concluded by the inclusion of the Allan Line vessels in the new company being formed.

During 1912 numerous changes took place in the management of the Allan Line, including the retirement of Sir Montagu Allan, B. J. Allan and J. Smith Park from the Board, and the election of Sir Frederick W. Taylor, T. Reynolds and Sir Thomas Skinner in their places. The fact of Sir Thomas Skinner being a director of the C.P.R. was commented on at the time as being likely to confirm the reports of closer future relations between the Allan Line and the C.P.R.

At the end of 1912 it was announced that the register of joint stock companies in Edinburgh, Scotland, showed that of the 60,639 shares in the Allan Line Steamship Co., 57,637 were held by the Royal Trust Co., Montreal.

## The Building of Submarines in Canada.

In the House of Commons on Feb. 11, Hon. W. Pugsley, M.P. for St. John, N.B., moved for a copy of correspondence relating to the purchase by the Government of two submarines ordered originally for the Chilean Government. In the course of the discussion he said:—I was pleased to observe the other day in Canada, a paper published in London, a dispatch from Montreal, or from New York originating in Montreal. I am sorry the Minister of Militia is not in his place. The dispatch is as follows:

"A telegram received in New York from Montreal, according to Reuter, says:—'To meet the exaggerated stories published in the United States, the Canadian Militia Department has authorized the statement that there is no reason why the facts concerning the construction of submarines in Canada should not be published. They are as follows: The keel of eight first-class units have already been laid down by the Canadian Vickers Company here, and it is expected that several will be ready in August next. The plant is running at full capacity.'"

I would ask the Minister of Marine and Fisheries if that statement is correct?

Mr. Hazen: As to whether the Militia Department authorized the statement I do not know.

Mr. Pugsley: As to the fact?

Mr. Hazen: As a matter of fact, I think submarines are being built by the Canadian Vickers at Montreal.

Mr. Pugsley: For whom?

Mr. Hazen: I presume for the British Government.

## The Safety of Navigation in the Bay of Fundy.

R. E. Armstrong, Secretary, Board of Trade, St. John, N.B., wrote recently to *Shipping Illustrated*, as follows:

In a recent issue, under the heading of "Marine Insurance," you say: "The loss of the steamer Navarra at Tusket Islands, Bay of Fundy, is the second which occurred last year in that vicinity. In Jan., 1914, the R.M.S.P. liner Cobequid was totally lost, and unfortunately there was serious loss of life."

You also refer to the wreck of two other steamers, one of which, the Gerald Turnbull, was wrecked on Gannet Ledge in 1913, and the other—the Bonavista—in Mar., 1912, and you close with the remark that "in less than three years four fine steamers have been wrecked in this Bay."

This is scarcely a fair statement of the case, and in one respect, at least, it is absolutely false. The Bay of Fundy, as an enclosed sheet of water, is really confined to the area included within a line drawn from the southern extremity of Brier Island to the opposite shore of the State of Maine; so that, if this area is accepted, three at least, if not all four, of these disasters you have referred to occurred outside the Bay of Fundy, on the Atlantic shore of Nova Scotia. If you accept Cape Sable as the point at which Bay of Fundy waters begin, then a line drawn across to the U.S. shore will bring you to Portland, Me. I do not think that, as an American journalist, you would be willing to admit that all or any of the marine disasters which occur at Portland, Me., or east of it on the coast of Maine, should be laid at the door of the Bay of Fundy. If this reasoning is good so far as the northern side of the Bay of Fundy is concerned, then it should also hold good when applied to the southern side, and all accidents which occur below Brier Island should be excluded from the Bay of Fundy account and charged up to the Atlantic coast.

The statement that there was a serious loss of life when the Cobequid was wrecked is untrue. Not a single life was lost during that wreck, although a heavy storm prevailed at the time.

Furthermore, in almost every case that you have referred to it was shown that the casualty was due to the navigators themselves and not to any particular danger that lurked in the waters.

The Marine Court, in its finding on the Cobequid case, stated: "The court is unanimous in its opinion that the stranding and

ultimate loss of the s.s. Cobequid was caused by the grave error of judgment of John Howson, the master. . . . The court therefore severely censures the master, but on account of the very efficient and satisfactory manner in which everything was carried out on board his ship for the safety of the passengers and crew, after the stranding, does not deal with his certificate."

In the case of the s.s. Navarra, Capt. Demers, the Dominion Wreck Commissioner, described the conduct of Capt. Milliken and his officers as "culpable errors of judgment." The master's certificate was suspended for 10 months, the second officer's for 6 months, the chief officer's for 3 months.

In the face of these findings, it does not seem fair that the Bay of Fundy should be charged up with these disasters. There is ample room in the Bay of Fundy for a ship to be navigated with perfect safety, but if navigators are careless, or if they put to sea in an unfit condition, the blame for the disaster that occurs should be placed on the proper shoulders.

Statistics prepared by this Board from Government returns of wrecks show that during 18 years subsequent to 1896, with a total tonnage of 42,029,262 tons entering the port of St. John, the casualty average was only 0.033 of 1%. This statement was made up from Cape Sable. The figures are very low, indeed, and should go far to establish the almost absolute safety of the Bay of Fundy from a navigator's standpoint.

If it were necessary, it would be quite easy to establish, by comparison, that not only were wrecks fewer in the Bay of Fundy than in many other largely-frequented waters, but that the loss of life was very much less. Not for a great many years has there been any serious loss of life in Bay of Fundy waters.

### New Steamships for C.P.R. Atlantic Service.

The two vessels which are under construction in Great Britain for the C.P.R.'s Atlantic service, and which it was announced were to be named Melita and Medora, have been named Melita and Minnedosa. They will be of the one cabin type, with accommodation for 500 cabin passengers and 1,500 third class passengers. The public rooms, consisting of large lounge, smoking

room, dining room, gymnasium, etc., will be elaborately decorated, and the dining room will have accommodation for 300. The third class dining room will have capacity for 550. In the cabin accommodation, there will be about 50 two berth rooms.

The propelling machinery will consist of combination turbine and reciprocating engines driving three screws. Each of the vessels will be equipped with Babcock and Wilcox patent davits, which will enable the lifeboats to be launched from either side of the vessel, even should there be a considerable list. The vessels will be built with the cruiser stern, giving greater stability and seaworthiness, while every device for the safety of passengers will be provided, including double bottom to the hulls, wireless telegraphy and submarine signalling apparatus. The dimensions are: length overall, 520 ft.; beam, 67 ft.; depth to bridge, 46 ft.

### The Future of the St. Lawrence Canal Route.

At the recent annual meeting of the Canadian Society of Civil Engineers, the retiring President, M. J. Butler, C.M.G., in speaking of the transportation problem, said:—"We have as a nation undertaken the task of forcing our outlets against the line of least resistance. The Atlantic seaboard is the outlet for the products of the prairies situated some 1,500 miles inland. Our efforts in building railways with easy curves and grades, the enlargement of our canal system and the improvement of rivers, and particularly of the St. Lawrence route, have but the one object of putting a few more cents a bushel into the pockets of the farmers. The enlargement of the Welland Canal will allow the larger type of vessel of 300,000 bush. capacity to pass down Lake Ontario and the St. Lawrence River to within 120 miles of Montreal. Storage elevators will be erected at or near Prescott, and 1,000 ton barges will be towed through the present canal system to Montreal. Ultimately, the larger lake vessel will come through to Montreal, as it is quite practicable and within the resources of the country to convert the St. Lawrence River into slack water navigation by the building of eight dams with duplicate locks, and, as an incident, develop the greatest water power in the world, aggregating over 4,000,000 h.p., eliminate the ice jams, and make practicable the navigation of the river in winter by the aid of powerful icebreakers.

It is a duty which our Government may well undertake at the earliest possible moment, to secure a hydrographic and topographic survey of the St. Lawrence, so that accurate estimates of cost may be made and proper regulations may be drawn up, so to regulate proposed power developments owned by private corporations that each may be brought into a component part of the completed whole."

### Great Lakes Protective Association.

This Association, at its annual meeting in Detroit, Mich., recently, decided not to increase its share of insurance risk upon vessels owned by members of the association, unless future developments in the European war made such action necessary. The association furnishes 25% of this insurance. Foreign companies are prominently represented among the underwriters, who insure the association's vessels for the other 75%. Marine men argued before the convention that the percentage of loss has been so small the association should increase its share of the risk to 50%. The majority of the members voted, however, to make no change at present unless conditions abroad make it advisable to reduce the amount of insurance given to foreign underwriters. The advisory committee was authorized to watch developments in Europe and to call a meeting of the association if it should be thought advisable, to change the insurance system.

As proof that the association has been successful in lowering insurance charges J. S. Ashley, chairman of the committee, presented figures showing the actual cost each year from 1905 to 1914 for full hull insurance on the steamship L. C. Hanna, the period covering five years preceding and five years subsequent to the beginning of the association. This vessel came out in 1905. Her gross registered tonnage is 6,356. She has been insured for her full hull insurance value ever since. Following is the actual cost to her owners each year, including commissions paid to brokers from 1905 to 1914 inclusive:

Cost.	Cost.
1905.....\$10,702	1910.....\$17,916
1906.....11,686	1911.....16,820
1907.....11,642	1912.....16,307
1908.....16,200	1913.....14,742
1909.....16,200	1914.....11,477

There was a steady increase in cost from 1905 up to and including 1910, the year following the formation of the association, and that this increased cost in 1910 was approximately \$7,000 more than it was in 1905 or 68%. There has been a steady decrease since 1910 and the 1914 cost was very nearly down to the cost of 1905. The figures of 1913 include an extra assessment of \$1,642 made by the association and which was necessary on account of the terrible disaster of Nov. 9 in that year. No credit has been taken in any of these years for profits which have been made on the percentage insured by the association. Had this profit been deducted from 1914 the cost for that year would show at approximately \$9,977.

Nineteen fourteen was a lean year for Great Lakes vessel owners, due to reduction in the ore movement, which showed a decrease of 34% from 1913, according to the report of W. Livingstone, President of the Lake Carriers' Association. Fifty-four sailors lost their lives in shipwrecks, which was "a rather high average," in the words of the President. Twenty-five vessels were lost during the season.

The New York State Barge Canal will, it is announced, be in operation for 78 miles west of the Hudson River during the coming summer, and the entire canal from the Hudson River to Lake Ontario will be ready for operation during the summer of 1916.

### Russian Government Purchases Reid Newfoundland Co's s.s. Lintrose.

It is announced from St. John's, Nfld., that the Russian Admiralty has purchased the Reid Newfoundland Co's s.s. Lintrose, for icebreaking service in the neighborhood of Archangel. It is stated that negotiations were commenced some time ago, but were suspended owing to the Dominion Government's offer of the icebreaking s.s. Earl Grey which was purchased and sent to Russia, but was not successful in keeping the harbor open. The negotiations for the Lintrose were then resumed and the vessel was taken from the Port aux Basques North Sydney route for inspection and test at St. John's before a representative of the Russian Embassy at Washington, D.C., and a shipbuilding expert from the U. S., and the purchase was completed.

She was built at Newcastle upon Tyne, Eng., in 1913, and was specially designed for operation in heavy ice. Her dimensions are, length 255 ft., beam 37 ft. She is equipped with single screw triple expansion engines, supplied with steam by four large boilers under forced draught, and is capable of running at 15½ knots an hour. Excellent passenger accommodation is pro-

The Steamship Lintrose.

vided for 30 first class and 150 second class passengers, with electric lighting and all up to date equipment.

Toronto Harbor.—Work on the improvement will go on this year without interruption, \$1,000,000 being provided. The Secretary, A. Lewis, made the following statement, recently: "When the war began we interviewed the Government and were assured that the money to carry on the work would be forthcoming this year. A million was voted last year, of which \$200,000 was left over as a balance, and is included in the million just put into the estimates. The contracts will be proceeded with. We have 5,700 ft. of the western seawall cribbed, and this will be capped with cement and the cribwork extended by 5,000 ft. in front of Parkdale, 65 ft. of substructure in the channel for the industrial district was placed last year and will be capped this year. The former wall will cost \$80 a lineal foot, the eastern wall \$120."

War Insurance.—An Ottawa report states that the Department of Marine is considering a scheme of war insurance, to be worked by the Government, or under Government guarantees. It is also stated that steps will be taken to secure the release of some of the vessels held as prizes, for operation on the Canadian route, in order to relieve the shipping situation caused by the deficiency of tonnage due to the Admiralty requirements.

### The Grounding of the s.s. Assiniboia.

The enquiry into the cause of the grounding of the C.P.R. s.s. Assiniboia on Bad Neighbor Shoal, Cove Island, Georgian Bay, on July 2, 1914, was held at Toronto, Feb. 18, before Capt. L. A. Demers, Dominion Wreck Commissioner, with Capts. J. D. Foote and H. W. LaRush, as nautical assessors. The judgment was as follows:—

After carefully reviewing the evidence adduced, we have come to the conclusion that the master of the Assiniboia adopted every method to navigate his vessel carefully, but owing to the current which he was not aware existed at the time, as they are irregular, it is evident that his vessel drifted from the course he thought he was making. Whilst we maintain that the fog horn is a secondary aid to navigation, and the sounds cannot be absolutely relied upon, owing to air currents and prevailing winds deflecting the sounds and giving a navigator possibly a wrong impression of his position, it behoves masters of ships to adopt the greatest measures of precaution. In this instance these measures were adopted and had the fog horn been sounded it is possible the mishap would not have happened, and we cannot but exonerate the

master from all blame with regard to the grounding of his vessel. The court has much pleasure in making the statement that it is the first time it has had the opportunity of examining a log, so carefully and neatly kept, without erasures or marginal notes.

With regard to the lighthouse keeper we cannot but state that he has performed his duties in a very perfunctory manner. He has absolutely disregarded the regulations which have been submitted to him with respect to keeping 20 lbs. pressure on the reserve tank in order to be able, in as short a time as possible, to operate the fog horn, which is absolutely necessary, as fogs come down very suddenly in that district. Also the fact of placing in charge a boy of 16 years, apparently intelligent, but not realizing the importance of the work he had to perform, is a very grave danger to the safety of shipping at that place, and does not meet with the requirements of rule 4, which says that at least one competent, able bodied man must be in charge at all times. On the whole we cannot express any other opinion than that there has been negligence, not only on this occasion, but on others which have been proved by witnesses.

The Canadian Society of Civil Engineers' Victoria Branch opened its new quarters in the Belmont House, Victoria, B. C., Feb. 5, with a reception and entertainment.

### Atlantic and Pacific Ocean Marine.

The C. P. R. s. s. Metagama is scheduled to sail from Liverpool, Eng., on her maiden trip, Mar. 26.

It is reported from Vancouver, B.C., that the service which was started recently by Russian steamships between Vancouver and Vladivostock, may have to be suspended, owing to lack of vessels, many of which are being used in Government service.

The case of the C.P.R. against the owners of the s.s. Storstad, for \$3,000,000 damages sustained through the sinking of the s.s. Empress of Ireland by the Storstad, commenced in the Admiralty Division of the Exchequer Court at Montreal, Feb. 15.

Panama Canal tolls in December aggregated \$411,896, the highest monthly record since the opening of the canal. The cargo tonnage was 446,415 tons, not including two lumber cargoes containing 5,232 m. ft. Ninety nine vessels passed through the canal during the month.

The United States Government has thanked the Dominion Government for the assistance rendered by the s.s. Lady Laurier in saving the s.s. Camino, which broke down while en route from San Francisco to Rotterdam with supplies for the Belgians, and which was towed into Halifax at the end of January.

The Allan Line s. s. Mongolian arrived at St. John's, Nfld., Feb. 8, from Philadelphia, en route for Scotland, with a large hole in her bow, caused by striking a rock outside the harbor. A portion of the cargo had to be discharged before repairs could be undertaken.

Canada Steamship Lines is reported to be making arrangements, in conjunction with Furness Withy & Co., for placing such of its vessels as are suitable for ocean service, in the ocean grain carrying business on the re-opening of navigation. It is reported that the company has about 10 vessels which can take part in such service.

The steamship companies have completed arrangements with the Russian Government whereby they may book Russian and Finnish emigrants at Helsingfors or Hango, such passengers undertaking to find their way to these ports. Such passages are confined to women, children and noncombatant males, and all must have passports.

The Allan Line s.s. Corsican, resumed her mail service between England and Canada at the end of January, after having been in the Admiralty service since the commencement of the war. The company's s.s. Pretorian, which was being used on the Liverpool route, has been returned to the Glasgow route.

The Usher Steamship Co.'s s.s. Usher has been sold to A. Richter and Co., Newcastle, Eng., for about £28,000. She was built at Glasgow, Scotland, in 1901, and is 3,594 tons gross, 2,350 tons register, with a deadweight capacity of 6,200 tons. The Usher Steamship Co. is owned by Hugh Cann and Sons, Ltd., Yarmouth, N. S.

The Allan line s.s. Numidian is reported to have been sold to British owners for £13,000. She was built at Glasgow, Scotland, in 1891, with steel hull, and equipped with triple expansion engines with cylinders 30, 50 and 80 x 60 ins., 582 n.h.p. Her dimensions are, length 400 ft., breadth 45.2 ft., depth 30.6 ft.; tonnage, 4,836 gross, 3,107 register.

The British s.s. Chalister, what is stated to be the first of five vessels to be engaged in a round the world service by way of the Panama Canal, arrived at Victoria, Feb. 11. This vessel on this voyage originally sailed from New York some time ago with cargo for Oriental ports, and instead of returning to New York by the Suez Canal route, was

ordered to proceed from China to British Columbia for coal, and then via the Panama Canal for New York.

The contract for the repair of the s.s. Camino, which was under charter to U. S. interests for carrying food supplies to Belgians, and which was badly damaged during rough weather recently, has been awarded in Halifax, N.S. Among other repairs is a new rudder, which is being supplied by the Nova Scotia Steel and Coal Co., New Glasgow.

The Norwegian s. s. Imataca, was reported at Halifax, N. S., Feb. 8, by wireless, to have been abandoned in mid ocean, the crew having been rescued by the s. s. Elzorore, which stated that the Imataca was in a sinking condition and a menace to navigation. She was bound from Scotland to Baltimore in ballast. She was built at Middlesbrough, Eng., in 1909, and was owned in Bergen, Norway.

The Canadian Trading Co., Ltd., has been organized and has announced the chartering of the British schooners Albert Meyer and Coquitlam City, the former for March loading in British Columbia for New Zealand ports, with Australian ports optional, and the latter for April loading. W. R. Dockrill, Vancouver, B.C., is President, and C. M. Pettibone, Seattle, Wash., is Vice President. The President sailed, recently, for Vladivostock, Russia, to investigate trade possibilities with Siberia and Manchuria.

Montreal officials of the White Star-Dominion Line are reported to have received information from England, that the name of the s.s. Zeeland has been changed to Northland, the change being necessary as the booking by this vessel for Canadian territory has been affected on account of the decided anti-German sentiment and the construing of the name as German. The item in a Montreal paper continues that the Northland and Vaderland are now carrying two classes of passengers, etc. If the name of the first vessel, which was not German, was changed, what about the name of the second one, which is distinctly German?

The alterations necessary to convert the former C.P.R. s.s. Empress of India into the hospital ship Loyalty, were completed recently at Bombay, and the whole was inspected by the Governor of Bombay before sailing from that port. The changes were carried out under the supervision of offices of the Indian Medical Service. Altogether there are about 500 beds available on the vessel, and there is a completely equipped operating room. The vessel, which, while she was acting as an auxiliary cruiser, was painted a dull grey, has been repainted white, with black strips on the water and deck lines, with the red cross amidships. She was purchased and equipped by the Maharajah Scindia of Gwalior.

### Maritime Provinces and Newfoundland.

The Dominion Government s.s. Tyrian is being repaired at Halifax, N.S. The amount of the contract is \$9,841.

The Reid Newfoundland Co.'s s. s. Bruce was seriously damaged by ice early in February at Port aux Basques, Nfld. The cost of repairs is estimated at \$20,000.

The Cabot Steam Whaling Co.'s whaling steamship Cabot, was offered for sale by tender, by the liquidator of the company at St. John's, Nfld., Feb. 20.

The British s. s. Kendal Castle arrived at Louisburg, N. S., Feb. 6, under charter to the Dominion Iron and Steel Co. She will load a general steel cargo for British ports.

Owing to damage by storm to the east breakwater pier and lighthouse at St. Martins, N.B., the exhibition of the fixed red light has been discontinued until

further notice. The lighthouse will shortly be moved 100 ft. farther in on the breakwater.

The Lehigh Valley Coal Co. is reported to have acquired, through local interests, the shipyards, docks and mill, formerly belonging to the Hildyard estate, along the harbor front at St. John, N.B., at a cost of \$150,000.

The Red Cross Line s.s. Morwenna, when leaving Halifax, N.S., for St. John's, Nfld., Jan. 31, collided with the ferry steamboat Chebucto, and sustained considerable damage to her bow, all above the water line.

The Nova Scotia Admiralty Court on Feb. 16, awarded \$3,250 as salvage to the owners of the s.s. Skogland, for towing the s.s. Desola into North Sydney about a month ago. Of the amount awarded, \$2,500 goes to the owners and the balance is divided between the officers and crew.

The Newfoundland Government has announced that Norwegian vessels now at Sydney, N.S., will be permitted to engage in the seal fishery this season, but they must comply with the law requiring all sealing vessels to carry wireless telegraph installations.

A press report from Vancouver states that the C.P.R. s.s. St. George, which has been operated in the company's Bay of Fundy service for some time, is to be transferred to the Pacific coast, on account of the two new Princesses, which were to have been on the coast service for the C.P.R. this spring, having been requisitioned by the Admiralty. The report states that the St. George, prior to her purchase by the C.P.R., was operating in the Channel service between Dover and Calais. This is incorrect, as the C.P.R. purchased her from the Great Western Ry., by which she was operated between Rosslare, on the southwest coast of Ireland, and Fishguard in South Wales, for which service she was built. Enquiry at Montreal elicits the information that the report is incorrect.

The s.s. Rose Castle, which is being built specially for the coal trade between Sydney, N.S., and Montreal, was launched at Sunderland, Eng., during January. She is built on the Isherwood system with single deck, and two bridges. Water ballast is provided for throughout the double bottom, in the fore and aft peaks and in wing tanks. There are 10 large hatches, 34 ft. wide with hinged steel covers. Two derricks are fitted to each hatch, and derricks are fitted to both masts for lifting and lowering hatch covers and handling heavy weights. There are 12 steam winches, steam and hand windlass, steam steering gear with rudder brake worked by telemotor from the wheel house and flying bridge and also from the top of the steering gear house. There are steam ash hoist and ash chute, and the vessel will be equipped throughout with electric light. The propelling machinery consists of triple expansion engines with cylinders 28½, 47 and 79 x 54 ins., supplied with steam by three multitubular boilers at 180 lbs., fitted with forced draught. It is expected that she will load a full cargo of coal in six hours and discharge by grabs in about the same time. Her dimensions are, length 470 ft., breadth 58 ft., depth moulded 33 ft. 9 ins., with a deadweight capacity of over 11,000 tons on a 25 ft. draught.

### Province of Quebec Marine.

The Dominion Government s. s. Montcalm sailed for Anticosti Island, Feb. 22, on the winter mail service. The ice in the neighborhood was reported to be very heavy.

The Montreal Harbor Commissioners are reported to have acquired the southwestern portion of lot 28, Hochelaga ward, containing 18,390 sq. ft., bound on the north by Notre Dame St. East, for \$58,871.25.

The Department of Marine announces that on the opening of navigation, the Prince Shoal lightship no. 7, will be moored in a new position about a third of a mile northward of its old position, in the alignment of Pointe Noire range lights, 4.42 miles from Pointe Noire front range light, off the mouth of the Saguenay River in the St. Lawrence.

A London, Eng., cable dispatch states that judgment for £466, balance of contract price due for transporting an icebreaker from Smith's Dock on the River Tees to Quebec, has been given to Rea and Co. at Liverpool. The icebreaker was built for the Quebec Harbor Commissioners at a cost of £18,500, and Rea and Co. were given a subcontract to deliver it. The vessel was transported on the understanding that they would receive certain money retained by the Commissioners, but the latter refused to pay a total of £2,000 on account of claims for damages through delay. It was held that plaintiffs had been prevented from securing money on account of defendants' acts.

### Ontario and the Great Lakes.

The steam tug Harrison, owned by John Harrison and Sons Co., Owen Sound, is being equipped with wireless telegraph by the Marconi Wireless Telegraph Co. of Canada.

The Goodrich Transit Co., Chicago, Ill., which operated the s.s. Arizona to Georgian Bay ports, last season, has announced that it has been found necessary to discontinue the service for the forthcoming season on account of the loss of one of its vessels.

The Cleveland and Buffalo Transit Co. announces that the same service will be operated during the coming season, as was run last year, between Cleveland, Ohio, and Port Stanley, Ont., the s.s. State of Ohio making the trip three times a week.

The Port Huron and Sarnia Ferry Co., it is reported, has been ordered to report and clear its vessels at Sarnia, each trip between Sarnia and Port Huron, on account of their now being operated as freight and passenger steamboats and not ferries.

It was announced at a meeting of the London, Ont., Board of Trade, recently, by Sir Adam Beck, that the Great Lakes Transportation Co., of which James Playfair is President, is planning the construction of a grain elevator at Port Stanley, to cost about \$700,000.

The Great Lakes Protective Association is taking steps to obtain a uniform rate for insuring vessels belonging to members of the association. The fact that all vessels in the association work under the same conditions will be brought to the attention of the underwriters.

J. Frater Taylor, President, Algoma Steel Corporation, in addressing the Sault Ste. Marie Board of Trade, Feb. 17, stated that he could see no reason why there should not be access for lake vessels to the ocean, by way of St. Lawrence, providing for ocean going steamships passing right up to Sault Ste. Marie.

It was announced at Detroit, Mich., recently, by C. F. Marvin, Chief of the U.S. Weather Bureau, that a naval wireless telegraph station will be built on Lake Michigan, near Chicago, during the year, to be used in dispatching storm warnings and general weather information to vessels on the Great Lakes.

Press reports state that about \$2,100,000 will be spent on harbor improvement works at Toronto during the current year. A considerable amount of work was done last year, and this will be continued. Some of this work is being carried out under the

Toronto Harbor Commissioners, and other portions by the Dominion Public Works Department.

The United States s.s. Tampa, which was sunk on the Canadian side of the St. Clair River, about 22 miles south of Sarnia, in 1911, was sold by auction at Sarnia, Feb. 2, for \$300. She was built at West Bay City, Mich., in 1890, and rebuilt in 1899. She is equipped with triple expansion engines, with cylinders 20, 32 and 54 x 42 ins., 1,000 i.h.p. at 76 r.p.m., supplied with steam by two Scotch boilers, 12 ft. long by 11 ft. diam. at 150 lbs.; tonnage, 1,972 gross, 1,632 register.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tide water for January, as follows: Superior, 601.81; Michigan and Huron, 579.44; Erie, 571.09; Ontario, 244.70. Compared with the average January levels for the past ten years, Superior was 0.22 ft. below; Michigan and Huron, 0.63 ft. below; Erie, 0.72 ft. below, and Ontario, 0.97 ft. below. It was anticipated that during February, Superior would drop 0.2 ft., Michigan and Huron would remain stationary, Erie would drop 0.1 ft., and Ontario rise 0.1 ft.

In a recent case against the Northern Navigation Co., for damages for the failure of the company to rescue a seaman who fell overboard through his own negligence whilst skylarking, it has been held that there is no legal obligation on a vessel owner under such conditions, on the ground that the voluntary action of the seaman in placing himself in a position of danger from which there was no escape except through the owner's intervention, could not create an obligation to stop the vessel or adopt other means to save him, and that no term was expressed or implied in the contract of hiring, that the owner should protect him from the consequences of his own negligence.

Under a deed of assignment for the benefit of the creditors of the Temiskaming Navigation Co., tenders are being received by Jas. Hardy, Toronto, for the purchase of the steamboats Meteor, Temiscamingue and Jubilee, the hull of the launch Kiask, 5 scows, and wharf properties on Lake Temiskaming, all the property of the Temiskaming Navigation Co., and the steamboat Silverland, the property of the Haileybury Navigation Co. The chief details of the steamboats are as follows: Meteor, built at Opemican, Que., in 1897; length, 130.5 ft.; breadth, 27 ft.; depth, 7.4 ft.; tonnage, 299 gross, 204 register; engines, 165 n.h.p. driving a screw. Temiscamingue, built at Temiskaming, Que., in 1898; length, 133 ft.; breadth, 22.5 ft.; depth, 6.5 ft.; tonnage 295 gross, 213 register; engines 21 n.h.p. driving a screw. Jubilee, built at Kingston, Ont., in 1897; length, 84.2 ft.; breadth, 15.4 ft.; depth, 5 ft.; tonnage, 177 gross, 78 register; engine 10 n.h.p. driving a screw. Silverland, built at Haileybury, Ont., in 1909, length, 85.4 ft.; breadth 17 ft.; depth, 6.7 ft.; tonnage, 92 gross, 53 register; engine, 13 n.h.p. driving a screw.

### Manitoba, Saskatchewan and Alberta.

The Canadian Hydrographic Survey has prepared charts of the Hudson Bay and Strait, and of the approaches to the Nelson River in Hudson Bay, copies of which may be had from the Department of Naval Service.

A site has been purchased for the construction of a dock at Winnipeg, and negotiations are in progress for another. It is expected that work on one of them, at least, will be proceeded with during this year. The Dominion Government appro-

priated \$200,000 last year for harbor work at Winnipeg and St. Boniface.

The shipping of goods to the Arctic circle has undergone many changes since the Hudson's Bay Co. commenced with dog teams and flat bottomed boats. Recent shipments from Edmonton, Alta., go by Edmonton, Dunvegan and British Columbia Ry. to McLennan, thence by the Canada Central Ry. to within 20 miles of the Peace River Crossing, to which latter point they are taken by teams, and loaded on a steamboat for shipment to the Chutes, and transhipped to another vessel which will take them to northern points along the Slave and Mackenzie Rivers.

### British Columbia and Pacific Coast.

The Imperial Oil Co. has placed a contract locally for the construction of a creosoted pile wharf at Prince Rupert, between the dry dock wharf and Cameron Bay. It is stated that work will be commenced almost immediately.

The Achates Tow Boat Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$30,000 capital and office at Vancouver, to build, own and operate steam and other vessels and to carry on a general tow boat business.

The Dominion Government fisheries cruiser Galiano, which stranded near Esquimalt recently, while assisting a Norwegian barque, which was in danger, is undergoing repairs at Esquimalt. A new stern post is to be fitted, and about 13 plates and a number of frames are being straightened.

Dominion Government and Vancouver civic officials visited the alterations being carried out at Brockton Point recently, in connection with the new lighthouse there, and G. Robertson, Marine Agent, Vancouver, expressed satisfaction as to the progress of the work.

The Border Line Transportation Co.'s s.s. Despatch, which was formerly operated between Vancouver and Seattle, has been equipped with passenger accommodation, and has been placed on the run to south east Alaskan ports, in conjunction with the steamships Alki and Northland.

It is reported that the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, which has been idle since the commencement of the war, will be overhauled at Esquimalt, and replaced in service to Prince Rupert and Granby Bay, about April 1, when the s.s. Prince George will be withdrawn for overhauling, after which the usual Monday and Thursday sailings will be resumed.

The floating dry dock, which the contractors, Grant, Smith and McDonnell, are using in connection with their work in Victoria harbor, collapsed and sank there, during the construction of the cribs, for which the dock was used, at the end of January. The two cribs which were in the dock were ready for transfer, and were a part of 54 similar ones. Angus McDonnell is reported to have stated that the loss would not be so great as was at first anticipated, and it is possible that a marine way will be built at Esquimalt to handle the construction of the cribs.

**Lake Freight Rates.**—A bill, introduced in the House of Commons by J. E. Armstrong, M.P. for East Lambton, Ont., providing for the placing of freight rates on steamships on inland waters, under the jurisdiction of the Board of Railway Commissioners, was read a second time, Feb. 18. Considerable opposition to the proposal has developed. A similar bill, introduced last year, was withdrawn.

## The Vancouver Dry Dock Project.

Canadian Railway and Marine World published in its issues of Aug., Sept., Oct. and Dec., 1914, some information about the Dominion Shipbuilding, Engineering & Drydock Co.'s project at Vancouver. We are officially advised that it is proposed to build a drydock 1,000 ft. long by 100 ft. wide, but that in order to obtain a subsidy from the Dominion Government, if it is necessary to increase the dimensions to 1,150 x 110 ft., this will probably be done, although it is felt that for a number of years the 1,000 x 100 ft. size would be sufficient for the needs of the port.

We are also advised that the company expects to have in operation by the end of this year, the 6 buildings and the 2 marine ways, one of 1,000 tons and the other of 4,000 tons capacity, together with the full equipment necessary in each case. After 1916 it is hoped to complete the second unit, consisting of a fresh water canal and ship-building plant, while July 1, 1917, should see the completion of the drydock, which will be the final construction.

### Control of Steamship Freight Rates.—

In the discussion of the estimates in the House of Commons, Feb. 16, the Minister of Trade and Commerce stated in reference to an item of \$6,000 for the control of ocean rates that all contracts for steamship services give him the right to control rates, and that he intended to secure an expert to deal with the matter.

**Canada Steamship Lines, Ltd.**—The annual meeting fixed to be held in Montreal, Feb. 25, was adjourned to Mar. 25, as the date fixed by the bylaws did not allow sufficient time to get in all the returns and for the audit. The shareholders will be asked to approve an amendment to the bylaws changing the time of the annual meeting from February to March in each year.

**The Ontario Workmen's Compensation Board** has, on account of the difficulties encountered in deciding the limits of applicability of the Workmen's Compensation Act to vessels, placed the navigation industry in schedule 2, that is under industries, the employers in which are individually liable to pay the compensation, and assessments paid in by vessel owners are being returned.

**Canadian Registry of Shipping.**—The Minister of Marine stated in the House of Commons, Feb. 10, that 22 vessels were withdrawn from the Canadian register, since July 1, 1914, with a gross tonnage of 28,791. Of these, three were transferred to Newfoundland, three to Barbadoes, one to France, 14 to the United States and one to Spain. During the same period, 194 vessels were added to the Canadian register, with a gross tonnage of 65,842, and of these, 127 were steamships and 67 sailing vessels.

**Shortages and Overages in Grain Cargoes.**—Deputations from the Winnipeg and Montreal Grain Exchanges waited on the Premier, and the Ministers of Trade and Commerce, Marine and Fisheries, Customs and Public Works at Ottawa, Feb. 6, to protest against the change in the bill of lading adopted at a conference of lake grain carriers and shippers at Detroit, Mich., Jan. 6, and which was published in Canadian Railway and Marine World for Feb., page 76, and also to ask that the approval of the form of bills of lading be placed under the Board of Railway Commissioner's jurisdiction. The grain exchange delegates were followed by F. King, Counsel, Dominion Marine Association and H. W. Richardson of Kingston, Ont., on behalf of the vessel owners, and on the conclusion of the speeches Sir Robert Borden announced that the matter would receive due consideration.

## Mainly About Marine People.

**R. T. Holcomb**, of Hall & Holcomb, Ltd., Ottawa, who has been seriously ill for several months, is somewhat improved in health.

**J. W. Norcross**, Managing Director, Canada Steamship Lines, Ltd., returned to Montreal in the middle of February, after spending some weeks in Bermuda.

**L. Revillon**, senior member of the firm of Revillon Bros., fur merchants, and who have branches in Canada and own some steamboats in Canadian waters, died in Paris, France, Feb. 1.

**John T. Mathews**, who has been appointed Dominion Government Steamboat Inspector at Edmonton, Alta., was presented with a signet ring by a number of his friends at West St. John, N.B., on leaving there to take up his new duties.

**R. H. Alexander**, Chairman of the Vancouver Pilotage Authority since May 26,

**S. L. Penhorwood**,  
Manager, New Ontario Dock Co., Ltd.

1883, died suddenly at Seattle, Wash., Jan. 29. He was born at Edinburgh, Scotland, Mar. 26, 1844, was educated in Toronto, and went to British Columbia in 1862.

**Alexander Elder**, founder of the Elder Dempster lines, died at Southport, Eng., Jan. 25. He retired from active participation in the affairs of the company some years ago. He was a director of the Pacific Steam Navigation Co., and Chairman of the Steamship Owners' Association. He founded a chair of naval architecture in the Liverpool University, and held the Royal Society's medal for life saving.

**S. L. Penhorwood**, Manager, New Ontario Dock, Sault Ste. Marie, Ont., who has resigned and been succeeded by F. Gilchrist, formerly of Port Colborne, Ont., as mentioned in our last issue, was in charge of the property from its organization in 1901 until Jan. 15, 1915. He was born at Swansea, South Wales, Jan. 6, 1873, and has lived in Sault Ste. Marie for 30 years. He is harbor master of the port and is interested in several businesses there. A year ago he was given command of the 51st Sault

Ste. Marie Rifles, with the rank of Lieutenant Colonel. The first and second over-seas contingents were each furnished the desired quota of 125 officers and men, and he has been selected to organize the Northern Battalion from Algoma, Nipissing and Timiskaming.

**The Farrar Transportation Co., Ltd.**, held its annual meeting in Toronto, Jan. 26. We are officially advised that after taking care of the fleet's bonded indebtedness, which amounted to approximately 7% on the capital stock, a dividend of 3% was paid to the shareholders. The directors were re-elected as follows: T. I. Thomson, Owen Sound, Ont., President; E. R. Wayland, Fort William, Ont., Vice President; G. E. Fair, Toronto, Secretary-Treasurer and Manager; D. D. Lewis, Lorain, Ohio; W. E. Allen, Toronto; G. P. Pearsall, Collingwood, Ont.; C. I. deSola, Montreal; J. Shultis, Port Colborne, Ont.; M. Snetsinger, Thornbury, Ont.; E. Stubbs, Sault Ste. Marie, Ont.

**Summer Deckload Rules.**—The Dominion Marine Department, acting in line with the British Board of Trade, is relaxing the summer deckload rules for oceangoing ships. The summer deckload has not been permitted in ports in the British Isles until April 16, but will now be allowed on vessels arriving after Mar. 30. Vessels will accordingly be allowed to leave Canadian ports for the United Kingdom with summer deckloads after March 1 in the case of sailing vessels and Mar. 12 in the case of steamers. The Dominion Government, however, takes no responsibility in the case of a Canadian ship arriving in the United Kingdom before the open season.

**Georgian Bay Canal Project.**—An Ottawa press dispatch states that it is likely that the Montreal, Georgian Bay and Ottawa Canal Co. will relinquish its charter to build a canal connecting the Georgian Bay with the St. Lawrence, and will hand over to the Government the property it holds, and the results of the work done. The company was incorporated in 1894, and considerable time and money has been spent in endeavoring to get the Dominion Government to undertake the work and award the contract to the company, or to guarantee the company's bonds to enable the work to be carried through. The project has been thoroughly discussed from many standpoints, and has aroused considerable controversy, its construction being thoroughly advocated by some and as thoroughly condemned by others. An application is before the Dominion Parliament for an extension of the time within which the company may commence the authorized works.

**Suggested Blockade Running for U.S. Vessels.**—A New York shipping paper states that there appears to be some ground for the opinion expressed by shipping veterans that merchants of today do not seem to possess the same confidence in sailorly qualities that their forbears turned to such good account in running the blockade during the civil war, and continues that it is surprising that so far no serious attempt has been made to run the blockade of the German ports and elude the British warships patrolling the English Channel and the northern passage. No one questions the morality of running the blockade by neutral countries, as it is considered legitimate game for those who care to undertake it, but it should be remembered that until the present war some respect has been paid to international rules governing warfare. Running a blockade with explosive mines spread broadcast over the waters calls for a degree of foolhardiness quite outside the range of sailorly qualities.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Ohio Brass Co., Mansfield, Ohio, has issued a card folder describing and illustrating its trolley retrievers and trolley catches.

Algoma Steel Corporation.—J. Frater Taylor, President, is reported to have stated at the Sault Ste. Marie Board of Trade recently that by May its mills will probably be making rails for South Africa.

The Brown Hoisting Machinery Co., Cleveland, Ohio, announces with deep sorrow and a keen sense of loss, the death of Miss Isabel Love Wightman, who for 17 years served the company with signal ability and devotion.

Martin-Senour Co., Ltd., paint and varnish manufacturers, Montreal, have issued a complete catalogue and color chart of marine and submarine paints and varnishes for steamship and drydock owners and the marine trade in general. Copies will be sent on application.

Canadian Locomotive Co.—Aemilius Jarvis, of Toronto, President, and A. W. Wheatley, of Kingston, Ont., Vice President, were reported to have arrived in Russia early in February to negotiate with the Government for orders for locomotives, shrapnel shells, etc.

The Bird-Archer Co.—Lyndon F. Wilson, Vice President of the Railway List Co., has resigned to become Vice President of the Bird-Archer Co., of New York, manufacturers of boiler compounds, and will take up his new duties on April 1, after which he will be located at the Chicago office.

Martin-Senour Co., Ltd., paint and varnish manufacturers, Montreal, have secured the Canadian manufacturing rights of Bredell's ship bottom compositions and copper paints. It is stated that the greater portion of ship bottom compositions used in Canada heretofore have been of German origin.

Canadian Locomotive Co.—C. Goldmark, who has been with the company for some years as Superintending Engineer, has removed to New York. On the eve of leaving he was entertained at dinner and presented with a loving cup made of pine and mounted on a 10 in. base and coated with aluminum. It was turned out in the company's pattern shop.

The Herbert Morris Crane & Hoist Co., Ltd., Toronto, makers of lifting and shifting machinery, have appointed W. G. McIntosh as Sales Engineer for Toronto. He graduated from the Toronto University's Faculty of Applied Science in 1909, obtaining an honor degree in mechanical engineering, and has since had a varied experience of shop work, drawing office and field erection with Otis-Fensom Elevator

Co., Toronto Power Co., Canada Foundry Co. and Dominion Bridge Co.

John S. Metcalf Co., Chicago and Montreal.—R. P. Durham, Vice President, who has had his headquarters in London, Eng., for the past year, has been spending a holiday in the United States and also a short time in Montreal. His company is designing two elevators for Arthur Guinness, Son & Co., the Dublin brewers, for their plant at Manchester, Eng., one for barley with 835,000 bush. capacity, and one for malt with 600,000 bush. capacity. The cost is estimated at about \$600,000. The Manchester Ship Canal Co.'s elevator no. 2, for which the Metcalf Co. acted as designers and engineers, is about completed. This is also of concrete, with 1,500,000 bush. capacity, costing about \$900,000.

H. Boker & Co., Inc.—The firm of Herman Boker & Co. is now being conducted under the firm name of H. Boker & Co., Inc. It is handling the same line of goods as heretofore, consisting of Novo Superior and other steels, as well as all other lines manufactured by Sir Joseph Jonas, Colver & Co., Ltd., Sheffield, Eng. The small tools used are made in Canada or England. The new company is capitalized at \$500,000, Karl Boker of New York being President and Sir Joseph Jonas of Sheffield, Vice President. F. E. Rejall continues as Canadian Manager at 332 St. James St., Montreal. H. Boker & Co. advise us that neither the old nor new firm is German, and that there neither was nor is any German capital invested, nor any Germans connected with the company.

NOTICE is hereby given that the Annual Meeting of the Shareholders of the Victoria Rolling Stock and Realty Company of Ontario, Limited, will be held at the offices of Messrs. Osler and Hammond, 21 Jordan Street, Toronto, on Wednesday, March 3, 1915, at twelve o'clock noon, for the reception of the Annual Report and election of Directors for the ensuing year.

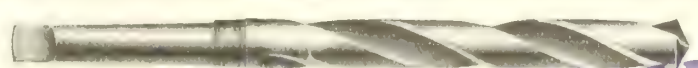

By order,  
 G. T. CHISHOLM,  
 Secretary.

Toronto, February 12, 1915.

MARINE SUPERINTENDENT of wide experience and with college training, familiar with design and upkeep of hulls, engines and boilers, first-class certificate, desires position. Box 117, Canadian Railway and Marine World.

### WANTED:

For use on Lake Ontario, two boats, capacity 600 to 1000 tons, for carrying stone. Boats with modelled bow desired. Give present location, age, full description, and price delivered at Toronto. Canadian Stewart Co., Ltd., 30 Church St., New York City.

**MORROW**  
Twist Drills

Your aim is economy in shop practice, with accuracy of results, there is no best tool obtainable, it is none too good. It will pay you to buy Morrow's.

**John Morrow-Screw & Nut Co., Limited,** - **Ingersoll, Ontario**

"MORROW DRILLS ARE GOOD DRILLS"

# Ottawa Traction Company, Limited

## First Annual Report for Year Ending December 31, 1914.

Your directors have pleasure in submitting their first annual report for the year ending 31st December, 1914, including the operations of The Ottawa Electric Railway Company.

Gross earnings of The Ottawa Electric Railway Company	\$1,096,459.22
Operating expenses and maintenance	665,226.81
Net earnings	431,232.41
Net earnings 1913	412,160.09

Increase 1914 \$19,072.32

The net earnings were disposed of as follows:

Four quarterly dividends of 3% and a bonus of 3%	\$281,535.00
Interest on bonds and loans	39,109.18
Mileage payments	15,751.16
Taxes	16,722.36
Placed to the credit of contingent account to be applied to the reduction of track renewals, car equipment, and other accounts	55,000.00
Transferred to credit of profit and loss	23,114.71
	\$431,232.41

25,321,547 passengers were carried compared with 23,987,883 in 1913, an increase of 1,333,664.

The balance at credit of profit and loss account is now \$190,273.38 and of rest account \$200,000.00.

Notwithstanding the business stringency throughout the country for the first seven months of the year, which was added to by the breaking out of the war in August, every month showed an increase in the company's gross receipts.

Nine large double truck cars were added to the rolling stock during the year. The old steel bridge at New Edinburgh was replaced by a new one costing about \$15,000.00.

Next spring it is intended to renew the Bank Street tracks from Wellington Street to Gladstone Avenue, replacing the present light rails with heavy rails. This will complete the track renewals throughout the system, a work which has been going on for a number of years past.

Your directors look with confidence to the future, and expect that when the war is over and business returns to normal conditions there will be an increase in the company's traffic even greater than in the past.

All of which is respectfully submitted.

T. AHEARN,  
President.

Ottawa, 1st February, 1915.

### THE OTTAWA ELECTRIC RAILWAY COMPANY.

#### STATEMENT OF ASSETS AND LIABILITIES DECEMBER 31st, 1914.

Assets.	
Roadbed and equipment, water power property and plant, real estate and buildings	\$3,221,474.54

## The Great Spare Time University

This university does not reserve its advantages for the wealthy or well-to-do—its privileges are within the reach of all. It does not ask a man to give up his job and leave home—it comes to him wherever he may live.

This university has students among all classes of men in every civilized country on the globe. It can truly be called "The World's Greatest University"—it enrolls a hundred thousand students every year—more than all the technical schools combined.

Two hundred and seventy-two courses are taught by this university—thirty of them are designed especially for men employed on the railroads and in ocean and lake navigation.

More than two hundred of the railroads in America have made co-operative agreements with this institution for the training of their employees.

This great Spare-Time University is the International Correspondence Schools with headquarters in Scranton, Pennsylvania, and London, Eng.

Full particulars will gladly be furnished upon request—either about individual courses for ambitious men who want to qualify for promotion or about the co-operative agreements for railroad officials who want to increase the efficiency of their employees.

Use the attached coupon for convenience in inquiring.

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

Executive Offices:  
NOS. 346 and 348 BROADWAY,  
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices.

Correspondence Invited.

## Distinguished for Quality

Wherever centrifugal pumps are used "American" centrifugals are distinguished for their quality, reliability and superior efficiency. They are made in a large variety of styles to meet every possible pumping condition, instead of attempting to adapt locations to a single type of pump.

Catalogue 132 describes about 50 styles. Write for it.

## FOR CONCRETE ROAD PAVEMENT, WALKS, BUILDING FLOORS, ETC.

We are the originators of this wire reinforcement in flat sheets, and it is coming into universal use wherever introduced. We have supplied many carloads of it this past season.

The standard mesh for road pavement is 6 x 12 inches; for bridges and building floors, the standard is 3 x 6 inches. Also, other meshes as desired. All sheets 4 feet wide, and any length specified that can be loaded in cars.

*Samples will be sent upon request.*

We also supply Iron Fences, Fire Escapes, Office Wire Work, and all kinds of Builders' Wire and Iron Work

When you are depending upon a locomotive crane for handling your coal you realize that it must be a **good** crane. You cannot have the crane continually breaking down, as it means a big loss in time.

## BROWNHIST Locomotive Cranes

are being used to-day by railroad men because they realize that these cranes will do their work as it should be done. One road uses thirty of them. These cranes are built for hard, continuous service. And records prove that they will stand up under the severe working conditions. Ask the owners—they will tell you what Brownhoist cranes will do.

Write for our Catalog K, which shows how and where the Brownhoist Locomotive Crane is used.

GRIP NUTS

**Canada Grip Nut Company, Limited**  
MONTREAL, QUE.

The frequent starts and stops in city service necessitate a brake equipment instantly responsive to application and release and sufficiently rugged to withstand hard continuous usage.

## The Westinghouse SME Straight-Air Brake With Emergency Feature

fulfils these requirements admirably. In service stops it has all the flexibility and responsiveness of the ordinary straight-air brake whether operating motor cars alone or with trailers, and in addition when trailers are handled complete protection against such emergencies as train parting or hose bursting is provided, as in such event brakes apply in emergency automatically on both motor and trailer. Quick and full response to emergency applications at the motorman's valve is also insured.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

## To Parties Manufacturing, or Intending to Manufacture in Canada:

We are prepared to produce, upon a large scale, articles of metal and wood.

Our facilities are those necessary for the extensive and economical manufacture of the heaviest freight cars and the highest class of passenger cars. These facilities include plants for the manufacture of steel, malleable and grey iron castings—rolled steel and iron products—frogs, switches and track work for electric and steam railways—coil and elliptic springs—forgings—cabinet and other wood work—and all preparatory and finishing adjuncts.

The various plants are distributed from Amherst, N.S. to Fort William, Ont.

Correspondence invited.

## Guarding Your Trains

Not only will Automatic Block Signals safeguard your traffic throughout the seasons of the year, through the heavy fog of spring and summer, through the storm and blizzard of winter, but they will move your traffic faster and decrease the spacing distance between your trains, thereby increasing the capacity of your double and single track lines.

G. R. S. Automatic Signal Systems are composed of appliances made from high grade materials by careful workmanship. The result is satisfactory service.

247 miles on the Great Northern, 1,092 miles on the Northern Pacific, in the cold sections of North America, prove that this is the system for cold climate.

An installation will pay dividends on the investment. Write for information.

# THE OHIO BRASS COMPANY

Mansfield, Ohio, U.S.A.

# Difficult Frame Welding Made Easy with Thermit

Finished Thermit Weld on Engine No. 802 of the  
Grand Trunk Pacific, Transcona, Man.

Frame Welded with Thermit by the Illinois Central,  
Centralia, Ill.

You can weld a frame quickly and economically with Thermit, whether it is broken in the splice, under the fire box, close up to the cylinder, or at any other point. It is not necessary to take the frame down, as all welds can be made with the frame in place.

No other process of welding is so quick and uniformly efficient and economical in operation as the Thermit Process.

The proof is in the fact that to-day 435 railroad shops in North America are using Thermit and returning their engines to service in from 10 to 24 hours.

We have just issued a new pamphlet of instructions for the use of Thermit in railroad shops, known as Pamphlet No. 2144. This should be in the hands of every railroad man, as it tells how and why the Thermit Process of welding will save thousands of dollars every year in repair costs. Write for it to-day.

Assistant Passenger Traffic Manager,  
Montreal, Que.

## The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is **Prevention** and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

Long experience, new equipment, efficient management and expert workmen, are guarantees that our Locomotives will give record service. Over 1,200 Locomotives have been built at our Works since the erection of the plant. We are builders of Simple and Compound Locomotives adapted to every variety of service, for Railway Contractors, for Industrial Purposes, Mines, all classes of Railway Work, etc.

We are also builders of stationary boilers, suitable for contractors and industrial plants. Grey iron castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

## Less Gas—More Power

This new 4 H.P. engine uses less gasoline than our previous 3 H.P. "Hit and Miss" which used a third less than any other engine made.

It has no governor parts to wear out.

## FAIRMONT HAND CAR ENGINES

have a Ball-Valve which admits tiny charges at the points of Spark Plug where they are unfailingly exploded. It saves gasoline, prevents missing, and keeps spark plug clean.

Throttles down to three miles per hour, without missing, on less than half the fuel consumed by any other throttled engine.

*Send us your name and address on a Post Card today, for circulars.*

## PEDLAR'S "PERFECT" PRODUCTS MADE IN CANADA

### Permanent Construction On Railway Right-Of-Way

Pedlar's "Perfect" Rivetted Culvert at Highway Crossing intersecting  
a railway.

is assured by the installation of Pedlar's  
"Perfect" Rivetted Culverts, which may  
be graded, bedded and permanently  
placed with a few hours' labor.

#### PEDLAR'S "Perfect" Rivetted CULVERTS

are made to specifications in sizes from  
8 to 84 inches in diameter. They have  
the double advantage, over concrete, of  
being frost-proof and elastic, allowing  
the desirable "springy" road bed to be  
preserved and doing away with main-  
tenance cost.

Supplied in any length up to 40 feet,  
and transported by flat car. Coupling  
bands supplied for longer lengths.

Write for complete Culvert Re-  
ference Book No. 4, giving drain-  
age tables and all necessary data.  
Address branch nearest you.

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders,  $23\frac{1}{2} \times 28$  inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

TORONTO, CANADA.

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 $\frac{1}{2}$  wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## Development and Effect of Railway Operating Standards.

By Geo. Bradshaw, Safety Engineer, Grand Trunk Railway and Grand Trunk Pacific Railway.

A standard is a principle promoted from the ranks on its own merits and given extensive jurisdiction with ample authority. Its first official act consists in removal from the service of all unfortunate fellow principles who contended for preference. A standard represents, in the survival of the fittest, nature's law applied to business affairs.

When we consider that the first railway spike was driven on the American continent within the memory of men still living, we are prepared to appreciate the wonderful progress made. We shall, however, get but an incomplete understanding of that progress if we consider only outward appearances and content ourselves with a comparison of the roadway, structures and equipment of today, with models of years ago. The really great achievements in railway history have been the solution of problems relating to administration and management. To the railways of Canada and the United States is conceded the proud distinction of being the most progressive in the world. While to England, we owe the wheel flange, the locomotive and the Bessemer process, we have contributed the telegraph, the airbrake, the automatic coupler, the electric signal, and the steel car. The natural explanation for the enviable record we have attained is found in the combination of two facts. First, a precedent with us has no sacred significance. Our standards of yesterday are found in the scrap heap of today. We never have been, and never intend to be, satisfied with anything we do. Secondly, we have developed the principle of cooperative action. We operate the railways of this continent—almost 300,000 miles—practically as one system. This result has been brought about by the evolution of standard methods, devices and appliances.

**The Standard Gauge.**—The first railways of England consisted of beams placed end to end, and were constructed solely for carrying coal. Neither the locomotive nor the car was known at that time, and the principle of common carrier was not introduced till long after the first railways were built. Any person owning a coal wagon and the animals to draw it was permitted to use the early railways upon payment of prescribed rates of toll. The railways were simply a new form of toll roads for public use. It was, of course, necessary to make the gauge of the first railways conform to the trackage width of wagons in common use at the time. That happened to be 4 feet 8½ inches, and to that circumstance we owe the standard gauge of this day which prevails on about three-fourths of the railways of the globe.

The Liverpool and Manchester Ry.—at first a toll road—adopted the locomotive in 1829, and other lines followed; but the uniform gauge of the toll roads was maintained till the opening of the Great Western. That line had a gauge of 7 ft.; the Great Eastern, 5 ft., and the Caledonian, 5½ ft. It was contended that the broad gauge permitted greater speed and economy of operation. This conflict of opinion was responsible for the "battle of the gauges," which had an indirect but important effect upon the ad-

vancement of railway construction. This was because it gave an impetus to locomotive development, which otherwise would have remained dormant till a much later date. In this day of speed records, it may serve as a healthy curb upon our vanity to bear in mind that in 1846, a locomotive on the Great Western attained a speed of 78 miles an hour, and in the following year one on the London and North Western (standard gauge) made 79 miles an hour. The "battle of the gauges" was ended in 1846 by an act of Parliament requiring all future constructed roads for carrying passengers in England to have a gauge of 4 ft. 8½ ins. It was not, however, till 1892 that the Great Western—the last of the broad gauge lines—completed the change to standard gauge, which it commenced in 1872 by laying a third rail.

Before railway construction was seriously undertaken on this continent, two principles had been discovered and developed in England, for which the world must ever remain in debt to the pioneers of that day. One was the wheel flange. It would perhaps be impossible, in the whole history of applied mechanics, to find another device so simple and insignificant in appearance to which the world owes so much as it does to this humble contrivance, the conception of an equally humble person. A coal miner, noting the excessive friction of the flange rail, simply transferred the flange to the wheel. When this was done, the owners of ordinary wagons could no longer use the railways, and it became necessary to devise special wagons, which were the forerunners of the freight car, known in England to this day by the name of wagons. The use of the special wagon, or car, brought an end to the existence of railways as public toll roads, and introduced the principle of common carrier. Following these fundamental developments, came the locomotive, the one instrumentality absolutely necessary to make possible the practical value of all that had preceded. We had the benefit of these developments and hence, with a few insignificant exceptions, railways never existed as toll roads in this country. The locomotive and the principle of common carrier were at once transplanted from England.

Little consideration, however, seems at first to have been given on this continent to uniformity in gauges. That this should have been so, especially after the experience of England had proved the importance of the matter, is explainable in part by the fact that the early roads were intended only for local and sectional purposes, and were authorized by special charters of the various provinces and states, instead of by one body as in England, and partly by the circumscribed ideas prevailing, even to a comparatively late date, as to the true functions of railways. We had as many as eight different gauges—3 ft.; 3 ft. 6 ins.; 4 ft. 8½ in.; 5 ft.; 5 ft. 6 in.; 5 ft. 9 in.; 5 ft. 10 in., and 6 ft. The Grand Trunk's gauge in Canada was 5½ ft., said to have been determined upon because the British Government adopted that standard for the railways of India. The Erie, for almost 50 years, main-

tained a 6 ft. gauge. The Pennsylvania, on some of its lines, had a gauge of 5¾ ft., which was retained for many years after the general adoption of the standard gauge. Most of the roads south of the Ohio River were built to a 5 ft. gauge.

It was maintained that the broad gauge permitted the movement of greater load in proportion to the dead weight of equipment. Where this lack of uniformity existed, it constituted an obstacle to through traffic. Passengers changed cars when they came to "the break in gauges," and freight was transferred at such points piece by piece, or the bodies of cars lifted from the trucks of one gauge and set upon those of another. To realize what this meant, unless one recalls from experience, he should undertake to make a trip, or to ship a package of freight over the various electric roads between distant cities.

Our "battle of the gauges" lasted for 30 years, instead of 10 as in England, and was terminated here by voluntary action of the roads instead of by legislative enactment. The Grand Trunk changed to standard gauge in 1874. On May 31 and June 1, 1886, most of the lines south of the Ohio River changed. The record made by those lines, time considered, must be regarded as one of the great feats in railway history. The change involved almost 25,000 miles of track, 1,800 locomotives and 45,000 cars. One of these roads—the Louisville and Nashville—on May 30, 1886, changed over 1,800 miles.

With the adoption of the standard gauge the history of systematic railway operation on this continent really begins. In the same year of its consummation, the two distinct bodies of operating officers, representing the northern and the southern railways, were amalgamated, forming the organization now known as The American Railway Association, representing practically the entire mileage of the North American continent, and constituting the greatest body of railway men on earth. Without the standard gauge, the Master Car Builders' Association—although organized 19 years before—could never have reached its present state of development, which entitles it to rank as one of the most remarkable organizations of modern times.

**Standard Time.**—The affairs of even the most primitive people demand some means of computing time, and to devise the various means suitable to the advancing stages of society has been a perplexing problem in all ages. The sun dial, the hour glass, the burning candle, the wooden wheel clock and the watch represent successive steps in the solution of the problem. The watch and the devices that preceded it were simply instruments for recording time, and it was in the perfection of this instrument only that society was concerned prior to the advent of railways. As the computation of time is based upon the rotation of the earth with reference to the sun, all places located on different meridians must actually have different time. In other words, it is noon (solar time) at each place when the meridian of that place is beneath the sun.

...directly under the sun. Before the appearance of railways, each community, to a great extent, lived to itself and was a law unto itself and therefore, had its own local or solar time. This served well enough the purposes of that day, but railways, extending for the most part east and west, through many communities, found this variation the source of the greatest annoyance and confusion. More than fifty different standards of time prevailed, each road taking as its standard the local time of some city in its territory. This condition existed till November 18, 1883, when the railways adopted "standard time," which is simply an arbitrary method whereby every place in Canada and the United States, instead of taking the solar time of its own meridian, adopts the time of one of five meridians—60°, 75°, 90°, 105°, 120° west of Greenwich. These meridians mark five different times—Atlantic, Eastern, Central, Mountain and Pacific—each varying from the other by an even hour added to the east and subtracted from the west. Railway time is not, therefore, really correct time; but an arbitrary standard adopted from necessity. It affords the anomalous example of a demand for a standard being so great as to justify its adoption at the sacrifice of correctness. Standard time has now been almost universally introduced, and the people generally depend upon the railways to furnish them the time in all localities. The subject cannot, however, be considered as finally settled. At the last meeting of the American Railway Association standard time was made the subject of a lengthy and learned report. While the meridians, already mentioned, are supposed to fix the points for changes in time, there is a wide departure among the various roads in adhering to such points. For example, the New York Central changes from Eastern to Central time at Buffalo, (located approximately at the 79° meridian) while the parallel Canadian roads change at Windsor, Sarnia and Fort William. The latter place is approximately on the 89° meridian and, therefore, has an actual difference from Buffalo time of 40 minutes. This variation is illogical and, to a considerable extent, unnecessary. While it does not occasion any great practical inconvenience, a greater degree of uniformity is desirable.

**Standard Signals.**—In the matter of hand and audible signals there prevails an almost absolute uniformity on all railways of Canada, the United States and Mexico. Perhaps in no other one method of operation has there been adopted a more exact and general standard than that known as the Uniform Train Signals put into effect on Nov. 16, 1884. Prior to the adoption of uniform signals each road had its own code, with the result that there was great confusion, involving risk of train accidents, at all junction points, terminals and roads used by two or more companies, and especially when employes trained on one road, entered the service of another. The uniform signals were the result of much investigation and discussion by the representatives of the two Time Conventions, (the bodies which in 1886 formed the General Time Convention, later known as the American Railway Association) and, with slight modifications dictated by subsequent experience, these signals may now be considered almost perfect in their conception and application.

If I may be permitted to offer a suggestion on a subject which the thought of able men has left so little open to further discussion, I would recommend, in the interest of safety, that the signal for starting a passenger train—two blasts of the air whistle—be eliminated, so that a passenger train may

be started only on hand signal from the conductor. The objection to the air signal for this purpose is threefold. 1st. It permits trainmen to be upon passenger car platforms, or inside the cars, at the time the train is started. Considerations of public safety demand that the conductor and trainmen of a passenger train should stand upon the station platform as the train starts. 2nd. As two blasts indicate "start" when the train is standing, and "stop" when the train is moving, confusion may, and often does, result. The locomotive man, not being prepared to start exactly upon receiving the signal, may be just starting when a second signal is received. That signal may be intended as a repetition of the first, and prompted by impatience at the failure to act promptly upon the first. It may also be intended as a stop signal, made necessary to prevent injury to some person in the act of getting on or off the train or in other hazardous positions. A misinterpretation by the locomotive man in one way will result in an unnecessary delay, and in another way may mean personal injury or damage to property. 3rd. Formerly, one blast of the air was the signal to start. This was changed to two blasts, because it was thought that, while the cord might by mistake or design of a passenger or other person, be given one pull, it would hardly receive two in the proper succession, and for the further reason that one blast was produced in the locomotive cab when a valve was opened and the air extended in the signal line. But the change has by no means removed danger from these two contingencies, especially from the latter. Suppose that in making coupling between cars—as when an extra car is put upon a train, or in coupling up after making a switch—the trainman or carman first opens the valve of the signal line at the rear end of the forward car and then opens the valve at the forward end of the rear car, there will be two distinct reports in the cab which a driver may naturally take as the signal to start. I personally witnessed an actual occurrence of this nature where a trainman was dragged a considerable distance, with his body across the rail, before the train, started on this unintentional signal, could be brought to a stop.

**Standard Rules.**—The Standard Code of Rules was adopted by the American Railway Association in 1887, and in 1889 was divided into Rules for single and double track operation. This code has been put into effect on most of the railways in Canada and the United States, but with so many modifications and additions to meet local conditions and individual opinions that, with the exception of hand and audible signals, already referred to, which were incorporated as a part of the Standard Code, and the methods of movements by train orders and block signals, there prevails a considerable divergence in methods. The American Railway Association has a permanent committee, styled The Train Rules Committee, for the consideration of changes in the Standard Code, and for answering inquiries and giving interpretations upon any rule. The rules of the Standard Code relate almost entirely to the operation of trains, and are intended to be of such general nature as to permit their adoption by all roads.

In Canada the Railway Act gives the Board of Railway Commissioners power to pass upon rules for the "operation of trains"—see sections 30, 268 and 269—and in July, 1909, the Board, by order 7563, approved what is termed the Uniform Code, which is based upon, and follows very closely, the Standard Code. Owing to the authority exercised by the Board of Railway Commissioners, there is in Canada a far greater

uniformity in operating rules than in the United States, where neither the Interstate Commerce Commission, nor the state commissions approve rules of the railways.

### Application for Establishment of Cartage Service at Fort William Refused.

In dealing with the Fort William Board of Trade's application to the Board of Railway Commissioners for an order requiring the establishment of a cartage service at Fort William, Ont., or the abolition of the railway companies' custom of collecting the consignor's cartage from the consignees, the Assistant Chief Commissioner, D'Arcy Scott, gave the following judgment recently:—

The railway companies have agreements with cartage companies in a number of cities and towns in Canada whereby the cartage company undertakes to call for and deliver freight for the railway companies on a schedule of charges. These cartage companies are not under the board's jurisdiction, and it is purely optional with a railway company to have such a service. This board has no jurisdiction to order a railway company to establish a cartage service, and therefore we cannot grant the request of the applicants for an order directing the railway company to establish a cartage service at Fort William. With regard to the practice which the railway companies have been following in some places of collecting the consignor's cartage charges from the consignees when collecting the freight for the railway haul, it seems to me the remedy for this evil is in the hands of the consignees themselves. If they do not want to pay the consignor's cartage to the railway company, I see no obligation on them to do so. The railway company has no right to withhold delivery of the freight because the consignees refuse to pay the consignor's cartage; and, as the cartage appears as a separate item on the freight bill, it would be a simple matter for the consignee to deduct that amount from the total amount demanded by the railway company.

The matter came before the board some years ago, and a memorandum of Commissioner McLean, concurred in by the Chief Commissioner, Sept. 25, 1913, was issued to the railway companies and a number of boards of trade, a copy being sent to the Secretary of the Fort William Board of Trade. A notice having been issued by the railway companies to the effect that it was their intention to discontinue the practice of collecting the consignor's cartage charges from the consignee, a strong protest was made to the board by delegates of a number of western shippers at a conference at Regina, Dec. 18, 1913, against the withdrawal of this practice by the railway companies. A number of boards of trade of western cities joined in the protest. As a result of this protest, representatives of the Grand Trunk Pacific and the Canadian Pacific Railway Companies, by memorandum dated Dec. 19, 1913, agreed to continue the practice of collecting consignor's cartage charges from consignees in cases where the railway companies had recognized cartage agents at the point of shipment.

I entirely agree with the views expressed by Mr. Commissioner McLean in his memorandum already referred to, when he said:—"The question as to whether the consignees should, or should not, pay advanced cartage to the railway is one entirely of contract between the parties. The board has nothing to do with it, nor is the work done by the railway in any manner a railway service or facility within the meaning of the Railway Act." That being so, I do not see that the board can take action in this matter.

## General Inspection Car on the Grand Trunk Railway.

As mentioned in Canadian Railway and Marine World for November, a general inspection of G.T.R. was made during October by 50 officials from all parts of the lines. A specially designed car, which is illustrated herewith, was built for the inspection. It is about the same size as one of the company's old open vestibuled baggage cars, with the observation end completely glazed, similar to the rear end of the observation cars used at the back of some of the passenger trains. The glazed end consists of a central door with large window panel, and two side windows, all the windows being of nearly full depth.

Back from the observation end, the floor was tiered, with a rise of 4 ins. in each tier, the tiers being spaced with the usual car seat spacing. Eight tiers carried this arrangement back to about the centre of the car. On each level of the tiers, there were placed two old passenger car seats, one on each side in the usual manner, with a central aisle. This provided 16 seats, or an observation seating capacity of 32. From the highest tier level, a flight of 4 steps leads down to the car level. In the rear or lower floor section of the car, there is a table between two car seats, and along the walls, there are 9 arm chairs.

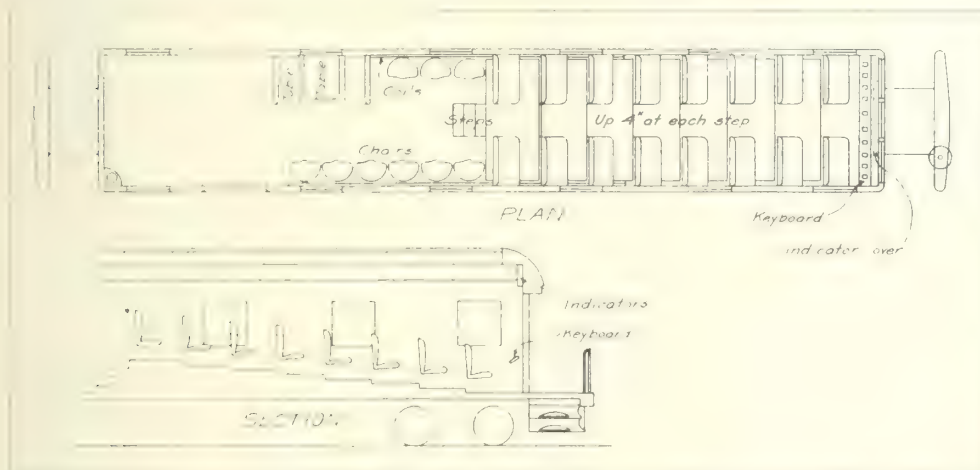

In front of the observation end windows, there is a narrow table running the width of the car, on which there are 10 sets of keys, arranged in pairs, each pair to be

tion, which is 5 miles long for single track, and 4 miles for double, an average of the

observations was struck. The summation of these observations for the division is a measure of its standing. The committees were arranged so as to produce impartial judgments.

Inspection Car, Grand Trunk Railway, Showing Observation Window.

Floor Plan and Section of Inspection Car, Grand Trunk Ry.

manipulated by one observer. The several sets of keys are named respectively, Line, Surface, Joints, Tie Spacing, Drainage Banks, Ditches, Ballast, Station Grounds, Policing, Fencing, Buildings, Spikes, Side Tracks. Under the several headings is divided all the work that comes under the care of the maintenance of way departments. Immediately over the keyboard, under the decking, there is a large 10 unit annunciator indicator, correspondingly marked with the above lettering in larger type that can be seen from the rear of the car. The annunciator units are electrically operated from the keyboard below.

Along the front row of seats before the keyboard desk, five officials observed the line, and outlined their judgments on the different conditions of the track on the annunciator above. The party on its trip each day appointed a special committee of five track and bridge and building supervisors, each of whom was delegated to operate two keyboards, at the end of each mile, registering the judgment of that mile on the annunciator above. In the rear of the car, clerks placed at the desk, noted these observations, and at the end of each sec-

The car covered the entire system from Portland, Me., to Chicago, in a train of 9 cars. The 50 officials comprised representatives from all sections of the maintenance of ways departments, among whom, not only will a friendly rivalry be instilled, but from observations of other men's work, higher ideals will be developed, and the men at the same time brought into closer touch with their superiors.

### Valcartier Transportation Charges.—

Replying to questions in the House of Commons, Feb. 15, the Minister of Militia stated that \$19,098.89 had been paid to the Canadian Northern Ry. for transportation and all other services in connection with Valcartier Camp, and of this amount, \$7,965.24 was represented by express charges.

### Canadian Railway Club.—E. Hungerford.

Advertising Manager, Wells Fargo & Co.'s Express, read a paper on railway advertising before the club in Montreal, Mar. 9.

## Birthdays of Transportation Men in April.

F. G. Adams, Commercial Agent, G.T.R., and Division Freight Agent, G. T. Pacific Ry., Winnipeg, born at St. John's, Nfld., Apr. 6, 1878.

W. H. Ardley, Comptroller, G.T.R., G. T. Pacific Ry., Montreal, born at London, Eng., Apr. 24, 1858.

Jas. Black, Freight Claim Agent, C.P.R., Vancouver, B.C., born near Seaforth, Ont., Apr. 19, 1858.

C. G. Bowker, General Superintendent, Eastern Lines, G.T.R., Montreal, born at Medford, N.J., Apr. 21, 1871.

S. P. Brown, M. Am. Soc. C. E., M. Am. Soc. M. E., Chief Engineer, Mount Royal Tunnel and Terminal Co., Montreal, born at Dover, Me., Apr. 29, 1877.

W. J. Camp, Assistant Manager Telegraphs, C.P.R., Montreal, born at Oakville, Ont., Apr. 22, 1855.

A. V. Collins, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., Apr. 21, 1868.

A. E. Edmonds, General Agent, C.P.R., Detroit, Mich., born at Woodstock, Ont., Apr. 8, 1866.

born at Renfrew, Ont., Apr. 15, 1871.

J. A. Macgregor, Superintendent, District 4, Alberta Division, C.P.R., Edmonton, born at Dufftown, Scotland, Apr. 5, 1873.

B. R. Marsales, District Freight Agent, Canadian Northern Ry., Regina, Sask., born at Guelph, Ont., Apr. 13, 1887.

P. Mooney, General Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N.S., born at St. Catherines, Que., April 19, 1871.

J. O. Norrie, Travelling Passenger Agent, Cunard Steamship Co., Winnipeg, born at Belfast, Ireland, Apr. 20, 1879.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Shops, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

R. S. Richardson, Assistant Superintendent, Intercolonial Ry., Moncton, N.B., born at Napanee, Ont., April 9, 1865.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., April 18, 1867.

## Quebec Public Utilities Commission's Orders

The following orders have recently been issued:

Asbestos and Danville Ry.—Approval of tariffs of tolls on line from Asbestos to Danville, about five miles, and charges for switching service. J. R. Pearson, Asbestos, Que., Manager.

Quebec and Saguenay Ry.—Extending to May 15, 1915, time fixed for installing gates at grade crossing at Pointe-au-Pic, Que.

Canada and Gulf Terminal Ry.—Ordering company to fix the minimum weight for car load lots of pulpwood shipped over its line at 40,000 lbs., for cars 35 ft. or over in length, instead of 50,000 lbs.

Quebec Central Ry.—Granting permission to the town of East Angus to open a crossing over Q. C. R. tracks, to connect Bernard St. with St. John St.

Authorizing the opening for traffic of the extension of the Chaudiere Branch from St. Sabine to 10 miles east.

Montreal Tramways Co.—The Montreal City Council applied for an order to regularize the crossings over the M. T. Co.'s right of way at eight streets. The President of the Commission was requested to view the crossings. He subsequently reported favoring certain crossings, and disapproving of others, and recommended that the work on the crossings approved should be put in to within 18 ins. of the tracks by the city, and the remaining width by the M. T. Co., the cost of the maintenance to be apportioned on the basis of the work done by each. An order was subsequently issued on this basis.

Granting permission to the City of Montreal to continue the grade of Cadillac St., Longue Pointe ward, over the company's right of way as a level crossing.

## Suggestions Invited by the Canadian Pacific Railway Management.

George Bury, Vice President, Montreal, has issued the following circular to all employees:—

"By the President's direction you are invited to send at any time to C. H. Buell, Secretary of the Pension Department, suggestions looking to continued amicable relations with the public; improving the conditions of employment, and increased efficiency of our operations. It is believed that there is much talent in such a vast organization as ours that never has had an opportunity of coming to the front, and this method is to be tried in an endeavor to bring such talent to light. Letters will be treated as confidential and will be passed upon periodically by a committee, so that anything of worth may be fully recognized. It is I hope, needless to say that the object is to obtain the benefit of the ideas of those working with us, and not a means for airing grievances, which if they exist should go through the usual channels as they do in all successful organizations."

In hardening high speed steel taps, threading dies, reamers and milling cutters, it is good practice to insist on slow pre-heating in a furnace at 1,500 degrees Fahr., and then submit to a temperature of 2,200 degrees Fahr., or move to an adjacent furnace.

Rail ingots have small surface flaws, which, on rolling, draw out into long lines or seams, leaving an incipient weakness in the finished rail, that may or may not extend, depending on the extent of the seam and the service to which the rail is subjected.

Observers' Keyboard and Overhead Indicators, Inspection Car, Grand Trunk Ry. See pg. 121.

B. C. Gesner, Moncton, N.B., formerly Air Brake Inspector, I.R.C., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N.S., April 23, 1850.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Udewella, Ceylon, Apr. 12, 1875.

V. A. Harshaw, Superintendent, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., born at Mono, Ont., Apr. 26, 1865.

A. Hatton, General Superintendent of Car Service, C.P.R., Montreal, born at London, Eng., Apr. 12, 1869.

J. M. Horn, District Freight Agent, Canadian Northern Ry., Edmonton, Alta., born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880.

B. S. Jenkins, ex General Superintendent, C.P.R. Telegraphs, Winnipeg, born Apr. 8, 1859.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G.T.R., Montreal, born at Uxbridge, Ont., Apr. 22, 1866.

J. Kyle, Master Mechanic, Western Division, Canadian Northern Ry., Edmonton, Alta., born at Toronto, Apr. 11, 1877.

G. W. Lee, Commissioner, Timiskaming and Northern Ontario Ry., North Bay, Ont.,

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

E. D. Toye, Storekeeper, Ontario Grand Division, Canadian Northern Ry., Toronto, born at Dalston, Ont., Apr. 27, 1891.

W. Woollatt, General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

H. J. White, General Foreman, Car Department, Quebec Grand Division, Canadian Northern Ry., Joliette, Que., born at Brownington, Vt., Apr. 1, 1871.

That watertight concrete is possible is demonstrated by a concrete water tank on the Baltimore and Ohio Rd., made with a 1:1½:3½ mixture, to which was added slaked lime while mixing, the inner and outer surfaces being finally coated twice with a cement coating.

# Railway Mechanical Methods and Devices.

## Lighting Generator Carbon Brush Diagrams for Canadian Northern Equipment.

In view of the difficulty experienced by the C.N.R. mechanical department in supplying the correct carbons for generator repairs, owing to the insufficiency of the information supplied from the places where the repairs were being made, another system of describing the brushes became necessary. From an inspection of the several dif-

Carbon Brush Diagram on Canadian Northern Railway.

ferent types of brushes shown in the accompanying illustration, it will readily be seen that the man making the repair might very readily wrongly describe the size and kind of brush required, leading to loss of time and confusion through the wrong brush being supplied from the stores as a result of incorrect ordering.

To obviate this, a sheet of perspective views of all the different types of brushes in use on the system, as shown in the

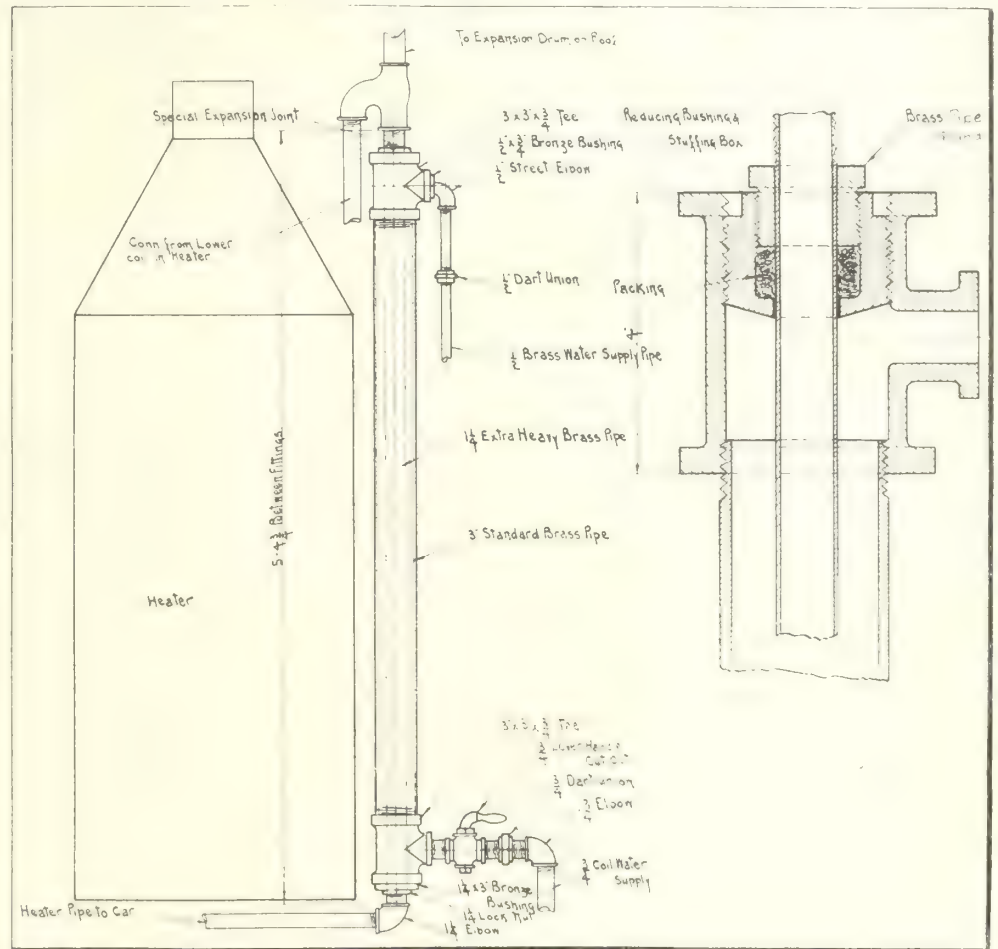

Tap and Reamer Holder for Turret Lathe.

accompanying illustration, was prepared, the sheet also containing blanks to be filled in with additional necessary identification data. Blueprints of these sheets are supplied all the repair points, and when it becomes necessary to order a new brush of a particular type from the stores, instead of a wordy description being required, it is only necessary to tick off the kind of brush required, as shown in the blueprint, and fill in the data required. No other information is required. This requisition sheet forms an excellent record for the

mechanical department, showing the several types that have the best characteristics, etc.

## Tap and Reamer Holder.

The tap and reamer holder described in the following has been found very useful on turret lathe work, as it is of simple though rigid construction, and there is practically nothing to get out of order. It will be seen that there are no set screws or other projecting parts on the holder which can injure the operator's hands or cause accidents through catching loose sleeves or other parts of his clothing. The body and shank of the holder are made of a single piece of soft steel, the shank being turned

Hot Water Jacket with Expansion Joint and Connections to Car Heater.

to fit the turret hole and milled flat on one side to form a bearing for the set screw in the turret. The socket B is bored out about 0.008 in. larger than the shank of the tap to provide the necessary float.

As taps used in turret lathes are frequently made special, their shanks can be made to suit the holder. The taps for this holder have two flats milled across their shanks as shown at F; this allows the shanks to be made short and effects an economy in tool steel. It will be seen that two slots are milled in the holder to receive two steel blocks D. In assembling the tool, the shank of the tap is inserted in the socket B, after which the blocks D are dropped into place, and the collar C is then slipped on and held by a headless set screw. The holder can be made with one block D and one flat on the shank of the tap, but as described, the strain will be more evenly distributed. Machinery, New York

## Expansion Joint in Car Heater Coil on Canadian Northern Passenger Cars.

The C.N.R. mechanical department had so much trouble with the inner pipe of its passenger car hot water jackets in the heating coils breaking, that a different method of installing became most desirable. The hot water jacket layout is shown in the accompanying illustration. In the former method of installing, the inner pipe was secured in the 3 x 3 x 3/4 in. T's, both top and bottom, by means of reducing nipples, making a rigid connection. In consequence of the difference in lengthwise expansion of

the inner and outer pipes, due to the difference in temperatures, the outer pipe, being the stronger, would frequently cause the rupture of the inner one. This was a most fruitful source of heater breakdown.

In the layout shown herewith, the lower T connection is left as formerly, but the upper connection is made into an expansion joint with expansion bushings. A detail of the upper connection is shown to the right of the heater. In place of the reducing nipples in the T, reducing from 3 to 1 1/4 in., there is screwed into the T a reducing bushing and stuffing box, the hole through the centre being a clearance fit for the 1 1/4 in. pipe. In the packing room packing is placed, with a brass pipe gland above, screw fitted into the bushing, whereby a tight joint may be secured. This permits expansion, or contraction, of the inner pipes, independent of the outer casing, and consequently eliminates the rupturing of the

## Compensation for Carrying Mails on Railways.

A subscriber has asked us for information as to the rates paid railways for carrying mails. For a number of years the railway companies have complained to the Dominion Government that the rates they have been paid for this service are altogether inadequate. Towards the end of 1913 they pressed the matter very strongly on the Postmaster General. Representatives of the principal lines had interviews with him, but no arrangements could be agreed on, and, exercising the arbitrary power conferred by the Post Office Act, he had the rates fixed by Order in Council on Jan. 27, 1914, as follows:

For a full postal car, which shall not be less than 60 ft. long, unless otherwise agreed to by the Postmaster General, equipped for the sortation and handling of mails, including parcels, and the accommodation and transportation of postoffice officials on duty, 16 cts. a car mile.

For a half car, or section of a car, which shall not be less than 30 ft. long, unless otherwise agreed to by the Postmaster General, completely equipped in the same manner as a full postal car and the transportation of postoffice officials, 9 cts. a car mile.

The equipment and accommodation furnished for postal cars shall include light, heat and drinking water.

For the conveyance of closed mails carried in baggage cars in charge of baggage-men or other railway officials in charge of such cars on regular trains, 4 cts. a car mile.

For special trains ordered by the Postoffice Department for the transportation of ocean mails, \$1.25 a train mile when no passengers, baggage or freight are carried. When cars for the conveyance of passengers, freight or baggage are attached to such trains by the railway company, the rate shall be \$1 a mile.

The rate of 16 cts. a car mile shall apply to all cars used wholly for mail purposes, whether hauled in special trains run by the railway companies for their own convenience, or on regular trains. However, the department will not require the railways to haul more than one car with mails on any such special train, and if it does, the rates provided for in the preceding section—that is, \$1 a mile—will apply.

All railway companies shall provide, without extra charge to the Postoffice Department, for the care and storage of mails at junction points when such mails have to be held or stored for train connection, and are to be transferred from one train to another of the same company. The work of transferring mails between the trains of any railway shall be performed by the railway company, except at points where the department has already provided for such transfers, or may hereafter agree to provide for them owing to growth or development.

In writing on March 3, 1914, to the Chairman of the Mail Transportation Committee at Washington, D.C., the Canadian Postmaster General said: "No special arrangements have been made for the transportation of parcels, which have to be conveyed in the same manner and paid for at the same rate as other mail matter. Under the arrangements above described, the Postmaster General will simply require the railways to furnish whatever car space may be necessary for the accommodation of mails of every description, and will pay accordingly. The increase that the railways will earn under the new schedule of rates, calculated on the basis of the service as it existed last year, will amount to about \$786,000. If it is found, however, that the increased amount of mail to be handled, owing to the introduction of parcel post,

will make it necessary for the railways to furnish extra accommodation, they will, of course, be paid a larger amount than that above mentioned."

## Electric vs. Steam Operation of Tunnel Railways.

The report of the Mersey Ry., operating the line under the Mersey at Liverpool, Eng., for 1913, gives some interesting comparisons of the results obtained under the two systems. The last year of operation under steam was 1902. In the intervening years there has been a steady increase in the receipts and of the number of passengers, and a decrease in the percentage of operating expenses to gross receipts, although the rate of wages has been substantially increased. Following is a comparison of the electric operation in 1913, and of steam operation in 1902:—

	Electric.	Steam.
Gross receipts .....	£122,631	£61,252
Expenses .....	64,285	57,537
Percentage of expenses to receipts .....	52½	94
No. of passengers .....	13,241,615	5,942,002
No. of season tickets .....	14,231	3,266
Total passengers .....	16,524,741	6,991,982
Surplus over working expenses .....	£58,347	£3,715
Balance after providing for rent, renewal fund and interest on first debentures .....	£20,202	£22,662
Additional surplus required to meet debenture interest .....	£6,707	£50,887

## Railway Construction in Alberta in 1914.

The Premier of Alberta in the course of a statement, Feb. 11, on provincial affairs, said that the railway mileage in the province had doubled during the last three years, that 22% of the railway construction in Canada during 1914 was in the province, and that there is now one mile of railway for every 125 persons in the province. The province had guaranteed bonds for the building of 2,435.97 miles of railways, of which there are now completed and in operation or being made ready for operation, 1,230.79 miles, and 347.02 miles graded and ready for tracklaying. At the end of 1913 tracks had been laid on 988 miles, and 280 miles of grade was ready for steel. The mileage at Dec. 31, 1914, was distributed as follows:—

	Miles track laid.	Miles extra grading.
Canadian Northern lines	656.29	198.02
Grand Trunk Pacific Ry.	259.50	....
Edmonton, Dunvegan and British Columbia Ry. . .	240.00	50.00
Alberta and Great Waterways Ry. ....	75.00	62.00
Lacombe and Blindman Valley Ry. ....	....	37.00

The total railway mileage in the province is 4,097, distributed as follows:—Canadian Pacific Ry., 1,887 miles; Canadian Northern Ry. lines, 1,188 miles; Grand Trunk Pacific Ry., 907 miles; Edmonton, Dunvegan and British Columbia Ry., 240 miles; Alberta and Great Waterways Ry., 75 miles. In 1905 there were only 1,060 miles of railway in the province, owned by the C.P.R. and its subsidiary, the Alberta Ry. and Irrigation Co.

**Richard Marpole's War Contribution.**—London, Eng., cablegram to Montreal Star, Mar. 3:—"Twenty Welsh volunteers from British Columbia, got together by Richard Marpole, General Executive Assistant C.P.R., were given a hearty welcome at Colwyn Bay, where they joined Sir Hamar Greenwood's battalion of South Wales Borderers. They were met at Liverpool by Lieut. Long, formerly of Vancouver, also Sergt.-Major Edford, formerly of the Scots Guards. The whole battalion escorted them to their billets amid much enthusiasm."

## Government Advances to C.N.R. and G.T.P.R.

Under the authority of orders in council, dated Sept. 5 and 26, and Oct. 24, 1914, the Dominion Government advanced to the Canadian Northern Ry. \$10,000,000 in the form of an issue of Dominion notes against a pledge by the company of its guaranteed securities issued in pursuance of the provisions of the Canadian Northern Railway Guarantee Act, 1914, by placing the sum so advanced to the credit of the Minister of Finance for payment out under the provisions of the trust deed securing the issue of these securities.

A similar advance of \$6,000,000 was made to the Grand Trunk Pacific Ry., against a similar pledge by the company in pursuance of the provision of the Grand Trunk Pacific Guarantee Act, 1914.

The Government's action in both cases has been ratified by Parliament.

## Marconi Wireless Telegraph Company Annual Report.

Following are extracts from the report for the year ended Jan. 31, 1914:—

The contract with the Canadian Government for the operation of the coast stations on the Great Lakes has been completed by the addition of new stations at Port Burwell, Toronto and Kingston. The operation of these has been placed on a satisfactory basis, and this section of the business should henceforth produce a steadily increasing revenue. The company secured the contract for the construction of these stations.

Under agreement with the Newfoundland and Canadian Governments the company operates 10 small stations in Newfoundland and Labrador, 22 stations on the Canadian Eastern Coast, 8 stations on the Great Lakes. The Newfoundland stations are subsidized \$4.63 a year, and the Canadian stations \$89,200 a year.

According to the latest government return covering steamships of Canadian register there were 93 vessels equipped with wireless telegraphy, of which 90 are equipped with the Marconi system. The policy of systematically improving the contracts for steamship operation is being successfully carried out.

With the completion of the duplex system the transatlantic receiving station at Louisburg, N.S., has been brought into operation, in addition to the installation for high speed transmission at Glace Bay, N.S. To provide for additional traffic with these improved facilities, a special business campaign was inaugurated, which has so far yielded gratifying results, and which should improve the future transatlantic traffic. This policy will be continued until the full capacity of the circuit is reached.

As a result of the destruction of the operating house by fire on May 5, the Cape Race station in Newfoundland suffered severely during the year. Prompt measures were taken to reestablish a temporary station, which was in operation within two days, but owing to the isolation of Cape Race it was not until Sept. 30 that a full commercial service could be resumed. Improved equipment has been installed, adding to the capacity of the station. The necessity for increasing the height of the masts has been strongly urged on the Government, and action has been taken for such construction, which will be completed before the end of this year. Thus equipped Cape Race will be the most important coast station on the North Atlantic Ocean, and the increase in earnings that can be expected is indicated by the results already apparent since the

installation of the improved plant. Owing to this unfortunate occurrence the ship traffic receipts show only a small increase over the previous year. Transatlantic traffic shows improved receipts for the year, and the revenue from the operation of the Marconi system on steamships and sales of apparatus shows decided progress.

Important legislation covering equipment of Canadian steamships with wireless telegraphy has been enacted. This law became operative on Jan. 1, 1914, and since the close of the past fiscal year a number of contracts have been made with shipowners covering vessels affected by the act.

A convention to consider means for increasing the safety of life and property at sea was held in London in Nov., 1913, one of

the results of which was a strong recommendation to the various governments participating to adopt still more stringent regulations concerning the equipment of vessels with wireless telegraphy.

Work on the contract with the Department of Railways and Canals for the construction of stations at Pas, Man., and Port Nelson, Hudson Bay, has been pushed forward and will be completed during this year. Owing to exceptional difficulties encountered by the Government through lack of terminal and transportation facilities, the company was unavoidably delayed in completing its portion of the work, but will not thereby be subjected to any financial loss. Owing to the isolation of the localities these difficulties had been anticipated.

Communication between the two stations was established in Feb., 1914, which was a source of gratification to the Government.

The balance sheet shows a profit of \$7,158.62 on the year's operations, leaving a balance of \$15,335.75 in deficit account. The capital stock is \$5,000,000.

### Amendment to Railway Act re Workmen's Injuries.

H. B. Morphy, M.P. for North Perth, Ont. in introducing a bill in the House of Commons, Mar. 1, to amend the Railway Act, Revised Statutes of Canada, chap. 37, sec. 2, clause 34, par. e, said the act as it stands includes, under the head of "working expenditure" of railways "(e) all rates, taxes, insurance and compensation for accident or losses." The bill which I ask leave to introduce extends the language of paragraph e to make it read in this way:

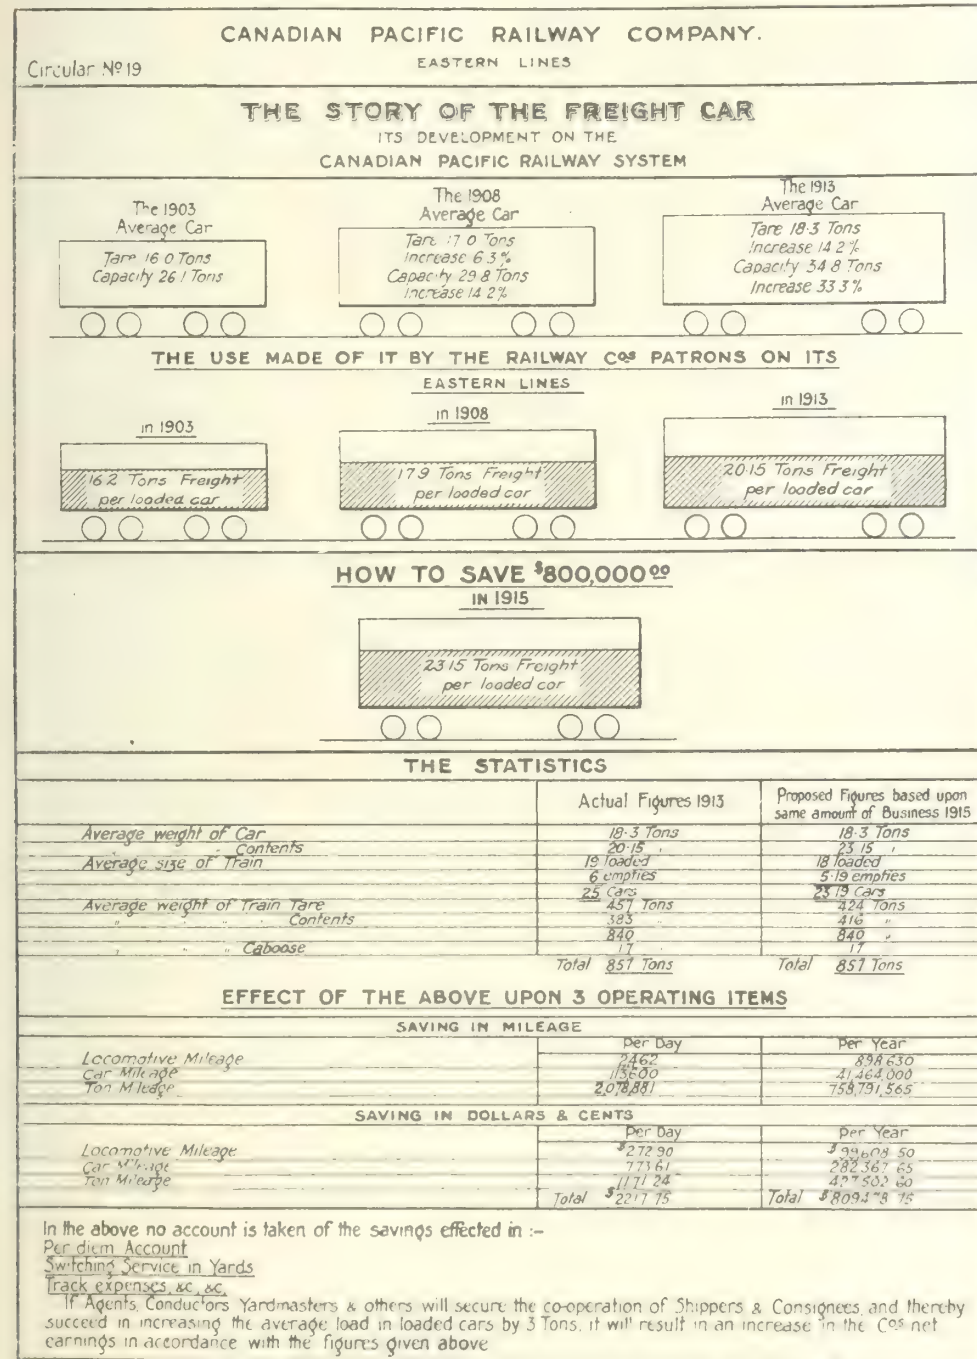

(e) all rates, taxes, insurance and compensation for accident or losses, including any such compensation payable under the provisions of any act of the Parliament of Canada or of any provincial legislature providing for the payment of compensation to workmen for injuries or in respect of industrial diseases.

The object of the bill is to extend to the workman who is injured the privilege of having his claim come under sec. 141 of the Railway Act in the same way as rates, taxes, insurance and compensation for accident or losses. It will give the claim of a workman who may suffer accident and loss priority as against a mortgage or bonding deed covering the railway's assets in the same way as rates, taxes and insurance now have a prior claim. This will bring the Railway Act into line with Ontario's new legislation dealing with compensation to workmen for injuries sustained. It is merely to extend the law as it stands, and it seems to be an amendment that is necessary in the case of a railway company which may be insolvent and unable to pay claims for losses. In such a case the workman's claim will have priority over a mortgage deed the same as the other elements now in the law have priority.

**Boiler Code.**—The American Society of Mechanical Engineers' boiler code committee has made a final report, which has been accepted by the society's council. The report is the result of the work of the original committee, of which J. A. Stevens was chairman, and an advisory committee of engineers representing various phases of the design, installation and operation of boilers. Among the railway representatives on the committee was H. H. Vaughan, Assistant to Vice President, C.P.R., Montreal. The code is considerably shorter than when originally brought out by the committee; and the rules laid down in it do not apply to boilers which are subject to U.S. federal inspection and control. The original committee and the advisory committee have been continued as one, and will meet once a year in order to make any changes that advances in practice may make necessary. At these meetings will also be taken up any change which may seem necessary in a rule because it works unnecessary hardship on any particular class of boiler makers or users.

**Each class of service on French railways** has its locomotive fuel carefully divided as to lump and slack, or briquettes and slack, by weight. Passenger service uses 20% slack and 80% lump or briquettes; fast freight, 40% slack; yard locomotives, 80% slack, etc.

**Walter White, Trainmaster, G.T.R., Palmerston, Ont.,** in remitting his renewal subscription, writes: "I could not very well get along without Canadian Railway and Marine World."

Montreal November 8<sup>th</sup> 1913

Asst Gen Manager

Circular Issued by Canadian Pacific Railway respecting car loading.

A paper on "Some Maximums and Minimums in Train Operation," by Alfred Price, Assistant General Manager, Eastern Lines, C.P.R., was published in Canadian Railway and Marine World for February. The above is a reproduction of a circular he issued in Nov., 1914, to secure an increase in the average loading of cars.

## Orders by Board of Railway Commissioners for Canada.

The following orders, published in each issue of the *Canadian Railway and Marine World*, are passed by the Board of Railway Commissioners, so that subscribers to the paper have a continuous record of the Board's proceedings. No other paper has done this.

The following orders, immediately following the numbers, are those on which the orders were drawn.

23170. Jan. 15.—Authorizing Canadian Northern Ry. to build spurs for Helendale Gravel Co. and J. G. Mitchell, in Secs. 30 and 19-19-22, w. 2 m., Sask.

23171. Jan. 16.—Authorizing C.P.R. to remove agent from station at Tache, Ont.

23172. Jan. 18.—Approving re-location of C.P.R. station at Glasnevin, Sask.

23173. Jan. 15.—Approving proposed location of C.N. Alberta Ry.'s combined stations and section houses at Borlan, Chip Lake, Fulstow, Dayman, Lobstick and Calahoo, Alta.

23174. Jan. 16.—Rescinding order 19928, July 30, 1913, authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) to take lands in New Westminster District, B.C., for diverting Gunn and Brunette Roads and providing overhead crossing at North Road.

23175. Jan. 16.—Authorizing G.T.R. to operate over junction of its eastbound and westbound tracks at St. Henri, Que., without first stopping trains.

23176. Jan. 16.—Authorizing C.P.R. to build spur for The Cardston Milling Co., Cardston, Alta.

23177. Jan. 15.—Dismissing Canadian Northern Ry. application to remove connection between C.P.R. and Winnipeg Joint Terminals railway at Higgins Ave., Winnipeg, Man., certain firms to continue to have switching service from C.P.R.

23178. Jan. 15.—Authorizing Canadian Northern Ry. to build highway crossing between Secs. 2 and 11, w.2 m., at Invermay, Sask.; municipality to pay cost of maintaining crossing.

23179. Jan. 16.—Dismissing City of Calgary's application for order compelling Canadian Northern Ry. to carry out agreement with city, dated Oct. 24, 1912, re entrance of railway into Calgary; and ordering C.N.R. to provide a 5% grade at approaches to crossings at Thistle, Pine and Hungerford Sts., and Spruce and Poplar Aves.

23180. Jan. 19.—Authorizing Kettle Valley Ry. to cross C.N. Pacific Ry. at Hope, B.C.

23181. Jan. 20.—Relieving C.P.R. from providing further protection at crossing of highway at mileage 52.09, between Lots 15 and 16, Eaton Tp., Que.

23182. Jan. 16.—Approving revised location of G.T.R. siding to Pilkington Bros.' premises, North Cayuga Tp., Ont.

23183. Jan. 21.—Extending to June 1, time within which G.T.R. shall complete highway over its line in Tay Tp., Ont., required under order 22344, Aug. 5, 1914.

23184. Jan. 19.—Exempting Canadian Northern Ry. from erecting fences, gates and cattle-guards along its right of way at certain points in North Bay and Sudbury Districts, Ont.

23185. Jan. 21.—Authorizing Town of Walkerville, Ont., to build Lincoln Road across Essex Terminal Ry., at grade.

23186. Jan. 20.—Authorizing Kettle Valley Ry. to build bridges at mileage 20.0 over Ladner Creek; 14.84, Coquihalla Section; and 9.1 over Slide Creek, B.C.

23187. Jan. 18.—Authorizing Esquimalt & Nanaimo Ry. to build transfer track to connect Canadian Collieries (Dunsmuir), Ltd., track at Royston, B.C.

23188. Jan. 21.—Relieving G.T. Pacific Ry. and Canadian Northern Ry. from maintaining night signalman at crossing at South Saskatoon, Sask.

23189. Jan. 20.—Authorizing Canadian Northern Ry. to discontinue station agent at Margaret, Man., until Apr. 1.

23190. Jan. 20.—Authorizing Nelson & Fort Sheppard Ry. (G.N.R.) to discontinue stopping its trains on flag at Benson & Ross spur, B.C.; to stop on flag at Benton Pole Co.'s spur, and build short platform and small shelter there.

23191. Jan. 22.—Approving G.T. Pacific Telegraph Co.'s bylaw 3, passed Jan. 16, and rescind-

ing order 8016, Sept. 8, 1909, re issuing tariffs of tolls.

23192. Jan. 21.—Authorizing C.N. Ontario Ry. to build bridge across Beaver River, Thorah Tp., mileage 64.1 from Toronto; bed of river to be deepened 1 ft. for 100 ft. above and below bridge.

23193. Jan. 22.—Recommending to Governor-in-Council for sanction lease, dated Oct. 8, 1914, respecting New Brunswick Coal and Ry. Co.

23194. Jan. 22.—Approving plans and specifications of Moore Drain, to be built under Michigan Central Rd., Metcalfe Tp., Ont.

23195. Jan. 22.—Authorizing G.T.R. to use bridges over Birch Ave., Hamilton; over Grand River, Brantford; over Clubine's Creek, Aurora; over Holland River, near Newmarket; near Barrie; over Big Creek, Hawkestone; and over Kashe River, near Severn, Ont.

23196. Jan. 21.—Rescinding order 16070, March 5, 1912, authorizing G.T. Pacific Branch Lines Co. and Canadian Northern Ry. to operate over crossing in n.w. ¼ Sec. 18-48-25, w. 2 m., East Saskatchewan District, Sask., without first stopping trains.

23197. Jan. 23.—Approving Bell Telephone Co. agreement with Elmsley South Rural Telephone Co., Dec. 17, 1914.

23198. Jan. 23.—Exempting Canadian Northern Ry. from erecting fences, gates and cattle-guards between mileage 4.5 and 23.5, McGregor Tp., Ont., until land becomes settled or improved.

23199. Jan. 23.—Authorizing Michigan Central Rd. to rebuild pile trestle bridge 11.60 across Long Marsh Drain, Malden Tp., Ont.

23200 to 23204. Jan. 25.—Authorizing G.T.R. to use 12 bridges at different points on its Ontario lines.

23205. Jan. 23.—Authorizing C.P.R. to use 17 bridges on its London Subdivision, Ont.

23206. Jan. 25.—Authorizing G.T.R. to use bridges near Woodstock and near Weston, Ont.

23207. Jan. 26.—Authorizing Canadian Northern Ry. to build spur for North Battleford Mfg. Co., North Battleford, Sask.

23208. Jan. 26.—Authorizing C.P.R. to build siding for H. & H. Box Co., between Pembroke and Stafford, Ont.

23209. Jan. 26.—Approving plan of Edmonton, Dunvegan & British Columbia Ry. class A station house.

23210. Jan. 26.—Authorizing G.T.R. to build extension of siding for Lord & Burnham Co., St. Catharines, Ont.

23211. Jan. 25.—Authorizing Canadian Northern Ry. to build spur to stock yards at Calgary, Alta.

23212. Jan. 25.—Extending to May 26, time within which Canadian Northern Ry. shall complete spur for J. H. Carleton, Winnipeg, authorized by order 22086, May 26, 1914.

23213. Jan. 26.—Ordering C.P.R. and Western Canada Power Co., jointly to file supplements to C.P.R. Special Joint Tariffs, C.R.C. nos. W-1615 and 1806, providing joint rates from Stoltz Mfg. Co.'s mill to destinations shown in tariffs, via Ruskin, B.C., which shall not exceed rates from Ruskin by more than 2c. per 100 lbs.; Western Canada Power Co. to receive 3c. per 100 lbs. as its proportion.

23214. Jan. 26.—Ordering Esquimalt & Nanaimo Ry. to stop its passenger trains on flag at Admiral's Road, Esquimalt Tp., B.C., and build flag station shelter there.

23215. Jan. 27.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build across 16 highways in Tp. 78, R. 21, 22 and 23, w. 5 m., Alta.

23216. Jan. 27.—Authorizing Lake Erie & Northern Ry. to build at grade, across Toronto, Hamilton and Buffalo Ry. in Brantford, Ont.; to insert diamond in T.H. & B.R. at crossing, to be protected by interlocking plant; and rescinding order 22199, July 3, 1914.

23217. Jan. 23.—Authorizing Kettle Valley Ry. to cross C.N. Pacific Ry. temporarily, for construction purposes only, for 6 months from date, at Hope, B.C.

23218. Jan. 26.—Amending order 23180, Jan. 19, re Kettle Valley Ry. crossing of C.N. Pacific Ry. at Hope, B.C.

23219. Jan. 27.—Ordering Hamilton Radial Electric Ry. to relocate its tracks on ground provided for it on Sherman Inlet, Hamilton, Ont., and that Hamilton Cataract Power, Light, Traction Co. remove its transmission line to new location; work to be completed by May 1st, 1915; H.R.E. Ry. to use 10-ft. ties for tracks; cost of relocating and maintenance other than ordinary maintenance to be paid by city, until, in opinion of Board, it should be relieved.

23220. Jan. 29.—Authorizing British Columbia Public Works Department to build highway crossings over C.P.R. at two points near Malakwa.

23221. Jan. 28.—Approving Edmonton, Dunvegan & British Columbia Ry. location, mileage 307 to 331.89.

23222. Jan. 29.—Authorizing Canadian Northern Ry. to build across and divert highway between Secs. 15 and 16-28-2, w. 4 m., Alta.

23223, 23224. Jan. 28.—Relieving G.T.R. from

providing further protection at crossings 3 miles west of St. Thomas, and at Sundridge, Ont.

23225. Jan. 27.—Relieving C.P.R. from providing further protection at crossing at mileage 107.4, West Nissouri Tp., Ont.

23226. Jan. 30.—Approving location of Canadian Northern Ry. third class station at Dinsmore, Sask.

23227. Feb. 1.—Ordering G.T.R. to stop train no. 1 at Kerwood, Ont., to discharge passengers from London, or points beyond.

23228. Feb. 1.—Rescinding order 20630, Oct. 22, 1913, re operation by Canadian Northern Ry. and G. T. Pacific Ry. over crossing at Camrose, Alta., with leave to either of them to apply for permission to operate interlocking plants there.

23229. Feb. 1.—Extending, to Apr. 15, time within which Esquimalt & Nanaimo Ry. shall install bell at crossing of Victoria and Campbell River trunk road, south of Duncan Station, B.C., as required by order 23038, Dec. 23, 1914.

23230. Jan. 28.—Authorizing Imperial Bank of Canada, Niagara Falls Branch, to pay to G.T.R. \$2,000, with accrued interest, in connection with building of spur for Standard Crushed Stone Co., Windmill Point, Ont.

23231, 23232. Feb. 2.—Suspending until further ordered, 12 tariffs of New York Central Rd., 7 tariffs of Ottawa & New York Ry., 2 tariffs of Boston & Maine Rd., and 3 tariffs of Maine Central Rd., in so far as they increase rates between stations in Canada.

23233. Jan. 30.—Authorizing City of Montreal to extend Cadillac St. across C.N. Quebec Ry.

23234. Feb. 2.—Amending order 23013, Dec. 18, 1914, re Saskatchewan Government road over Canadian Northern Ry. in n.e. ¼ Sec. 33-43-16, w. 3 m.

23235. Feb. 1.—Authorizing C.P.R. to build branch for P. Lariviere, Montreal.

23236. Feb. 1.—Certifying correction in plan of C.P.R., Regina-Saskatoon and North Saskatchewan Branch, mileage 43.2 to mileage 132.69.

23237, 23238. Feb. 1, 2.—Authorizing C.P.R. to remove regular agents at Flower and Newtonville stations, caretakers to be appointed.

23239. Feb. 1.—Amending order 23091, Jan. 7, re C.P.R. siding for American Tar Products Co., La Salle, Que.

23240, 23241. Feb. 3.—Authorizing G.T.R. and Erie and Ontario Ry. (T.H. & B.R.) to operate over crossings in Moulton Tp. and Dunnville, Ont., without first stopping trains.

23242. Feb. 1.—Recommending to Governor-in-Council for sanction lease dated Oct. 4, 1914, between Fredericton & Grand Lake Coal & Ry. Co. and C.P.R.

23243, 23244. Feb. 1.—Approving agreements between Bell Telephone Co. and the Kingston, Ont., Roman Catholic Diocese, Jan. 2; and Plummer, Aberdeen and Galbraith Rural Telephone Association, Jan. 15.

23245. Feb. 3.—Authorizing C.P.R. to use bridge 9.3, Edmonton, Subdivision, near Red Deer, Alta.

23246. Feb. 4.—Approving agreement between Bell Telephone Co. and Apsley Telephone Co., Jan. 21, and rescinding order 11926, Oct. 11, 1910.

23247. Feb. 3.—Approving C.N. Ontario Ry. revision between mileage 89.22 and 90.47, North Orillia Tp., Ont.

23248. Feb. 3.—Relieving Canadian Northern Ry. from providing further protection at highway crossing between Secs. 21 and 22, Crozier Tp., Ont.

23249. Feb. 2.—Ordering G.T.R., within 60 days, to install improved type of automatic bell at crossing near Oakville, Ont., 20% of cost to be paid out of railway crossing fund.

23250. Feb. 1.—Ordering that C.P.R. and G.T.R. at Arnprior, Ont., be connected to provide reasonable receiving, forwarding, delivering and interswitching of traffic, work to be done by G.T.R., cost to be paid, half by G.T.R. and half by Gillies Bros.; cost of maintenance and protection to be paid by G.T.R.; work to be commenced by May 1 and completed within 30 days.

23251. Feb. 3.—Authorizing G.T.R. to build or rebuild bridges 69, near Harrisburg, Ont.; 28 and 27, near Paris, Ont.; 26 and 22, over Clarence St., Brantford, Ont.

23252. Feb. 6.—Approving clearances between poles already erected and nearest rail of London and Port Stanley Ry., and authorizing with respect to poles to be erected, a clearance of 7½ ft.

23253. Feb. 5.—Authorizing London St. Ry. and G.T.R. to operate half-interlocking plant on Dundas St., London, Ont.

23254. Feb. 5.—Authorizing Canadian Northern Ry. to open for traffic its line from junction with Camrose-Strathcona line to junction with Edmonton, Yukon & Pacific Ry., at Strathcona, Alta., 0.6 miles.

23255. Feb. 5.—Establishing collection and delivery limits of Canadian Northern Express and American Express Cos., in Fort Frances, Ont.

23256. Feb. 5.—Approving agreement between Bell Telephone Co. and Thamesville Telephone Co., Jan. 25, and rescinding order 6892, Apr. 26, 1909.

23257. Feb. 5.—Authorizing C.P.R. to use bridges 24, near Jasper; and 3.6, near Chauviere Jct., Ont.

23258. Feb. 5.—Relieving G. T. Pacific Branch Lines Co. from erecting fences, gates and cattle-guards from mileage 0 to 97, Melville-Regina Branch, Sask.

23259. Feb. 8.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build across highways between Tp. 78-26, w. 5 m. and Tp. 78-1, w. 6 m.; and between s. e.  $\frac{1}{4}$ , Sec. 13-78-3 and unsubdivided portion Tp. 78-2, w. 6 m., Alta.

23260. Feb. 8.—Authorizing Wabash Rd. to operate over crossing of Erie & Ontario Ry. (T. H. & B. R.) in Moulton Tp., Ont.

23261. Jan. 29.—Authorizing C.P.R. to build two sidings for J. Aybram, St. Elizabeth Parish, Joliette County, Que.

23262. Feb. 8.—Relieving C.P.R. from providing further protection at crossing of first public highway west of Lake Shore Jct., Ont.

23263. Feb. 8.—Approving agreement between Bell Telephone Co. and Katevale Telephone Co., Jan. 28.

23264. Feb. 9.—Approving location of C. N. Alberta Ry. proposed station and section house at Carrot.

23265. Feb. 9.—Approving Ottawa & New York Ry. bylaw re preparing tariffs of tolls, and rescinding order 13555, May 2, 1911.

23266. Feb. 9.—Approving St. Lawrence & Adirondack Ry. bylaw re preparing and issuing tariffs of tolls, and rescinding order 13815, June 1, 1911.

23267. Feb. 15.—Authorizing Hydro-Electric Power Commission of Ontario to erect wires across C.P.R. track and telegraph wires at Adelaide St., Chatham, Ont.

23268. Feb. 9.—Authorizing clearance at Windsor Sand & Gravel Co.'s siding at Viney, Ont.

23269. Feb. 9.—Approving location of Canadian Northern Ry. freight and passenger shelter at Entwistle, Alta.

23270. Feb. 9.—Ordering C.P.R. to restore train service between Lindsay and Bobcaygeon, Ont., commencing with opening of navigation.

23271. Feb. 11.—Extending, to Apr. 14, time within which Great Northern Ry. shall complete station building at New Westminster, B.C., as required by order 23016, Dec. 14, 1914.

23272. Feb. 10.—Rescinding order 23232, Feb. 2, in so far as it relates to Maine Central Rd. tariff, C.R.C. no. C. 832, effective Feb. 15.

23273. Feb. 10.—Extending, until Sept. 1, time within which Campbellford, Lake Ontario & Western Ry. (C.P.R.) may operate siding across G.T.R. at mileage 89.9, Murray Tp., Ont.

23274. Feb. 11.—Relieving C.P.R. from providing further protection at crossing of public road, Grand Cote Concession, Berthier Parish, Ont.

23275. Feb. 11.—Approving proposed changes in Edmonton, Dunvegan & British Columbia Ry. right of way, to afford sufficient width for station at Morinville, Alta.

23276. Feb. 11.—Authorizing C. N. Ontario Ry. to build bridge across McCarthy Creek, mileage 268.11 west of Ottawa, Gibbons Tp., Nipissing District, Ont.

23277. Feb. 11.—Ordering G.T.R., by June 1, to install improved type of automatic bell at crossing of Concession St., Casselman, Ont.; 20% of cost to be paid out of railway grade crossing fund; G.T.R. to remove section house east of Sealey St., so line of vision when approaching crossing from northwest may not be blocked.

23278. Feb. 8.—Ordering C.P.R., by June 1, to install improved type of automatic bell at crossing of highway in n. w.  $\frac{1}{4}$  Sec. 7-12-23, w. 3 m. Mapot municipality, Sask.

23279. Feb. 5.—Authorizing C. N. Ontario Ry. to build across St. Laurent Road, Cartierville, Que.; and rescinding order 18384, Dec. 23, 1912.

23280. Feb. 10.—Dismissing application of Fort William Board of Trade for order requiring establishment of cartage service at Fort William; or for abolition of railway companies' custom of collecting consignor's cartage from consignees.

23281. Feb. 9.—Dismissing application of Fort William Board of Trade for abolition of charge of 1c. per 100 lbs., minimum \$5 per car, for switching goods for or from steamships between sidings and docks at Fort William.

23282. Feb. 10.—Dismissing application of Fort William Board of Trade for order requiring railway companies to lower all rates from head of lakes to points west by  $2\frac{1}{2}$ c. per 100 lbs., and make tariffs read, "Rates are exclusive of wharfage at Fort William, Port Arthur and West Fort."

23283. Feb. 11.—Authorizing Canadian Northern Ry. to build spur to serve Dominion Government terminal elevator at Saskatoon, Sask.

23284. Feb. 11.—Authorizing Canadian Northern Ry. to build spur near Rosetown, Sask., to connection with C.P.R.; Drumheller Mines to deposit to the Board's credit in a chartered bank at Moose Jaw \$2,500; C.N.R. to refund to Drumheller Mines by way of rebate, \$2 a car, until \$2,500 is repaid.

23285. Feb. 10.—Authorizing St. Jerusalem d'Argenteuil municipality, Que., to build New Monty Road across C.P.R. and C. N. Quebec

Ry. at points as shown on plans on file with the Board; provided brushwood at crossing of C.P.R. is removed.

23286. Feb. 12.—Authorizing C.P.R. to build spur for Crow's Nest Stone Co. in s. e.  $\frac{1}{4}$  Sec. 12-7-2, w. 4 m., and rescinding order 19482, June 6, 1913.

23287. Feb. 12.—Authorizing Alberta Public Works Department to build highway over C.P.R. in n. w.  $\frac{1}{4}$ , Sec. 36-39-23, w. 4 m.; cost of crossing to be paid by C.P.R.

23288. Feb. 15.—Amending order 13993, June 12, 1911, re location of Lachine, Jacques Cartier & Maisonneuve Ry. (G.T.R.), and authorizing L. J. C. & M. Ry. to cross Montreal Tramways Co.'s line overhead, with a clearance of 15 ft., so that use of M. T. Co.'s track will not be interfered with.

23289. Feb. 12.—Authorizing C.P.R. to build road diversion in Sec. 17-8-17, w. 2 m., and build its Weyburn-Stirling Branch across same at mileage 19.61.

23290. Feb. 15.—Authorizing C.P.R. to build extensions to Provincial Reformatory siding, Guelph Tp., Ont.

23291. Feb. 13.—Authorizing C.P.R. to use bridges 24.2, 7.17 and 10.8, Port Burwell Subdivision; 103.25, Hamilton and Goderich Subdivision, and 33.6, Bobcaygeon Subdivision, Ont.

23292. Feb. 15.—Relieving Canadian Northern Ry. from providing further protection at crossing of highway near Elgin, Man.

23293. Feb. 13.—Authorizing G.T.R. to use bridges 278, over Nottawasaga River; 274, near Palgrave station; 265, near Inglewood station; 263a, near Georgetown station, and 262, and Stewarton viaduct, in Ontario.

23294. Feb. 13.—Prohibiting Windsor, Essex and Lake Shore Rapid Ry., until further order, from operating its cars over crossing of Gravel Road, near Windsor, Ont., when gates are down on Michigan Central Rd. crossing.

23295. Feb. 15.—Approving location C.N. Alberta Ry. combined station and section house at Bilby, Alta.

23296. Feb. 15.—Approving plans of Edmonton, Dunvegan and British Columbia Ry. station B.

23297. Feb. 15.—Approving location of G.T. Pacific Branch Lines Co.'s station at Gerrond, Sask.

23298. Feb. 12.—Authorizing C.N. Ontario Ry. to build across and divert Petit Bois Franc Road, Cartierville, C.N.Q.R. to pay to Town of Cartierville \$12,000 as soon as road is legally closed, when all its responsibility shall cease; remainder of cost of diversion to be paid half each by Towns of Cartierville and St. Laurent.

23299. Feb. 15.—Amending order 12321, Nov. 18, 1910, re electric bell installation by C.P.R. at Cote des Niegues Road, Hochelaga County, Que.

23300. Feb. 15.—Extending to May 15, time within which G.T.R. shall install bell at crossing of highway, near Oakville station, Ont., as required by order 23249.

23301. Feb. 18.—Authorizing C.P.R. to build trestle over its main Branch, Toronto, at mileage 2, from Leaside Jct., provided vertical clearance be 22 $\frac{1}{2}$  ft.

23302. Feb. 18.—Relieving Canadian Northern Ry. and G.T. Pacific Ry. from maintaining night signalman at crossing at Camrose, Alta.

23303 to 23305. Feb. 8.—Relieving G.T. Pacific Branch Lines Co. from erecting fences, gates and cattle guards on its Melville-Canora Branch between mileage 0 and 54.72; and on its Moose Jaw Northwest Branch, mileage 0 to 66.6; and on its Regina-Moose Jaw Branch, mileage 0 to 43.3, Sask.

23306. Feb. 18.—Dismissing application of City of London, Ont., for order directing G.T.R. to provide electric bell at crossing of Dundas St.; speed of trains limited to 10 miles an hour.

23307. Feb. 19.—Approving order by Exchequer Court of Canada appointing T. J. Kennedy and V. Harcourt, Receivers of Algoma Central and Hudson Bay Ry. Co.

23308. Feb. 19.—Approving revised location of C.P.R. Swift Current Northwesterly Branch, from Sec. 17-23-29, w.3.m., mileage 111.96, northwesterly to Sec. 24-23-1, w. 4 m., mileage 112.56.

23309. Feb. 19.—Amending order 23274, Feb. 11, re C.P.R. highway crossing in Grand Cote Concession, Berthier Parish, Ont.

23310. Feb. 18.—Relieving C.N. Ontario Ry. and Canada Cement Co., from maintaining night signalman to operate interlocking plant at Belleville, Ont.

23311. Feb. 19.—Relieving Canadian Northern Ry. from providing further protection at crossing south of Mount Albert station, Ont.

23312. Feb. 22.—Authorizing C.P.R. to use bridge 814, Winnipeg Beach Subdivision, Man.

23313. Feb. 19.—Authorizing Erie & Ontario Ry. and Michigan Central Rd. to operate trains over crossing near Attercliffe, Ont., without first stopping.

23314. Feb. 19.—Relieving Canadian Northern Ry. from erecting fences, gates and cattle guards along portions of its line, between North Bay and Port Arthur, Ont.

23315. Feb. 19.—Relieving C.P.R. and Canadian Northern Ry. from maintaining night signalman to operate interlocking plant in Lot 101, St. Paul's Parish, Man.

23316, 23317. Feb. 20, 22.—Authorizing C.P.R. to use bridge 42.2, Drummondville Subdivision, Que., and bridges at Main St., Parkside St., Scotia St., and East Kildonan Road, Kildonan, Man.

23318. Feb. 20.—Authorizing Esquimalt and Nanaimo Ry. to build spur for Weeks Dunnel Cedar Co., Fanny Bay, Vancouver Island, B.C.

23319. Feb. 20.—Approving plan of Smith Patterson Drain under Michigan Central Rd., Brooke Tp., Ont.

23320, 23321. Feb. 22.—Approving location of Edmonton, Dunvegan & British Columbia Ry., through Tp. 78, R. 6 and 10, w. 6 m., Alta., mileage 359.416 to 385, and through Tps. 78 and 79, R. 10 and 13, w. 6 m., Alta., mileage 385 to 410.45.

23322. Feb. 20.—Rescinding orders 16181, Mar. 26, and 17763, Oct. 16, 1912, in so far as they authorize Lachine, Jacques Cartier and Maisonneuve Ry. (G.T.R.) to be built across Iberville and De Fleurimont Sts., Montreal; and authorizing it to cross Iberville St. by bridge 50 ft. wide, carrying highway in straight line over railway, bridge to be so built as to serve De Fleurimont St. as well; dismissing application to divert Comte St.; order 16181 to be amended to provide for bridge, 40 ft. wide, for vehicular and pedestrian traffic only, over Comte St.; rescinding order 16181, in so far as it authorizes level crossing at Poupart St., with leave to applicant to divert Poupart St. along east side of right of way into Comte St., or, at its option, to build bridge carrying said street over railway.

23323. Feb. 22.—Approving Great Northern Express Co.'s resolution authorizing Ronald Stewart, Vice President and General Manager, to prepare tariffs for traffic over its lines in Canada.

23324. Feb. 22.—Dismissing C.P.R. application to remove regular agent at Lavant Station, Ont.

23325. Feb. 22.—Authorizing Canadian Northern Ry. to discontinue its agents at Lavoy, Alta.; Devlin, Ont.; Homewood, Man.; Ridpath, Sask.; Brunkild, Rosebank, Underhill, Man.; St. Gregor, Sask.; Neelin and Warren, Man.

23326. Feb. 22.—Dismissing Canadian Northern Ry. applications to remove agents at Mafeking, St. Laurent, Cardale, Decker, Woodnorth and Fairfax, Man.; Mikado, D'Arcy, Norquay, Beadle, Weldon, Waseca, Pinkham, Willmar and Brooking, Sask.; Minburn, Alta.; and Sleeman, Ont.

23327. Feb. 22.—Authorizing C.P.R. to discontinue agents at Purple Springs, Alta.; Beverly, Sask.; and Tilley, Alta.; caretakers to be appointed.

23328. Feb. 22.—Relieving G.T. Pacific Branch Lines Co. from erecting fences along portions of its Regina-Boundary Branch, mileage 0 to 175, Sask.

23329. Feb. 22.—Approving revised location of C.P.R. Weyburn-Stirling Branch from mileage 316.63 to 358.31, Sec. 25-3-1 to Sec. 12-6-7, w. 4 m., Alta.

23330. Feb. 22.—Rescinding order 15911, Feb. 5 1912, and authorizing C.P.R. to build road diversion in n. e.  $\frac{1}{4}$  Sec. 13-18-17, w. 3 m., Sask.; and build its Swift Current Northwesterly Branch at grade across same at mileage 21.03.

23331. Feb. 22.—Authorizing C.P.R. to discontinue agents at Appin, Brechin and Bethany, Ont.; caretakers to be appointed.

23332. Feb. 23.—Ordering C.P.R. and Western Canada Power Co. jointly to file supplements to C.P.R. Special Joint Tariffs, C.R.C. nos. W-1615 and 1806; also C.R.C. nos. W-1790, 1812 and 2000, being respectively, Transcontinental Freight Bureau's S.R. 1019, 17-A, and 18-B, providing joint rates from Stoltze Mfg. Co.'s mill to destinations shown in said tariffs, via Ruskin, B.C., which shall not exceed rates from Ruskin to same destinations by more than 2c per 100 lbs.; Western Canada Power Co. to receive 3c per 100 lbs. as its proportion, and rescinding order 23213, Jan. 26.

23333. Feb. 23.—Authorizing C.P.R. to build extension to spur for British Sand and Gravel Co., St. Felix de Valois Parish, Que.

23334. Feb. 24.—Approving proposed location C.N. Alberta Ry. combined station and section house at Bliss.

23335. Feb. 23.—Approving proposed location of Canadian Northern Ry. standard freight and passenger shelter at Anerley, Sask.

23336 to 23340. Feb. 24, 23.—Approving proposed location C.N. Alberta Ry. combined stations and section houses at Bedson, Darwall, Obed, Mount Gelkie and Scrivan.

23341 to 23345. Feb. 23.—Authorizing C.P.R. to remove agents at Jeanette, Ont.; Chelsea, Que.; West Montrose, McAlpin, and Grasshill, Ont.

23346. Feb. 22.—Authorizing Canadian Northern Ry. to discontinue agents at Beaver, Man.; Hawick, Alta.; Berton and Ladysmith, Man.; Chandler, Sask.; and Banning, Ont.

23347. Feb. 24.—Authorizing Swift Current Rural Municipality, No. 137, Sask., to build highway over C.P.R. through Sec. 9-15-15, w. 3 m.; after construction, municipality consenting, C.P.R. may close portion of original road allowance north of n. e.  $\frac{1}{4}$  Sec. 9-15-15, w. 3 m., within its right of way.

23348. Feb. 24.—Approving location C.P.R. station at Govenlock, Sask., mileage 307.5, Weyburn-Stirling Branch, station to be C.P.R. standard structural plan A2.

23349. Feb. 24.—Approving proposed location of C.N. Alberta Ry. combined stations and section houses at Brule and Henry House.

23351. Feb. 23.—Approving agreements between Bell Telephone Co. and Sunderland Telephone Co., Stroud Telephone Co., Johnson Tp. municipality, and Tarbutt and Tarbutt Additional Tp. municipality.

23352. Feb. 25.—Approving clearance on C.P.R. at conveyor, to be installed by William Neilson Co., at Beachville, Ont.

23354. Feb. 24.—Relieving G.T.R. from providing further protection at crossing near Rideau Station, Ont.

23355. Feb. 24.—Approving proposed location of Canadian Northern Ry. standard freight and passenger shelters at Surbiton, Sask.

23356. Feb. 25.—Authorizing Western Canada Power Co. to build extension of its line from Stave Falls, B.C., over power house dam to Stave River, about 800 ft. above power house dam.

23357. Feb. 25.—Authorizing G.T.R. to use bridge 15 across Welland Canal, between St. Catharines and Port Dalhousie, Ont.

23359. Feb. 26.—Relieving Canadian Northern Ry. and G.T.R. from maintaining night signalman near Washago, Ont.

23360. Feb. 26.—Ordering C.P.R. fencing of portion of right of way, between mileage 58.6 and 103.6, Thompson Subdivision, and mileages 0.2 and 39.75, Cascade Subdivision, B.C.; be commenced by Apr. 1 and completed within 30 days.

23361. Feb. 26.—Extending to Dec. 31 time within which C.P.R. shall equip cabooses with marker sockets in lower position, as required by general order 127, July 6, 1914.

23362. Feb. 25.—Approving agreement between Bell Telephone Co. and Village of Blyth, Ont., Feb. 19.

23363. Feb. 27.—Approving revision in Edmonton, Dunvegan and British Columbia Ry. through Sec. 28-56-55, w. 4 m., mileage 29.

23364. Feb. 27.—Approving Bell Telephone Co. agreement with Laird Tp., Ont., and rescinding order 9653, Feb. 21, 1910.

23365. Feb. 26.—Authorizing G.T.R. to use bridge, mileage 330.11, over Carlaw Ave., Toronto.

23366. Feb. 26.—Authorizing G.T.R. to suspend operation of half-interlocking plant for 8 weeks from date pending completion of repairs required at crossing of London St. Ry., on Dundas St. London, Ont.

23367. Feb. 27.—Authorizing C.P.R. to use bridge 52.3, near Ardendale, Ont.

23368. Mar. 1.—Approving Bell Telephone Co. agreement with Tarentorus Telephone Co., Feb. 19, and rescinding order 12251, Nov. 11, 1910.

23369. Feb. 27.—Authorizing City of Lachine, Que., to build foot subway under G.T.R., at intersection of 6th Ave. and 7th Ave.

23370. Mar. 3.—Dismissing complaint of Quebec and St. Maurice Industrial Co., Berlin, N.H., against discontinuance by Quebec and Lake St. John Ry. of through train service between La Tuque and Rivière a Pierre Jet., Que.

23371. Feb. 27.—Amending order 22845, Nov. 7, 1914, re farm crossing of Dominion Atlantic Ry. at Deep Brook, N.S.

23372. Mar. 3.—Approving location of C.P.R. station at Robsart, Sask.

23373. Feb. 27.—Relieving C.N. Ontario Ry. and C.P.R. from maintaining night signalman at crossing near Hurdman's Bridge, Nepean Tp., Ont.

23374. Feb. 27.—Relieving C.N. Ontario Ry. and C.P.R. from maintaining night signalman at Tweed, Ont.

23375. Feb. 26.—Ordering G.T.R. and Canadian Northern Ry. jointly to publish and file tariff of joint rates to apply on coal in carloads, minimum of 15 gross tons, shipped from Prescott, Ont., to all points on the portion of C.N.R. formerly known as Brockville, Westport and Northwestern Ry., via Lyn; G.T.R. proportion of rates to be 56c a gross ton, including switching from Ogdensburg ferry dock; C.N.R. proportion thereof to be less than its local mileage rates on coal by amounts corresponding to reduction made by G.T.R. from its local mileage rate, having regard to mileage in each case.

23376. Mar. 2.—Ordering City of Fort William, Ont., to pave and drain subway where C.P.R. crosses Syndicate Ave., work to be completed by Aug. 1.

23377. Mar. 5.—Ordering G.T. Pacific Ry. to carry freight to and from St. Louis, Sask.; to supply freight box car at point convenient to public highway leading to St. Louis, to be used as receptacle for less than carload freight; such service to be inaugurated forthwith.

23378. Mar. 4.—Extending to Aug. 1, time within which Campbellford, Lake Ontario and Western Ry. (C.P.R.) may use crossing by its ballast pit spur under Canadian Northern Ry. in e. ¼ Lot 12, Con. 4, Scarborough Tp.

23379, 23380. Mar. 5.—Approving plan and specifications of improvement to Gernhelder

drain under C.P.R. Guelph and Goderich Branch on Lots 33 and 34, Con. 17, Elma Tp., Ont.

23381. Mar. 4.—Authorizing C.P.R. to remove agent from Hawk Lake, Ont.

23382. Mar. 3.—Authorizing Hamilton Cataract Power, Light and Traction Co. to erect transmission line across G.T.R. on Lot 34, Con. 1, Saltfleet Tp., Ont.

23383. Mar. 5.—Extending to Apr. 15 time within which Great Northern Ry. shall install bell at crossing of Front St., near intersection of Columbia St., New Westminster, B.C.

23384. Mar. 5.—Authorizing C.N. Ontario Ry. to build across public road between Lots 230 and 232, St. Eustache Parish, and rescinding order 13061, Feb. 20, 1911.

23385. Mar. 5.—Relieving C.P.R. from providing further protection at crossing of Dundas Road, mileage 7, Lambton, Ont.

23386. Mar. 4.—Authorizing C.P.R. to build extensions to sidings of Cataract Jct. Sand and Gravel Co. in Lot 4, Con. 3, Caledon Tp., Ont.

23387, 23388. Mar. 4, 5.—Authorizing C.P.R. to make alterations to spurs for Laidlaw Lumber Co., Guelph, Ont., and Godson Contracting Co., Darlington Tp., Ont.

23389. Mar. 2.—Authorizing C.N. Ontario Ry. to build across Monkland Boulevard, Cartierville, Que.

23390. Mar. 2.—Authorizing C.N. Quebec Ry. to build sidings across Stadacona and Marlboro Sts., Montreal.

23391. Mar. 4.—Suspending, pending Board's decision in general application of railway companies operating in Eastern Canada for increased freight rates, Supplement 6 to C.P.R. Tariff, C.R.C. no. E-2919, in so far as it proposes to cancel Item 136.

23392. Mar. 4.—Ordering C.P.R. to accept shipments of such perishable freight as beer, fruit and vegetables, for carriage in heated cars to stations on such days of each week as are duly announced by company, subject to conditions, that shipper sign release waiving all claim for damages by frost, unless shown heating appliances were in fact missing, or heaters were allowed to fail of their purpose as a result of negligence of C.P.R. employees; damages recoverable against company limited to half freight tolls charged; order to apply only to shipments of Fernie-Fort Steele Brewing Co., and Elk Valley Brewing Co., and any others who may apply for same service on C.P.R. west of Port Arthur, during winter of 1915-1916.

23393. Mar. 4.—Relieving C.P.R. and C.N. Ontario Ry. from maintaining night signalman at Brechin, Ont.

23394. Mar. 5.—Authorizing C.P.R. to use bridge over Westminster Road, Lethbridge, Alta.

23395. Mar. 8.—Authorizing C.P.R. to build extension to siding for I. Desormeau, St. Martin Parish, Que.

23396. Mar. 8.—Approving change in location of C.P.R. Swift Current Northwesterly Branch from mileage 6.61 to 7.52, n.e. ¼ Sec. 17, and s.e. ¼ Sec. 20-37-11, w. 4 m., Alta.

23397. Mar. 9.—Amending order 23375, Feb. 26, re G.T.R. and Canadian Northern Ry. tariffs relating to case shipments from Prescott, Ont.

23398. Mar. 8.—Ordering C.P.R. to build and divert highway between Secs. 22 and 23-21-12, w. 2 m., west of Balcarres, Sask.

23399. Mar. 9.—Relieving G.T.R. from providing further protection at crossing near Brampton, Ont.

23400. Mar. 9.—Rescinding order 14446, July 31, 1911, re C.P.R. road diversion along south boundary of Sec. 27-32-17, w. 2 m., Sask.

23401. Mar. 8.—Ordering International Bridge and Terminal Co. to appoint day and night watchmen to protect crossing of Church St., Fort Frances, Ont., pending rearrangement of tracks.

23402. Mar. 10.—Approving C.P.R. clearances at tie loading platform and loading jack on siding at mileage 79.37, Sudbury Subdivision, Mowat Tp., Ont.

23403. Mar. 10.—Approving location of C.N. Alberta Ry. combined station and section house, n.w. ¼ Sec. 19-53-15, w. 5 m.

23404. Feb. 8.—Amending order 21753, May 2, 1914, re highway crossing by G.T.R. at Stoney Creek, Ont.

23405. Mar. 12.—Approving location of C.N. Alberta Ry. combined station and section house at Marlboro.

23406. Mar. 12.—Authorizing C.P.R. to build highway over its right of way on regular road allowance east of Sec. 21-12-28, w. 3 m., Sask.

23407. Mar. 12.—Rescinding order 23294, Feb. 12, and ordering Windsor, Essex and Lake Shore Rapid Ry. flag its cars over crossing at Gravel Road near Windsor, Ont., when gates are down on M.C.R. crossing.

23408. Mar. 11.—Ordering Esquimalt and Nanaimo Ry. to build highway crossing at Waterloo, near mileage 64, Bright and Cranberry Districts, B.C.; cost to be paid by British Columbia Public Works Department.

23409. Mar. 11.—Authorizing Niagara, St. Catharines and Toronto Ry. to build spur for W. A. Griffiths, Lot 7, Con. 1, Grantham Tp., Ont.

23410. Mar. 11.—Authorizing C.P.R. to divert road allowance between Secs. 12 and 13, and between Secs. 11 and 12-41-26, w. 3 m., Sask.

23411. Mar. 15.—Approving revised location G.T. Pacific Branch Lines Co., Cutknife Branch, in s. ½ Sec. 29-44-22, w. 3 m., Sask.

23412. Mar. 11.—Authorizing C.P.R., pending further order, to remove regular agent at Vermillion Bay station, Ont., and to appoint caretaker.

23413. Mar. 15.—Ordering C.P.R. to install improved type of automatic bell at crossing at Martinon station, N.B.; 20% of cost to be paid out of railway grade crossing fund.

23414. Mar. 13.—Approving agreement between Bell Telephone Co. and West Garafraxa Telephone Co-operative Association, Ltd., Feb. 19.

23415. Mar. 12.—Ordering C.P.R. to build farm crossing over its Stobie Branch on Lot 4, Con. 5, McKim Tp., Ont.; 300 ft. north of south boundary of R. A. Waite's property; cost to be paid by R. A. Waite; work to be completed by Apr. 1.

23416. Mar. 12.—Dismissing Esquimalt and Nanaimo Ry.'s application to remove its regular station agent at Cowichan, B.C.

23417. Mar. 16.—Authorizing C.P.R. to build spur for Canada Ingot Iron Culvert Co., Calgary, Alta.

23418. Mar. 16.—Relieving C.N. Ontario and G.T.R. from providing signalman at crossing of G.T.R. spur to Edwards' Mill, Rockland, Ont.

23419. Mar. 16.—Amending order 23353, Feb. 25, re C.P.R. clearances at Beachville, Ont.

23420. Mar. 18.—Relieving Brantford and Hamilton Electric Ry. from providing further protection at highway near Ancaster station, Ont.

23421. Mar. 16.—Approving revised location of G.T. Pacific Branch Lines Co.'s Moosejaw Northwest Branch through n.e. ¼ Sec. 19-18-28, w. 2 m., Sask.

23422. Mar. 16.—Ordering C.P.R. to install, by June 1, improved type of automatic bell at main highway crossing between Ketepec and Acamac, N.B.; 20% of cost to be paid out of the railway grade crossing fund.

23423. Mar. 17.—Authorizing Kettle Valley Ry. to build bridge 20.3 over Twenty Mile Creek, Coquihalla Section, B.C.

23424. Mar. 20.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) and G.T.R. to operate trains over crossings at mileage 119.90, 119.91 and 120.02, Cobourg, Ont., without stopping, and rescinding order 23111, Jan. 11.

23425. Mar. 20.—Authorizing Glengarry and Stormont Ry. (C.P.R.) and G.T.R. to operate trains over crossing near Cornwall, Ont., without stopping.

23426. Mar. 20.—Ordering C.N. Ontario Ry. to restore certain passenger train service from Trenton to Bancroft and Maynooth.

23427. Mar. 17.—Authorizing C.N. Ontario Ry. to operate two spurs for Haight & Dickson Lumber Co., Capreol Tp., Ont.

23428. Mar. 16.—Approving location C.N. Alberta Ry. second class station at Tollerton.

23429. Mar. 16.—Approving location of Canadian Northern Ry. third class station at Forgan, Sask.

23430. Mar. 17.—Approving clearances of C.P.R. new standard three car stockyard and loading chute.

23431. Feb. 23.—Ordering C.P.R. to appoint agent at Mozart station, Sask., during grain shipping season.

23432 and 23433. Mar. 22.—Authorizing C.P.R. to use bridge 62.8 over Magnetawan River, near Byng Inlet, Ont., and bridge 18.1, Moosejaw Subdivision, Sask.

**F. P. Gutelius, M. Can. Soc. C.E.**, who was appointed General Manager, Canadian Government Railways, Moncton, N.B., Mar., 1912, became a British subject Feb. 23, 1912, the naturalization certificate being granted by a judge of the Circuit Court of Montreal on that date. This information was given in the House of Commons recently by the Secretary of State in reply to the member for Temiscouata.

**A Quebec Court** has decided in the case of Couture against the G.T.R., that the company is responsible for accidents to employees, when it does not enforce its safety rules. Couture met with an accident when coupling cars which were in motion. The company pleaded contributory negligence, and the plaintiff retorted that the regulation against coupling cars while in motion was not enforced by the company.

**National Transcontinental Ry. Temporary Service.**—Senator Loughheed stated in the Senate, Mar. 16, that the Government is paying at the rate of \$5.35 a mile for the weekly train service on the N.T.R. west of Cochrane, Ont.

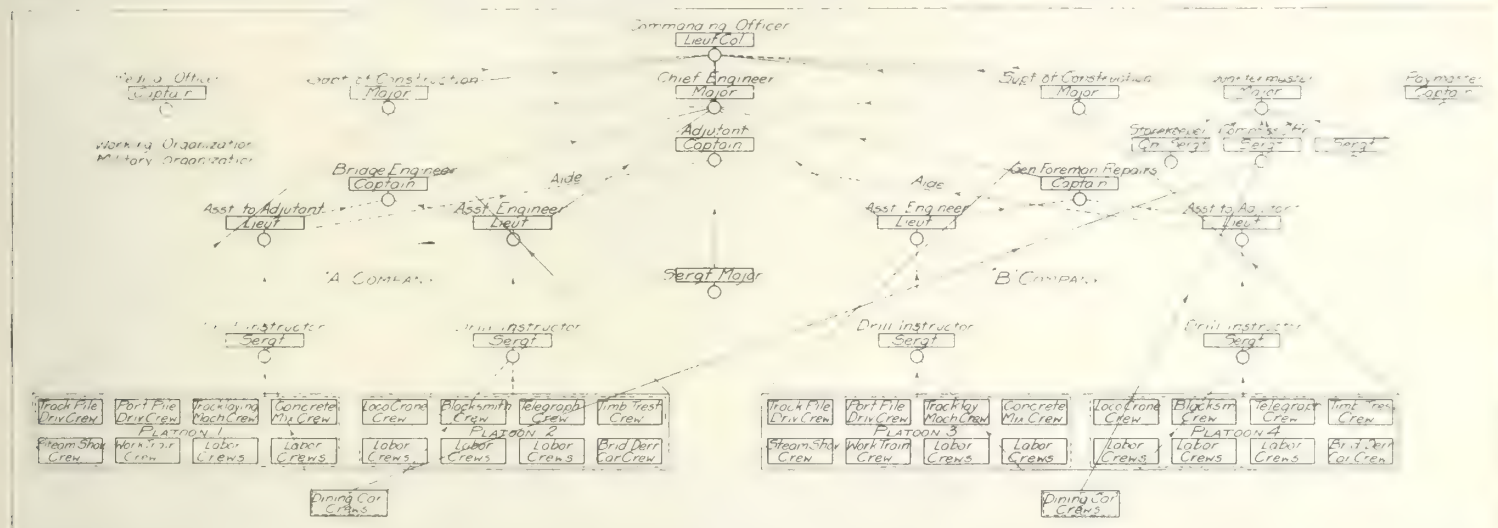

# Organization of Canadian Overseas Railway Construction Corps.

The British War Office asked the Dominion Government recently to arrange for the recruiting in Canada of a force of a little over 500 men for railway repair and reconstruction work in Europe during the continuance of the war. At the request of the Dominion Government the C.P.R. management, through the President, Sir Thos. G. Shaughnessy, undertook the organization of such a corps and to name the officers and select the men. The organiza-

will rank as captain; a paymaster, who will rank as captain, and a medical officer, who will rank as captain.

The corps will be divided into two companies, A and B, each under the command of a major, who will be superintendent of construction, with a captain as a second in command, the captain of A company being bridge engineer, and the captain of B company being general foreman of repairs. Each company will be divided into two pla-

commander. For working purposes each company will be directly under the command of the company major, who, as above stated, will be superintendent of construction. The right platoon of each company will consist of a locomotive crane crew, blacksmith crew, telegraph crew, timber trestle crew, bridge derrick car crew and three labor crews. The left platoon will consist of track pile driver crew, portable pile driver crew, track laying machine crew, concrete mixing crew, steam shovel crew, work train crew and two labor crews. Each company will have a dining car crew.

Organization Chart, Canadian Overseas Railway Construction Corps.

tion is in progress under C. W. P. Ramsey, Engineer of Construction, Eastern Lines, C. P.R., Montreal, who has been granted extended leave of absence and who will rank as lieutenant colonel in command.

The force, which is to be mobilized at St. John, N.B., will have a regimental staff comprising the commanding officer, who will rank as lieutenant colonel; a chief engineer, who will rank as major; a quartermaster, who will rank as major; an adjutant, who

toons under the command of a lieutenant, one of whom in each company will be assistant engineer and the other assistant to the adjutant. The strength of each company outside of the officers will be 252 men. The organization is shown in the accompanying chart. Each company will be identical in its makeup. Under each platoon commander there will be a sergeant drill instructor, who will provide for the military instruction under the supervision of the platoon

The C.P.R. has given official notice that the 507 skilled railway constructors to be enlisted will be apportioned as shown in the accompanying table. In addition to the regular rates of pay named in the table, certain working allowances will be made for the various classes of skilled men in accordance with position and ability. Complete information can be obtained at 143 St. Antoine street, Montreal, and at the headquarters of the C.P.R. general superintendents at St. John, N.B., Toronto, North Bay, Winnipeg, Moose Jaw, Calgary, and Vancouver. Recruiting will not be confined to men in C.P.R. service.

**Alberta Expenditure on Railways.**—The Minister of Railways for Alberta informed the Legislature, Mar. 8, that in respect of the various lines for the building of which the Province had guaranteed bonds, \$33,692,541 had been realized on the securities issued, the total bonds authorized to be issued being \$40,600,450. Out of the proceeds of these bonds \$20,318,972 had been paid out to the several companies, viz., Canadian Northern Ry., \$7,389,548; Canadian North Western Ry., \$2,730,614; Grand Trunk Pacific Ry., \$3,293,067; Edmonton, Dunvegan and British Columbia Ry., \$4,902,740; Alberta and Great Waterways Ry., \$1,886,280; Lacombe and Blindman Valley Ry., \$116,623.

**Free Right of Way for Railways.**—By an order in council, dated Mar. 6, the provisions of the order in council of July 15, 1886, under which the Minister of the Interior may grant free right of way to railway companies in Manitoba, Saskatchewan and Alberta, are extended so that the Minister may grant right of way to railways incorporated by the legislatures of either of the three provinces, but which have been taken over by companies holding Dominion charters. The order is made retroactive, so as to cover the past practice of the department, such rights of way having been invariably granted.

## Suburban Type Locomotives, Grand Trunk Railway.

Six suburban type locomotives, one of which is shown in the accompanying illustration, have been delivered recently to the G.T.R. by the Montreal Locomotive Works. They have been put in service between Montreal and Vaudreuil, 24 miles, and between Montreal and St. Hyacinthe, 37 miles. Where this kind of traffic is frequent, the suburban type locomotive can be used to good advantage, for delays caused by turning are eliminated, as the suburban type can run in either direction equally well.

This traffic on the G.T.R. was formerly handled by 4-4-2 suburban type locomotives having 17 x 22 in. cylinders and a total weight of 128,600 lbs. As this traffic increased 20 x 26 in. moguls and ten wheelers were also used. New steel suburban cars, which weigh 138,000 lbs. as compared with 75,000 lbs. for the older class of car, have also been placed in service recently. As it was also desired to increase the number of cars in a train, it became necessary to design a more powerful locomotive. Former experience with the traffic and the differ-

Tank, capacity water ..... 3,500 U.S. gals.  
Tank, capacity coal ..... 5 tons.

The design in general follows the standards of the builders. An interesting feature is the combination of the Gaines combustion chamber and a Security brick arch. This combination is claimed to secure a very complete deflection of the gases, whereby better combustion is obtained; the back end of the firebox is more fully utilized, with a resulting increase in the generation of steam; and the amount of smoke is reduced to a minimum, which is so important in this kind of service. The front truck is equalized with the drivers, as it was not desired to have more than two systems of equalization. Other features are a Schmidt superheater, outside steam pipes, self centring valve stem guide, extended piston rod, the improved throttle lever bracket, which has also been applied on the mikados for this road, which were described in Canadian Railway and Marine World, Aug., 1913, long main driving box, and vanadium steel main frames.

line to Jan. 31 was \$9,768,869.23, of which \$1,009,063.15 was expended in 1912-13; \$4,498,717.25 in 1913-14, and \$4,261,088.83 to Jan. 31, 1915. It was stated in the House of Commons in answer to further questions, Mar. 4, that the total expenditure in connection with the project during 1914 had been \$4,188,379.17, of which \$2,344,891.57 had been expended on the railway proper, and \$1,843,987.60 on the Port Nelson terminals and harbor. The Marine Department expended \$45,676.77 on the project during the same period. \$40,164.98 was expended in surveying Hudson Bay and Strait between April 1 and Dec 31, 1914. (Mar., pg. 94.)

**Canadian Society of Civil Engineers.**—Ottawa branch.—An address on Railway Construction and the Public, was given by H. A. Powell, K.C., of St. John, N. B., before the Ottawa branch of the Canadian Society of Civil Engineers, Mar. 4. He contended that more than half of the money used in the construction of railways in Canada had been spent in providing lines that were unnecessary, and that a considerable portion of the amount had been expended upon the building of railways which had proved to be

Suburban Type Locomotive for Montreal Suburban Lines, Grand Trunk Railway.

ent types of locomotives used, influenced the G.T.R. officials in deciding on the suburban type for the new power. The new locomotives are handling an average train of 7 cars, whereas trains of 5 cars were the average with the former power. Following are the principal particulars:—

Traction power .....	30,940 lbs.
Factor of adhesion .....	4.7
Wheel base, driving and rigid .....	15 ft. 8 ins.
Wheel base, total .....	38 ft. 11 ins.
Weight, working order .....	262,000 lbs.
Weight, on drivers .....	146,000 lbs.
Weight, on trailers .....	67,000 lbs.
Weight, on engine truck .....	49,000 lbs.
Boiler, type .....	Straight top, radial stay.
Boiler, o.d. first ring .....	71 9-16 ins.
Boiler, pressure .....	200 lbs.
Firebox, type .....	Wide.
Firebox, length and width .....	129 x 75 1/4 in.
Crown staying, type .....	Radial.
Tubes, material .....	Cold drawn seamless steel.
Tubes, number and size .....	191 2 in.
Flues, material .....	Cold drawn seamless steel.
Flues, number and size .....	26 5 3-8 in.
Heating surface, tubes and flues .....	1,604 sq. ft.
Heating surface, firebox .....	173 sq. ft.
Heating surface, arch tubes .....	31 sq. ft.
Heating surface, total .....	1,808 sq. ft.
Superheater surface .....	347 sq. ft.
Grate area .....	47 sq. ft.
Wheels, engine truck .....	30 1/2 in. solid steel.
Wheels, driving .....	63 in. cast steel.
Wheels, trailing .....	31 in. solid steel.
Journals, driving, main and others .....	
Journals, engine truck .....	9 1/2 x 20 and 9 1/2 x 12 in.
Journals, trailing truck .....	6 1/2 x 10 1/2 in.
Journals, trailing truck .....	6 x 11 in.
Cylinders, size .....	21 x 26 in.
Valves, type .....	Piston.
Tank, type .....	Water bottom.

## Dominion Government Railway to Hudson Bay.

A press dispatch from Pas, Man., Mar. 8, says the frost is rapidly leaving the ground in the country through which the line passes, and an early start on construction is expected. The right of way has been cleared to within 40 miles of Port Nelson. The steel work for the bridge across Manitou Rapids is being taken in. It is expected that 3,000 men will be at work by the end of April along the route, and that the grading will be completed to Port Nelson by the next winter.

A press telegram from Pas, Man., credits J. W. Porter, Chief Engineer, with stating that the contract for the steel cantilever bridge across the Nelson River at Manitou Rapids has been let to Canadian Bridge Co., Walkerville, Ont.

Replying to questions in the House of Commons recently the Minister of Railways said the roadbed is completed and fully ballasted to mile 56, and is partially ballasted to mile 175. Track has been laid on 214 miles of the grading. It is expected that the line will be completed by the autumn of 1917, by which time it is expected also that it will be possible to ship grain from Port Nelson. It will require a couple of year further work on the terminals before they will be completed. The total expenditure on the

actually injurious to the trade of the country. The question was whether it was advisable to go ahead with railway construction slowly and economically or rapidly and extravagantly. He claimed that the system prevailing since Confederation had favored the latter, and advocated the formation of a new railway board, independent of political and other considerations, to report on applications for railway charters and subsidies.

**Rogers Pass Tunnel Suit.**—The action brought by J. McIlwee and Sons, Denver, Col., against Foley, Welch and Stewart, for damages on account of breach of contract, was terminated at Vancouver, B.C., Mar. 3, when judgment was given for the plaintiffs for \$31,000, with costs, which are estimated at \$30,000. The plaintiffs had a sub-contract from Foley, Welch and Stewart for boring the pioneer tunnel at Rogers Pass, on the C.P.R. After considerable work had been done and certain premiums were alleged to have been earned, disputes arose, as a result of which the contract was terminated and the McIlwee firm entered suit for breaches of contract, claiming over \$500,000 as damages, etc. The court sat for 16 days hearing evidence, most of which was of a highly technical character. In fixing the damages at \$31,000 the court held that the plaintiffs should have gone back to work when they were offered a chance to do so after the first dispute.

## Railway Statistics for Year Ended June 30th, 1914.

The following abstract of the railway statistics for the year ended June 30, 1914, as compiled in the Railways Department at Ottawa, has been prepared by the Comptroller of Statistics, J. L. Payne:—

**Operating mileage** was increased by 1,491 miles during the year, bringing the total up to 30,795. By ten year periods the growth of railway mileage has been as follows—

1864 .....	2,189	1894 .....	15,627
1874 .....	4,331	1904 .....	19,431
1884 .....	10,273	1914 .....	30,795

By provinces, the following was the mileage on June 30, 1914, and the increases over June 30, 1913:—

	Miles.	Increase.
Nova Scotia .....	1,365	5
Prince Edward Island .....	279	
New Brunswick .....	1,839	295
Quebec .....	4,044	57
Ontario .....	9,255	255
Manitoba .....	4,075	82
Saskatchewan .....	5,089	438
Alberta .....	2,545	332
British Columbia .....	1,978	28
Yukon .....	102	
In the United States .....	223	
<b>Total</b> .....	<b>30,794</b>	<b>1,492</b>

The mileage in the United States relates entirely to Canadian lines which, for geographical reasons, pass over U.S. territory in forming a continuous system between points in Canada.

By official inquiry it was ascertained that on June 30, 1914, there were 22,891 miles of railway under construction, as follows:—

	Surveyed.
Manitoba .....	354.00
British Columbia .....	3,577.69
Quebec .....	439.00
Ontario .....	531.84
New Brunswick .....	57.00
Saskatchewan .....	3,458.00
Alberta .....	3,054.47
Nova Scotia .....	
<b>Total</b> .....	<b>11,472.00</b>

309 miles of second, or double, track were laid in 1914, bringing the total up to 2,293 miles. Combining single, double and yard track and sidings there was a total of 40,605 miles.

**Capitalization.**—The capital liability of operative railways stood at \$1,808,820,761 on June 30, 1914—an increment of \$276,990,069 for the year. This capitalization was divided as follows:—Stocks, \$853,110,653; debenture stock (C.P.R.), \$173,307,470; funded debt, \$782,402,636. Stocks increased by \$107,844,383 during the year, and bonds by \$169,145,686. There were also outstanding on June 30, 1914, \$64,637,500 of stocks and \$88,669,809 of bonds attached to railways under construction, making the final aggregate of capitalization \$1,962,128,070. Dividends on stocks in 1914 amounted to \$30,434,601. The interest charges on bonds were met in full.

**Aid to Railways.**—Cash aid to railways in 1914 reached a total of \$16,106,319, of which the Dominion contributed \$15,583,059. These payments brought the account up to the following position:—

By the Dominion .....	\$178,824,529
By the provinces .....	37,023,275
By municipalities .....	17,914,836
<b>Total</b> .....	<b>\$233,772,640</b>

Land grants up to June 30, 1914, were as follows:—

	Acres.
By the Dominion .....	31,864,074
Province of Ontario .....	1,198,650
British Columbia .....	8,119,221
New Brunswick .....	1,647,772
Nova Scotia .....	160,000
Ontario .....	624,232
<b>Total</b> .....	<b>43,613,949</b>

The account with respect to guarantees stood as follows on June 30, 1914:—

Dominion .....	
Manitoba .....	
Alberta .....	
Saskatchewan .....	
New Brunswick .....	
Ontario .....	
Quebec .....	
British Columbia .....	
<b>Total</b> .....	

Included with the guarantees authorized is \$33,116,000 of Grand Trunk Pacific bonds which the Dominion Government purchased in order to prevent the application of the implement clause of the agreement with that company.

**Public Service of Railways.**—For the statistical year 1913-1914, the railways of Canada carried 46,702,280 passengers and 101,393,989 tons of freight. As compared with 1913 there was an increase of 471,515 in the number of passengers carried, and a decrease of 5,598,721 in the number of tons of freight hauled. The growth of freight traffic is shown in the following statement:—

	Tons.		Tons.
1884 .....	13,712,269	1904 .....	48,097,519
1894 .....	20,721,116	1914 .....	101,393,989

The number of passengers carried one mile was 3,089,031,194, against 3,265,656,080

Under Contract.	Completed.	In Operation.	Total.
108.33	133.85	102.70	698.88
1,234.98	698.08	598.20	6,108.95
945.63	43.29	1.70	1,429.62
1,841.06	835.71	465.20	3,673.81
167.55			224.55
340.37	555.40	587.19	4,940.96
804.95	1,188.93	688.23	5,736.58
78.02			78.02
<b>5,520.89</b>	<b>3,417.26</b>	<b>2,443.22</b>	<b>22,891.37</b>

in 1912-1913. Per mile of line the number of passengers carried was 1,516—a decrease of 60 as compared with 1912-1913. The average receipts per passenger per mile were 2.007 cents. The average of ticket sales was \$1.328 per passenger. There was an average of 59 passengers per train, against 62 in 1912-1913. The average journey was 66 miles. The average number of passenger cars per passenger train was 4.2. There was an average of 14 passengers per car.

The number of tons of freight hauled one mile was 22,063,294,685, and the average receipts per ton per mile were .742 cent. The average number of tons per freight train was 353—a betterment of 11 tons over 1912-1913, and of 75 tons over 1908-1909. There was an average of 18.4 loaded cars per train, with an average of 19.18 tons per car. The average freight haul was 217 miles, which was the longest of any country in the world. The average revenue per ton was \$1.614, against \$1.636 in 1912-1913. The division of freight traffic in 1914 by classes was as follows:—

	Tons.	Per Cent.
Products of Agriculture ..	18,370,480	18.11
" Animals .....	3,433,500	3.29
" Mines .....	38,260,170	37.73
" the Forest .....	16,012,097	15.79
Manufactures .....	16,834,126	16.62
Merchandise .....	5,113,603	5.43
Miscellaneous .....	3,397,697	3.03

From the United States railways 23,553,833 tons were received, or 22% of the total.

**Earnings and Operating Expenses.**—Gross earnings aggregated \$243,083,539, or \$13,619,164 less than in 1912-1913. The decline was equal to 5.6%. This decrease followed

a long period of advances, as the following statement shows:—

1884 .....	\$33,421,705	1904 .....	\$100,219,436
1894 .....	49,552,528	1914 .....	243,083,539

Operating expenses amounted to \$178,975,-

Authorized.	Executed.	Earned.
\$188,965,063	\$127,965,063	\$127,965,063
25,221,580	25,221,580	24,589,067
55,810,450	40,200,450	17,561,778
41,625,000	21,651,459	21,651,459
6,063,000	6,063,000	4,806,965
7,860,000	7,860,000	7,860,000
392,000	392,000	392,000
80,322,072	39,357,072	30,647,072
<b>\$406,259,165</b>	<b>\$268,710,264</b>	<b>\$235,473,354</b>

259, or 73.63% of gross earnings. There was a decrease of \$3,036,431 as against 1912-1913. The difference between gross earnings and operating expenses was \$64,108,280, which was \$10,582,733 less than in 1912-1913. The sources of gross earnings in 1914 were as follows:—

Passengers .....	\$ 62,012,296
Mails .....	2,500,176
Express .....	6,444,214
Baggage, parlor cars, etc. ....	1,607,517
Freight .....	165,753,731
Station and train privileges .....	1,044,737
Telegraphs, rents, etc. ....	3,720,868

The railways also had gross earnings of \$23,882,142 from outside operations, to which operating expenses of \$19,784,804 attached. Per mile of line gross earnings were equal to \$7,893.60—a loss of \$856.90 as compared with 1913. In this connection it should be remembered that during the past three years 5,395 miles of new line have been put into operation, and new mileage does not yield the same volume of traffic as does established mileage. Operating expenses were equal to \$5,811.83 per mile of line. Per train mile, all trains, earnings were equal to \$2.253, and the cost of operation was \$1.659. Per ton, freight earnings were equal to an average of \$1.614. An analysis of operating expenses shows that there was a high ratio of expenditure on the upkeep of roadbed and equipment. This has been a satisfactory feature of railway development in Canada for a number of years past.

**Equipment.**—The additions to equipment in 1914 were: Locomotives, 328; cars in passenger service, 306; cars in freight service, 21,969; cars in company's service, 827. It is significant that during the past three years 77,032 cars have been added to freight equipment. Complaints of car shortages have ceased. Not only has there been a large increase in numbers, but there has also been a material advance in the capacity of hauling and carrying units. Following is a comparison, as between 1906-1907 and 1913-1914, of the number of locomotives and cars per 1,000 miles of line:—

	1907.	1914.
Locomotives .....	156	176
Freight cars .....	4,783	6,636
Passenger cars .....	162	195

**Employees.**—On June 30, 1914, there were 159,142 employees in the service of Canadian railways, and the aggregate of salaries and wages paid was \$111,762,972. Salaries and wages were equal to 62.43% of the total operating expenses. The average rates of remuneration, which have been steadily ascending for a considerable number of years, made further slight advances.

**Accidents.**—Railway operations for the year resulted in death to 600 persons and injury to 4,037. Of the deaths 565 were caused by the movement of trains. The classes of persons affected were as follows:—

	Killed.	Injured.
Passengers .....	27	116
Employees .....	221	
Freight cars .....		
Non trespassers .....	48	
Postal clerks, etc. ....	12	70
One passenger in every 1,868,091 was killed, and one in every 116,175 injured.		

1,221 persons were killed and 122 injured at highway crossings. Of the killed, 44 were trespassers at the time, presumably at protected crossings in cities and towns.

Editor's note.—It will be noticed that at the commencement of the foregoing article the railway mileage at June 30, 1914, is given as 30,795 miles, while the distribution of the same by provinces totals only 30,794. We are advised that this is due to the elimination of the fractional mileage in the abstract. In the report the decimal point is used, but for abstract purposes the fractions are omitted. The difference between the 1,491 miles of increase in 1914 and the 1,492 miles shown in the column headed "Increase" in the second table is further accounted for by the intentional omission in the abstract of a small decrease in the case of mileage in the United States of Canadian lines which for geographical reasons pass through U.S. territory in forming a continuous system between Canadian points.

In reference to the third table showing 22,891.37 miles under construction at June 30, 1914, we are advised that the 2,443.22 miles shown as "In Operation" have nothing to do with the 1,491 miles added to mileage in operation in the year ended June 30, 1914. They are over and above that mileage, and represent lines, which although actively in operation in most instances by the contractors, have not been officially brought into operation. From time to time the Board of Railway Commissioners gives permission to railways under construction to operate certain sections under prescribed conditions, and it may be that such mileage does not come under the Department's jurisdiction for statistical purposes until the whole line is completed. Such mileage is always classified by the Department as being under construction.]

### Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,384,000	\$1,163,800	\$420,500	x \$82,800
Aug.	1,367,700	1,123,000	244,700	x 163,800
Sept.	2,108,000	1,519,000	590,700	65,800
Oct.	1,800,000	1,332,100	467,900	x440,900
Nov.	1,670,000	1,123,100	547,100	x417,700
Dec.	1,380,000	908,000	472,100	200,900
Jan.	950,800	773,000	177,800	x175,100
Feb.	1,105,100	823,700	281,400	42,800
	\$12,922,400	\$8,763,900	\$3,258,500	x\$1,373,700
1913-14	\$4,245,000	\$2,861,300	\$1,373,700	.....

x Decrease.

Approximate earnings for three weeks ended Mar. 21, \$881,900, against \$980,900 for the same period 1914.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1913-14, from July 1, 1914:

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$3,111,712	\$6,703,525.89	\$3,778,445.83	\$398,347.86
Aug.	3,917,764.34	6,554,606.68	3,873,157.70	597,981.54

x Decrease.

Approximate earnings for February, \$6,503,000, against \$7,365,000 for Feb., 1914, and for two weeks ended Mar. 14, \$3,398,000, against \$4,070,000 for same period 1914.

### Grand Trunk Railway Earnings, Etc.

Subject to audit, the G.T.R. accounts, including the Canada Atlantic Ry., show the following results for the year ended Dec 31, 1914:

Gross receipts	\$41,866,172
Working expenses	33,320,053
Net receipts	\$8,546,119
Income from rentals, outside operations, and car mileage balances	\$1,592,490
Total net revenue	\$10,138,609
Net revenue charges for the year, less credits	\$6,903,955
Balance	\$3,234,654
Deduct G.T.W.R. deficiency	\$659,154
D.G.H. & M.R. deficiency	505,263
	1,164,417
Surplus	\$2,070,237
Less interim dividend on 4% guaranteed stock	\$1,217,500
Balance	\$852,737

which, added to \$81,329 from Dec., 1913, makes a total of \$934,066, which will admit of a further payment for the year of 1½% on the 4% guaranteed stock, making 3½% for the year, and leave a balance of about \$21,000 to be carried forward.

Following are the earnings and expenses for the G.T.R., including the C.A.R., the G.T.W.R. and D.G.H. & M.R. for January:—

Grand Trunk Railway:—	
Earnings	\$2,659,300
Expenses	2,431,800
Net earnings	\$227,500
Grand Trunk Western Railway:—	
Earnings	\$559,500
Expenses	588,900
Deficit	29,400
D.G.H. & M. Railway:—	
Earnings	\$192,000
Expenses	219,300
Deficit	27,300

#### Traffic Receipts of the System.

Aggregate from Jan. 1 to Feb. 28:—

	1915	1914	Incr.	Decr.
G.T.R.	\$5,287,379	\$5,922,436	.....	\$ 635,057
G.T.W.R.	1,087,245	1,030,828	\$42,417	.....
D.G.H. & M.R.	370,874	353,693	17,181	.....
Totals	\$6,745,498	\$7,315,957	.....	\$ 575,459

Approximate earnings for February, \$3,325,036; against \$3,544,016 for Feb., 1914; and for two weeks ended Mar. 14, \$1,709,298, against \$1,916,794 for same period, 1914.

### Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for February, were \$281,783, against \$313,491 for Feb., 1914, and for two months ended Feb. 28, \$528,794, against \$681,809 for same period, 1914.

### Railway Route Maps Approved.

The Minister of Railways has approved of the following route maps:—

Western Dominion Railway, Mar. 1. — From the international boundary to about 5 miles north of Cardston; and from Pincher Creek to Kootenay Pass, Alta., about 61 miles.

Hudson Bay, Peace River and Pacific Ry., Mar. 1.—From Sec. 11, Tp. 11, Range 5, east of the Principal Meridian, to Sec. 10, Tp. 18, Range 9, east of the Principal Meridian, about 50 miles.

Montreal Warehousing Co.—The annual meeting was held at Montreal, Mar. 1. The following directors were elected for the current year:—E. J. Chamberlin, President; H. G. Kelley, Vice President; J. E. Dolrymple, F. Scott and J. Pullen. C. J. Smith, formerly General Manager, Richelieu and Ontario Navigation Co., and latterly Vice President and General Manager, North Ry., Montreal, was appointed Manager and Secretary, succeeding the late G. H. Hanna.

### Quebec Legislation Respecting Freight Rates.

The Quebec Legislature has amended article 6607 of the Revised Statutes of 1909, relative to rates on railways. The third paragraph of that article, which provides that "The Railway Committee may approve such bylaws in whole or in part, or may change, alter or vary any of the provisions therein," is struck out, and is replaced by three paragraphs which provide: (1) for the approval by the railway committee of such bylaws in whole or in part, the amending of the same, or delaying the coming into force of the same until the interested parties are heard; (2) that bylaws to increase rates cannot be approved until they have been posted up for 30 days before the date fixed for application for approval, and that bylaws for the reduction of tolls must be posted up for three days before application for approval; (3) where freight is to pass over any continuous route operated by two or more companies, the committee may require, on application by the parties interested, the railway companies to agree upon a joint tariff, and may approve of such tariff with or without amendments. A new section is added giving the Quebec Public Utilities Commission jurisdiction in the matter. The act comes into force at once.

### Burrard Inlet Tunnel and Bridge Co. —

Early in 1914 a design made by Sir John Wolfe Barry, Lyster & Partners, of London, Eng., was accepted for a long and heavy bridge across the Second Narrows of Burrard Inlet, connecting Vancouver and North Vancouver, B.C. The accepted design for a bridge to cost \$2,500,000, included the longest swing-span in existence, 581½ ft. between end bearings. In Aug., 1914, this design was rejected as too expensive and bids asked for a cheaper design. In response to this request, three designs were submitted: by Dominion Bridge Co., associated with Armstrong-Morrison & Co., of Vancouver, \$1,916,000; by Canadian Bridge Co., \$1,846,000; and by C. A. P. Turner, associated with Western Foundation Co. of Vancouver, \$1,744,831. On these designs Ralph Modjeski, of Chicago, was asked to report. This report recommended that none of the bids should be accepted but that the bidders be allowed to revise their designs to meet certain requirements prescribed by Mr. Modjeski. However, the company has accepted C. A. P. Turner's design and has awarded the contract to him and his associates to erect the bridge in accordance with that design, as corrected to meet Mr. Modjeski's suggestions, for the bid price noted. The carrying out of the contract is contingent upon the raising of additional funds from the City of Vancouver and from the B. C. Government. (Mar., pg. 94.)

Montreal Ammunition Co., Ltd., has been incorporated under the Dominion Companies Act with an authorized capital of \$250,000 and head office in Montreal. The directors are:—President, H. H. Vaughan, Assistant to Vice President, C.P.R.; Vice President, G. H. Duggan, First Vice President, Dominion Bridge Co.; Secretary-Treasurer, T. Arnold, of Taylor and Arnold, Ltd., railway supplies, etc, Montreal. Other directors:—Phelps Johnson, President and Managing Director, Dominion Bridge Co.; F. L. Wanklyn, General Executive Assistant, C.P.R., and W. F. Angus, Vice President and Managing Director, Canadian Steel Foundries. The company has a large contract from the British Government for shells and cartridge cases and is establishing a plant at Dominion, near Montreal, for their manufacture.

## Timiskaming and Northern Ontario Railway Operations for 1913-14.

The total mileage of track operated by the T. & N.O.R. Commission, as shown in the report for the year ended Oct. 31, 1914, was 438.32 miles, distributed as follows:—Main line, North Bay to Cochrane, 252.19; branch lines:—Charlton branch, 7.80; Porcupine branch and line to Iroquois Falls, 40.11; Elk Lake branch, 28.50; total branch mileage, 76.41; yards and sidings, 108.02; second track, North Cobalt to Haileybury, 1.70. The lines owned also include the Nipissing Jct. spur, 2.10 miles, which is leased to the G.T.R.; and the Nipissing Central Ry. (electric), representing an additional mileage of track owned of 12.64 miles, or a total of 453.06 miles of track owned by the Province of Ontario and managed for it by the commission.

The report of the operation of the Nipissing Central Ry., which is an electric line, will be found on another page of this issue. The main features of the report on the operations of the T. & N.O.R. follow:—

the line are as low, and in many instances lower than on other railways in Canada for a similar service, and it is also stated that the rates for telegraph service on the railway were reduced 20% on Aug. 1, 1914, and the telephone rates on the lines operated in the area served by the line were reduced from 20 to 40% on Nov. 1. The telephone rates are stated by the Ontario Railway and Municipal Board to be the lowest in Canada. Attention is also called to the fact that during the year all-steel passenger trains were put in operation on the line, and that out of the 4,716,331 passen-

of loaded freight cars north and east, 3,036,177; mileage of loaded freight cars, south and west, 1,749,903; mileage of empty freight cars north and east, 364,244; mileage of empty freight cars south and west, 1,615,159; average number of freight cars per train mile, 17.13; average number of loaded freight cars per train mile, 11.44; average number of empty freight cars per train mile, 4.73; average number of tons of freight per train mile, 206.32; average number of tons of freight per loaded car mile, 18.03.

**Train mileage.**—Mileage revenue passenger trains, 385,575; mileage revenue mixed trains, 79,299; mileage revenue freight trains, 338,973; total revenue train mileage, 803,847.

The freight tonnage was distributed as follows:—

	Originating on road.	Received from Can. lines.	U.S. lines.	Total tons.
Products of agriculture .....	7,670	28,785	49	36,504
Products of animals .....	1,268	3,508		4,776
Products of mines .....	106,329	43,601	69,683	219,613
Products of forests .....	355,334	4,172	231	359,837
Manufactures .....	12,001	43,636	1,614	57,251
Miscellaneous .....	24,435	32,140	878	57,453
Other commodities .....	4,154	2,698	80	6,932
<b>Total .....</b>	<b>511,191</b>	<b>158,540</b>	<b>72,635</b>	<b>742,366</b>

	1914.	1913.
Freight revenue .....	\$ 952,090.35	\$ 906,476.16
Passenger revenue .....	544,820.08	576,049.37
Other revenue from transportation .....	83,757.85	84,702.90
Revenue from other sources than transportation .....	90,230.59	88,926.42
<b>Total operating revenue .....</b>	<b>\$1,670,898.87</b>	<b>\$1,656,154.85</b>
Maintenance of way and structures .....	\$ 408,046.15	\$ 430,820.04

<b>Total operating expenses .....</b>	<b>\$1,468,574.23</b>	<b>\$1,477,550.01</b>
<b>Net operating revenue .....</b>	<b>\$ 202,324.64</b>	<b>\$ 178,604.84</b>
Ore royalties, etc. ....	58,687.38	90,046.18
<b>Total income .....</b>	<b>\$261,012.03</b>	<b>\$268,651.02</b>
Deductions from income .....	32,034.80	13,327.30
<b>Net income .....</b>	<b>\$228,977.23</b>	<b>\$255,323.72</b>
<b>Paid to Treasurer of Ontario .....</b>	<b>\$ 225,000.00</b>	
<b>Balance .....</b>	<b>\$3,034.23</b>	

The general balance sheet shows liabilities of \$20,927,532.02, of which \$20,246,451.99 represents the sums loaned by the Ontario Government on construction account, and \$681,080.03 represents the working liabilities. The assets total \$21,337,247.92, made up as follows:—Cost of road to Oct. 31, 1913, \$17,373,118.75; cost of road for year ended Oct. 31, 1914, \$373,934.90; total, \$17,747,053.65; cost of equipment to Oct. 31, 1913, \$2,003,622.49; cost of equipment for year ended Oct. 31, 1914, \$223,938.78; total cost of equipment, \$2,227,561.27; Nipissing Central Ry., \$464,677.97; working assets, \$801,573.21; deferred debt items, \$24,040.79; land agent, \$72,341.03. The balance at credit of profit and loss account is \$409,715.90.

While freight receipts increased \$45,614.19, there was a decrease of \$31,229.29 in passenger receipts. There were also small decreases from other transportation sources, and from other than transportation sources, the net operating revenue showing an increase of \$14,744.02. The operating expenses were 89.8% of the revenue, against 88.7 in the year ended Oct. 31, 1913. The expenditures in all departments, except maintenance of equipment, show decreases; in that department the increase was \$42,301.94 or 2.9%, but it is explained that this is mainly due to the setting aside of \$33,883.92 to a reserve fund to cover depreciation on rolling stock, and to provide for the renewal of cars and locomotives retired, sold or destroyed. The great disappointment on the year's operations was the drop of \$25,546.75 in ore royalties. It is pointed out that the freight charges on

gers carried since 1905, not one had been killed or seriously injured. The road bed, rolling stock and operating equipment are all being kept in a high state of efficiency, and the safety first campaign is being emphasized.

The traffic and mileage statistics follow:—

**Passenger Traffic.**—Total revenue passengers carried, 535,869; number of passengers carried one mile, 22,471,533; number of passengers carried one mile per mile of road, 68,303; average distance carried, 41.93 miles; average amount received from each passenger, \$1.01; average receipts per passenger per mile, 2.42 cents; passenger train service per mile of road, \$1.881.07; passenger service train revenue per train mile, \$1.62.

**Freight traffic.**—Number of revenue tons carried, 742,366; number of tons carried one mile, 86,295,945; number of tons carried one mile per mile of road, 262,298; average distance of haul of one ton, 116.21 miles; average amount received per ton, \$1.29; average amount received per ton per mile, 1.12 cts.; revenue per mile of road, \$2,764.20; revenue per train mile, \$2.28.

**Total traffic.**—Operating revenue per mile of road \$5,061.10; operating revenue per train mile, \$2.07; operating expenses per mile of road, \$4,448.32; operating expenses per train mile, \$1.82; net operating revenue per mile of road, \$612.84; net operating expenses per train mile, 25 cts.

**Car mileage.**—Average number of passengers per car mile, 10; average number of passengers per train mile, 49; average number of passenger cars per train mile, 4.87; mileage of passenger cars, 2,239,856; mileage

## The Attempt to Destroy the St. Croix River Bridge.

Werner Horn, the man who damaged the bridge over the St. Croix River, between St. Croix, N.B., and Vanceboro, Me., and who claimed that he did it in his capacity as an officer of the German army "as an act of war against Great Britain," and who was sentenced to 30 days imprisonment by a Maine court for damaging glass in Vanceboro by explosion, was, on Mar. 7, taken into custody at Machias jail by the U. S. authorities under federal warrants, charged with transporting dynamite in contravention of the interstate commerce laws. The federal grand jury, sitting at Boston, Mass., found three bills against him, alleging the illegal transportation of 60 lbs. of dynamite from New York to Boston, over the New York, New Haven and Hartford Rd.; from Boston to Vanceboro, over the Boston and Maine and Maine Central Rds.; and with carrying dynamite in a suitcase without notifying the officials of those railways. The maximum penalty for the offence is 18 months imprisonment and a fine of \$2,000. At the hearing at Bangor, Me., Mar. 17, it was contended for the prisoner that what he did was "an act of war against Great Britain." On the previous day a motion to have the prisoner's private papers returned to him was refused by the court. These proceedings will postpone the proceedings instituted by the Canadian Government for the extradition of the prisoner to answer the actual charge of dynamiting the bridge.

It was decided by the United States Commissioner at Bangor, Me., Mar. 18, that the accused must be removed to Boston, Mass., for trial under the federal warrants. The Commissioner stated that Horn could be released on \$10,000 bail.

**Railway Lands Patented.**—Letters patent were issued during January, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acre.
Calgary and Edmonton Ry. ....	5,284.95
Canadian Pacific Ry. ....	47.26
Edmonton, Dunvegan and British Columbia Ry. ....	6.04
Grand Trunk Pacific Branch Lines Co. ....	149.19
Grand Trunk Pacific Ry. ....	1,438.8
Kootenay Central Ry. ....	8.36
Qu'Appelle, Lake and Saskatchewan Rds. and Steamboat Co. ....	10,016.48
<b>Total .....</b>	<b>18,951.39</b>

## Canadian Northern Railway Construction, Betterments, Etc.

**Montreal-Ottawa-Port Arthur Line.**—It was stated in the Ontario Legislature recently that no application had been made to the Department to designate any part of the lands to be granted to the C.N.O. Ry. under the provisions of chap. 71 of the statutes of 1909. This act provides that the Government may grant 4,000 acres of land per mile as a subsidy in aid of the building of a line from Sellwood Jct. to Port Arthur, not exceeding 500 miles, subject to certain provisions as to location, selection, etc.

Sir Wm. Mackenzie is reported to have stated in Winnipeg, Mar. 14, that freight service on the line east from Port Arthur will be started May 1, and passenger service June 1.

**Canadian Northern Ontario Ry.**—The bill asking for confirmation of an agreement with the Campbellford, Lake Ontario and Western Ry. respecting certain lines to be constructed as joint lines in Belleville, Ont., and the confirmation of an agreement with the Georgian Bay and Seaboard respecting certain lines to be considered joint lines in the vicinity of Orillia, was withdrawn from consideration in the House of Commons, Mar. 2. R. Blain, M.P., who had charge of the bill, said there were some points about which the companies desired to negotiate further.

The bill to confirm an agreement with the C.P.R. for the construction and operation of joint terminals at North Toronto was also withdrawn. For full particulars see under "Canadian Pacific Ry. Construction, Betterments, etc."

Engineers were in Hamilton recently, making certain investigations, and subsequently the City Engineer was in Toronto in consultation with the Secretary of the C.N.R. Nothing is definitely known of the matters discussed, but the Mayor of Hamilton stated that there appeared to be good ground for thinking that preparations were being made for the building of the Toronto-Hamilton-Niagara line.

**Canadian Northern Ry.**—A press report says that plans have been prepared for large additions to the yards at Port Arthur, Ont., and that about 40 miles of tracks will be added.

Announcement was made in Winnipeg recently that the new lines to Grand Marais and Fisher River would be opened for traffic at once.

The Manitoba Legislature has increased the Winnipeg River Ry. Co.'s authorized capital from \$50,000 to \$500,000. The company has power to build a railway from Lac du Bonnet along the Winnipeg River Valley for 10 miles.

The Board of Railway Commissioners has authorized the C.N.R. to build a spur line to connect with the C.P.R. at Rosetown, Sask.

In the Alberta Legislature, Mar. 9, the Minister of Railways said only partial construction had been done on the line projected from Blackfalds, on the Brazeau line to Calgary, and on the line from Calgary to Macleod. Both of these lines were being built under provincial guarantee of bonds.

Application is being made to the Dominion Parliament for the confirmation of an agreement between the C.N.R. and the G. T. Pacific Ry., respecting the use of terminals at Edmonton, Alberta. Each company contributes certain areas of land, together with tracks, buildings and terminals, which are to be administered as a joint section for terminal purposes. The joint property is to be managed by a terminals board consisting of one representative from each company, and is to be operated by a superintendent to be appointed by the

board. In case of difference between the members of the board, and the failure of the companies to agree, appeal may be made to the Board of Railway Commissioners. The G. T. P. R. shall have the right to erect its own freight shed at a point indicated on the plans annexed to the agreement. The cost of maintenance shall be borne equally by the two companies, but capital expenditures shall be borne by the company upon whose land it is expended. The rights of the G.T.P.R. under its agreement with the city of Edmonton, dated Mar. 6, 1906, are protected. The value of the property brought into the joint premises by the C.N.R. in excess of that brought in by the G.T.P.R. is declared to be \$743,084.70, and on one-half of this the G.T.P.R. agrees to pay interest at the rate of 5% a year. The agreement is for 99 years, from May 1, 1912.

**Lines on Vancouver Island.**—In the British Columbia Legislature recently, the Minister of Railways said the line from Victoria to Port Alberni will have a total length of 135.5 miles. Grading is completed on 128.5 miles of this, but no track has been laid. It is estimated that it will require an expenditure of \$889,624 to complete the grading and bridging, and \$1,346,563 to lay the track and put the line in operation so far as now graded. The C.N.P.R. has paid \$2,893,088 to the contractors on account of the work. On the branch to Patricia Bay, 94% of the grading has been completed, but no track has been laid. The estimated cost of completing the branch, including all sidings, stations, freight sheds, telegraph lines, etc., is \$358,700. The contractors had been paid \$127,628 on account of work done to Feb. 1. (Mar., pg. 102.)

## Dominion Railway Expenditures for 1913-14.

The Minister of Finance in reply to a question in the House of Commons, Mar. 8, gave the following particulars of expenditures on capital and special account respectively from April, 1914, to Mar., 1915, as passed through the Finance Department books:

Railways and Canals capital:	
Canals .....	\$4,989,901.91
Intercolonial and connected railways .....	4,964,867.79
Towards construction of a railway to connect Montreal with National Transcontinental Ry. ....	250,000.00
Hudson Bay Ry. ....	4,340,337.06
Quebec Bridge .....	2,963,616.58
National Transcontinental Ry. ....	6,777,255.98
Prince Edward Island Ry. ....	604,976.66
	\$24,890,955.98

Railway Subsidies:	
Fredericton and Grand Lake Coal and Ry. ....	\$ 111,579.96
Canadian Northern Ontario .....	2,343,335.80
Atlantic and Lake Superior .....	18,449.17
St. John and Quebec .....	59,581.32
Ha Ha Bay .....	16,158.72
Algoma Central and Hudson Bay ..	138,980.56
Esquimalt and Nanaimo .....	405,120.00
Kootenay Central .....	504,622.21
Canadian Northern Pacific .....	178,077.80
Canadian Northern Alberta .....	262,080.00
Algoma Eastern .....	13,022.87
Alberta Central .....	209,768.00
Kettle Valley .....	369,497.28
	\$4,630,273.69

**Foreclosure of a Mortgage of \$300,000 on the World Building, Vancouver, B.C.,** by J. J. Toomey, St. Paul, Minn., is being asked under proceedings instituted Mar. 13. Mr. Toomey is stated to be a confidential agent of J. J. Hill, and the writ was issued in his behalf by A. H. McNeill, K.C., the Vancouver solicitor of the Great Northern Ry.

## Grand Trunk Railway Betterments, Construction, Etc.

**Southern New England Ry.**—Press reports state that work is to be resumed at an early date upon the construction of the line to Providence, R.I., the differences with the contractors having been adjusted. So far as regards the line to Boston, Mass., President Smith, of the Central Vermont Ry., informed the Legislative Committee on Railways recently that the project had not been abandoned, although it was not contemplated to proceed with it at present.

**Lachine, Jacques Cartier and Maisonneuve Ry.**—The Montreal City Council has decided to apply to the Board of Railway Commissioners for an order fixing gradients, etc., on this projected railway. The route of the line has been approved by the Commissioners, and the city is desirous of proceeding at once with the completion of roads and the construction of sewers in St. Denis and Rosemount wards, through which the line will pass. If the gradients were fixed the city could proceed at the minimum of cost with the work on the streets to be crossed by the railway.

**Bronson Ave. Viaduct, Ottawa.**—The question of the erection of a viaduct at Bronson Ave., which has been in abeyance since the order for its erection was obtained in 1912, was before the Ottawa City Council recently. The estimated cost, including land damages, is \$200,000, and the city engineer was directed to prepare detailed estimates. The Dominion elimination of grade crossings fund will contribute \$5,000 towards the cost, and the balance will be divided between the G.T.R. and the city. It is expected that when the viaduct is completed the line running under the Bell St. bridge will be abandoned. (Mar., pg. 100.)

**The Toronto Civic Transportation Committee,** composed of representatives of the Toronto City Council, Toronto Harbor Commission and the Hydro Electric Power Commission of Ontario, and of which T. L. Church, Mayor of Toronto, is chairman, is studying the transportation problem as applied to the radial railway entrances to Toronto, and the street railway situation. The board of engineers consists of R. C. Harris, Commissioner of Works, City of Toronto; F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario; and E. L. Cousins, Chief Engineer, Toronto Harbor Commission, who is engineer in charge, having been temporarily relieved from his duties with the Harbor Commission for this purpose.

**Three Cent Fares Denied.**—The first application for three cent street railway fares to come before the Public Service Commission for the Second District of New York has been denied. The case was that of the City of Rochester vs. the New York State Rys. The city contended that the company could afford to make the reduction, that the increased traffic would bring up the revenues and that the city's large working population would establish itself outside the congested districts. The commission found that three cent fares with existing traffic would bring the company only 4.6% return on property within the city five cent zone, that a 20% increase of business would be necessary to reimburse the company for the cut, and that this increase would come at rush hours when the system was already overtaxed.

**Guelph not a divisional Point.**—We are officially advised that there is no intention of establishing a G.T.R. divisional point at Guelph, Ont., as stated in press reports recently.

## Canadian Pacific Railway Construction, Betterments, Etc.

**Ontario Division.**—The bill introduced in the House of Commons to confirm an agreement between the C.P.R. and the Canadian Northern Ry., respecting the construction of a joint passenger station at North Toronto, has been withdrawn. The bill was prepared in anticipation of the signing of the agreement, but as this has not been effected it had to be withdrawn, and the matter will probably be taken before the Board of Railway Commissioners, which has power to approve an agreement for 21 years.

New General Offices, Atlantic Division, Canadian Pacific Ry., St. John, N.B.

The draft agreement attached to the bill provided for the use by the Canadian Northern Ontario Ry. of certain lines and the terminal facilities at North Toronto belonging to the C.P.R. It provided that certain lines should be known as common tracks, certain others as joint tracks, and certain premises as joint premises. The agreement set out the work already done, the work to be done by the C.P.R. on the lines and premises common to both, at the joint cost, and the work to be done by each on other property which might be used by both. The operation of the trains over the joint lines and premises were to be under the control of the officials of each company, but the C.N.O.R. trains were to be subject to C.P.R. rules and regulations when on the C.P.R. North Toronto branch, which forms part of the joint tracks. The station was to be under the control of an agent appointed by the C.P.R. and approved of by the C.N.O.R. The construction work which each company was to do was defined. The C.N.O.R. was to pay to the C.P.R. a rental of  $4\frac{1}{2}\%$  on the value of the property brought in. The C.N.O.R. must not permit any other railway to use these facilities, but the C.P.R. might, in which case the rate of payment was to be readjusted. Differences as to the construction of any of the terms of the agreement were to be submitted to the Board of Railway Commissioners.

**Saskatchewan Division.**—The Board of Railway Commissioners has approved revised location plans of the Swift Current northwesterly line, mileage 111.95 to 112.56.

**Alberta Division.**—The Board of Railway Commissioners has approved revised location plans for the Weyburn-Stirling line, mileage 316.63 to 359.39, west of the 4th meridian, Alberta.

The Edmonton City Council decided, Mar. 3, to carry out the old C.P.R. entrance agreement made between the company and the City of Strathcona. The latter city has since been incorporated with Edmonton.

**Rogers Pass Tunnel.**—A press report states that it is likely a system of forced air ventilation will be adopted for the Rogers Pass tunnel, now under construction, and that as a result it may not be found necessary to equip it for operation by electric power. (Mar., pg. 96.)

### Victoria Rolling Stock and Realty Company, of Ontario, Limited.

Following is the directors' report for the year ended Feb. 15, 1915, issued over the signature of the President, Sir Edmund B. Osler:—

The bonds shown in the last annual report as issued against the rolling stock lease series T to the C.P.R. Co. have been disposed of, part of the terms of sale being that this company should be released from any obligation in connection with these bonds. The bonds issued under the lease have been cancelled and the lease assigned. The company, therefore, has no further liability in connection with this lease. The company, however, will receive a commission from time to time as if the bonds were outstanding as agreed upon when the lease was made.

All payments maturing during the year have been promptly met. The profit on the year's business, after charging up directors' fees and expense account, is \$46,810.95. This includes a payment on account of special commission on the cancelled lease. A dividend of 6% per annum has been paid on the capital stock, and \$32,410.95 has been carried forward to profit and loss account, which now stands at \$123,600.55.

ASSETS.	
Obligations on leases .....	\$ 596,075.00
Cash in bank .....	115,659.54
Call loan .....	295,000.00
Interest accrued on same .....	2,472.84
	<hr/>
	\$1,009,207.38

The Canadian Pacific Railway's New Algonquin Hotel, St. Andrew's, N.B.

LIABILITIES.	
Capital stock subscribed \$600,000.00	
Capital stock paid up .....	\$ 240,000.00
Debentures outstanding .....	640,000.00
Interest accrued on same .....	5,333.33
Commission account series T .....	273.50
Balance at credit of profit and loss.	123,600.55
	<hr/>
	\$1,009,207.38

Interest paid and accrued on debentures .....	\$342,789.50
Expense account .....	1,066.74
Directors' fees last year .....	1,400.00
Dividend account .....	14,400.00
Balance carried forward .....	123,600.55
	<hr/>
	\$483,256.79

Balance at credit of profit and loss, Feb. 15, 1914 .....	\$ 91,189.60
Rents received and accrued on leases and interest on advances and bonds held by company .....	392,067.19
	<hr/>
	\$483,256.79

Original cost of rolling stock held under existing leases .....	\$2,939,370.00
Amount paid in on account by railway companies in addition to interest .....	2,299,370.00
	<hr/>
	\$483,256.79

Total amount of company's debentures outstanding .....	\$640,000.00
--	--------------

The directors for the current year are:—Sir Edmund B. Osler, President; W. D. Matthews, Vice President; Duncan Coulson, His Honor J. S. Hendrie, Jos. Henderson, F. G. Osler, all of Toronto. G. T. Chisholm is Secretary.

### Great Northern Railway Lines in Canada.

**Vancouver Terminals.**—The Vancouver City Council was informed, Feb. 25, that the G.N.R. engineers were completing certain statistical information for the B.C. Government in connection with the plans for the development of the False Creek terminals, and that full plans would be submitted with these. The agreement is one to which the Provincial Government is a party, and the company cannot do anything definite until the province is satisfied. The company, it was stated, means business, and will go ahead with the work as soon as possible. The building of the station will involve the expenditure of \$1,000,000 instead of the \$500,000 originally suggested.

The question of the building of the three east end viaducts, which formed the subject of litigation at the invitation of the British Columbia Electric Ry., has been revived, and it is said that a plan is being arranged for the work to be financed. If the arrangements carry, the G.N.R. will have to apply to the Board of Railway Commissioners for the necessary order. The viaducts, which were eliminated from the order as a result of the litigation, are projected at Pender, Keefer and Harris Sts., and are estimated to cost \$67,250, \$66,723 and \$70,413 respectively. The fourth viaduct is at Hastings St., and is estimated to cost \$95,444. The contract for the erection of the four viaducts was let to the Union Contracting Co., and the new arrangement is under consideration with a view of preventing that company entering an action for damages for breach of contract. (Mar., pg. 102.)

**G.T.R. Apprentices' Dinner.**—A number of former apprentices at the G.T.R. shops at Stratford, Ont., joined with this year's class of 110 at a dinner there, Mar. 18, at which Robt. Patterson, Master Mechanic, presided. W. D. Robb, Superintendent of Motive Power, was the principal speaker.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta and Great Waterways Ry.**—W. R. Smith, Chief Engineer, is reported to have stated recently there are 1,000 men at work on the line; that track has been laid to 16 miles beyond Lac la Biche, and that it is hoped to have the line completed to Fort McMurray by the end of the year. (Mar., pg. 94.)

**Alma and Jonquieres Ry.**—The Quebec Legislature has passed an act extending the time for the construction of this projected railway from Herbertville, on the Quebec and Lake St. John Ry., to Lake St. John, between Great and Little Discharge, 20 miles, and from St. Joseph de Alma easterly to Jonquieres, Que., 30 miles. (Feb., 1913, pg. 83.)

**Athabasca and Fort Vermillion Ry.**—The Alberta Legislature has incorporated a company with this title to build a railway from Athabasca northwesterly to Trout Lake, and on to Fort Vermillion, about 300 miles. The provisional directors and others interested in the incorporation of the company are: J. M. Kernan, F. R. Falconer, J. V. Rawle, A. C. McKay, I. Gagnon, L. Menard, W. R. Day, R. Vance, L. Willey, J. L. Lessard, H. F. Cull, A. E. Walsh, W. N. Pomeroy, C. E. Nanckivell, G. Hees, M. McKernan, S. Willey, J. Dalganeau, Dr. Oliver, Athabasca; N. Dusseault, S. Lawrence, F. E. Wilson, S. Clarke, Fort Vermillion; J. Keith, Edmonton.

**Bassano and Bow Valley Ry.**—The Alberta Legislature has amended the company's act of incorporation by authorizing it to use "steam, electricity or any other motive power," instead of "any motive power but steam," as before; by authorizing the building of the line to Coronation, instead of for 40 miles only from Bassano; to increase the company's power to issue bonds from \$14,000 to \$20,000 a mile, and to extend the time for the building of the line.

**Brule, Grand Prairie and Peace River Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Brule Lake, Alberta, northwesterly to Grand Prairie, and thence to a junction with the Pacific Great Eastern Ry. in the Peace River Block; with a branch from Grand Prairie, crossing the Peace River near Dunvegan, to a junction with the projected Pacific, Peace River and Athabasca Ry. at the Montagneuse River. The provisional directors are D. R. McDonald, Alexandria, Ont.; C. L. Hervey, Montreal; R. H. Pringle, T. A. Burgess, L. Cote, Ottawa. (Feb., pg. 56.)

**Burrard Inlet Tunnel and Bridge Co.**—The amended plans for the erection of the projected bridge across the Second Narrows of Burrard Inlet, Vancouver, B.C., under the accepted Turner-Western Foundations tenders, were laid before the directors Mar. 10, and it was decided to forward them to the Provincial Government for approval. (Mar., pg. 94.)

**Central Canada Ry.**—It is reported that track has been laid from the junction with the Edmonton, Dunvegan and British Columbia Ry., at McLennan, Alberta, to Paul's stopping place, 30 miles. The grading on the remaining 22 miles to the Peace River Crossing is being pushed forward, but as it includes some heavy work it is not expected that any further tracklaying will be done until the autumn. (Mar., pg. 94.)

**Edmonton, Dunvegan and British Columbia Ry.**—W. R. Smith, Chief Engineer, is reported to have stated recently that about 1,000 men are at work on the line, of which

400 are employed on the right of way between the Big Smoky and the Spirit Rivers. Track is being laid between McLennan and Big Smoky River. A sub-contract has been let for the grading of the last 10 miles to this river. This is the heaviest piece of grading on the line. A temporary bridge will be built across the river and the work of putting in the substructure for the permanent steel bridge will be gone on with during the winter of 1915-16.

Objection was made before the House of Commons committee recently to the company's application for an extension of time for the completion of the line. The particular piece of line referred to is the section from Spirit River to the junction with the Pacific Great Eastern Ry. at the Alberta-British Columbia boundary. The committee approved of the extension of time upon receipt of assurance from the Premier of Alberta that the company is building as fast as possible, and that the Province has power under the act guaranteeing the bonds to use pressure if the construction is not proceeding at a satisfactory rate.

The company is asking power under another bill before the Dominion Parliament to build a branch line from tps. 77, 78 or 79, ranges 3, 4, 5 or 6 west of the 6th meridian, southerly through the Grand Prairie district to Jasper House, Alberta. (Mar., pg. 94.)

**Entwistle and Alberta Southern Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from Entwistle, Alberta, southerly to the Saskatchewan River, on the boundary between tps. 57 and 58, west of the fifth meridian, 50 miles. The provisional directors are: C. L. Hervey, D. A. O'Meara, Montreal; T. A. Burgess, L. A. Cote, R. H. Pringle, Ottawa. (Mar., pg. 94.)

**Hudson Bay, Peace River and Pacific Ry.**—A bill is under consideration by the Dominion Parliament providing for the changing of the title of this company to that of the Winnipeg and Hudson Bay Ry.

The town of Transcona is asking the Manitoba Legislature for power to bonus the establishing of railways, railway yards, stations and terminals. When the bill came before the law amendments committee of the Legislature, Mar. 12, deputations representing the town, the H. B., P. R. and P. Ry., and other interests were present. Considerable opposition was manifested to the proposition and there was some criticism of the company's position and prospects. (Jan., pg. 10.)

**Huntingdon and Hemmingford Ry.**—The Quebec Legislature has extended the time for the building of this projected railway from Huntingdon, Que., via Hemmington, to the point where the Delaware and Hudson Co.'s railway crosses the International boundary. (Jan., pg. 10.)

**Lake Huron and Northern Ontario Ry.**—The Minister of Lands, replying to a question in the Ontario Legislature, Mar. 3, said the company began construction on the extension of its line Nov. 1, 1913, and reported having expended \$22,256.20 during 1914, in securing right of way, clearing right of way and upon grading, and that within the same period \$56,000 had been expended upon the reconstruction of the original line from Bruce Mines to Rock Lake. The company cannot obtain any land from the Government under the terms of its agreement until 10 miles of the line have been completed. (Oct., 1914, pg. 468.)

**Intercolonial Ry.**—The Minister of Railways, replying to questions in the House of Commons recently, stated that no construction has been done on the projected spur line at Wallace, N. S., on account of which \$60,000 was voted in the fiscal year 1912-13. There has been expended \$74,568.84 on the construction of a spur line or siding to the brickyard at Pugwash, and the work is not yet completed.

Replying to questions in the House of Commons, Mar. 1, the Minister of Railways stated that the building of a branch railway to Guysboro, N. S., was under consideration. He made a similar reply, Mar. 3, to questions as to the building of a line from Sydney through the Big Pond and East Bay district to St. Peters, N. S. (Mar., pg. 94.)

The Minister of Railways replying to a question in the House of Commons, Mar. 8, said the total expenditure for the calendar year 1914 on the ocean terminals at Halifax, on account of the railway construction account, was \$1,181,355.78. The total expenditure on account of docks and per contract at Halifax was \$285,811.10.

**Kent Coal and Ry. Co.**—Application is being made to the New Brunswick Legislature for the incorporation of a company with this title to build a railway from Rexton to the Intercolonial Ry., between Kent Jct. and Adamsville, thence to Chipman, to Minto, and from Rexton to Richibucto Head, N.B. Inghes and Hazen, Fredericton, N.B., solicitors for applicants.

**Montreal and South Western Ry. and Power Co.**—An extension of time has been granted by the Quebec Legislature, for the lines projected to be built by this company, and to be operated by steam, electricity or any other motive power. One line is to start at Adirondack Jct., on the C.P.R., and extend along the St. Lawrence River Valley to the International Boundary, and the other is to start at Adirondack Jct., on the New York Central Rd., and extend to Sunder, Que. (Mar., pg. 94.)

**Northern Pacific and British Columbia Ry.**—The Dominion Parliament is being asked to incorporate a company with this title, having power with the Northern Pacific Ry., to enter into agreements with the Great Northern Ry., and with the Vancouver, Victoria and Eastern Ry. and Navigation Co., for running rights over the latter company's lines between Huntingdon and New Westminster and Vancouver; and to acquire land, and lay out terminals for its own use along the V. V. and E. Ry. The provisional directors are: E. C. Blanchard, General Manager, Northern Pacific Ry., Tacoma, Wash.; G. T. Reid, Assistant to the President, N. P. Ry., Tacoma; A. H. McNeill, Vancouver, B. C. (Feb., pg. 57.)

**Pacific Great Eastern Ry.**—A train service was put in operation on the section of the line from Squamish to Lillooet, 120 miles, Mar. 7. Previously the service had only extended to Anderson Lake, 87 miles. The first train over the line to Lillooet was run Feb. 22, when the Premier of British Columbia and other members of the Legislature were taken for a trip by the contractors. From Squamish there is a gradual ascent to the summit at Alpha Lake, 2,100 ft. above sea level, the maximum gradient being 2.2%, with moderate curvature. Then comes the descent to Pemberton Meadows, which are at an elevation of 700 ft. Tracklaying, it was stated to the party, is expected to be completed to Clinton by the end of the summer, and there is a likelihood of the track being laid southerly from Fort George by the end of the year, and of the whole being ballasted and in operation early in the spring of 1916. (Mar., pg. 95.)

**Pacific, Peace River and Athabasca Ry.**—We are officially advised that, as the result of the reconnaissance survey completed at the end of 1914, it was found that a change would have to be made in the location of the terminals on the Pacific coast, and the Dominion Parliament is being asked to authorize the building of a line from Kitimat Arm to the Naas River, instead of the mouth of the Naas River, as formerly. It was intended to go on with the location surveys this year, but it has not been decided when the work will begin.

The company has acquired the charter of the Naas and Skeena River Ry., which was incorporated by the British Columbia Legislature in 1911, to build from Nasoga Gulf to the Skeena River. In the same year the Dominion Parliament voted a subsidy on the usual terms for the building of a railway from Portland Inlet to the Skeena River, not to exceed 100 miles.

In connection with the Peace River Tramway and Navigation Co., which is owned by the P., P. R. and A. Ry., we are officially advised that it is expected to build a steamboat at Peace River Crossing, to build a tramway at Vermillion Falls, Alberta, and to drill for oil at the Falls, where discoveries of oil shales were made in 1914. (Mar., pg. 95.)

**Salisbury and Albert Ry.**—A petition has been forwarded to the Department of Railways asking that this railway extending from Salisbury, to Albert, N. B., 45 miles, be taken over by the Government and operated as a part of the Intercolonial Ry. The memorialists also ask in the event of the line being taken over that a diversion be built to run into Moncton, instead of to Salisbury, as at present. (Aug., 1913, pg. 377.)

**Smoky Valley and Peace River Ry.**—The Alberta Legislature is being asked to incorporate a company with this title to build a railway from the Canadian Northern Alberta Ry. near the junction of Solomon Creek with the Athabasca River, northerly and westerly to the junction of Sheep Creek with Smoky River, and continuing northerly to a junction with the Canadian Northern Western Ry. near Dunvegan. Short, Woods, Biggar and Collisson, Edmonton, Alberta, solicitors for applicant.

**Toronto, Hamilton and Buffalo Ry.**—Revised plans prepared by W. F. Tye, M. Can. Soc. C. E., for the depression of the company's tracks in Hamilton, Ont., were deposited with the City Engineer, Mar. 9. The estimated cost of carrying out the revised plans is \$931,100. The engineers interested in the several plans submitted met in Ottawa recently and discussed the merits of the proposals with G. A. Mountain, Chief Engineer, Board of Railway Commissioners. (Mar., pg. 95.)

**Vancouver Terminal Ry.**—The Dominion Parliament is being asked to incorporate a company with this title to lay out railway yards, terminals, with buildings for the storage and handling of traffic, the construction of tunnels, viaducts, bridges, etc.; the building of wharves and docks for the handling of traffic by water; the provision of workshops and plants capable of being used in connection with any of the foregoing; the construction of railways connecting its yards, terminals, wharves, docks, etc., with the lines of any railway now existing or hereafter to be built between Vancouver and New Westminster and the mouth of the Fraser River. The provisional directors are: C. F. Pretty, C. N. Pretty, T. T. Dauphinee, T. R. Pearson, J. B. Noble, Vancouver, B. C.

The Vancouver City Council had the matter before it Mar. 1, when J. R. Noble, on behalf of the company, submitted a plan showing a tunnel from Lulu Island, through

to False Creek, and a line from Lulu Island to New Westminster. The company, it was stated, would work in connection with the Vancouver Harbor and Dock Co., formed three years ago. This company proposed to build extensive docks on Lulu Island jutting out into the Gulf of Georgia. The city council desire to have more definite information and plans before they approve of the proposal, and a motion to oppose it before Parliament was defeated by only a narrow majority. The railway committee of the House of Commons, Mar. 11, threw out the bill.

**Western Dominion Ry.**—When the application for the extension of time for the building of this projected railway, which is projected to run from Calgary, via the Old Man River Valley, Pincher Creek, and Cardston, Alberta, to the International Boundary, was under consideration in the House of Commons, Mar. 1, it was stated that about 30 miles of grading had been completed and that work was at a standstill. The company, it was stated, had not settled for right of way taken, and the company's counsel promised that the amounts due would be paid at an early date. The Minister of Railways said landowners could obtain redress by going before the Board of Railway Commissioners, but he would see that the company paid what was due. (Dec., 1914, pg. 545.)

### Railway Rolling Stock Notes.

The C.P.R., between Feb. 15 and Mar. 15, received two class D4 locomotives from its Angus shops, Montreal.

The G.T.R. has received one dining car and one parlor buffet car from Canadian Car and Foundry Co.

The Alberta and Great Waterways Ry., Winnipeg, has bought two combined passenger and baggage gasoline motor cars, 55 ft. long, 200 horse power, for service in northwestern Alberta, from McKen Motor Car Co., Omaha, Neb.

The private car Eaton, owned by J. C. Eaton, President, the T. Eaton Co., Toronto, which was damaged by fire a short time ago, has been repaired by National Steel Car Co., Hamilton, Ont., and is for sale. Mr. Eaton has ordered an all steel private car from Preston Car & Coach Co., Preston, Ont., which will embrace all the latest improvements in its design. Preliminary plans for it have been prepared in the Canadian Northern Ry. Mechanical Department, Toronto.

J. D. McArthur Co., railway contractors, Winnipeg, have ordered 2 ten wheel passenger locomotives with superheaters, from Canadian Locomotive Co. Following are the chief details,—

Weight on drivers .....	102,000 lbs.
Weight, total .....	125,000 lbs.
Wheel base, rigid .....	11 ft. 10 ins.
Wheel base, total engine .....	21 ft. 7 ins.
Wheel base, engine and tender .....	49 ft. 4 1/4 ins.
Heating surface, firebox .....	123.5 sq. ft.
Heating surface tubes .....	1047.5 sq. ft.
Heating surface, arch tubes .....	15 sq. ft.
Heating surface, total .....	1,186 sq. ft.
Driving wheel, diar. ....	63 ins.
Driving wheel centres .....	Cast iron.
Driving journals, diar. and length .....	8 1/2 by 10 ins.
Cylinders, diar. and stroke .....	19 by 26 ins.
Boiler, type .....	Radial stay.
Boiler pressure .....	180 lbs.
Tubes, no. and diar. ....	122—2 ins.; 18—5 3/8 ins.
Tubes, length .....	11 ft. 10 ins.
Injectors .....	Locomotive Type.
Safety valves .....	2—3 in. locomotive pop.
Brakes .....	Westinghouse American
Packings .....	Metallurg
Superheater .....	Schmidt type A.
Weight of tender loaded .....	116,500 lbs.
Tank, type .....	U type.
Water capacity .....	5,000 imp. gals.
Coal capacity .....	9 tons.
Tender, type .....	4 wheel arch bar.
Truck wheel diar. ....	30 ins.
Wheel, type .....	Steel tread, cast iron centres.
Journal, diar. and length .....	5 by 9 ins.
Brake beam .....	Simplex.

### Railway Finance, Meetings, Etc.

**Canadian Northern Ry.**—The Treasurer of Manitoba in his recent budget speech, stated the amount of securities guaranteed by the Province for the C. N. R. was \$25,221,580.

**Canadian Northern Ry.**—London, Eng., cablegram, Mar. 11:—There have just been listed Canadian Northern Pacific £500,000 fours, guaranteed by the Dominion, and Canadian Northern Pacific £570,000 4 1/2's, guaranteed by British Columbia.

**Fredericton and Grand Lake Coal and Ry. Co.**—There has been deposited with the Secretary of State at Ottawa, copy of lease dated Nov. 4, 1914, made between the company and the C. P. R. under which the company's railway is being operated.

**Grand Trunk Ry.**—A bill is before Parliament authorizing the directors to assist by advances any company, the capital of which is held or controlled in behalf of the G.T.R., and to use for such purposes the proceeds of any class of stock heretofore or hereafter issued, such power to be only exercised upon the passing of a resolution to that effect by the shareholders. W. H. Biggar, Vice President, G.T.R., explained on behalf of the company, that it is easier to dispose of G.T.R. securities than those of subsidiary companies.

**Morrissey, Fernie & Michel Ry.**—At the annual meeting in Toronto, Mar. 12, of this company, which is closely allied with the Crows Nest Pass Coal Co., it was stated that the profits from operation for the calendar year 1914 were \$15,564.47. The profits brought forward to Jan. 1, 1914, were \$27,922.58, making a total at credit of profit and loss of \$43,487.05. The directors for the current year are Elias Rogers, President and Treasurer; E. C. Whitney, Vice President; H. B. McGiverin, C. A. Thompson, and W. H. Robinson. R. M. Young is Secretary and Miss L. M. Kelley, Assistant Secretary.

**Ottawa and New York Ry.**—St. Lawrence and Adirondack Ry.—These two Canadian lines are owned by the New York Central and Hudson River Ry., and give that company's lines access to Ottawa and Montreal, respectively. The two companies are applying to the Dominion Parliament for authority to lease their lines to the N.Y.C. and H.R. Ry. When the bill was before the House of Commons it was decided to limit the period to which the lines could be leased to 10 years, and to compel application to be made to parliament for authority to renew the lease. In the Senate, Mar. 11, it was decided to make the period 21 years, to which the Minister of Railways signified his approval.

**Toronto, Hamilton and Buffalo Ry.**—The bill confirming the agreement for amalgamation between the T. H. and B. Ry. and the Erie and Ontario Ry. was approved by the Railway Committee of the House of Commons, Mar. 11. The committee fixed the bonding powers of the amalgamated company at \$10,000,000 instead of \$15,000,000 as applied for.

**Incline Railway for Banff.**—An order-in-Council was passed at Ottawa, Mar. 3, authorizing the Minister of the Interior to make an agreement with T. R. Deacon, M. Can. Soc. C. E., Winnipeg, granting permission for the construction and operation of an incline railway up the face of Cascade Mountain, Banff, Alberta. We are officially advised that the surveys have not been completed, but it is expected to complete them during the summer and to have the line completed to the top of Cascade Mountain in two years. Electricity will be the motive power, but none of the other details have been settled.

### Grand Trunk Pacific Railway Construction.

The Minister of Railways stated in reply to questions in the House of Commons, Mar. 3, that the following information as to the amount of expenditure charged to the account of the G.T.P.R. since 1911 had been supplied by the company:—Prairie section—1911-12, \$1,051,330.73; 1912-13, \$1,966,847.18; 1913-14, \$1,587,393.98; 1914-15, \$2,244,593.96; total, \$6,850,165.90. Mountain section—1911-12, \$12,275,403.44; 1912-13, \$15,896,403.44; 1913-14, \$23,990,160.84; 1914-15, \$16,726,213.36; total, \$68,888,065.24.

Press reports state that it is expected to inaugurate regular daily service between Winnipeg and Prince Rupert at an early date.

Oil burning locomotives are to be used for the traffic between Edmonton and Prince Rupert, and excavations have been started at Fort George, B.C., for the erection of two 35,000 gall. oil tanks for use in this connection.

The floating dry dock at Prince Rupert is expected to be ready for use in May. The ship repairing plant in connection with the dock is already completed. (Jan., pg. 19.)

### National Transcontinental Railway Construction.

Replying to a question in the House of Commons, Mar. 1, the Minister of Railways said that on June 5, 1914, the Government bought for \$175,000 a piece of line, 5.5 miles long, for use in connection with the N.T.R. This line connected with the N.T.R. only at the east end near Cape Rouge, Que., and in order to facilitate operation an additional Y connection, 2,481 ft. long, is being constructed at the Cape Rouge end. At the west end a connection 2.3 miles long has been built in order to effect connection with the Leonard shops. The east end of the line is in Cape Rouge parish and the west in St. Malo parish. On Mar. 3 another question elicited from the Minister the fact that \$11,000 is being expended upon repairing the line purchased.

The Minister of Railways informed the House of Commons, Mar. 3, that work had been started on the N.T.R. terminals in the city of Quebec. There had been expended by the commission \$372,514.86 for lands, and by the C.P.R. \$154,293.83 on tracks and buildings.

The Minister of Railways, replying to questions in the House of Commons recently, said the expenditure on the Quebec bridge since Mar. 12, 1912, had been:—1912-13, \$1,512,825.96; 1913-14, \$2,604,105.61; and to Jan. 31, 1915, \$2,964,911.40. Total, \$7,081,842.97.

In reply to questions in the Senate, Mar. 2, Senator Loughheed stated the N.T.R. was operated from Dec. 1, 1913, to May 1, 1914, from Hervey Jct., mileage 72 west of Quebec, to the divisional point at Parent, mileage 245 west of Quebec; and during this winter it is being operated from Cochrane, Ont., east to Peter Brown Creek, 143 miles. These are the mileages between Quebec and Cochrane, which have been operated.

In the Senate, Mar. 11, on a motion for the submission to Parliament of copies of all petitions for traffic on the N.T.R. between Abitibi and Hervey Jct., Senator Loughheed stated that the contractors for the building of the line between these points were operating a bi-weekly service for which they were receiving \$12,000 from the Government. The contractors had pointed out that no revenue was being made from this operation. The Minister of Railways made a personal investigation of the situation in the

late autumn. The line was being operated also between Hearst and Amos, 270 miles west of Cochrane. As to further operation it will be necessary almost immediately for the Government to operate in a limited way the entire system for the purpose of maintenance. Whatever difficulties settlers along the line might experience at present, there was a possibility of these being overcome at a very early date, as the line would have to be operated to prevent the decay into which it would necessarily fall except it becomes a going concern. He continued:—"Immediately the contractors completed their contracts between Quebec and Cochrane the Government took the necessary steps to notify the Grand Trunk Pacific of the completion of the road and of the necessity of their carrying out or fulfilling the obligations which fall upon them under the contract between the Crown and the company. The company has not responded with that alacrity which the Government would very much like to see. They have not pointed out wherein the road is incomplete in any particular respect, but they rely upon a general objection, which is a very favorite objection, in special pleading. What the result of this may be I cannot say. The probabilities are that negotiations between the G.T.P. and the Government may be extended over some period of time, but in the meantime the perplexities which must necessarily attend the handling of so important a matter will be thrown upon the shoulders of the Government." (Mar., pg. 102.)

Senator Loughheed stated in the Senate, Mar. 12, that the G.T. Pacific Ry. had filed "omnibus objections" to the taking over of the line from Moncton, N.B., to Winnipeg, in respect to which there would have to be negotiations between the company and the Government. Under the terms of the agreement entered into in 1903, the G.T. Pacific Ry. Co. undertook to take over the line when completed, on lease for 50 years at a rental of 3% upon the total cost, after the first seven years.

### Traffic Orders by the Board of Railway Commissioners.

#### Interswitching at Arnprior.

23250. Feb. 1. Re application of Gillies Bros., Ltd., of Braeside, Ont., and G. R. Baker, of Arnprior, Ont., under sec. 228 of the Railway Act, for an order requiring the construction of interchange tracks, for the purpose of interchanging cars between the C.P.R. and the G.T.R. at Arnprior, it is ordered that C.P.R. and G.T.R. tracks at Arnprior be so connected as to provide for the reasonable receiving, forwarding, delivering, and the interswitching of traffic between their respective railways, as shown on the plan filed by the applicants with the Board, and that if the C.P.R. and G.T.R. do not agree, within 15 days from the date of this order, to accept the said plan, the G.T.R. thereafter submit a plan to the C.P.R., and if an agreement is not arrived at within 15 days from the submission of such plan by the G.T.R., any points of disagreement existing between the parties be settled by an engineer of the board; the plan, in either event, to be approved by the board. That the necessary materials be supplied and the work of construction done by the G.T.R. That the cost of constructing the interchange track be paid one half by the G.T.R. and one half by Gillies Bros., Ltd.; the payment of Gillies Bros., Ltd., of their portion of the cost to be paid by them on completion of the work and upon an account rendered to them by the G.T.R. That the cost of maintenance, and the cost of protection, if any, as may be ordered by the

board in respect of any portion of the said interchange track, be borne by the G.T.R. That the work herein required to be done be commenced by May 1, 1915, and completed within 30 days thereafter.

#### Suspension of Maine Central Rd. Tariffs.

23272. Feb. 10. Re order 23232, Feb. 2, suspending certain tariffs filed by the Boston & Maine and the Maine Central Railroads until further order. Upon its appearing that the Maine Central tariff, C.R.C. no. C. 832 is not one of the tariffs providing for a general increase of 5% in the rates between the company's stations in Canada to which the order was intended to apply; it is ordered that order 23232 be rescinded in so far as it relates to the said Maine Central tariff, effective Feb. 15, 1915.

#### Coal Rates to Newboro, Ont.

23375. Feb. 26.—Re the complaint of W. S. Bilton, of Newboro, Ont., complaining of excessive freight charges on coal shipped from Ogdensburg, N.Y., to Newboro, via ferry at Prescott, it is ordered that the G.T.R. and the Canadian Northern Ry. be jointly directed to file a tariff of joint rates to apply on coal in carloads of a minimum weight of 15 gross tons, shipped from Prescott to all points on that portion of the C.N.R. line formerly known as the Brockville, Westport and Northwestern Ry., via Lynn; the G.T.R.'s proportion of the joint rates to be 56 cts. per gross ton, including switching from the Ogdensburg ferry dock; and the C.N.R.'s proportion thereof to be less than its local mileage rates on coal by amounts corresponding to the reduction made by the G.T.R. from its local mileage rate, having regard to the mileage in each case.

#### Rates on Newsprint to West of Fort William.

General order 135. Mar. 22.—Re complaint of the Middle West Federated Boards of Trade, on behalf of the Sun Publishing Co., of Brandon, Man., complaining that the rates charged by the C.P.R. on newsprint paper from Ottawa and other eastern shipping points to Brandon, as compared with the rates charged to Winnipeg, unjustly discriminate in favor of Winnipeg and against Brandon, it is ordered that the through rates of freight on newsprint paper, in carloads of 40,000 lbs. minimum weight, from the points of shipment thereof, by the all-rail route, to the Canadian points of consumption west of Fort William, be made by the addition to the 5th class published tariff rates from Port Arthur and Fort William of the following special arbitraries, per 100 lbs. for the purposes of this order, viz.:—from Sault Ste. Marie, Espanola, and Sturgeon Falls, Ont., 15 cts.; from Merriton and Ottawa, Ont.; Hull, Windsor Mills, Shawinigan Falls, and Grand Mere, Que., 25 cts. That other points of shipment of newsprint paper east of Sault Ste. Marie (if any) be added to those named above at through rates appropriate to these herein prescribed. That the said through rates take effect not later than April 15.

#### American Railway Engineering Association.

—At the annual convention in Chicago in March the following officers were elected:—President, R. Trimble, Chief Engineer, Maintenance of Way, Pennsylvania Lines West, Northwest System, Pittsburg, Pa.; Vice President, J. G. Sullivan, Chief Engineer, Western Lines, C.P.R., Winnipeg; Treasurer, G. H. Bremner, Assistant District Engineer, Interstate Commerce Commission, Chicago; Secretary, E. H. Fritch, Directors for three years each:—H. R. Safford, Chief Engineer, G.T.R.; A. N. Talbot, Professor of Municipal and Sanitary Engineering, University of Illinois; and C. W. F. Felt, Chief Engineer, Atchison, Topeka and Santa Fe System.

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, Telegraph, and Railway and  
Canal Contractors' Interests.  
Official Organ of the various Canadian  
Transportation Associations.  
Published on the first of each month.

## Train Accident Caused by the Sliding of an Earth Fill.

The sliding of an earth fill under a moving railway train is one of the rarest of the causes of railway accidents. Such an accident is recorded, however, in an accident bulletin of the Interstate Commerce Commission. It occurred May 27, 1914, near West Point, Tex., on the Missouri, Kansas & Texas Ry. The fill was made in a ravine at the base of a hill and was composed largely of a soapstone formation, which when wet had little holding qualities. Apparently no outlet was left through the fill for water draining from the hills behind, and a pool was formed back of the fill about 7½ ft. deep and 75 ft. long. During the three months preceding the accident, Weather Bureau records show that nearly 25 in. of rain had fallen. The track on the fill was on a 4 degree curve, and the train which was passing over the fill when the slide occurred was a slow freight running only 5 to 10 miles an hour. The locomotive and first four cars were derailed and the locomotiveman and fireman were crushed under the overturned locomotive. The roadmaster, trainmaster, and district engineer agree that the fill had become soft from the continued rains. While the embankment slipped under a slow freight train, it is stated that a passenger train running 20 to 25 miles an hour had passed over the track only 40 minutes earlier.

**Coal Importation for Intercolonial Ry.**—Senator Loughheed, replying to questions in the Senate, Mar. 10, said coal had been purchased in the U.S. for use on the Intercolonial Ry. as follows:—1900-01, 14,300 gross tons, at \$3.75, f.o.b. Montreal; 27,646 gross tons, at \$5.30, f.o.b. St. John; 3,977 gross tons at \$3.93, f.o.b. St. John; 14,600 gross tons at \$4.20, f.o.b. St. John, all duty free; total, 61,079 gross tons. The reason for these purchases was apprehension on the part of the management that friction between certain miners and coal operators would lead to cessation of work. In 1908-09 36,059 gross tons were bought at \$4.95, f.o.b. St. Hyacinthe, duty paid. The reason for this purchase was the strike at Springhill collieries and the inability of other collieries to make up shortage. In 1913-14 15,331 net tons were bought at \$4.10, f.o.b. Ste. Rosalie, duty paid. The reason for this purchase was that there was a greater consumption of coal than was anticipated, which could not be met from the usual sources of supply.

**Algoma Central Railway Receivership.**—By an order of the Exchequer Court, dated Feb. 20, the Algoma Central and Hudson Bay Ry. Co. has been placed in the hands of two receivers, T. J. Kennedy, President and General Manager of the company, and Vivian Harcourt, who is a partner in the accounting firm of Deloitte, Plender, Griffiths and Co., of London, Eng., and Montreal. The receivers will have their headquarters at Sault Ste. Marie. We are advised that no changes are contemplated at present in the officials of the railway in consequence of the receivership. The Algoma Central Terminals, Ltd., the Algoma Eastern Ry. Co., and the Algoma Eastern Terminals, Ltd., are not included in the receivership.

**Paul Seurot, M.Can.Soc.C.E.,** Chief Engineer for Jacobs & Davies, Inc., Montreal, has been awarded the Canadian Society of Civil Engineers' Gzowski medal, for the best paper for the year 1914.

**White Pass and Yukon Route.**—Gross earnings for January, \$6,275, against \$13,611 for January, 1914.

## Manufacture of High Explosive Shells in Toronto.

A contract for 100,000 eighteen pound high explosive shells for the British Government has been given to the Universal Tool Steel Co., Ltd., in which Sir Wm. Mackenzie and Sir Donald Mann are shareholders. The company has acquired temporarily a vacant factory at 133 Dufferin St., Toronto, which is being fitted up preparatory to the installation of the machine tool equipment, which will consist of 24 new automatic turret lathes, nine or ten 18 to 20 in. engine lathes, and about 12 odd tools such as drills, millers, etc., for the auxiliary work. Most of this equipment, with the exception of the new turret lathes, is being secured from the various Canadian Northern Ry. shops throughout the country, whatever machines it is possible to spare being used. The capacity of the plant is expected to be about 800 shells a day.

S. J. Hungerford, Superintendent of Rolling Stock, C.N.R., is organizing the plant and supervising the installation of the equipment. D. M. Galloway, General Foreman, C.N.R. Locomotive Shops, Winnipeg, is acting Superintendent, and A. Hopkirk, Shop Engineer, C.N.R. Locomotive Shops, Winnipeg, is Shop Engineer.

**Smokeless firing of locomotives** is impossible unless they are correctly designed, with not less than 90% ashpan openings, and 46% openings in the grate.

**Furnaces for treating high speed steel** should be so constructed that the oxygen of the air from the blast and fuel opening will not attack the metal, as this will result in scale, blisters, uneven heating, cracking in hardening and general bad results.

**Shell Orders From Russia.**—Press reports state that W. W. Butler, Vice President, Canadian Car and Foundry Co., Montreal, who has been in Petrograd for some time, has secured orders from the Russian Government for shells to the value of approximately \$80,000,000; that as many of these as possible will be made at the company's plants at Turcot and Dominion, near Montreal and Amherst, N.S.; and that subcontracts for the balance will be let both in Canada and in the U.S.

**Taxation of Railways in British Columbia.**—The B.C. Legislature has under consideration an amendment to the Municipal Clauses Act, as it affects the taxation of railways. It is proposed to fix the basis of assessment at \$10,000 a mile, the same as is fixed for provincial purposes. Other amendments are for the purpose of settling difficulties that have arisen owing to the contention of the electric railways that they do not own the streets on which their tracks are laid, and that the tracks are in the nature of street improvements.

The Mackay Companies' report for 1914 shows assets consisting of investments in other companies of \$91,996,160, and cash \$598,959. The liabilities consist of \$50,000,000 preferred stock and \$41,380,400 common stock, leaving a surplus of \$1,205,719. The income from investments is \$4,264,014, an increase of \$62,000. It was reported that business depression both before and since the outbreak of war, had affected the returns in the U.S., and rigid economies in regard to operating expense are being insisted on. The contract with the C.P.R., which has been renewed, is entirely different from the usual railway telegraph contract in the States, providing for an interchange of telegraph business, the same as between two telegraph companies, and it does not burden the telegraph company with deadhead railway telegrams. The directors were reelected.

## Mainly About Railway People.

**R. Bryant**, a former inspector of bridges for the G.T.R., died at Brockville, Ont., Mar. 9, aged 75.

**Geo. H. Ham**, of the C.P.R. head office staff, returned to Montreal, Mar. 18, after spending a few weeks holiday in Florida.

**Morley Donaldson**, Vice President and General Manager, Grand Trunk Pacific Ry., returned to Winnipeg early in March, after spending a short holiday in California.

**T. H. White**, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., visited the company's head offices in Toronto at the end of March.

**Miss Helen McNicoll**, daughter of **D. McNicoll**, formerly Vice President, C.P.R., Montreal, has had two pictures accepted by the Royal Society of British Artists.

**J. J. Carter**, a brakeman on the C.P.R., has been awarded the Albert medal of the second class by the King for saving life at Tweed, Ont., last year.

**M. H. MacLeod**, General Manager and Chief Engineer, Canadian Northern Ry., Winnipeg, is spending a few weeks in California.

**J. G. Sullivan**, Chief Engineer, Western Lines, C.P.R., Winnipeg, has been elected Second Vice President, American Railway Engineering Association.

**Grant Hall**, Vice President and General Manager, Western Lines, C.P.R., made his first trip of inspection in that capacity over the lines from Winnipeg to Port Arthur, Ont., recently.

**Jas. Lyman**, formerly of Kingston, Ont., and also formerly Freight Agent for Detroit and Milwaukee Rd., at Linden, Mich., died at his home in Manchester, N.Y., Mar. 20, aged 91.

**Mrs. F. L. Wanklyn**, wife of the General Executive Assistant, C.P.R., Montreal, is making an active canvass in the interest of the corps for contributions for mufflers, mitts and heavy socks.

**Sir Thos and Lady Tait** and **Miss Tait**, who have been spending part of the winter in Cuba, Florida and South Carolina, expect to spend April at Hot Springs, Va., and to return to Canada early in May.

**H. Rindal**, Division Engineer, C.P.R., Vancouver, B.C., read a paper on the C.P.R. Vancouver terminal before the Canadian Society of Civil Engineers, Vancouver branch, Mar. 4.

**Sydney E. Junkins**, who retired from the Vice Presidency of Westinghouse, Church, Kerr and Co., New York, in November last, is practising as a consulting engineer in New York and has spent a portion of the winter in California.

**Lieutenant Jas. O'Reilly**, chief clerk, Sleeping, Dining and Parlor Cars and News Department, C.P.R., Winnipeg, was presented with a silver flask recently by the local staff, on his leaving for active service with the Army Service Corps.

**H. McCall**, Superintendent, G.T. Pacific Ry., Melville, Sask., was entertained to dinner at Edmonton, Alta., at the end of February, by the local staff, on the occasion of his removal from that district to Melville.

**Henry Yates**, formerly chief checker, G. T. R. freight sheds, London, Ont., and father of **G. W. Yates**, Minister's Secretary, Railways and Canals Department, Ottawa, died at London, Mar. 7, aged 67. He was placed on the pension fund about two years ago.

**Mrs. H. E. Whittenberger**, wife of the General Superintendent, Ontario Lines, G. T.R., Toronto, has received an acknowledgment of a shipment of shirts, sweaters, socks and mufflers, for soldiers of the second Canadian contingent, which was con-

tributed by wives of G.T.R. officials in Toronto and district.

**A. G. Clark**, accountant, C.P.R., Vienna, Austria, who, with others of the staff there, was held as a prisoner on the outbreak of war, has been released, and has returned to England with his wife and family. Three members of the Vienna staff are still held prisoners.

The engagement is announced of **Miss Isabel Piers**, daughter of **Arthur Piers**, of Liverpool, Eng., formerly Manager, Steamship Department, C.P.R., to **Capt. G. S. Carne, J.P.**, of the Glamorgan Yeomanry, eldest son of the late **J. D. Carne**, of Nash Manor, Cowbridge.

**Sir Frederick Harrison**, latterly a director and formerly General Manager of the London & North Western Ry. and since 1909 Deputy Chairman of the South Eastern Ry. and a member of the South Eastern & Chatham Ry., managing committee, died in England recently.

**J. S. Morrison**, of Edinburgh, Scotland, who is reported to have been awarded the distinguished conduct medal for service as a dispatch rider in France and Belgium, is a nephew of **J. W. Stewart**, of Foley, Welch and Stewart, railway contractors, Vancouver, B.C.

**J. R. Grant**, M. Can. Soc. C.E., who has been Secretary-Treasurer of the Vancouver

In affectionate remembrance of

SIR WILLIAM WHYTE,

who died at San Diego, California,  
April 14, 1914,

Deeply regretted by the thousands  
who had the privilege of know-  
ing him.

Branch of the Canadian Society of Civil Engineers, was entertained to dinner at Vancouver, recently, by a number of local engineers, on his departure for England, where he is joining the Royal Engineers for service during the war.

**W. R. Smith**, Chief Engineer, Edmonton, Dunvegan and British Columbia Ry., Alberta and Great Waterways Ry., and Central Canada Ry., gave an address, Mar. 10, before the Industrial Association at Edmonton, Alberta, upon the industrial and trading possibilities of the country to be opened up by these railways.

**George W. McMullen**, of Picton, Ont., who was best known as an inventor, died of heart disease on a train between Chicago and Evanston, Ill., Mar. 23. He was one of the original promoters of the Central Ontario Ry. Of late he has been principally engaged in developing a patent for the preservation of railway ties by a drying process.

**George Paton**, who has been appointed agent, C.P.R. Telegraphs, Toronto, was born at Toronto, Mar. 13, 1882, and entered telegraph service, Mar. 26, 1900, since when he has been, to May 31, 1910, clerk, Audit Department, Great North Western Telegraph Co., Toronto; June 1, 1910, to Oct. 1, 1912, accountant, C.P.R. Telegraphs, Toronto; Oct. 1, 1912, to Mar. 20, 1915, assistant agent, C.P.R. Telegraphs, Toronto.

**William Henry Maund**, who has been appointed Secretary-Treasurer, Timiskaming and Northern Ontario Ry. Commission, Toronto, was born at Kingston, Ont., Nov. 20,

1884, and entered railway service July, 1899, since when he has been, to Sept., 1907, messenger, billing clerk, cashier and ticket agent, consecutively, Kingston and Pembroke Ry., Kingston, Ont.; Oct., 1907, to Mar., 1915, clerk, agent and Travelling Auditor, consecutively, Timiskaming and Northern Ontario Ry., at various points, latterly at North Bay, Ont.

**Frank L. Hutchinson**, whose appointment as Manager in Chief of Hotels, C.P.R., Montreal, was announced in our last issue, was born at London, Ont., Aug. 10, 1869, and first entered C.P.R. service in 1908, since when he has been, to 1910, Manager, Chateau Frontenac, Quebec, Que.; 1911, Assistant to Manager in Chief of Hotels, C.P.R.; 1912 to 1913, Superintendent of Hotels in Alberta and British Columbia, C.P.R.; Aug., 1913 to Mar., 1915, Manager, Windsor Hotel, Montreal. Prior to entering the C.P.R. service, he was for 4 years a member of the Montreal Stock Exchange, and for 13 years prior to that was with the Bank of Montreal.

**Thomas Webb Nash**, who died in the General Hospital, Kingston, Ont., Mar. 24, was born in 1827, and entered railway service in 1849, since when he had been, to 1850, chain man, Boston, Ogdensburg and Lake Huron Ry.; 1850 to 1851, explorer and surveyor, Belleville and Peterboro Rd.; 1852 to 1858, draughtsman, G.T.R.; 1858 to 1864, on special surveys, G.T.R.; 1866 to 1867, engineer, Kingston Penitentiary Ry.; 1867 to 1871, Chief Engineer preliminary surveys, Kingston and Frontenac, Kingston and Madoc, and Kingston and Napanee Rys.; 1871 to 1876, Chief Engineer, Kingston and Pembroke Ry.; 1876, Engineer, Kingston loop line, G.T.R.; 1876 to 1885, Chief Engineer, and from that year to the taking over of the line by the C.P.R., also Secretary and Treasurer, Kingston and Pembroke Ry., Kingston, Ont.

**C. W. P. Ramsey**, Engineer of Construction, C.P.R., Montreal, who has been granted extended leave of absence to take command of the Canadian overseas railway construction corps, was born at Bury, Que., Jan. 15, 1883. He entered C.P.R. service as apprentice in Mechanical Department at Delorimier Avenue shops in 1898 and served in various minor capacities until Sept. 19, 1903, when he was transferred to the construction department at Montreal, passing through the various grades of draughtsman, transitman, Assistant Engineer and Division Engineer. On Mar. 15, 1912, he was appointed Engineer of Construction, Eastern Lines, holding that position until Feb. 25, 1915, when granted leave of absence as above stated. He was closely identified with the construction of several of the company's lines, notably the Lindsay, Bobcaygeon and Pontypool Ry., the Toronto-Sudbury branch, and the Campbellford, Lake Ontario and Western Ry., as well as the double tracking of a large portion of the eastern lines.

**C. T. Delamere**, who has been appointed acting Engineer of Construction, C.P.R., Montreal, was born at Brainerd, Minn., Mar. 18, 1881, and graduated C.E., from the University of Minnesota in 1902. He entered railway service in July, 1902, since when he has been, to May, 1903, instrument man, Northern Pacific Ry., Duluth, Minn.; May, 1903, to June, 1905, Resident Engineer, same road, Jamestown, N.D.; June, 1905, to Nov., 1906, Roadmaster, same road, Jamestown, N.D.; Nov., 1906, to Apr., 1908, Assistant Engineer, same road, Valley City, N.D.; Apr., 1908, to June, 1910, Division Engineer, same road, Missoula, Mont.; June, 1910, to July, 1911, in private practice; July to Sept., 1911, Resident Engineer, Canadian Northern Ontario Ry., Nipigon, Ont.; Sept., 1911, to June, 1912, Division Engineer, same road, Nipigon, Ont.; June, 1912, to Aug., 1913,

Assistant District Engineer, same road, Port Arthur, Ont.; Aug., 1913, to Nov., 1915, Assistant Engineer of Construction, C.P.R., Montreal.

**A. J. McGee**, Secretary-Treasurer, Timiskaming and Northern Ry. Commission, Toronto, died there, Mar. 1, from pneumonia. He was born at Lachine, Que., Jan. 24, 1876, and was for some time in Canada Atlantic Ry. service in the Audit Department, where he was Auditor of Passenger Traffic. He was appointed Secretary-Treasurer of the T. & N.O.R. Commission in 1905. At a meeting of the Commission, Mar. 4, the following resolution was passed:—"The Commission of the Timiskaming and Northern Ontario Ry., with deepest sorrow and sincere regrets, are called upon to chronicle the untimely death of their friend, the Secretary and Treasurer of the Commission, Alfred John McGee. For ten years the late Secretary has been in charge of the responsible duties of Secretary and Treasurer of the Commission, and has acquitted himself, not alone as a good, loyal, conscientious servant, but at all times with the paramount thought how best to serve the interests of the Commission, the Province, and the public utilities that were within his charge."

**Walter Burdett Pratt**, whose appointment as General Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., was announced in our last issue, was born at Sibbertoft, Northamptonshire, England, Jan. 18, 1870, and entered railway service in Aug., 1883, since when he has been, to Oct., 1886, office boy in Audit Office, C.P.R., Winnipeg; Nov., 1886, to Apr., 1889, chief clerk, Purchasing Department, C.P.R., Winnipeg; May, 1889, to Sept., 1890, on construction work, C.P.R., Winnipeg; Oct. to Dec. 1890, temporary cashier, Treasurer's Office, C.P.R., Winnipeg; Dec., 1890, to Nov., 1894, accountant, Sleeping and Dining Car Department, C.P.R., Winnipeg; Dec., 1894, to Sept., 1898, Agent, same department, Winnipeg; Oct., 1898, to Mar., 1903, Assistant Superintendent, Sleeping and Dining Cars and Hotels, Western Lines, C.P.R., Winnipeg; May, 1903, to Feb., 1911, Superintendent, Sleeping and Dining Cars and News Service, Canadian Northern Ry., Winnipeg; Mar., 1911, to Jan. 31, 1915, Superintendent, Sleeping and Dining Cars, Hotels and News Service, C.N.R., Winnipeg. His office is at Winnipeg for the present, but it will probably be removed to Toronto in the near future.

**Alphonse Dion**, whose appointment as Assistant Superintendent, National Transcontinental Ry., Monk, Que., was announced in our last issue, was born at Montmagny, Que., Dec. 18, 1857, and entered railway service in Sept. 1874, since when he has been, to June 1876, telegraph operator and relief agent, G.T.R., Warwick, Danville and Riviere du Loup, Que.; June 1876 to Sept. 1878, telegraph operator and train baggage man, Intercolonial Ry., Riviere du Loup, Que., and Moncton, N.B.; Sept. 1878 to Apr. 1879, telegraph operator, Dominion Telegraph Co., Quebec, Que., and St. John, N.B.; Apr. 1879, to Dec. 1883, dispatcher, Quebec, Montreal, Ottawa and Occidental Ry., now part of the C.P.R., Three Rivers and Hochelaga, Que.; Dec. 1883, to July 1884, Agent, C.P.R., St. Martins Jct., Que.; July 1884 to Oct. 1885, dispatcher, C.P.R., Ottawa, Ont.; Oct. 1885 to Sept. 1897, agent, C.P.R., St. Martins Jct., Que.; Sept. 1897 to Aug. 1900, dispatcher, C.P.R., Ottawa and Montreal; Aug. 1900 to Sept. 1901, Chief Dispatcher and Trainmaster, Great Northern Ry. of Canada and Quebec and Lake St. John Ry., Quebec and Grand Mere, Que.; Sept. 1901 to Feb. 1915, dispatcher, Intercolonial Ry., Riviere du Loup, Que.

**Allan Purvis**, who has been appointed Superintendent, District 2, Ontario Division,

C.P.R., London, was born at Batavia, Java, June 29, 1878, and educated at the Merchant Taylor's School, Liverpool, Eng. He entered C.P.R. service at an early age, and was from Aug., 1890, to Feb., 1891, messenger,

**F. L. Hutchinson.**  
Manager in Chief of Hotels, Canadian Pacific Railway.

**W. Pratt, Jr.,**  
General Superintendent, Sleeping, Dining, Parlor Cars and Hotels, Canadian Northern Railway.

Stores Department; Feb. to Nov., 1891, storeman; Nov., 1891, to Sept., 1892, junior clerk, Vancouver, B.C.; Sept., 1892, to Aug., 1893, timekeeper, Donald, B.C.; Aug., 1893, to Oct., 1894, clerk, Vancouver, B.C.; Oct., 1894, to Mar., 1895, assistant storekeeper,

North Bend and Kamloops, B.C.; Mar., 1895, to Sept., 1896, clerk and operator, Car Service and Fuel Department, Vancouver, B.C.; Sept., 1896, to Jan., 1899, chief clerk, Fuel Department, Vancouver; Jan., 1899, to Feb., 1903, chief clerk to General Superintendent, Vancouver; Feb. to Nov., 1903, Superintendent, District 4, Central Division, Souris, Man.; Nov., 1903 to Oct., 1909, Superintendent, District 3, Pacific Division, Nelson, B.C.; Oct., 1909, to Oct., 1911, Local Manager, Fraser Valley Branch, British Columbia Electric Ry., Vancouver; May, 1912, to Feb., 1915, Manager of Interurban Lines, same company, New Westminster, B.C.

**C. J. Smith**, who has been appointed Manager and Secretary, Montreal Warehousing Co., Montreal, was born at Hamilton, Ont., Mar. 10, 1862, and entered transportation service in 1879, since when he has been, to 1880, clerk in local freight office, Hamilton and Northwestern Ry., Hamilton, Ont.; 1880 to 1882, in Auditing and Purchasing Department, Chicago and Alton Rd.; 1882 to May, 1885, in Construction Department, C.P.R.; June, 1885, to 1886, in Traffic Department, New York, Lake Erie and Western Rd.; 1886 to 1888, chief clerk to General Manager, Chicago and Atlantic Ry.; Jan. to July, 1888, in Traffic Department, Minneapolis, St. Paul and Sault Ste. Marie Ry.; July, 1888, to Jan., 1890, in Traffic Department, St. Paul, Minneapolis and Manitoba Ry.; Jan., 1890, to Mar., 1898, General Freight and Passenger Agent, Canada Atlantic Ry.; Apr., 1898, to Mar., 1904, General Traffic Manager, Canada Atlantic Ry. and Canada Atlantic Transit Co., Ottawa, Ont.; Mar., 1904, to Mar., 1913, General Manager, Richelieu and Ontario Navigation Co., Montreal. In Apr., 1913, he was appointed Vice President and General Manager of the North Ry. Co., formed to build a railway from Montreal to James Bay, and to operate steamships from the latter place.

**Lacey R. Johnson**, M. Can. Soc. C.E., who has been appointed General Welfare Agent, C.P.R., Montreal, was born at Abingdon, Berks, England, June 22, 1855. He entered railway service as an apprentice at the Great Western Ry. works at Swindon, Wilts., June 1, 1870, and was a mechanic and Foreman of Mechanics at Woolwich Arsenal, Jan. to Aug., 1876, and fitter and erector, Sept., 1876, to Nov., 1878; Manager, Davis and Sons' engineering works, London and Abingdon, Nov., 1878, to Aug., 1879. In Sept., 1879, he went to India as draughtsman on the Scinde, Punjab and Delhi Ry., and was subsequently foreman of machine and erecting shops there. He left India on account of health in Mar. 1882, and entered G.T.R. service at Montreal as draughtsman, June, 1882, and joined the C.P.R., Nov., 1882, since when he has been, to Nov., 1885, General Foreman, Carleton Jct., Ont.; Nov., 1885, to May, 1886, Assistant Master Mechanic, Eastern Division, Chisleau, Ont.; May, 1886, to Apr., 1901, Master Mechanic, Pacific Division, Vancouver, B.C.; and from the commencement of the Transpacific service his jurisdiction was extended over the engineering department of the vessels, during which time he spent three winters in Hong Kong, China, superintending alterations and repairs to the company's vessels; Apr. to Sept., 1901, on the purchase of the Canadian Pacific Navigation Co. by the C.P.R., he was Superintending Engineer of the combined fleets, which position was severed from the locomotive and car department; Sept. 1, 1901, to July 1, 1912, Assistant Superintendent of Motive Power, C.P.R., Montreal; July 1, 1912, to Mar., 1915, General Superintendent, Angus Shops District, C.P.R., Montreal. He is Lieutenant-Colonel, Commanding the Montreal Heavy Brigade of Artillery.

## Transportation Appointments Throughout Canada.

**Canadian Northern Ry.**—E. G. THEOBALD, heretofore auxiliary foreman, has been appointed Car Foreman, Joliette, Que., vice J. Hodgson, transferred to Montreal.

J. HODGSON, heretofore Car Foreman, Joliette, Que., has been appointed Car Foreman, Montreal, vice R. Moore, assigned to other duties.

A. A. TAGGART, heretofore Locomotive Foreman, Brockville, Westport and Northwestern Ry., Brockville, Ont., has been appointed Locomotive Foreman, C.N.R., there.

S. J. HUNGERFORD, Superintendent Rolling Stock, Winnipeg, who is at present organizing the Universal Tool Steel Co.'s plant at Toronto, as mentioned elsewhere in this issue, is handling his department from his temporary office at 133 Dufferin St., Toronto.

A. H. EAGER, Superintendent of Shops, Winnipeg, is in charge of the Winnipeg office during Mr. Hungerford's absence.

A. HOPKIRK, Shop Engineer, Locomotive Shops, C.N.R., Winnipeg, is in Toronto for a time acting as Shop Engineer, Universal Tool Steel Co.

J. STINSON, heretofore Roadmaster, Brockville, Westport and Northwestern Ry., Brockville, Ont., has been appointed section foreman, C.N.R., North Bay, Ont.

L. WEDGE is acting General Foreman of Locomotive Shops, Winnipeg, during the absence of D. M. Galloway, who is acting Superintendent, Universal Tool Steel Co., Toronto.

**Canadian Pacific Ry.**—The President, Sir Thos. Shaughnessy, has issued the following circular: "In view of the benefits derived from certain voluntary agencies, such as the St. John Ambulance Association, the safety first movement, the Railroad Y.M.C.A., and athletic associations, I have decided to appoint an officer to co-operate in the development of such organizations amongst the employes of the C.P.R., with the title of General Welfare Agent. Lieut.-Col. LACEY R. JOHNSON, heretofore General Superintendent of Angus Shops District, who since he joined the service in 1882 has been actively identified with the general uplift of ideals and service among the railroad employes, will assume that office."

The position of General Superintendent, Angus Shops District, has been abolished.

JOHN McMILLAN, heretofore General Superintendent of Telegraphs, Western Lines, Winnipeg, has been appointed Manager of Telegraphs, Office, Montreal. In the circular announcing this, George Bury, Vice President, says: "James Kent, who has for so many years undertaken the duties of that office with such conscientious regard for the interests of the company and its patrons, has, at his own request, been allowed to relinquish those duties, and given leave of absence for an extended period."

C. VERNER has been appointed Roadmaster, Quebec East, St. Maurice Valley, Piles and Cap de la Madeline Branch, Office, Three Rivers, Que.

A. MERCIER has been appointed Roadmaster, Ottawa, St. Lin and Eustache Subdivisions, Office, Ste. Therese, Que.

C. T. DELAMERE, heretofore Assistant Engineer of Construction, has been appointed acting Engineer of Construction, during the absence of C. W. P. Ramsey, Engineer of Construction, who has been given extended leave of absence in order to take command of the Canadian Overseas Railway Construction Corps, Office, Montreal.

A. C. FRASER has been appointed Superintendent of Telegraphs, Eastern Division, vice F. J. Mahon, transferred to Saskatoon, Sask. Office, Montreal.

W. M. THOMPSON, heretofore Agent Telegraphs, Winnipeg, has been appointed

chief operator, Montreal, vice H. Bott, transferred to Toronto.

G. W. GEHAN, heretofore Storekeeper, Place Viger, Montreal, has been appointed

P 411  
Lt.-Col. C. W. P. Ramsey,  
Commanding Overseas Railway Construction  
Corps.

P 412  
W. Maund,  
Secretary-Treasurer, Timiskaming and Northern  
Ontario Railway Commission.

Storekeeper, Hochelaga, Que., vice G. H. Jobin, transferred.

G. H. JOBIN, heretofore Storekeeper, Hochelaga, Que., has been appointed Storekeeper, Place Viger, Montreal, vice G. W. Gehan, transferred.

H. J. LILLIE, heretofore Chief Operator, Toronto, has been appointed Superintendent of Telegraphs, Ontario Division, vice W. Marshall, promoted. Office, Toronto.

G. PATON, heretofore Assistant Agent, Telegraphs, Toronto, has been appointed Agent there, vice H. A. Shambrook, transferred to Calgary, Alta.

H. BOTT, heretofore chief operator, C.P.R. Telegraphs, Montreal, has been appointed chief operator, Toronto, vice H. J. Lillie, promoted.

ALLAN PURVIS, heretofore Manager, Interurban Lines, British Columbia Electric Ry., New Westminster, B.C., has been appointed Superintendent, District 2, Ontario Division, C.P.R., vice R. King, who has been granted three months leave of absence. Office, London, Ont.

W. MARSHALL, heretofore Superintendent of Telegraphs, Ontario Division, Toronto, has been appointed Assistant Manager of Telegraphs, Western Lines, vice J. McMillan, General Superintendent of Telegraphs, Western Lines, promoted. Office, Winnipeg.

R. RUSSELL, heretofore Assistant Agent Telegraphs, Winnipeg, has been appointed Agent there, vice W. M. Thompson, appointed chief operator, Montreal.

J. F. RICHARDSON, heretofore Superintendent of Telegraphs, British Columbia Division, Vancouver, has been appointed Superintendent of Telegraphs, Saskatchewan Division, vice D. Coons, transferred. Office, Moose Jaw.

D. COONS, heretofore Superintendent of Telegraphs, Saskatchewan Division, Moose Jaw, has been appointed Superintendent of Telegraphs, Alberta Division, vice R. N. Young, transferred. Office, Calgary.

H. A. SHAMBROOK, heretofore Agent Telegraphs, Toronto, has been appointed Agent Telegraphs, Calgary, Alta.

R. N. YOUNG, heretofore Superintendent of Telegraphs, Alberta Division, Calgary, has been appointed Superintendent of Telegraphs, British Columbia Division, vice J. F. Richardson, transferred. Office, Vancouver.

W. G. PAYTON, heretofore baggage master, Vancouver, B.C., has been appointed station agent there, vice S. Woods, appointed constable on pier D, there.

R. E. ALLINGHAM has been appointed baggage man at Vancouver, B. C., vice W. G. Payton, promoted.

**Edmonton, Dunvegan and British Columbia Ry.**—R. M. HALPENNY, heretofore Trainmaster, G.T. Pacific Ry., Edson, Alta., is reported to have been appointed Trainmaster, Edmonton, Dunvegan and British Columbia Ry.

**Grand Trunk Ry.**—W. J. TYERS has been appointed General Supervisor, Montreal Division, vice G. Dyson. Office, Montreal.

T. W. MASON, heretofore Trainmaster, Montreal, has been appointed Chief Dispatcher, Richmond, Que., vice E. C. Potter.

W. E. ALLEN has been appointed Passenger Agent, Brockville, Ont.

H. R. BULLEN, heretofore Soliciting Freight Agent, G.T. Pacific Ry., Regina, Sask., is reported to have been appointed Soliciting Freight and Passenger Agent, G.T.R. and G.T.P.R., San Francisco, Cal.

**Montreal Warehousing Co.**—C. J. SMITH, heretofore Vice President and General Manager, North Ry., Montreal, has been appointed Manager and Secretary, Montreal Warehousing Co., vice G. H. Hanna, deceased.

**Timiskaming and Northern Ontario Ry.**—W. H. MAUND, heretofore Travelling Auditor, has been appointed Secretary-Treasurer, vice A. J. McGee, deceased. Office, Toronto.

H. H. MCGEE, heretofore Assistant Auditor, has been appointed Travelling Auditor, vice W. H. Maund, appointed Secretary-Treasurer.

# Electric Railway Department

## Hydro Electric Railway Association of Ontario.

This association, which was organized last year, held its first annual meeting in Toronto, Feb. 26, several hundred representatives of municipalities throughout Ontario being present. Among the speakers were the Honorary President, Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario; the President, J. W. Lyon, Guelph; the First Vice President, Mayor Church, Toronto; and J. B. Detweiler, Berlin.

Sir Adam Beck said that the hydro electric scheme is now divided into two groups, power and radial railways. In reference to the latter he said:—"There are railways which have received subsidies amounting to the exact cost of their construction, and the promoters issued stock and pocketed the spoils. Assert yourselves, and declare that subsidies to private individuals must cease. We have sufficient transcontinental railways. Let us be in earnest. Tell those men you have sent to Ottawa and Toronto that they have been elected to serve you and not private interests. Call a halt to subsidies! Call a halt to land grants! Call a halt to all bonuses! If we must guarantee bonds, let us guarantee our own. As soon as the frost is out of the ground, we will proceed with the construction of 98 miles of radial lines to the northeast of Toronto. The whole of Canada is interested in this scheme, because it means so much, then let us get some assistance from Canada. You people from all parts of the province, never call Toronto 'hog town' again. The city council has assumed responsibilities which will prove of immense value to the whole province. With the help of the Federal Government it intends to spend \$19,000,000 on great harbor developments, and intends giving the hydro radials free access to the waterfront." He urged the delegates to work unceasingly in the interests of the hydro power and radial schemes.

J. W. Lyon urged an immediate canvass of the members of the Dominion Parliament and Ontario Legislature. "There is an election pending," said he. "It is your business to see every member and aspirant to office in this province and find out where he stands on this question. We are asking the Dominion for a subsidy of \$6,400 a mile. What is that compared to the \$230,000,000 granted in subsidies to private corporations, as well as land grants as big as the Maritime Provinces. We are going to make bold and back up our resolutions to the limit. Ontario has borne the brunt of these grants to private concerns; it is now her turn to be helped construct radials that will be owned by the people."

It was urged that if the Dominion Government is serious in its campaign for greater production it could not refuse the association's requests, because the construction of the radials would stimulate trade, improve business, provide employment, encourage rural settlement, increase production, reduce transportation rates, increase farmers' profits, reduce cost to consumers and increase national wealth. On this ground it was argued that a promise of subsidies could not be held up on pleas of war conditions.

The association's constitution was adopted as prepared. It provides that the objects are to develop a system of radial railways in Ontario, owned by the municipalities and operated for them by the Hydro

Electric Power Commission; to secure all necessary legislation and government aid in the furtherance of the enterprise; assist municipalities in carrying bylaws in connection with radials, and to prevent by lawful methods the renewals of private charters or issuance of new ones to individuals or corporations.

For organization purposes the province is divided into districts, as follows:—St. Lawrence district—counties east of Frontenac and west of Ottawa River. Kingston and Ontario district—Frontenac, Hastings, Northumberland and Peterboro' counties. Toronto East district—comprising York east of Yonge St., Ontario, Durham and Victoria counties. Toronto district—City of Toronto. Toronto West district—comprising York west of Yonge St., Peel, Halton, Wentworth and Simcoe counties. Hamilton district—Hamilton and Wentworth and Halton counties. Niagara district—Lincoln, Welland and Haldimand counties. Guelph and Georgian Bay district—Wellington, Waterloo, Dufferin and Grey counties. Erie East district—Norfolk, Elgin, Brant and Oxford counties. Erie West district—Kent and Essex counties. London and Huron district—Middlesex and Lambton counties. Stratford and Huron district—Perth, Huron and Bruce counties.

Officers were elected as follows:—Honorary President, Sir Adam Beck; Honorary Vice Presidents, Hon. I. B. Lucas, Attorney General, Province of Ontario, and W. K. McNaught, one of the Hydro Electric Power Commissioners; President, J. W. Lyon, Guelph; First Vice President, T. L. Church, Toronto; Second Vice President, C. M. R. Graham, London; Third Vice President, A. F. Wilson, Markham; Fourth Vice President, W. H. Buller, Peterborough. The following were elected district vice presidents:—1, F. S. Evanson, Prescott; 2, T. F. Matthews, Peterborough; 3, J. H. Downey, Whitby; 4, John O'Neill, Toronto; 5, R. H. Lush, Clarkson; 6, P. Ray, Waterdown; 7, G. B. Ryan, Guelph; 8, W. D. Euler, Berlin; 9, M. B. Johnston, St. Thomas; 10, W. C. Bush, St. Catharines; 11, H. Clay, Windsor; 12, R. Stirrett, Petrolia; 13, D. A. McLachlan, Stratford; 14, J. McQuaker, Owen Sound; 15, D. C. Barr, Collingwood. T. J. Hannigan, Guelph, was subsequently appointed Secretary, and G. P. Hamilton, Guelph, is Treasurer.

On March 10, a deputation from the association waited on the Dominion Premier in Ottawa, among those comprising it being Sir Adam Beck, J. W. Lyon, Mayor Church, Controllers Foster and Spence, Toronto; Mayor Buller, Peterborough; H. Clay, Windsor, and T. J. Hannigan, Secretary. The delegates, in addressing the Premier, asked for a subsidy of \$6,400 a mile for approximately 1,000 miles of railway.

After listening to the arguments advanced Sir Robert Borden expressed his appreciation of the additional information which had been placed before him, the delegation having gone into details of the proposal somewhat more fully than when the large deputation visited Ottawa last year, but he stated that owing to the outbreak of the war so soon after the 1914 session there had been little time or opportunity to give consideration to the suggestions which had been placed before the Government at that session. He also stated that the delegates' desire to have a definite statement of policy on behalf of the Government would be dis-

cussed with his colleagues, but that in the meantime no definite reply could be made, further than that it would be impossible to vote any subsidies this session.

Following the deputation's visit to Ottawa, various municipal corporations in Ontario were asked by the association to sign petitions to the Dominion Government urging an early announcement of policy in regard to requests for subsidies. At the time of writing (Mar. 22) arrangements have been made for a large deputation to wait on the Ontario Government, Mar. 26, to ask provincial subsidies of \$3,200 a mile.

The Niagara District Hydro Radial Union held its first annual meeting at Welland, March 19, and elected officers. T. J. Hannigan, Secretary, of the Hydro Electric Railway Association of Ontario, spoke. A resolution was passed urging the Dominion Government to grant a subsidy of \$6,400 a mile for hydro electric railways and to make an immediate announcement of its policy in this respect.

Sir Adam Beck stated in the Ontario Legislature recently that all the Hydro Electric Power Commission of Ontario's estimates for radial railways were based on the assumption that they would be given a Dominion bonus of \$6,400 a mile.

### The Montreal Tramway Situation.

Montreal's city solicitor has prepared a report upon the tramway situation there in conformity with resolutions passed in January, in the discussion arising upon a plan submitted by the mayor for terminating all existing franchises and replacing them by a new one to run 30 years. A summary of the mayor's proposals appeared in our Dec., 1914, issue, pg. 554. The solicitor's report, which was made public Mar. 12, is in two parts—the first dealing with the franchise granted by the city in 1892, for 30 years, and the second with the 23 separate franchises held outside the city. The several franchises are dealt with in detail, following which certain questions which were asked by the council are answered. The only way in which the original franchises granted to the Montreal St. Ry. in 1892, and to the Montreal Terminal Ry., by bylaw 274 and its amendments, can be abrogated is to purchase the lines under the terms of the bylaws. Certain of the franchises in the other districts appeared to have been granted in consideration of the fact that the company to which they were given had connection with the city lines; while in other cases there did not appear to have been any consideration of this kind. The report continues:—"The statements contained in the project submitted by the mayor, relating to the franchises belonging to the company and the reasons connected with the project are not altogether exact in fact or in law. It would not be prudent for the city to admit these statements as correct and to incorporate them in a resolution, or in a bylaw, or in a contract." (Feb., pg. 70.)

The Auto Public Service Co. of British Columbia, Ltd., Vancouver, is issuing The Jitney Press, as the official organ of the jitney service, and is distributing it free.

### Stores Card for Controller Segments in Montreal Tramways Stores Department.

The Montreal Tramways Co., in its main stores department at its Youville shops, has a unique system of locating and storing controller segments by means of a chart, a copy of which is shown herewith. The controller segments are used in only three sizes of drums, 4¼, 4½ and 5 ins. diameter, which are respectively given the symbols A, B and C. The developed controller drums for each type and size of controller are shown as indicated, with the segments in their respective positions with regard to each other.

The various segments are made in standard widths, most of which are 1 in. The lengths of the segments are usually in even eighths of an inch. To name the lengths, using the length in its whole and fractional parts of an inch, tends to introduce a chance of error when a requisition for a certain size is called for. To overcome this tendency towards error a system has been developed, using the actual length as a basis, whereby the length is denoted in a

Stock, Montreal Tramways Co., to whom we are indebted for the information.

### Proposed Legislation re Electric Railway Fares in Ontario.

During the Ontario Legislature's current session, M. H. Irish, M.L.A. for Northwest Toronto, introduced a bill, "An Act to Amend the Ontario Railway Act," reading as follows:

"1. Clause (a) of subsection 1 of section 210 of The Ontario Railway Act is amended by inserting after the word 'miles' in the fourth line thereof the words 'in any municipality other than an urban municipality.'"

"2. Subsection 1 of the said section 210 of the said act is further amended by inserting the following clause (aa) after clause (a) thereof:

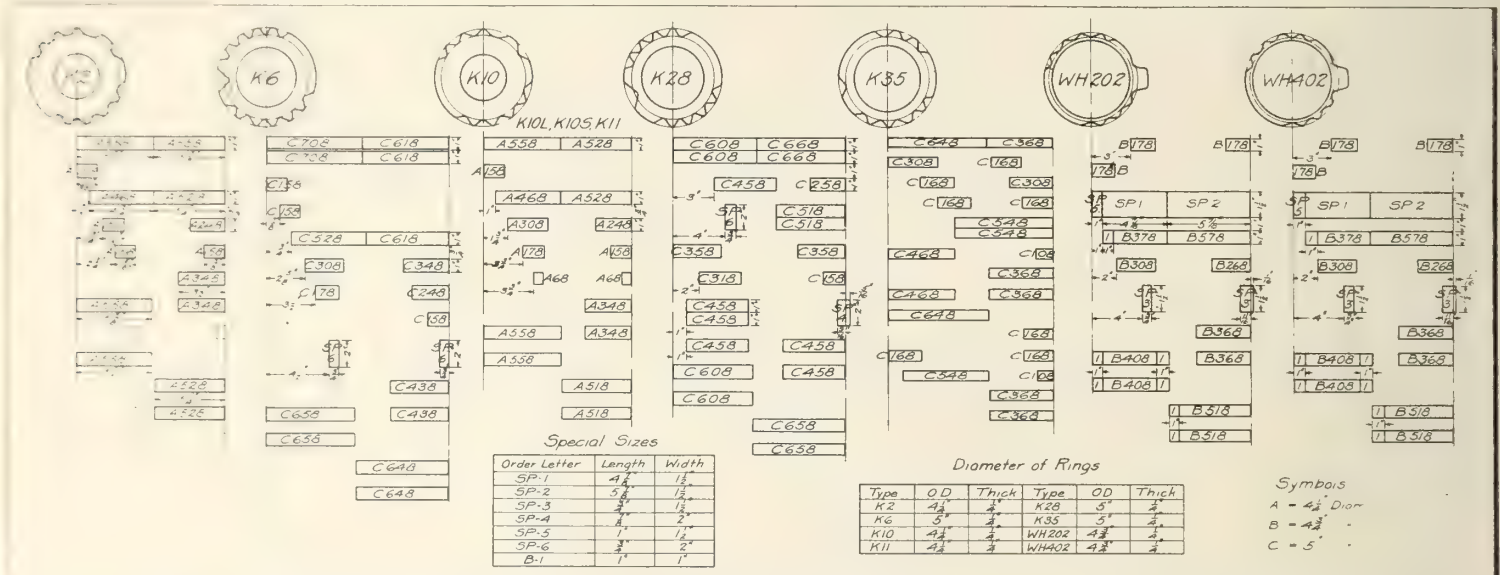

"(aa) The fare to be taken by a company on a railway operated by electricity for each passenger shall not exceed five cents for any distance in an urban municipality; and in the case of children under ten years of age shall not exceed three cents for any distance, but children in arms shall in all cases be carried free."

### Electric Locomotives for the London and Port Stanley Railway.

More detailed data of the three electric locomotives which are being built for the London and Port Stanley Ry., which were briefly described in Canadian Railway and Marine World for Nov., 1914, and Mar., 1915, are now available. The following are the principal particulars:—

Length inside of knuckles ..... 37 ft. 6 ins.  
Length over cab ..... 28 ft. 0 ins.  
Height over cab ..... 12 ft. 10 ins.  
Height with trolley down ..... 15 ft. 2 ins.  
Width overall ..... 9 ft. 7½ ins.  
Total wheelbase ..... 24 ft. 8 ins.  
Rigid wheelbase ..... 7 ft. 2 ins.  
Minimum radius of curvature ..... 75 ft. 0 ins.  
Weight, electrical equipment ..... 38,950 lbs.  
Weight, air brake and compressor ..... 4,670 lbs.  
Weight, mechanical equipment ..... 76,380 lbs.  
Weight, total ..... 120,000 lbs.  
Weight, on drivers ..... 120,000 lbs.  
Weight, per driving axle ..... 30,000 lbs.

The locomotives will each be mounted on two swivel equalized trucks, with cast steel truck transoms bolted rigidly to the steel side frames, and carried on semi elliptic springs, with the brakes inside hung. The wheels will be of solid rolled steel, 36 ins. diam., 5½ ins. wide, and 2½ ins. thick,

Stores Card for Describing Controller Segments and Position of Ratchet Wheels.

whole number. The system is simple. Each length is expressed in a whole number of three digits, the first of which denotes the even number of inches. As all the sizes are in even inches, with fractions as low as eighths, the latter is taken as the basis, quarters and halves being represented in eighths. One eighth would be represented by 18, one quarter by 28, one half by 48, and so on. This arrangement is combined with the whole number of inches of length. Thus, a segment, 3½ ins. long, would be represented by the number 348, and 4½ ins. by 458. This is better emphasized by the linear dimensions and symbols shown in the K2 controller. For the several diameters, the diameter symbol is also combined, for instance, a segment 3½ ins. long from a 4½ in. drum, would be called for by the number B328.

In this manner all the sizes are sifted down to a few different kinds, which are stored under these symbol numbers. When a repair part is required it is only necessary to give the symbol number on the requisition by referring to the accompanying sheet, no dimensions being required. The odd sizes, of which there are seven, are listed separately in a table, each given a special number. This arrangement is due to D. E. Blair, Superintendent of Rolling

The amendment proposed in section 1, above quoted, would have changed the Ontario Railway Act to read as follows, the proposed amendment being shown in bold-faced type:

"210.—(1) Notwithstanding anything to the contrary contained in any agreement with a municipal or other corporation or person or in any special Act,

"(a) the fare to be taken by a company on a railway operated by electricity for each passenger shall not exceed five cents for any distance not exceeding three miles in any municipality other than an urban municipality, and where the distance exceeds three miles shall not exceed two cents per mile or fraction thereof for the distance actually travelled; and in the case of children under ten years of age shall not exceed three cents for three miles or less, and where the distance exceeds three miles shall not exceed one cent per mile or fraction thereof for the distance actually travelled, but children in arms shall in all cases be carried free."

The bill was withdrawn after its first reading.

The Hamilton St. Ry. is preparing a revised traffic schedule, as the result of a conference with a subcommittee of the Hamilton, Ont., City Council.

with tread and flange 5½ ins. wide, M.C. B. 1909 contour. The axles will be 7 ins. diameter, with 5½ x 10 in. journals.

The platform framing will be built up of structural steel, longitudinal and cross sills, stiffened by brace plates, with a ¾ in. steel floor, covered with a ¾ in. wooden flooring throughout. The end frame will be a steel casting, secured to the platform centre and side sills. There will be friction draught gear with M.C.B. 5 x 7 in. shank, attached to the centre sills and end frame, at a height of 34½ ins. above the rail. The platform and coupler housing will be designed to withstand buffing strains equivalent to a 300,000 lb. static load applied at the drawhead.

The cab will be of the box type, 9 ft. 7 ins. x 28 ft., with an operating compartment at each end, and an apparatus compartment between, with the sides and ends built up of 1-8 in. steel, and a roof of no. 8 steel, the whole substantially rivetted to a frame work of steel angles. There will be doors at both ends of the cab, and in the bulkheads between the operating and apparatus compartments, made of wood, glazed with double thickness glass. Seats for the locomotive man and fireman will be provided at the operating positions. The safety appliances will conform to the Board

of Railway Commissioners' requirements. Each locomotive will have a steel tool box fully equipped, pneumatic sanders independently operated from either end, locomotive bell and two air operated alarm whistles.

Air will be supplied from two C.P. 30 air compressors in the cab, having a free air capacity of 35 cu. ft. per min. at 110 lbs. pressure on 1,500 volts. The brake equipment will be Westinghouse schedule 14 EL combined straight and automatic air, with two 28 x 60 in. main reservoirs, and a 16 x 12 in. air brake cylinder.

The motor equipment will consist of four GE 251 A 750-1,500 volt box frame single geared commutating pole railway motors, rated at 274 amperes on 750 volts, and suspended on the axle and by the motor nose on the truck transoms. They will operate on a gear ratio of 4.37.

The locomotives will be equipped with type M multiple unit control, with two controllers arranged for 10 steps, the motors connected all in series, or 7 steps, motors two in series, two such groups in parallel. Three locomotives may be operated in multiple. The collecting apparatus will consist of two pantographs, centrally located, pneumatically operated, with a variation in height from 15½ to 24½ ft. The pantographs are to be arranged for multiple unit control.

The maximum safe operating speed, limited by the bearings or commutation, will be 34 m.p.h.; and the maximum emergency speed, limited by the armature construction, will be 40 m.p.h. The maximum speed on a level tangent track will be approximately 24.5 m.p.h. with a 860 ton train. At a tractive effort 21,500 lbs., the locomotive will propel a train of 860 tons, including locomotive, up a 0.9% grade, tangent track, at 17.1 m.m.h. At a tractive effort of 30,000 lbs., it will accelerate a maximum train of 860 tons up a tangent grade of 1% at a rate of approximately 0.08 miles per hour per second, or 1.110 tons on a level tangent track at approximately 0.15 m.p.h. per sec.

### Bloor Street West Line, Toronto Civic Railway.

The temporary line for the Toronto Civic Ry. along Bloor St. West was opened for service on Feb 23 by the Mayor and other civic officials. The new service consists of a temporary single track line extending from Dundas St. to Quebec Ave., 0.745 mile, with a passing track at Keele St., midway in the line. The temporary line is laid with several sizes of rail, averaging about 60 lbs. The trolley wire is 2/0 round hard drawn copper. A temporary car barn, with accommodation for two cars, has been built. It is of frame construction, sheathed in galvanized iron sheeting.

It is the intention to proceed with the permanent double track line about Apr. 1, or as soon as the frost is out of the ground. This will be laid on oak ties, embedded in a concrete base. A 7 in. girder rail of the 122-467 Lorain section will be used. The overhead construction will be span, with 2/0 round hard drawn copper wire.

Power for the line is received over 350,000 cm. positive and negative feeders from the Toronto Hydro Electric System substation J, at the corner of Edwin and Ruskin Aves., about 3,000 ft.

The three single truck, double end operation, p.a.y.e. cars for this line, which are now in operation, were described in Canadian Railway and Marine World for February. They have 21 ft. bodies, with 6 ft. platforms, with an overall length of 34 ft., and are mounted on E21 trucks, equipped with two 40 h.p. Westinghouse motors, the cars completely equipped weighing 25,000 lbs. They have a seating capacity for

32 persons, with 8 cross seats and 4 longitudinal seats. They are being operated on an 8 minute headway. We are indebted to D. W. Harvey, Assistant Engineer, Works Department, for the foregoing information.

### Death of J. C. Rothery.

The dead body of J. C. Rothery, who, until a few months ago, was Manager of the Toronto Eastern Ry., which is under construction between Toronto and Bowmanville, was found on Mar. 10, imbedded in snow and ice near the G.T.R. bridge over Black Creek, near Weston, Ont., it having been noticed by the locomotiveman of a passing C.P.R. train. Mr. Rothery left his home in Weston on Mar. 3 for Toronto, and was not afterwards seen alive by his family. He was seen on the train between Toronto and Weston on the return journey, and the supposition is that he fell from the train and that the body was covered by the heavy snowfall and not observed until the thaw, which set in a few days later, had

The Late J. C. Rothery.

partly melted the snow. A coroner's jury returned a verdict of accidental death.

Mr. Rothery, who was about 60 years old, was born at Glasgow, Scotland, and went to sea at an early age. Subsequently he took a course in engineering and went into the electrical field. In May, 1893, he was appointed Superintendent, Niagara Falls Park and River Ry., and in 1902 was also appointed Superintendent of the International Ry.'s Buffalo and Niagara Falls Division. He also had charge of the upper steel arch bridge at Niagara Falls, and the Queenston and Lewiston bridge, the construction of both of which he supervised. In Dec., 1905, he went to East Liverpool, Ohio, as General Manager of the East Liverpool Traction and Light Co., and in June, 1909, removed to Chester, W. Va. In 1910 he returned to Canada and was appointed Manager of the Toronto and Eastern Ry., and was engaged on other electrical railway propositions, etc., in the Mackenzie and Mann interests.

He took a prominent part in the Canadian Street Railway Association's meetings prior to leaving Canada in 1905, and was well

known by electric railway officials throughout the Dominion and a considerable portion of the United States. He was an expert diver and swimmer, and is said to have been the only man who dived successfully from the Queenston-Lewiston bridge into the Niagara River.

### Toronto and York Radial Railway Power for Newmarket.

An enabling bylaw was passed by the ratepayers of Newmarket, Ont., on Feb. 22, by a majority of 178, for the consummation of a contract with the Toronto and York Radial Ry. for furnishing power. The contract is for 5 years, renewable at the end of that time by the town for a further 5 years, at the following rates: \$25.50 a horse power a year for a maximum demand of 500 h.p.; \$25 a h.p. a year, up to 750 h.p.; \$24.50 a h.p. a year, over 750 h.p.; payable monthly on the basis of the highest peak during each month having a duration of not less than 20 consecutive minutes. The power will be delivered from the railway substation in Newmarket, to the town lines at 4,200 volt a.c., 3 phase. At the town power house it will be stepped down to 550 and 110 volts, for industrial, street lighting and commercial purposes. The railway receives its power at 24,000 volts from the Niagara substation at Toronto, transmitting at that voltage to Newmarket, where it is stepped down to 4,200 volts.

In 1912 the same proposition was offered the town, but it was defeated at the polls by 21 votes. Conjointly with the latter offer the company offered the town power at 12,000 volts for \$23.50 a horse power a year. At the same time the Hydro Electric Power Commission of Ontario offered the town power at 13,000 volts at \$26.98 a h.p. a year, up to 500 h.p., on a monthly bill of 75% of the contracted 500 h.p. This offer was subsequently revised to \$24.78 a h.p. a year on the same basis. No action was taken by the town on these high voltage propositions.

Newmarket is unique in the electric lighting field, it being claimed that the first municipal electric lighting plant in Ontario was installed there 21 years ago.

**Grand Valley Ry. Operation.**—The City Solicitor of Brantford received, Mar. 10, an order from the Board of Railway Commissioners authorizing the city to operate the Grand Valley Ry. This order was necessary as the G.V. Ry. was built and is operated under a Dominion charter. The order will only be in force until the end of the next session of the Dominion Parliament, at which time the City Council will apply for the necessary Parliamentary authorization to operate the G.V.R.

**Port Arthur Electric Ry.**—The ratepayers voted, Mar. 5, in favor of a bylaw vesting in a Public Utilities Commission the control and management of the street railway, the telephone system, and the Current River power plant, owned by the city. This Commission has been appointed under the provisions of chap. 204 of the Revised Statutes of Ontario, 1914, and the passing of the bylaw formally vests the control of these utilities in the hands of the Commission. (Jan., pg. 28.)

**St. John River Hydro Electric Co.**—The New Brunswick Legislature is being asked to revive the act of incorporation of 1912, under which the company was incorporated, with power to acquire and develop a water power on the St. John River at Pokiok, and to build the necessary works for the transmission of power.

## The City of Toronto's Attempt to Override the Privy Council Frustrated.

At the Ontario Legislature's current session a bill was introduced at the instance of the Toronto City Council which had it been passed would have overridden judgments given by the Judicial Committee of the British Privy Council and which were in favor of the Toronto Suburban Railway Co. and the Toronto Railway Co. The bill's principal provisions were as follows:—

The true meaning of the agreement dated Sept. 4, 1899, between the Township of York and the Toronto Suburban Ry. Co., is that the company is obliged to keep clean and in proper repair and to construct a new roadway or pavement on that part of Bathurst St. and Davenport Road, occupied by and between the company's rails, and for 18 ins. on each side of the rail or rails, such new roadway or pavement to be of a character similar to that constructed or to be constructed upon the other portion of the said highways by the municipality, and that in default of the company keeping clean and in proper repair and constructing a new roadway or pavement when requested to do so by the City of Toronto, the same may be done by the city at the company's expense.

The word "tracks" wherever mentioned in the said agreement shall cover or include the roadway or roadbed on which the rails are placed between the said rails and 18 inches outside of each rail.

The City of Toronto may expropriate and take that portion of the Toronto Suburban Ry. within the limits of the city and of the real property within the city limits in connection with the working thereof and such personal property in connection therewith as the Ontario Railway and Municipal Board may fix that the city should take, upon payment of the value of the same to be determined by arbitration by the Ontario Railway and Municipal Board under the provisions of the Ontario Railway Act, and in determining such value the franchise or control of tracks upon the highways shall not be estimated as of any value whatever.

All the rights and privileges of the Toronto Suburban Ry. Co. to operate railways, or to exercise any other franchise rights within the City of Toronto, are hereby cancelled and forfeited.

The proper construction of the agreement entered into between the City of Toronto and G. W. Kiely and others, dated Sept. 1, 1891, and the award, conditions and bylaw in connection therewith, is that in respect to what new lines shall be established and laid down and tracks and services extended thereon by the company, whether on streets in the city as existing at the date of the agreement or as afterwards extended, it is for the city and not for the railway company to determine, decide upon and direct, and in the manner prescribed by clause 14, of the conditions of the said agreement what new lines shall be established and laid down and tracks and services extended thereon by the company, whether on streets in the city as existing at the date of the agreement or as afterwards extended, and further that the privilege to the city to grant to any person or company for failure of the company to establish and lay down new lines and to open same for traffic, or to extend the tracks and service upon any street or streets as provided by the agreement, is not the only remedy the city can claim, but that the city, in addition to the remedies provided by statute and otherwise may, in the event of the company failing to establish, lay down and operate any new lines as provided in the said clause 14 within such period as is fixed by bylaw as

aforsaid, construct, lay down, and operate such line or lines, and the company shall pay the cost of such construction and operating, and the city may collect such cost of construction and operation by distress on the property of the company, and may impose a penalty upon the company of \$1,000 a day for failure to comply with the requirements of any such bylaws as above provided for.

The Toronto Ry. Company shall construct and equip 13 miles of new track within the City of Toronto, and shall build, equip and place in operation upon its system of street railways within the city 180 new cars, in order to afford an adequate and proper street car accommodation for the citizens.

The bill was rejected by the Legislature Private Bills Committee, Mar. 23. The Chairman of the Committee, Attorney General Lucas, objected to the bill principally on account of its object being to nullify Privy Council decisions, but intimated that an amendment to the Ontario Railway and Municipal Board, Act might be introduced to give the Board more extensive powers in dealing with disputes between electric railway companies and municipalities.

### Winnipeg Electric Railway Annual Report

The report for the calendar year 1914 shows gross earnings from all sources of \$4,101,302.48, against \$4,078,694.75 for 1913. The expenses of operation, including maintenance, repairs and renewals, were \$2,416,208.93, against \$2,252,606.77 for 1913. The net earnings from operation were \$1,685,093.55, a decrease of \$140,994.43. Of this amount the fixed charges, including 5% on gross earnings payable to the City of Winnipeg, interest on funded debt and other fixed charges, absorbed \$690,482.43, leaving a surplus for the year of \$994,611.12, to be added to the balance brought forward from 1913 of \$901,697.99, making together \$1,896,309.11. The usual quarterly dividends, at the rate of 12% per annum, were paid, amounting to \$1,080,000.00, leaving a balance at the credit of profit and loss of \$816,309.11. The properties were fully maintained from revenue throughout the year. The increase in the operating expenses, which occurred principally in the railway department, is attributable partly to expenditure introduced in conformity with the requirements of the Public Utility Commissioner, and partly to the annual increase in the graduated scale of wages applicable to senior service employees.

To meet growing requirements new construction and improvements and betterments were carried out, entailing an expenditure of \$1,308,545.00. About 7½ miles of track were laid in Winnipeg, as follows:—4.192 miles with 80 lb. rails with concrete foundation and asphalt pavement; 3.33 miles of surface track with gravel ballast, which includes an extension through Fort Garry Municipality, to St. Norbert Village. A branch line was built from Middlechurch on the Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary line, to Stonewall, 18 miles, and a fast electric car service has been established between Winnipeg and Stonewall. This has increased the mileage of the Winnipeg, Selkirk and Lake Winnipeg line to 40 miles.

Twenty large double truck closed motor cars, 46 ft. long with wide vestibules, equipped with air brakes and other modern appliances, were constructed in the company's shops. Practically all of the double truck

closed single end cars have been converted to comply with operating conditions under the p.a.y.e. system. The rear vestibules have been equipped with safety doors at the steps, which are operated by the conductor. By this means it is hoped that accidents will be largely diminished.

To provide for the foregoing capital expenditures, the directors sold additional 4½% consolidated debenture stock, the proceeds of which amounted to \$879,468.59, and treasury notes for \$500,000, in all \$1,379,468.59.

The number of passengers carried was 58,489,987, a decrease of 1,073,770 from 1913. Transfers numbered 20,277,197, an increase of 5,238,181.

The percentage and car license paid to the City of Winnipeg was \$122,486.90, and the taxes, insurance, etc., \$118,263.

The Winnipeg, Selkirk and Lake Winnipeg Ry., a subsidiary company, gross earnings were \$136,665.45; gross expenses, \$72,884.06; net earnings, \$63,781.39; less interest on bonds, \$20,000; taxes, \$31,067.26 leaving a surplus for the year of \$12,714.13, and bringing the profit and loss balance to \$60,919.83.

The Suburban Rapid Transit Co., another subsidiary, had gross earnings of \$84,927.78; gross expenses, \$64,688.21; net earnings, \$20,239.57. Interest on bonds was \$25,000, and taxes, etc., \$2,459.61, making a deficit for the year of \$7,220.04 and increasing the profit and loss debit to \$74,391.16.

The directors of the W.E.R. Co., who were re-elected, are:—Sir Wm. Mackenzie, President; A. M. Nanton, Vice President; F. M. Morse, Sec.-Treas.; Sir Wm. Van Horne, Sir Donald Mann, D. B. Hanna, G. V. Hastings, Hugh Sutherland, R. J. Mackenzie. The Manager is Wilford Phillips.

### Effect of Jitney Competition on the British Columbia Electric Railway.

The B.C.E.R. Co.'s directors issued the following circular to shareholders recently:

"The directors draw attention to the very serious traffic decrease, which they regret to say they are advised by cable is likely to be still more severe for February and following months. It is largely due to a novel form of competition which has suddenly sprung up as a result of the bad times through which the country is passing, and which is costing the company the loss of traffic amounting to between \$2,500 and \$3,000 a day.

"A few weeks ago a large number of private motor cars, mostly driven by their owners, started plying for hire in opposition to this company's cars, at ordinary tram fares. They are able to compete on a very unfair basis, as the railway has to submit to extremely rigid regulations for the comfort and safety of the public, whereas the motor cars are at present absolutely uncontrolled. This competition is general in all cities on the Pacific Coast. The following cable on the subject has been received from the General Manager:

"In common with all other street railways on the Pacific Coast our transportation is very seriously affected by competition with passenger motor cars, mainly due to exceptional conditions obtaining and number of second hand motor cars on the market. While it is improbable this particular form of competition will prove permanent, the unlooked for development of this new traffic has created a situation which, unless the new traffic is made subject to regulations similar to those governing the street railway, will make it impossible to continue payment of dividends. The matter has been submitted to the municipal authorities for the purpose of receiving fair and reasonable treatment at their hands."

## Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—The station building in Brantford, Ont., is rapidly approaching completion. The old building is being retained in its main outlines, but is being strengthened, and the entire interior rearranged. The entrance will be by a new arch. On the main floor there will be provided general and women's washing rooms, ticket office, manager's office, and board room on one side of the hallway, and on the other a baggage room. The cars will be run in on the south side of the building, which is 83 ft. long, so as to prevent any stoppage on the main line.

The Commissioners have decided in favor of a loop line round Eagle Place, and it is said that construction will be started as soon as the arrangements can be made. (Mar., pg. 108.)

**Hamilton St. Ry.**—A subcommittee of the Hamilton, Ont., City Council is discussing with the company the question of track extension to the southwestern parts of the city, and the renewal of the tracks on York St. (Mar., pg. 108.)

**London and Port Stanley Ry.**—The London Railway Commission has submitted plans to the Board of Railway Commissioners for electrifying the L. & P.S. Ry.'s right of way into the G.T.R. station in London. Sir Adam Beck states that the L. & P.S. Ry. has the right to run into the station for 99 years, more than half of which period is unexpired.

**Moncton Tramways, Electricity and Gas Co.**—A petition has been presented to the company asking that its railway be extended from Moncton, N.B., to Fox Creek. A number of farmers along the route have promised contributions of from \$50 to \$100 each towards the cost of construction. The local officers of the company are said to view the extension with favor, and petitioners have forwarded the petition to the head office at Pittsburg, Pa. (Dec., 1914, pg. 553.)

**Montreal Tramways Co.**—The Quebec Legislature has extended the time within which the Town Council of Mount Royal may enter into agreements for the construction of electric lines in that town with the M. T. Co., or its subsidiary, the Public Service Corporation. (Feb., pg. 70.)

**Niagara, Welland and Lake Erie Ry.**—The Ontario Legislature is being asked to confirm an agreement between the company and the town of Welland, under which the amount payable by the company for paving the streets on which the railway is to run, shall be payable by instalments spread over 20 years. The town will issue debentures for the whole amount, the company's share of interest and sinking fund is fixed at \$2,700 a year until 1919, \$2,900 a year for the next five years, \$3,100 a year for the third five years, and \$3,350 a year for the last five years. These payments are to cover all taxes except school rates upon the company's property. (Feb., pg. 70.)

**Ottawa Electric Ry.**—The City Council has appointed a special committee to consider the construction of a bridge on Pretoria Ave., to permit of the extension of the electric railway to Ottawa East.

The company has completed the installation of a 2,150 h.p. generator set in its new steam auxiliary power station on Middle St. (Feb., pg. 70.)

**Three Rivers Traction Co.**—It is stated that construction on the loop line in Three Rivers, Que., with a connection to the waterfront, will be started as soon as weather permits and that it is hoped to have the line in operation this year. It is also stated that Geo. Anderson, Superintendent of the North Shore Power Co., will also

be Superintendent of the Three Rivers Traction Co. It is proposed ultimately to build a line connecting the parishes on the north shore of St. Maurice River from Portneuf to Berthier, about 80 miles. (July, 1914, pg. 336.)

**Toronto Suburban Ry.**—Work has been started on the foundations of the piers for the bridge across the Humber at Lambton Mill. Ewan Mackenzie is the contractor. Men are getting things in readiness from Islington westerly to get the section of the line on which track has been laid completed for operation, and for continuing tracklaying, ballasting and other work.

A permit has been taken out at Guelph, for the erection of a transformer station at a cost of \$4,500. Tenders have been invited, and it is said that the building will be completed as speedily as possible. (Feb., pg. 71.)

**Tramways, Limited.**—The directors of the company have passed a resolution setting forth that the company will not at any time claim that the City of Edmonton, Alta., must build connecting lines. The agreement between the city and the company was turned over to the company as soon as the above resolution was filed with the city clerk. While the agreement was approved by a large majority of the ratepayers at the recent elections, it did not receive the necessary two thirds majority to make it effective. (Mar., pg. 108.)

**Transcona, Manitoba.**—As the result of a hearing before the Manitoba Public Utilities Commission J. H. Kern was given time, on Mar. 3, to decide whether or not he will carry out his agreement for the building of an electric railway in Transcona. The conditions which he must accept or reject are: 20% of the line is to be completed by June 1; 40% by July 1; 60% by Aug. 1; 80% by Sept. 1, and the whole to be completed and in operation by Oct. 1. It is provided that the Transcona Town Council may appeal to the Public Utilities Commissioner at the end of each month as to whether the contractor has completed the portion of road called for; and further that the standard of construction, and the system of operation shall be the same as in Winnipeg. During the course of the proceedings it was stated that W. J. Christie, G. M. Newton, W. Chambers and E. Kern, of Winnipeg, were associated with J. H. Kern in the financial arrangements for the building of the line. Mr. Kern stated that in all probability a free right of way along Regent St. would be arranged by May 1. Another matter involved is the building of a line on Talbot Ave., by the Winnipeg Electric Ry., to connect the lines of that system with the Transcona line. The Transcona Town Council was recommended to take up the question of this extension with the Winnipeg City Council and the Winnipeg Electric Ry. Mr. Kern and his associates are applying to the Manitoba Legislature for the incorporation of a company to carry out the agreement. (Mar., pg. 108.)

**Winnipeg Electric Ry.**—We are officially advised that the question of the extension of the line to Morse Place has been considered by the Manitoba Public Utilities Commission at different times, but that no definite decision has been reached about it. (Mar., pg. 108.)

In mixing the solutions for lead storage batteries, always pour the acid into the water, as if this process is reversed, the heat generated by the acid will cause the mixture to splutter, and it will be very apt to be splattered on the attendant.

## Mainly About Electric Railway People.

**J. P. Verner**, Superintendent, Brantford Municipal Ry., is reported to have resigned.

**Thomas Ahearn**, President, Ottawa Traction Co., Ottawa, has been elected a director of the Bell Telephone Co. of Canada.

**J. H. Larmouth**, Superintendent, Edmonton Radial Ry., addressed the Edmonton, Alberta, Civic Club recently on street railway transportation problems.

**J. W. Wallace**, a Toronto Ry. roadmaster, died suddenly, from heart failure, in the street, at Toronto, Mar. 20. He had been in the company's service for several years.

**E. L. Cousins**, Chief Engineer, Toronto Harbor Commission, has been granted leave of absence to prepare plans for a rapid transit system and radial entrances for Toronto.

**James D. Fraser**, Director and Secretary-Treasurer, Ottawa Electric Railway, and Vice President, Canadian Electric Railway Association, had a ten days outing in March in the Gatineau country, north of Ottawa.

**W. G. Ross**, formerly Managing Director, Montreal St. Ry., and now Chairman, Montreal Harbor Commissioners, has been re-elected President of the Asbestos Corporation of Canada.

**W. H. Hazlett**, who retired recently from British Columbia Electric Ry. service, after 15 years, latterly as Purchasing Agent, has joined the firm of A. G. Langley & Co., engineers and contractors, Vancouver.

**R. J. Fleming**, General Manager, Toronto Ry., owns and operates a 900 acre farm in Pickering Tp., about 30 miles from Toronto. This year about 700 acres will be under crop. A considerable number of cattle are kept, chiefly Jerseys, and heavy horses are bred.

**H. L. Beach**, who was associated with Bion J. Arnold, of Chicago, in connection with the appraisal of the Toronto Ry. property, when it was proposed that the city of Toronto should buy out the company, has been appointed Manager, Utah Light and Traction Co., Salt Lake City, Utah.

**R. R. Hamilton**, of Winnipeg, was appointed Superintendent of the Saskatoon Municipal Ry. by the City Council of Saskatoon, Sask., Mar. 15, at a salary of \$150 a month, the appointment to be held during the Council's pleasure. He took up his duties at once.

**Sir John Gibson**, Director, Dominion Power and Transmission Co., Hamilton, and ex-Lieutenant-Governor of Ontario, received word Mar. 10 that his son, Lieut. Colin Gibson, had been wounded in active service and was in a military hospital at Hazebruck, France. His condition was regarded as quite satisfactory.

**Charles Avery Lee**, who has been appointed Purchasing Agent, British Columbia Electric Ry., Vancouver, was born at Colorado Springs, Col., Sept. 11, 1882, and entered B.C.E.R. service March, 1909, since when he has been, to July, 1910, Assistant Engineer, Vancouver; July, 1910, to Sept., 1911, Engineer in charge of Coquitlam Dam, Coquitlam; Sept., 1911, to Sept., 1912, Assistant Engineer, Vancouver; Sept., 1912, to Dec., 1914, Engineer in charge of Jordan River power development.

**Geo. Saunders**, who has been with Mackenzie, Mann & Co. at their Toronto office, in charge of their Mount Royal, Montreal, and Leaside, Toronto, terminal and town-site properties, and who formerly spent a number of years in Mexico, has been appointed Official Representative of the Monterey Ry. Light & Power Co. and its subsidiary companies, with office at Monterey, Mexico. Under the Mexican laws all foreign companies operating there must have a resident official representative in that country, with power of attorney and full authority

y to act. The M. R. L. and P. Co. operates all the street railway lines in Monterey, and also has electric light, power, gas, water-works, sewerage, and farm lands concessions. Its other officers are Sir William Mackenzie, President; Sir Donald Mann,

First Vice President; L. Lukes, Second Vice President and General Manager; R. P. Ormsby, Secretary and Treasurer, and R. G. O. Thompson, Auditor, all of Toronto. The local manager and purchasing agent at Monterey is E. Leonarz.

## Answers to Questions on Electric Railway Topics.

Following are questions submitted to the American Electric Railway Association's question box, with replies thereto by Canadian electric railway officials:

**Drying Out Car Motors.**—What methods have been used for drying out car motors, after same have been subjected to water due to floods or other cause?

W. R. McRae, Master Mechanic, Toronto Ry.—Since the introduction of impregnated field coils we have not had any trouble of this nature. All motor cases have a hole drilled in them to allow water to get out quickly.

**Trolley Wheels.**—What size and weight of trolley wheels do you use, for city service and for interurban service?

W. R. McRae, Master Mechanic, Toronto Ry.—Trolley wheels  $4\frac{1}{2}$  ins. diam., and  $3\frac{1}{4}$  lbs. weight used for both city and interurban service.

What tension do you maintain trolley wheel on wire, in city service, and in interurban service?

W. R. McRae, Master Mechanic, Toronto Ry.—In city service, four motor equipment, 23 to 25 lbs.; two motor equipment, 18 to 20 lbs.; in interurban service, all four motor equipments, 35 lbs.

**Balancing of Armatures.**—In regard to balancing of armatures used in regular city and interurban work, (a) Is any special attention given to the mechanical balancing of armatures? (b) Are armature cores balanced before rewinding? (c) Are armatures balanced after being rewound? (d) What method is used to determine whether or not an armature is out of the balance? (e) What method is used to correct an armature that is found to be out of balance after being rewound? (f) Have any decidedly injurious results been observed from armatures being out of balance?

W. R. McRae, Master Mechanic, Toronto Ry.—(a) Yes. (b) Yes. (c) No. (d) Straight edge levelling rails. (e) This is done before winding by boring holes in end plates, or by leading in existing holes. (f) Yes. Short life bearings, and pinions worn unevenly.

D. E. Blair, Superintendent Rolling Stock, Montreal Tramways Co.—We have found that the manufacturers of railway motors are very careful in the balancing of armature cores, and do not know of any serious results following the unbalancing that would result from slightly unsymmetrical position of the cores.

**Cast Iron vs. Steel Wheels.**—Is it not true that for purely city surface operation under a medium weight car, high grade cast iron wheels are cheaper than steel wheels?

W. R. McRae, Master Mechanic, Toronto Ry.—High grade cast iron wheels have given the best results on this property.

D. E. Blair, Superintendent Rolling Stock, Montreal Tramways Co.—We have found that high grade cast iron wheels with flange 1 13-16 ins. thick are considerably more economical than steel wheels, and quite satisfactory for city service and moderate speed on suburban lines.

**Inter-departmental Charges for Use of Tools.**—I should be pleased to learn what is the practice among other railways in the motive power or equipment department, as to charging other departments in the same company, a percentage for the use of tools, machinery and supervision for work done for such other departments. It occurs to

the writer that such a percentage charge is permissible, legitimate and only fair. If you are going to do some work for a neighboring factory or some other friendly company, you would not hesitate to charge them a certain percentage for use of machinery and supervision. When the tools are in the mechanical department, the mechanical department must replace them and naturally the costs are chargeable to the accounts of that department. When it becomes necessary to replace worn out tools and machinery, you would not think of assessing other departments of the company, such as have had work done in the mechanical department, therefore, I think it is only fair a reasonable percentage should be added to the cost of doing the work. What is your practice and opinion on the subject?

D. E. Blair, Superintendent Rolling Stock, Montreal Tramways Co.—It is not our practice to charge other departments with a percentage above the cost of work done in the shops of the mechanical department when same is chargeable to maintenance account, but we do consider that work done for capital account should carry its fair share of the overhead expense. The amount charged is arrived at by us by figuring the proportion of all legitimate overhead expenses and the total amount of labor and material charged to the shops. Otherwise we could not arrive at the actual cost of new work.

## Regina Municipal Railway Operations.

The operations for February show total revenue of \$14,456.02; operating expenses, \$14,344.90; capital charges, \$9,137.58; operating surplus, \$111.12; deficit, \$9,026.46, compared with \$18,009.14 total revenue; \$21,444.19, operating expenses; \$8,691.42, capital charges; \$3,435.05, operating deficit; \$12,126.47, total deficit for Feb., 1914. The aggregate total revenue for two months ended Feb. 28 was \$29,931.50; operating expenses, \$32,310.77; capital charges, \$18,275.15; operating deficit, \$2,379.27; total deficit, \$20,654.42. The passengers carried in February were 289,421, against 403,081 in Feb., 1914, and the aggregate passengers carried for the two months ended Feb. 28, were 613,105. The average expenses per car mile, excluding power costs, for February, were 14.75c.; average expenses per car mile, including power costs, 19.72c.; cost of power per k.w.h., 2.03c.; cost of power per car mile, 4.97c.; wages of motormen and conductors per car hour, 72.56c. The percentage of expenses, without capital charges, to earnings, was 99.23, and with capital charges, 162.44.

**Zone Fares for Saskatoon.**—At a meeting of the Saskatoon, Sask., City Council, Mar. 15, Electrical Engineer Hanson submitted a proposition to divide the various routes on the municipal electric railway into stages, and that the fare for each stage be 1c. The following are the routes, with the number of stages on each:—Pheasant Hill and Exhibition, eight stages; Avenue H., one stage; Mayfair and University, six stages; Seventh Ave. and Nineteenth St., three stages; Sutherland line, four stages to city limits, and full five cent fare from city limits to Sutherland. The proposition was laid over for future consideration.

## Yard Cranes for Wheels in Dominion Power and Transmission Co's. Shops

The accompanying illustration shows a yard crane used in the Dominion Power and Transmission Co's shops at Hamilton, Ont., for lifting car wheels from the adjacent storage pile. Prior to the use of this crane several men were required when it was necessary to lift wheels from the storage pile to a truck for running into the shop. With the arrangement one man can handle the work more expeditiously alone than several men formerly did.

Crane for Lifting Car Wheels in Yard.

The crane consists of a light jib of  $1\frac{1}{4}$  in. round iron, mounted on a post. On the outer end of the jib there is an arm about 12 ft. long, supported on a 3 to 1 ratio, with a hook and chain on the short end. This gives sufficient leverage to lift the wheel well clear of the ground for swinging from the storage pile, which is to the rear of the post, out into the foreground for lifting on trucks. This crane has been installed by J. O. Binkley, Superintendent of Shop, to whom we are indebted for the information.

## The Toronto Railway and the Overcrowding Bylaws.

In the article on overcrowding on the Toronto Ry. in Canadian Railway and Marine World for March, reference was made to the company's application to the Ontario Railway and Municipal Board for approval of its bylaw to limit the capacity of its cars to 50% above their seating capacity. This bylaw is in accordance with the city bylaw under which a conviction was obtained against the company last year for overcrowding. At a meeting of the Toronto Board of Control, Mar. 3, it was proposed to repeal the bylaw limiting the standing room to 50% of the seating capacity; to enter opposition to the company's application for approval of its bylaw, which is on precisely the same lines, and to urge the Attorney General to proceed with the cases against the company for overcrowding.

The Ontario Railway and Municipal Board has approved a draft of the bylaw, on condition that it be redrafted, and that it is not to become operative until a date to be fixed, and that the company adopt a device to show that the cars are full. On the question of a conviction for overcrowding, made in Nov., 1914, sentence was suspended pending the disposition of a stated case in the Appeal Court.

**Wentworth St. Incline Ry., Hamilton.**—Plans have been under consideration for some time for the improvement of the Wentworth St. Incline Ry., Hamilton, Ont., but it was decided, Mar. 5, that the carrying out of the suggestion would interfere injuriously with the Toronto, Hamilton and Buffalo Ry. tracks. It was decided to have new plans prepared.

## Cross Seated Cars for Operation on the Toronto Railway.

The Toronto Ry. has equipped seven of its standard cars with cross seats, and is now trying them on its lines. In the report on the traction improvement and development of the Toronto metropolitan district, submitted to the city by Bion J. Arnold, of Chicago, in 1912, cross seated cars were among the recommendations. Owing to the narrow devil strip between the tracks on the Toronto streets, the cars as used by the Toronto Ry. are of necessity about a foot narrower than those on most of the larger systems in Canada and the United States. In consequence, a difficult problem was presented in planning the seat layout to introduce the cross seat and at the same time provide a satisfactory aisle, with the nar-

Cross Over Cross Seated Car on the Toronto Railway.

rower width of car body, as even with the wider car the aisle width is considered none too great.

In the Arnold report the cross over seat layout shown herewith was suggested as a possible means of meeting the difficulty. Six of the cars have been arranged in this manner, and a seventh is provided with a narrow centre aisle the length of the car, as shown in the other car. The cars with the cross over aisle have a body length of 30 ft. with 6 ft. platforms at each end, with no bulkhead at the front. The outside car body width is 7 ft. 8 ins., and the inside width, 6 ft. 8 ins. The cross seats, of which there are 10, are 3 ft. long, and are of a wooden construction, non reversible. Opposite each set of 5 seats there is a longitudinal seat, 12 ft. 4 3/4 ins. long in front, and 15 ft. 10 1/2 ins. long at the rear, leaving an aisle width of 2 1/4 ft., which is reduced by the feet of the passengers sitting on the longitudinal seats. The six cars equipped in this manner are of the older standard type. They have seating capacity for 40 persons.

The seventh car, which has the through central aisle, is of the latest or 2,000 type of car, with the same body length of 30 ft., but with an inside width of 7 ft., a 6 1/2 ft. platform in front, and a 7 ft. platform in the rear, with no front bulkhead. In the centre of the body there are on each side 8 reversible rattan cross seats, each 2 ft. 8 ins. long and 19 ins. wide, at 2 1/2 ft. centres, leaving an aisle width of 20 ins. In the short body space at each end two short longitudinal seats are provided. The 20 in. aisle width was the governing factor, necessitating a short seat. The seating capacity of this car is 42 persons.

These cars were first tried on the Dundas St. route, and afterwards changed to the King St. line. It is the intention to give them a thorough trial before adopting any policy with regard to changing any more of the equipment.

The Detroit United Ry. is stated to have issued an order that Canadian silver is not to be accepted in payment of fares over its lines. It is said that the reason for this order is that the company has a quantity of Canadian silver on its hands which it experiences difficulty in disposing of.

## Electric Railway Finance, Meetings, Etc.

**Cape Breton Electric Co.**—Gross earnings for January, \$29,054.06; operating expenses and taxes, \$17,782.38; net earnings, \$11,271.68; interest charges, \$5,485.41; balance, \$5,786.27; bond sinking and improvement funds, \$1,235.83; balance for reserves depreciation, etc., \$4,550.44, against \$29,798.29 gross earnings; \$18,563.18 operating expenses and taxes; \$11,235.11 net earnings; \$5,247.37 interest charges; \$5,987.74 balance; \$1,190 bond sinking and improvement funds; \$4,797.74 balance for reserves, depreciation, etc., for Jan., 1914.

**Detroit United Ry.**—The negotiations for the purchase of the street railway system in Detroit, Mich., by the city council, which is under consideration, involves only the lines in the city, 222 miles in all. The re-

12.87 cts. against 13.99 cts.; cost per car mile, 23.22 cts. against 21.11 cts.; passengers per car mile, 2.94 against 3.28; average fare per passenger, 4.21 cts. against 4.17 cts.

**London St. Ry.**—Gross earnings for January, \$30,616.10; operating expenses, \$21,518.62; net earnings, \$9,097.48, against \$28,354.13 gross earnings; \$19,853.66 operating expenses; \$8,500.47 net earnings for Jan., 1914.

**Saskatoon Municipal Ry.**—Receipts for week ended Mar. 6, \$2,431.05; passengers carried, 52,549; average number of cars in service, 12; average daily receipts per car, \$29; average fare, 4.626c. For the corresponding week in 1914, the receipts were \$2,489.25; and the number of passengers carried, 54,870.

**Sherbrooke Ry. and Power Co.**—Gross earnings for seven months ended Jan. 31, \$86,436; operating expenses, \$52,052; net earnings, \$34,384, against \$85,265 gross earnings; \$52,422, operating expenses; \$32,842 net earnings, for same period 1913-14.

**Winnipeg Electric Ry.**—The Manitoba Legislature has passed an act under which it is declared that in case the company has or may deposit any of its 4% perpetual consolidated debenture stock to secure advances for current account, such stock shall not be deemed to have been redeemed by reason of the repayment of such advances, but may be reissued. A similar provision is made to apply to any other bonds, debentures, or debenture stock. The company is given power to acquire stock or other securities of an electric light, power or tramway company or other corporation, or to raise money in order to aid by way of bonus, loan or advance to any other company with which it may have business relations.

## Electric Railway Notes.

The Saskatoon, Sask., City Council passed a resolution, Mar. 2, removing the special concession to workmen in the early morning hours, and making the street car fare a straight five cents for all adults.

Commencing Mar. 1, the Edmonton, Alberta, city's power plant made a 25% cut in the charge to the Edmonton Radial Ry. for power. The charge for power is now 1.5 cts. a kilowatt hour instead of 2 cts.

After some discussion regarding the pro-

posal to increase the 2 ct. fares on the municipal electric lines, the Toronto Board of Control decided not to concur in the Works Commissioner's recommendation to that effect.

The Regina City Council is appealing against the decision of the Saskatchewan courts, awarding Louis Schell, a street car conductor, \$2,700 damages for injuries received by him through striking a street car standard near the Broad St. subway, in the course of his work.

The report of

Centre Aisle Cross Seated Car on the Toronto Railway.

Commissioner Reid on the public utilities of Lethbridge, Alberta, contains the following with regard to the Municipal Railway for the year 1914: "There has been no decrease in traffic since the straight 5c. fare went into effect, but it has not been long enough in force to enable the commissioner to judge of its worth. The revenue for the year was \$46,053.56, against \$60,609.62 for 1913; the expenditures were \$83,098, against \$91,440.84 in 1913; the deficit was \$37,044.44, against \$30,831.22 in 1913. Taxes to the amount of \$5,518.81 were added to the expenses of the department in 1914." Following are the traffic statistics in comparison with those for 1913:—Passengers carried, 1,054,848 against 1,420,011; car miles, 357,938 against 483,183; revenue per car mile,

The Manitoba Legislature has passed an act providing that electric railway cars may be operated within the town of Stonewall, and certain parts of the rural municipality of Rockwood, upon a favorable vote of the ratepayers.

The Mayor of Toronto, at a meeting of the Ad. Club in Toronto, Mar. 18, stated that the Rapid Transit Committee were preparing a proper rapid transit scheme for Toronto, including tubes and entrances for radial lines.

The Edmonton, Alberta, City Council decided, Mar. 2, to cancel its agreement with the employes of the Edmonton Radial Ry., discharge the men whose wages and hours are governed by it, and re-engage those who

desire to work under the new conditions and wage schedule to be laid down by the Council.

The Toronto City Works Department received tenders Mar. 16, for the supply of track material, overhead line material and oak ties, for the building of a line connecting the municipal electric lines at St. Clair Ave. and Bloor St. West, via Lansdowne Ave.

C. A. Lee, A.M.Can.Soc.C.E., read a paper on Jordan River Power Development, Vancouver Island, before the Canadian Society of Civil Engineers, in Montreal, Mar. 4. This development is owned and operated by the Vancouver Island Power Co., a subsidiary of the British Columbia Electric Ry. Co.

## The Progress of the Jitney Auto Service.

The jitney bus service has definitely invaded Victoria, Vancouver, Winnipeg and Toronto, in competition with the electric railway service given by the companies having franchises in those cities, and Edmonton and Saskatoon in competition with the municipally owned electric railways. The jitneys' first appearance in Canada was in British Columbia. They started running in Victoria in November last and there are now about 80 in that city. About the middle of November they also started in Vancouver and there are now about 325 in that city, with about 40 running between Vancouver and New Westminster. They are said to have very materially reduced the British Columbia Electric Ry.'s receipts. The automobiles used in this service are of various makes and sizes, many of which have been resurrected from the junk heap and some of which are liable to drop to pieces. In fact several have done so since the service was started. They have no organized system, but jump from one line to another and back again wherever they think they can pick up a load. They run only on paved streets inside the city limits and simply skim the traffic during rush hours both morning and evening, particularly during fine weather. If it is very wet they do not turn out. As stated in our March issue the Auto Public Service Co. of B.C., Ltd., has been incorporated under the B.C. Companies Act, in the interests of jitney owners, and in Victoria, an association of jitney owners has been formed under the provisions of the Benevolent Societies' Act.

The B.C. Legislature has made some amendments to the Motor Vehicles' Act, and various amendments have been made in the Vancouver City Act, giving the council power for inspecting, prohibiting, licensing and regulating motor vehicles, "the streets and routes upon which motor vehicles may be driven or operated, the capacity of motor vehicles and the number of persons, the quantity, weight and number of freight and other things which may be carried in or upon motor vehicles, the places in or upon motor vehicles, in which persons, freight and things may be carried, the number of motor vehicles which may be driven or operated on any street or route, the number of hours and time on any day during which motor vehicles may be operated or driven by any one person, and the fitness of drivers and chauffeurs to drive and operate motor vehicles." The finance, police and fire committees of the Vancouver City Council had a joint meeting Mar. 15, to frame regulations under the Act.

The first regular jitney in Edmonton, Alberta, started running on 24th Street, between Namayo Ave. and Stoney Plain Road, Mar. 15. The car will carry 12 to 15 persons, and in the event of not too stringent regulations being drawn up by the City Council, it is proposed to put similar cars on a number of routes and to run on time.

At Edmonton, Alberta, a city bylaw is being prepared to fix a prohibitive license on all autos operating as jitneys in competition with the municipal street railway. An editorial in one of the Edmonton papers says:—"We seem to have no alternative but to clap on restrictive legislation as a means of self protection. Undoubtedly that is a kind of legislation to which a great many people have an instinctive dislike. It is a direct negation of the principle that the individual is entitled to the best service he can get for the money. Yet, what are we to get for his money? We cannot afford to put the street railway system—which we have to pay for—on the scrap heap. The Saskatoon, Sask., City Council is preparing to impose a high license fee on any cars operating as jitneys. Of the towns outside Vancouver, North Vancouver has appointed a commission to draw up regulations for the control of this new traffic, and other towns are moving in the same direction.

Canadian cities are finding the same difficulties with jitneys as United States cities have. In addition to the difficulties arising out of the great variety of vehicles used, and the overcrowding of the same, in Victoria, Vancouver and Winnipeg the police are finding difficulty in enforcing traffic regulations. Traffic in the already congested districts is becoming more congested, and the more or less irresponsible jitney owners or drivers openly disregard the directions of traffic officers. The number of fines inflicted for breaches of the traffic bylaws in these cities is increasing, the offenders in nearly every case being jitney drivers. There is also an increasing number of street accidents due to the increasing traffic, for which jitneys are in a large measure responsible. In Seattle, Wash., out of nine auto accidents on Jan. 17, seven were due to jitneys. Attention is also drawn by Women's Councils in several of the U. S. cities to the dangers of the new traffic to public morals, instances being given where jitneys have been operated in connection with immoral resorts.

The only course for the public authorities to take is to make such regulations for the traffic, as will protect the public, and keep out of the field the irresponsible, the dishonest (such as one driver who is reported to have said he never completed a schedule route during rush hours because it was not profitable), and the reckless drivers.

As an example of the effect of the jitneys on street car earnings it is stated that a company operating in Seattle, Wash., is losing \$2,500 a day in earnings, and is about to reduce its service. In Portland, Oregon, the company has issued two pamphlets dealing with the subject, one to its employes, and the other to the public. The first places before the men information and arguments to be used in meeting statements favoring the jitney traffic, and the second points out

among other things that 15½% of the company's revenue goes to federal, state, county and city governments for the mere privilege of doing business.

Various states are moving in the direction of enacting laws for the control and regulation of the traffic. Oregon proposes to place jitneys under the same regulations, as street railways, and auto common carriers outside cities under the same regulations as steam railways; the Massachusetts state legislature is considering a bill to put the control of the new traffic under the Public Service Commission, and authorizing the municipal authorities to name the conditions under which jitneys may be operated. The bill provides that the capital of the companies operating such service shall be not less than \$10,000 for each seat in the largest vehicle operated, and may be increased by the commission.

Following on the establishment of a jitney service in the northern suburbs of Toronto in February, an additional service was put on, Mar. 15, running from Front St. on the south to the Toronto and York Radial Ry. station in the northern part of the city. Several automobiles are being utilized, with accommodation for an average of six persons each, the fare charged being 5c. a trip, and 6 tickets for 25c. The Jitney Motor Bus Co. applied to the city, Mar. 12, for a permit to operate a service on Yonge St., as from Mar. 15. The Mayor is reported to have stated, in connection with the application, that there is nothing to interfere with the company in operating such a service, but that there should be an agreement by which the city should be guaranteed 25% of the revenue. He said that undoubtedly the Toronto Ry. traffic would suffer and the city percentage would be affected. The Toronto Jitney Association has been formed with the object of protecting the interests of those concerned in the traffic.

## Calgary Municipal Railway's Operating Results.

Following is a comparative statement for January, 1915 and 1914:—

	1915.	1914.
Car and miscellaneous earnings .....	\$47,726.41	\$57,640.20
Maintenance of way and structures .....	\$ 631.81	\$ 1,994.87
Maintenance of equipment .....	2,476.89	8,618.55
Transportation .....	27,068.24	40,746.78
General expenses .....	1,451.46	1,878.72
Total operating expenses .....	\$31,628.40	\$53,238.92
Wages held back conditionally .....	1,250.96	.....
Balance of revenue .....	14,847.05	4,401.28
	\$47,726.41	\$57,640.20

The following were fixed charges for Jan., 1915:—

Depreciation and sinking fund .....	\$5,906.51
Contingent account, gross receipts ..	954.32
Debt interest .....	8,853.29
Insurance .....	625.00

	\$15,339.12
Deficit for Jan., 1915 .....	\$1,502.27

	Jan. 1915.	Jan. 1914.
Revenue per car mile ..	21.244 cts.	20.484 cts.
Operating expenses per car mile .....	14.078 "	18.920 "
Surplus (gross) .....	7.165 "	1.564 "
Cost of power per car mile .....	3.947 "	4.906 "
Proportion operating expenses to revenue ....	66.270%	92.36%

The recommendations of the city auditors on the Municipal Railway accounts for 1914, have the effect of turning what appeared to be a deficit into an apparent surplus of \$10,000. The recommendations include the charging to general city account of the interest and sinking fund charges of the Ogden line, and the reduction of the depreciation on the lines from 7½ to 5%. The auditors point out that the Ogden line was built for the benefit of the city at large, and that the reduced traffic warrants a reduction in the provision for depreciation.

# Marine Department

## Coast, Lake and River Officers for 1915.

The following appointments, made by navigation companies, engaged in Canadian navigation, for their various steam vessels and tugs, for this year, have been reported to Canadian Railway and Marine World, by the managements. The first column shows the names of the vessels, the second those of the captains, and the third those of the chief engineers.

## Disastrous Voyage of the s.s. Desola.

The Canadian steamship *Desola*, of Montreal, 2932 registered tons, length 340 ft., loaded a cargo of sulphuric acid or oleum, consisting of some 7,000 odd drums, each weighing 800 lbs. net, in New York early in

the engineer had not returned. Some time elapsing the Chinese firemen became alarmed at the non appearance of either, entered the tunnel in a body and found both engineer and oiler unconscious. The Chinese rolled

The Canadian Steamship *Desola*, at St. John's, Nfld.

December, and started for Ardrossan, Scotland. It is assumed that the oleum was to be used for the manufacture of high explosives by the British Government, the Canadian Explosives Co. securing the product from a Newark, N. J., concern. The *Desola* encountered very heavy weather for several days. Her decks were continually flooded fore and aft, and it is assumed that a large quantity of sea water must have found its way into the cargo holds, either through the hatchways or down the ventilators; the result was that large quantities of poisonous gases escaped from the cargo holds and found their way into the crew's quarters, also into the engine room, stokehold, and tunnel shaft.

The crew was composed of Chinamen, with white officers in charge, under Capt. Drurie, Chief Mate Swift and Chief Engineer Dixon. About January 12, the fourth Engineer, W. Sheppard, being on watch at this time went into the shaft tunnel to see that the bearings were being oiled, etc., and as he did not return in a reasonable time, the Chinese oiler on watch with him notified the fireman that he was entering the tunnel to find out why

their countryman off the white engineer, took the latter out of danger and then returned for the oiler, showing conclusively the loyalty of the crew to their white officers. So badly was the engineer injured that he still lies in the hospital in St. John's, Nfld., his injuries being principally burns from the combination of water and sulphuric acid.

The conditions were so bad that the master deemed it advisable to put into St. John's to have the cargo restowed. About 3,000 drums were removed from the vessel and about 300 of these were proved to be in a leaky condition. They were disposed of and the remainder of the cargo restowed in a careful manner. After this was done it was discovered that the acid was draining into the bilges of the vessel and mixing with the bilge water, seriously affecting the pumps and their connecting parts. The vessel also sprang a leak in the forward end. About this time Capt. H. B. Saunders, agent for the London Salvage Association, with Chemical Expert E. E. Armstrong of the Canadian Explosives Co., arrived at St. John's from New York in connection with the vessel and cargo, and after examining the vessel, decided

it would be impossible for her to continue the voyage to Ardrossan, but recommended, under certain conditions, that she return to New York to have her cargo reconditioned. After waiting a few days, and there being apparently no danger from the fumes, the vessel left St. John's, but had only proceeded about 200 miles before the former conditions were again met with. It is apparent that after meeting a rather heavy sea some more drums commenced to leak, and conditions became so serious that the master was obliged to return to St. John's.

Conditions now became so bad that the agent in charge of the cargo and ship, after getting in touch with the owners and underwriters, received authority to discharge the cargo and have the vessel thoroughly examined and repaired, but considerable difficulty was found in getting anyone to receive the cargo. Eventually the Reid Newfoundland Co. agreed to transport it to Irvine, about 10 miles out of St. John's, and to erect a temporary shed to allow the cargo to be reconditioned, and in due course shipped to its destination. The work of discharging the cargo was commenced on Mar. 1, and although considerable difficulty was experienced by the obnoxious fumes arising from the holds, about 2,000 drums were discharged and taken to the storing place, but on the afternoon of Mar. 3, the fumes became so bad that work had to be stopped. It was found that about 35% of the drums were in a leaking condition, and 5% of these actually had large holes from 3 to 10 ins. in diameter, and were as thin as paper in several places. About 9 p.m. the crew, who were sleeping in the forecabin, heard a roaring issuing from the two 3 in. vent pipes from the forward ballast tank and immediately evacuated their quarters. One of the crew procured a lantern to investigate, when suddenly gases became ignited and burned very fiercely, consuming the wood work in the forecabin. This was explained by Chemist Armstrong as being due to the presence of hydrogen gases in large quantities, which was caused by the action of the sulphuric acid dissolving the iron parts of the ship. This continued to burn with great ferocity until 3 a.m., when it was extinguished by the combined efforts of the men of His Majesty's training ship *Calypso* and the local fire department. During this time, great volumes of fumes from every hold of the ship were arising and being carried by the wind for several hundred yards, making it impossible to approach the ship unless properly protected from the fumes. The Reid Newfoundland Co., realising the danger of allowing the vessel to remain at their wharf, requested the captain to have her removed as far as possible, so that in case of an explosion their dock premises would not be damaged. This work was commenced at daylight, during which time it was apparent that the acid had succeeded in eating holes through the bulkheads, which allowed the water to flow into the stokehold of the vessel. She also commenced to make considerable water, and in a short time the fires were put out and the vessel apparently commenced to sink. So many complaints were made from the neighboring tenants of houses and workmen employed in the buildings in the vicinity of the fumes, that the Government issued instructions to the captain of the vessel and the agent, to remove her at once, and it was decided that the only safe method of disposing of her was to tow her out of the harbor away from inhabited regions. This, however, was found impossible by the ice blockade which had effectually closed the port for several days. About 9 p.m. a series of explosions took place on the vessel and the captain ordered the crew and officers to

leave her. Shortly after they had done so the after part of the vessel burst into a volume of flame, reaching as high as the topmast. The fire department was called but could do nothing to check the flames and practically all the wood work in the cabins and the accommodations of the vessel were destroyed. Soon after the fire commenced she commenced to sink rapidly, and now lies partially submerged and resting on the bottom. The action of the acid after the ship was submerged continued and the drums could be heard bursting, and the water in her was kept in a boiling condition for three days after she sank. Portions of the hull became so heated that the paint on the outside was burnt off.

The captain and crew displayed great bravery in sticking to the ship so closely in the dangerous condition that she was found to be in. Chief Engineer Malcolm Dixon, particularly, was untiring in his efforts to keep the pumps in order, to prevent the water reaching the cargo. It is probable that an effort will be made to raise the *Desola* in the near future, so that she may be placed in dry dock for survey.

This is probably the first case of this nature that has occurred. There will probably be litigation as to who will remove the vessel and pay damages. The underwriters will be likely to try and recover damages from either the makers of the steel containers, or the manufacturers of the acid. The *Desola* was valued at \$132,000, and the cargo of 7,000 steel drums of sulphuric acid weighing 850 lbs. each, was valued at \$175,000.

### The Shipping Federation of Canada.

The annual general meeting was held at Montreal, Mar. 1. The report of the President, A. A. Allan, stated that the first vessel to arrive in Montreal for the 1914 season was the Allan Line s.s. Corsican, Apr. 29, and the last vessel to leave was the Manchester Liners s.s. Manchester Spinner, Dec. 4. At the outbreak of war a great number of vessels in the Canadian trade were requisitioned by the Admiralty, and several of the shipping lines, in order to maintain their schedules, were obliged to charter outside steamers. In many cases the higher rates paid left a very small margin of profit, owing to the delays and detentions that had been caused at the ports on the other side. The total number of seagoing vessels arriving during the season was 916, an increase of 96 over the previous year, with an increased tonnage of 68,827 tons. There was a serious falling off in the passenger service, particularly in the westbound traffic. Exports show decreases in the following commodities, as compared with 1913:—apples, 49,733 barrels; cheese, 88,267 pkgs.; lard, 200,633 pkgs.; lumber, 34,969,363 ft.; while the following showed increases:—butter, 5,572 pkgs.; oats, 1,152,508 bush.; flour, 16,948 sacks; hay, 203,022 bales, and wheat, 27,365,164 bush.

In connection with the transportation of the first Canadian expeditionary force to Great Britain, shipowners were called upon by the Dominion Government to inform the Minister of Militia and Defence how many steamships could be supplied to carry a certain number of troops by a certain date. Within a few days a list of 52 vessels, approximating 476,717 gross tons, was submitted as being suitable, from which 32 vessels of nearly 330,000 tons were requisitioned. The companies were left to look after the coaling and provisioning of the vessels, and the engaging of additional crews to cope with the increase of work in all departments. Most, if not all, of the vessels had to be transformed into transports,

involving an immense amount of work. Most of this was done at Montreal, and the vessels sent to Quebec, where embarkation took place.

In view of the fact that the British Board of Trade had given permission to vessels loading in the White Sea to carry full deck loads for an extra period, the Shipping Federation approached the Canadian Government with the view of having the same privilege extended to British vessels sailing from Canada, and as a result of negotiations the Government notified shipowners that they would not proceed against owners of vessels sailing from ports in Canada up to Nov. 7 last, and the privilege was later extended to Mar. 16.

The tonnage entered in the Federation in 1914 was the highest since incorporation. The total line tonnage was \$40,188, an increase of 206,966 over the previous year. The tramp tonnage was 340,940 tons, an increase of 249,337, or a grand total of 456,303 tons over 1913. During 1914 there was an increase of 22,363 tons in the Canadian registered tonnage entered in the Federation, as compared with 1913.

A. A. Allan was re-elected President for the current year, the other members of the executive council being, J. R. Binning, D. W. Campbell, A. Mackenzie, W. R. Eakin, R. W. Reford, John Torrance.

The following representatives of the various steamship companies were elected:—Allan Line, A. A. Allan, W. A. Wainwright; White Star-Dominion, Canada, and Cie. Generale Transatlantique Lines, John Torrance, P. V. G. Mitchell, W. Macpherson; Cunard, Donaldson, Thomson and Cairn Lines, R. W. Reford, W. I. Gear; Manchester Liners and Furness Withy and Co., J. R. Binning, J. W. Nicoll; New Zealand Shipping Co., E. W. Foulds, V. A. Ward; Elder Dempster and Co., D. W. Campbell; Canadian Northern Steamships, R. C. Vaughan, G. Tombs; Head Line, W. R. Eakin, A. E. Francis; Dominion Coal Co., A. Mackenzie. A. Dick; Nova Scotia Steel and Coal Co., L. C. Webster.

### The Canadian Pacific Railway Ocean Services.

It is stated that the name by which the new company, which will take over the C.P.R. ocean vessels, together with any other vessels which may be decided upon, will be Canadian Pacific Ocean Services, Ltd., and that it will be registered in England. The bill to authorize the transfer passed the House of Commons, Mar. 8.

Sir Thomas Shaughnessy is quoted as saying:—"The C.P.R. is operating steamships on the Atlantic and Pacific Oceans, and on the Pacific Coast and the Great Lakes and other inland waterways of Canada. These latter are connecting links between different sections of the railway line, and are, therefore, essentially a portion of the railway transportation system, and it is not proposed to change their status. The ocean fleets are, however, in a different class, engaged in competition with outside fleets, plying between Canada and other portions of the world. The company proposes to transfer these ships to a steamship company, with which the business relations will be the same as they are with outside steamship lines which exchange traffic with the railway company. Heretofore, all expenditures for the acquisition and construction of these ocean steamships were made by the railway company and included amongst the liabilities in its balance sheet. Hereafter, it is proposed that the steamship company shall itself secure the requisite money for these purposes by the issue of its own securities. The ownership and control of

the steamship company will remain with the C.P.R., but the management and operation of the steamship lines will be vested in the directors of the Canadian Pacific Ocean Services, Ltd. It is only another step in the direction of eliminating from the direct operations of the railway company items that do not relate to the railway property itself."

### The Morwenna-Chebucto Collision.

Following is the judgment re the collision between the s.s. Morwenna and the ferry steamboat Chebucto in Halifax harbor, Jan. 30. The enquiry was held by Capt. L. A. Demers, Dominion Wreck Commissioner, with Capt. John Fleming and John Hearn as nautical assessors:

The court, having carefully weighed a most contradictory version of this accident, is of opinion that the master of the Morwenna, Luke Holmes, when leaving the wharf, exercised the usual prudence necessary on such an occasion; but when straightening up on his course for probably a point on Georges Island, in order to get into position to go out of the harbor, and noticing the ferry was on his port side, and considering it was his duty to keep clear of him, when he saw there was a danger he blew one blast of the whistle and gave an order to the engine room to stop, and two minutes later gave order full speed astern. Upon being asked what he did after blowing one blast, he said he kept his helm amidships, which we consider was contrary to the rules of the road as established, as the signal one blast was misleading in this case. While we admit the one blast was sounded as a signal of warning, as he claimed, to the other vessel, no one on the Chebucto heard such a signal, and the court can easily understand the reason of it. The vessel had been two days in the dock and the whistle was not used, the steam had remained in the pipe and was condensed, and a certain amount of water had accumulated therein. Upon leaving the wharf, there was only about 160 lbs. of steam, and upon the first blast of the whistle, which might be a sound, as he said, it might not have been sufficiently loud to be heard any great distance owing to the accumulation of water in the pipe. Again, when he saw that the collision was inevitable, it was very apparent he did not take the precautions which are required of a shipmaster, to go full speed astern or starboard his helm in order to pass astern of the ferry boat, and by the entries in the log and the succession of signals given to the engine room within a minute, and maybe a little more, between each other, and the sounding of one blast of the whistle, shows that the master was for the moment perplexed. After sounding the blast of the whistle, and when ordering the vessel to go full speed astern, he also failed to sound the three blast signal indicating that such was the movement he was taking in order to avoid the collision.

The court has tried to ascertain whether there are any regulations governing the movements of ferry boats in Halifax harbor, but did not obtain any definite information. Therefore it is under the impression that the navigation in the port of Halifax, whether ferry vessel or any other vessel, is governed by the international rules of the road, and on that its opinion is based. At no time would it appear that the Chebucto was a crossing ship. Both vessels were following a course in an oblique direction, and coming to a point which proved fatal in this instance. This opinion is arrived at by the fact that no one on the Morwenna claims to have seen the sidelights of the ferry steamer, which it has been proved were lit at 5.15 that afternoon, and which

would indicate that the Morwenna was a couple of points abaft the starboard beam of the ferry. Therefore the Chebucto cannot be considered a crossing ship and expected to go astern of the Morwenna. On the other hand, the rules of the road state that it is permissible to adopt any action when a collision is inevitable, though it is contrary to the articles already framed. The master of the Morwenna, knowing the nature of the boat he was meeting, the location of the wharf where she was to enter, and the nature of the traffic she was engaged in—transporting passengers, the number of which was more or less great—it was his duty to adopt a different action to that which he did. We maintain that he ought to have gone full speed astern all along, no matter if his ship swung towards the wharf, as we maintain it would have been preferable for him to come into contact with the wharf than to risk striking a ship carrying passengers, and the fact that he dreaded striking the wharf goes to prove that he was closer to it than he stated.

The regulations governing the speed of vessels in Halifax harbor were produced, and we find by an order in council passed in 1896 that the speed is limited to 5 miles an hour, and anyone contravening this order is liable to a fine of \$100. The speed of the Morwenna was 6 or 7 knots, not exactly half speed, her full speed being 13; but in this case this regulation, being enacted by the authorities ruling matters pertaining to Halifax harbor, it does not come within our jurisdiction to comment upon. If it is a breach of the regulations, it pertains to others to deal with it. Whether the ship was going 3 miles an hour, or 5 miles, or 7 miles, it does not alter the fact that the collision occurred, and errors of judgment were committed to avoid the same.

The court cannot arrive at any other conclusion than that the master of the Morwenna is alone at fault for the collision that occurred, and in consequence suspends his certificate, no. 3136, for six months from Feb. 12 to Aug. 12, without the option of a lower grade certificate being granted. The other officers are exonerated from blame, as they did not participate as principals in the navigation of the vessel.

With regard to the Chebucto, our opinion is that the master, N. W. Allen, where a crew is limited, ought to have been taking his lunch in the forward wheelhouse, where the navigation is conducted, instead of in the after wheelhouse, as he stated. It is true that the weather was fine, and it was so for some time, and there was no occasion for the master to be right there at his station, but nevertheless we claim that when the first bell was rung, "stand by," he should immediately have come out and stationed himself by the wheelhouse and conducted the navigation of his ship for the balance of the time until she entered her dock. Although there is no negligence of duty in this matter, we still reprimand him and caution him to be more careful in the future. With regard to the mate of the Chebucto, who was at the wheel, though we hold that the Chebucto did not contribute to the collision, yet we claim there was a defective lookout kept on board that vessel, and that, moreover, the mate adopted a very dangerous practice, contrary to the orders of the administrators of the ferry boat corporation, to admit no one into the wheelhouse, and for that reason we think that, as a future warning to him, it is proper for this court to suspend his certificate for one month from Feb. 12 to Mar. 12, which may cause him to pay more attention to the rules and laws of navigation in the future. This is done with a view to acting as a deterrent for future neglect and for the safety of the passengers who are called upon to travel

between Halifax and Dartmouth and vice versa, and we trust that the ferry boat corporation will see that the orders and regulations that are framed will be carried out to the letter by their employees. We maintain that no one should be allowed in the wheelhouse where there is only one man to look after both duties of acting as wheelsman and lookout, as in this case.

### Lake Vessels Chartered for Gulf and Ocean Service.

During March various reports were current as to lake vessels which, it was stated, had been chartered for service in the St. Lawrence Gulf, to the West Indies, and for trans-Atlantic ocean service. Statements were circulated giving the names of a large number of vessels, many of which are entirely unsuitable for gulf and ocean service, and also the names of the charterers, most of which were incorrect, and practically all, misleading.

The Nova Scotia Steel and Coal Co. was stated to have chartered 26 vessels for service between Canada and the West Indies and South American ports. Thos. Cantley, Vice President and General Manager, was later reported to have stated that his company had chartered five lake steamships for carrying coal from the coast to inland points, but that no vessels had been chartered for West Indies or South American service.

We are officially advised that Canada Steamship Lines' steamships Empress of Fort William, Empress of Midland, Winona, Canadian, Acadian, D. A. Gordon, Midland Queen, Donnacona, C. A. Jaques, Dundee, Dunelm and Glenellah have been chartered for ocean service, in addition to those other of the company's vessels which have been under similar charter for two or three years. The Canadian Lake and Ocean Navigation Co.'s steamships Turret Cape, Turret Court, and Turret Crown, under the management of J. W. Norcross, Managing Director, Canada Steamship Lines, Ltd., have also been chartered. The charters are for any service for which the charterers desire to use them, some for 12 months and some for 6 months from the opening of navigation. The s.s. Turret Chief, which was mentioned in the daily press as having been chartered, was wrecked at the end of 1913. It is probable that some of the Canada Steamship Lines other vessels will be chartered, or may be operated on the ocean, but no details are available at present. None of the company's vessels have been running in ocean service during the winter, except the regular ocean vessels, which have been running full.

Of the other vessels mentioned as having been chartered, the s.s. Sindbad, owned by F. E. Hall & Co., Montreal, is under time charter to the Dominion Coal Co., operating between Nova Scotia and New England ports, but the same company's s.s. Carleton has not been chartered, and we are advised that she will probably remain in the lake trade this season. The Western Navigation Co.'s s.s. Kaministiquia has been chartered for the South Atlantic trade. The steamships W. H. Dwyer, Port Colborne and Port Dalhousie, owned by Forwarders, Limited, Kingston, Ont., have not been chartered, but will be operated in the pulpwood trade between New Brunswick and Maine ports from May to August, and after that, in the St. Lawrence grain trade. The steamships Glenmount, Stormount, Northmount, Fairmount and Westmount, owned by the Montreal Transportation Co., have been chartered for four months from May, with sailing limitations between Canada, the United States and the West Indies. The Farrar Transportation Co.'s s.s. Meaford

has been chartered for the coasting service and may be utilized in a West Indies service. We have been advised that the St. Lawrence and Chicago Steam Navigation Co. has no vessels suitable for ocean service.

A press report stated recently that the Dominion Marine Association officials had asked the Dominion Government to investigate the qualifications of masters and mates of inland vessels selected to engage in ocean going traffic, and that the Government Examiner of Masters and Mates had conducted examinations of those who had requested permission to remain with the vessels chartered for such service. We are advised that the Dominion Marine Association has no knowledge of such a request.

### Supervision of Lake and Ocean Freight Rates.

The question of the supervision of lake and ocean freight rates was raised in the House of Commons recently, on the revoting of \$6,000 in the Trade and Commerce Department's estimates. Sir George Foster explained that it had been impossible to find a man having the practical knowledge required for the position, and it was not intended to fill the position until the proper man could be found. He hoped to be able to make an appointment shortly. The \$6,000 is intended to cover salary and general expenses. The various subsidy contracts entered into with steamship companies contain a clause authorizing the Minister of Trade and Commerce to fix rates, but he had not in the department the expert assistance to enable him to do so. He had talked the matter over with the Board of Railway Commissioners, which employed expert assistance, and found that there were many things in respect of which they could co-operate if there was a traffic expert in connection with lake and ocean freight service attached to his department. The ocean services during the past six months had been very much disorganized owing to war conditions, but the department had, as far as possible, consulted with the subsidized companies in regard to rates, and he did not think they would increase abnormally, certainly they had not done so, when compared with the increases that have taken place in all other parts of the world.

**Compulsory Pilotage in British Columbia Waters.**—A press report from Vancouver states that the Vancouver Shipmasters Association is recommending some amendments to the Canada Shipping Act, one of them being the abolition of compulsory pilotage so far as it applies to British Columbia waters, it being urged that compulsory pilotage leaves the ship immune from liability when damage is done, when the court finds that an accident is solely due to the pilot in charge. It may be pointed out that Sec. 474 of the Canada Shipping Act reads as follows:—"Nothing in this part shall exempt any owner or master of any ship from liability for any loss or damage occasioned by his ship to any person or property, on the ground of either such ship being in the charge of a licensed pilot, or of such loss or damage being occasioned by the act or default of a licensed pilot, or on any other grounds."

**A Ship Masters' Association was formed** in Toronto, Mar. 17, with the following officers:—President, Capt. J. Mann; Vice President, Capt. Oscar Patterson; 2nd Vice President, Capt. W. McGlennon; Secretary-Treasurer, Capt. A. E. Stinson; Chaplain, Capt. C. Smith; Marshal, Capt. Jefferies; Warden, Capt. H. Patterson; Sentinel, Capt. Sexsmith.

## Midwinter Shipping Letter From the Head of the Lakes.

F. & W. Jones, grain, vessel and marine insurance brokers, Fort William, Ont., write:—In preparing the following summary of conditions at Fort William and Port Arthur, every care has been taken to give as accurate information as possible. Future conditions are estimated after considering all matter pertaining thereto upon the data now available, and which necessarily may be subject to change later. At a future date, when navigation is in sight, this letter will be supplemented by a further forecast of conditions.

**Coal.**—The total movement of coal to the Canadian head of the lakes during 1914 shows a big falling off when compared with former seasons, having no apparent reason beyond the cessation of immigration consequent upon the world wide financial depression. During the past years the coal consumption of Western Canada has steadily increased, and consequently each year receipts at these ports have shown a corresponding increase over previous years. 1914 receipts not only show no increase, but are considerably below those of 1913. As no definite figures are on file for 1913, the actual decrease cannot be shown, but it is estimated as approximately 2,000,000 tons.

Dispatch in vessel unloading during 1914 was exceedingly good throughout the entire season and there was no serious holdup, and only a few cases are on record when steamships waited for turn more than one day. It is quite safe to calculate that the average time for unloading a 10,000 ton steamship was from 25 to 30 working hours. Overtime was not the rule, on account of the smallness of business, and only in certain cases, when a steamship could be worked out within say four or five hours of closing time, would a dock consider overtime at all. There were, however, cases when a dock worked continuously on a steamship until discharged, but in such cases the vessel took care of the extra overtime.

The total receipts of coal at the joint ports of Fort William and Port Arthur for the 1914 season were 1,853,256 tons, composed of 1,368,535 tons bituminous and 484,721 anthracite. Receipts at Jackfish were 177,295 tons bituminous. Of the coal received at Fort William and Port Arthur, 790,570 tons were carried in Canadian bottoms and 1,062,686 tons in U.S. bottoms. The majority of coal in Canadian bottoms went to Port Arthur docks. The increase in coal carrying by Canadian vessels is probably accounted for by the fact that the number of large vessels owned and operated by Canadian companies is steadily increasing.

Coal shipments to the west during the season were fairly active. The daily shipments since the close of navigation have been around 115 cars (approximating 4,000 tons) of commercial coal, while the daily shipments of railway service coal have been about 145 cars (approximating 5,000 tons), thus bringing up the shipments to about 9,000 tons a day. With the opening of February, the western shipments dropped off slightly, following a considerable rise in temperature. Should a cold snap follow, which is anticipated, they will necessarily again pick up, and by the opening of navigation stock piles will undoubtedly be very greatly reduced.

While several docks are doing extensive repairs and readjusting to their plants during the winter, there are no indications of any material changes or improvements under way with regard to unloading machinery. The general situation, however, can be considered as eminently satisfactory, as most of the plants are of comparatively late construction and compare favorably

with those of other lake ports.

Stocks of coal on all docks at time of writing (Feb. 28) are estimated at 1,150,000 tons bituminous and 350,000 tons anthracite.

**Grain.**—The eastern movement of grain from the Canadian head of the lakes for the navigation season of 1914 totaled approximately 127,000,000 bush., and showed a very considerable decrease as compared with the shipments for the 1913 season, which reached approximately 204,000,000 bush. This decline naturally had a seriously depressing effect upon lake grain rates, with consequent unsatisfactory and unsettled conditions to the trade generally. The tonnage in Canadian and U.S. bottoms for 1913 and 1914 compares as follows, in bushels:—

	1913.	1914.
Canadian vessels .....	106,637,870	93,175,403
United States vessels.	96,606,180	33,224,473
	203,240,050	126,399,876

The figures for 1914 reveal a contrast with previous seasons by the fact that 74% of the shipments were in Canadian bottoms, and only 26% in vessels of U.S. register. In previous years the percentage of U.S. vessels has been approximately from 50% to 60%.

The following comparative statement of deliveries to Canadian and U.S. ports will be interesting as showing that approximately only 27% of the grain tonnage was delivered to U.S. ports:—

	1913.	1914.
	Bush.	Bush.
Canadian ports .....	104,852,807	90,140,031
U. S. ports .....	98,387,243	36,259,845
	203,240,050	126,399,876

There is little doubt that the whole of the shipment from both Canadian and U.S. head of the lakes was seriously disappointing to the carrying interests. The total shipments from Duluth appear to have been about 81,500,000 bush. Of this, approximately 7,250,000 were carried in Canadian vessels. As nearly as can be estimated, 3,000,000 of the 81,500,000 bush. was Canadian grain from the Northwest Provinces.

Receipts of grain at the Canadian head of the lakes from the close of navigation to the end of February were 9,250,000 bush. Of this, 6,000,000 bush. has been shipped east by all rail, leaving an accumulation of 3,250,000 bush. during the winter. This tends to show that the export demand has been mainly on storage at eastern points, and that there has been no great demand upon stocks at western terminals. The total stocks in elevator and afloat at Fort William and Port Arthur are:—

	Bush.
In store—Wheat .....	4,915,628
Oats .....	2,192,114
Barley .....	269,114
Flax .....	854,940

Afloat—Wheat .....	283,122
--------------------	---------

Stocks at same date 1913 were:—

	Bush.
In store—Wheat .....	10,700,086
Oats .....	3,596,040
Barley .....	1,230,882
Flax .....	2,714,865

	18,241,873
Afloat—Wheat .....	4,085,630
Oats .....	2,514,311
Barley .....	334,832
Flax .....	461,017
	7,393,790

It will be noted that the present grain in store shows a decrease compared with last year of some 10,000,000 bush, while the grain afloat shows a decrease of over 7,000,000 bush.

The amount of grain in store at Winnipeg and western points is somewhat difficult to estimate, but it is generally conceded that, after making provision for feeding and seeding purposes, there will be little more than 10,000,000 bush. to come forward between

now and the opening of navigation. It will thus be seen that no large lake movement can be expected, and it is safe to compute that, although early navigation may be sharp, it will not extend beyond three to four weeks after the opening. Preparation for the 1915 crop has made great headway, and a larger quantity of summer fallow has been done than ever before. There is also a greater percentage of winter sowing, particularly in Saskatchewan and Alberta. This should all point to an early harvest, if weather conditions continue as favorable as at present. In some districts it is estimated that should normal conditions prevail, the 1915 harvest will come a good month earlier than heretofore. The increased acreage, generally speaking, is 10% in advance of last year, and probably 20% in advance of the last normal crop (1913). Thus, if the present weather continues to improve, there will be approximately 300,000,000 bush. available for lake movement in 1915. These figures can only be considered as a rough estimate and are based upon information which has come to hand with regard to acreage under cultivation, and in anticipation that favorable weather will continue. The statistics to hand tend to show that 60% of the sowing is wheat, 30% oats, balance 10% other grain.

**Package Freight.**—The situation in this phase of business is not at all promising for the coming season, and indications are that package freight steamships will have difficulty in securing sufficient upbound business for the early opening. It is persistently rumored that many of the Canadian package freighters will be sent to the Gulf of St. Lawrence to engage in coastwise trade, pending the arrival of the 1915 grain crop.

**Ore.**—The Canadian ore industry is still in a state of embryo at this end of the lakes. The mines under work are situated about 200 miles northwest of Fort William, on the Grand Trunk Pacific, and produce a pyritic ore. The output for the navigation season of 1914 was 74,554 net tons. This was carried by Canadian vessels to Chicago and Lake Erie ports. The 1915 movement of ore is expected to continue to advance, and will probably be a moderate increase over the 1913 movement.

**Dock Conditions.**—The docks have been quiet all winter. Only one boat is fully loaded, the J. H. Plummer having 52,000 bush. wheat aboard. The E. D. Carter has a part cargo of 231,130 bush. aboard.

There are altogether 10 Canadian and one U.S. steamships laid up at these ports. The Carter and Plummer have grain aboard, the Donnacona is lined up to load pulpwood ready for the opening, the Empress of Midland and Beaverton are now loading pulpwood, the Fordonian is in dry dock, the W. Grant Morden, A. E. Ames, Agawa, Glenmavis, and W. D. Rogers are all light. The Carter is the only vessel placed under the elevator spouts, so it is unlikely that any other vessel will load grain before the ice breaks up. The only improvement in grain handling facilities under way is a storage annex of 750,000 bush. to the Ogilvie Flour Milling Co.'s elevator.

**Ice Conditions.**—The ice in the river and bay is calculated to be 36 ins. thick and fairly solid. A break-up is not looked for before the end of April, and there is no indication of any attempt to hasten the opening of navigation by the use of ice-breakers.

**Admiralty Prison Ships.**—It is stated that the steamships used in Great Britain for prison vessels, during the war, were paid for at the rate of from 15s. 6d. to 17s. 6d. per ton per month, with a reduction of 6d. per ton after the first two months. For the first two months, the approximate payment was £86,000 a month, and subsequently, £83,000 a month.

### Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. Montrose, which has been in Admiralty service since the commencement of the war, was reported to be ashore off Portuguese West Africa, Mar. 13.

The C.P.R. s.s. Metagama, which sailed from Liverpool, Eng., Mar. 26, on her maiden trip to Canada, attained a speed of 17½ knots an hour on her trial over a measured mile on the Clyde, early in March.

The Cairn Line s.s. Cairntorr, which is well known on the St. Lawrence route, was reported to have been torpedoed by Germans off Beachy Head in the English Channel, Mar. 21, when bound from Newcastle, Eng., to Genoa, Italy, with coal.

The Cunard Line, on Mar. 8, announced that the second class rates on its vessels crossing the Atlantic, were reduced to £10, or \$50. Announcement was made later in the month that other steamship companies in the same service had also reduced their rates to a similar amount.

Canadian Northern Steamships' s.s. Royal Edward, which has been in Admiralty service since the commencement of the war, is now being utilized as a prison vessel with the main prison fleet at Southend, England. Practically all of the prisoners on board are Germans, who, at their own request, have been given work to do caring for the vessel.

Furness Withy & Co. have been appointed agents, Canada Steamship Lines, Ltd., New York, vice A. E. Outerbridge & Co., two partners of the latter firm having accepted positions with Furness Withy & Co., thus retaining their associations with the Bermuda and West Indies service, formerly operated by the Quebec Steamship Co., now part of Canada Steamship Lines, Ltd.

The Allan Line s.s. Mongolian, outward bound from Philadelphia and St. John's, for Glasgow, returned to Halifax, Feb. 27, having sprung a leak when well out at sea. On her previous voyage she suffered some damage from ice, and certain repairs were undertaken at St. John's by a local diver under instructions from the underwriters, and it is surmised that the leak was due to a loose plate.

It was announced, Mar. 5, that the steamship Missanabie had arrived at Liverpool, Eng., and the steamships Megantic and Southland at Queenstown, Ireland, conveying the first units of the second Canadian contingent of troops for the war. The departure of the men from Canada, numbering about 4,000, was not made public. The vessels sailed from Halifax, N.S., Feb. 22, and were convoyed by the cruisers Essex and Gloria.

The shipping companies operating between Canada and Glasgow, have advanced the wages of the men standing by liners when in Glasgow, by a shilling a day, and the boiler scalers, who asked for an increase of a penny an hour, are considering the offer of the companies to an increase of half that amount. It is stated that the companies, so far as the first increase is concerned, are willing to consider it a permanent one, provided that such conditions do not arise after the war, as make it imperative for them to reopen the matter.

A federal grand jury at New York, has returned two indictments against the Hamburg-American Line and five of its employees, all Germans, on charges of conspiracy to defraud the U. S. Government through the filing at the custom house, of false records, false clearances of vessels and false manifests of cargo quoting delivery of same to false vessels. These charges were initiated on the complaint of the British Consul General, in connection with the chartering of the U. S. steamships

Berwind and Lorenzo and the Norwegian steamships Fram and Sommerstad, and the shipping of coal, etc., to South American ports.

### Maritime Provinces and Newfoundland.

The s.s. Navarra, which was wrecked near Holmes Island, N.S., Dec. 30, has been sold to a junk dealer at St. John, N.B., for \$1,000. She was under charter to the Admiralty for conveying war supplies to France.

A press report states that the Dominion Government customs cruiser Margaret, which has been engaged in duty on the St. Lawrence for some time, has been acquired by the British Government for service at Halifax, N.S.

Navigation was reported open on the Petitcodiac and Shepody Rivers, Mar. 2, the ferry boats on the Hopewell Cape and Dorchester route, and between Hopewell Hill and Harvey, having been operated on that day.

The Department of Marine has announced that the proposed replacement of the lightship on the Sambro outer banks, at the entrance to Halifax harbor, by a gas and whistling buoy, will not be made until the close of the war.

The Miramichi Steam Navigation Co.'s directors for the current year are,—Hon. J. P. Burchill, President; J. D. Creaghen, Vice President; J. D. B. F. McKenzie, J. McDonald, R. Murray, W. B. Snowball, R. A. Snowball, H. B. McDonald is Secretary-Treasurer and Manager.

Replying to a question in the House of Commons, recently, the Minister of Trade and Commerce stated that during 1914 the Gaspe and Baie des Chaleurs Steamship Co. was paid \$9,615.25 for a steamship service between Montreal and Campbellton, N. B., the amount being computed at \$384.61 a trip.

### Province of Quebec Marine.

The Inland Revenue Department will receive tenders to Apr. 12 for a ferry service across the Ottawa River between Fitzroy, Ont., and Onslow, Que.

Work on the dry dock at St. Joseph de Levis will, it is reported, be recommenced as soon as weather permits. The contractors are M. P. and J. T. Davis.

The Minister of Marine stated in the House of Commons, Mar. 19, that the work in progress in the St. Lawrence ship channel, included deepening from 30 to 35 ft. and widening it from 300 to 500 ft., between Quebec and Montreal, and also straightening it in several places. The commission which had reported on the lowering of the water level found that at Montreal it was down 31 ins., and that, of this, some two or three inches was due to the Chicago drainage canal, and the rest due to work in the St. Lawrence ship channel, chiefly the removal of obstructions at St. Mary's Rapids, just below Montreal harbor. Farther down the river the lowering was less. The material dredged from the channel could be used for damming some unused channels near Lake St. Peter and elsewhere and thus help to raise the water level. These works would cost about \$400,000.

### Ontario and the Great Lakes.

The name of the s.s. E. M. Peck, no. 130,439, registered at Sarnia, has been changed to Malton.

An order in council has been passed establishing a permanent harbor quay line at Sault Ste. Marie, beyond which line, break-

waters, wharves, piers and other structures shall not be built.

The Great Lakes Transportation Co., which purchased the s.s. Howard M. Hanna, Jr., formerly owned by the Hanna Transit Co., Cleveland, Ohio, is having its name changed to Glenshee.

The Georgian Bay Shipbuilding and Wrecking Co., Midland, has built a marine railway capable of dealing with vessels 150 ft. long and to partially dock, to the extent of 100 ft., larger vessels for stern and lower repairs.

The Dominion Parliament has extended the time for the commencement and completion of the work for which the Montreal, Ottawa and Georgian Bay Canal Co. was chartered. Considerable opposition to a further extension was shown.

The Department of Marine is establishing, for the opening of navigation, the Stag Island gas buoy no. 5, in 23 ft. of water to mark the bend in the St. Clair River below Stag Island. An occulting white light will be exhibited, visible for 5 secs. and eclipsed 5 secs. alternately.

The Dominion Public Works Department has awarded a contract for the construction of 2,000 ft. of breakwater on the Mission River, at Fort William, to the Thunder Bay Contracting Co. It is stated that work will be commenced immediately on the opening of navigation. It is estimated that it will cost \$250,000.

The Village of Fort Erie, Ont., obtained judgment, by consent, against the Fort Erie Ferry and Ry. Co. at Welland, Mar. 3, for specific performance of agreement regarding service. If the company fails to carry out the agreement, it forfeits \$2,000 under a bond.

The Hamilton City Council has decided to continue the grant of \$5,000 to the Harbor Commissioners, although there was some opposition to it. The Commissioners had prepared a tariff of fees for all vessels using the harbor in case the Council decided against continuing the grant.

An announcement from the U.S. Lake Survey office states that there is a clear depth of 34 ft. over the wrecked s.s. Charles S. Price, which went down in Lake Erie during the November, 1913, storm, and that it is no longer a menace to navigation. The gas buoy which marked the location of the wreck last season will not be replaced.

The Dominion Parliament has extended the time within which the Montreal, Ottawa and Georgian Bay Canal Co. may commence and complete the works for which it was incorporated. The extension granted provides that the company may commence the work by May 1, 1918, and complete same by May 1, 1924.

It is reported that the Trent Valley Canal will be opened between Peterborough and Trenton, for light draught vessels, this spring, and it is possible that vessels of fairly deep draught will be able to use the canal there at a little later date, dependent on the completion of some dredging.

It is announced that work has been started on the building of a new wooden wharf at Sarnia for Northern Navigation Co. and G.T.R. traffic. The old wharf is being demolished, and the new one, which will be 800 ft. long, will be of a more modern type. The work is being done by the G.T.R., and it is expected will be completed in time for the reopening of navigation.

The s.s. John Sharples, which was wrecked in Lake Ontario about three years ago, and was salvaged by the Reid Wrecking Co., is reported to have been sold to

a company operating on the Atlantic coast. She was built at West Superior, Wis., in 1903, and is a steel vessel, with triple expansion engines with cylinders 14, 25 and 42 by 30 ins., 650 i.h.p. Her dimensions are, length 241 ft., breadth 41 ft., depth 18 ft.; tonnage, 1,614 gross, 919 register.

The Cabotia Steamship Co.'s s.s. Cabotia, which has been lying at Toronto for some time, is to be sold. She is a wooden vessel and was built at Gibraltar, Mich., in 1880. Her dimensions are, length 234 ft., breadth 36 ft., depth 30 ft.; tonnage, 1,530 gross, 930 register. She is equipped with fore and aft compound engine of 700 i.h.p., with 85 r.p.m., with cylinders 21 and 50 by 46 ins., supplied with steam by a Scotch boiler 12 by 12½ ft. at 125 lbs.

The C.P.R. steamship service on the Great Lakes will be performed this season by the steamships Keewatin, Manitoba, Alberta and Assiniboia, which will leave Port McNicoll, in the order named, on Tuesdays, Wednesdays, Thursdays and Saturdays, and Fort William on Fridays, Saturdays, Sundays and Tuesdays. The service will commence May 21 on schedule, and possibly prior to that, regardless of schedule, as the occasion may warrant. The s.s. Manitoba will call at Owen Sound on Wednesdays on the westbound trip.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for February, as follows.—Superior 601.70; Michigan and Huron 579.54; Erie 571.41; Ontario 244.99. Compared with the average February levels for the past ten years, Superior was 0.09 ft. below; Michigan and Huron 0.54 ft. below; Erie 0.27 ft. below and Ontario 0.78 ft. below. It was anticipated that during March Superior would be 0.2 ft. lower, that Michigan and Huron would remain stationary, and that Erie and Ontario would be 0.1 ft. higher.

The Windsor-Detroit-Wallaceburg Steamship Line, Windsor, has chartered the s.s. Olcott from the Peninsular Steamship Co., Sandusky, Ohio, for operations between the points named, for the 1915 season, which it will open about June 10. The Olcott is a steel vessel, built at Toledo, Ohio, in 1901 and lengthened in 1906. Her dimensions are, length 148.5 ft., breadth 28 ft., depth 12 ft.; tonnage, 337 gross, 229 register. She is equipped with fore and aft compound engines, with cylinders 18 and 42 by 24 ins., and has i.h.p. of 800 at 150 r.p.m. Steam is supplied by a Scotch boiler, 13 ft. 9 ins. diam. by 11½ ft. long, at 180 lbs. pressure.

### Manitoba, Saskatchewan and Alberta.

The Manitoba Legislature is dealing with a bill defining the Winnipeg and St. Boniface Harbor Commissioners' powers.

The Peace River Tramway and Navigation Co. proposes to build a steamboat this year at Peace River Crossing, Alberta. It will be 165 ft. long and 35 ft. beam, with accommodation for 110 cabin passengers and 300 tons freight. The engine cylinders will be 20 by 84 ins. and will develop about 800 nominal h.p.

### British Columbia and Pacific Coast.

The s.s. Curacoa, which was salvaged last September after having been submerged in Alaskan waters for over a year, is being repaired at North Vancouver.

The C.P.R. s.s. Princess Margaret, one of the two vessels recently completed for the C.P.R. coast service, and which were taken from the builders for Admiralty requirements, is stated to be in scouting service in the North Sea, where her speed makes her of excellent use.

The Fort George Lumber and Navigation Co. is proceeding against the G.T. Pacific Ry. to recover damages for the alleged interference with the navigation of the Fraser River, at a point near Fort George, B.C., where it is stated the G.T.P.R. has placed a temporary bridge across the river to carry its line into Fort George.

The progress of the construction of a jetty at the entrance to the north arm of the Fraser River has necessitated the temporary discontinuance of the outer fixed white light. A temporary fixed white light will be exhibited on the extreme of the jetty as it is built seaward, and further notice will be given when the work is completed.

The Geographic Board has decided that the northerly entrance channel of the Skeena River, extending westward from Eleanor Passage to Chatham Sound, and lying eastward, northward and westward of Smith Island, shall be called Inverness Passage, and not North Skeena Passage, North Skeena Pass, nor The Slue, as hitherto.

The members of the Vancouver Branch of the International Longshoremen's Union struck work March 1, when asked to consent to a reduction of 10c. in the wage schedule. It was announced that slingers would be paid 35c. an hour, and truckers 30c. an hour, instead of 45c. and 40c. respectively as heretofore. The vacancies were quickly filled, as there were quite a number out of work in the city.

### The Transportation of Supplies to the War Zone.

The Dominion Government and the Admiralty have arranged for a tri-weekly service between Canada and France, chiefly for the conveyance of war supplies and equipment from this continent to the war zone. It is stated that the Admiralty has undertaken to provide 18 freight vessels for the service until the conclusion of the war. Since the commencement of hostilities, the materials and food supplies purchased on this side have steadily increased, until it has become necessary to establish a regular service.

At the beginning of the war, the C.P.R. placed the services of A. H. Harris, its Special Traffic Representative, at the Government's disposal, and he has since acted as Director of Overseas Transport in connection with the shipment of troops and war supplies. It is stated that he will continue to act in that capacity in connection with this special war service.

**The Newfoundland Sealing Disaster of 1914.**—The commission, consisting of Chief Justice Horwood, Justices Emerson and Johnson of the Newfoundland Supreme Court, which was appointed to enquire into the disaster to the sealing fleet off the coast in the spring of 1914, when 248 lives were lost, has made its report. In the case of the s.s. Newfoundland, regarding the loss of 73 of the crew, it was held by a majority of the commissioners that Capt. A. Kean of the s.s. Stephano committed a grave error of judgment, and G. Tuff, chief officer of the s.s. Newfoundland, an error of judgment. Justice Johnson dissented, giving his opinion that neither was to blame. In the case of the loss of the s.s. Southern Cross with 175 men, it was decided that it could only be attributed to the perils of the sea.

The North Pacific Coast Passenger Agents' Association met at Bellingham, Wash., Mar. 10, and arranged summer excursion fares. The next meeting will be held at Tacoma, Wash., May 12.

### Mainly About Marine People.

R. W. Thom, station agent, G.T.R., Colingwood, Ont., has also been appointed local agent, Northern Navigation Co. there.

Capt. J. W. Hatherly, of the Allan Line s.s. Mongolian, was killed, Mar. 17, when a crane struck him as he was superintending repairs being made to the vessel at Halifax, N.S.

Jas. Wainwright, Assistant Harbor Engineer, Toronto, will have charge of the harbor work undertaken by the Harbor Commissioners at Toronto, during the absence of E. L. Cousins, who is preparing plans for a rapid transit system for Toronto.

Sir Stephen Furness, Chairman, Furness, Withy and Co., and one of the advisory board of Canada Steamship Lines, Ltd., in London, Eng., who died in Sept., 1914, left unsettled property of the gross value of £213,077, the net personalty being stated as £165,980.

Lt. Col. Lindsay, of the Dominion Marine Department, and Lt. Col. G. P. Murphy, of the Ottawa Transportation Co., were in charge of the embarkation of the first detachment of the second Canadian contingent which sailed from Halifax, N.S., and arrived at Queenstown and Liverpool, Mar. 4.

**All Red Route.**—The Imperial Parliament will not have before it this session the bill for the building of a short railway in Ireland, which it is proposed shall form a link in what is called the All Red Route round the world, the promoters having failed to comply with the standing orders respecting the introduction of bills.

**Special Dominion Taxation.**—The Finance Minister's proposals to increase the amounts to be received from taxation were given in our last issue. Since then the matter has been discussed in the House of Commons, and a number of changes made. Press dispatches are made exempt from the tax of 1c. on each message for which a minimum charge of 15c. is made, and the proposed tax on steamship tickets has been extended to include tickets sold for the West Indies, which were at first excluded, and the tax itself is changed to \$3 if the amount chargeable for passage exceeds \$40, instead of \$30, and \$5, if it exceeds \$65, instead of \$60.

The Department of Marine has issued lists of gas buoy lights on the Atlantic coast, the Gulf of St. Lawrence, navigable waters in Quebec and Ontario, and British Columbia, and has announced that in connection with the rearrangement of gas buoy and gas beacon lights, whereby red occulting lights will be exhibited on the starboard side and white occulting lights on the port side in going upstream, the lights so listed will be changed as follows:—On the Atlantic coast and the Gulf of St. Lawrence, between Apr. 15 and May 31; Quebec and Ontario, on the opening of navigation; British Columbia, between Apr. 15 and May 31.

**Transfer of Canadian Registered Vessels to Foreigners Forbidden.**—An order in council has been passed under the provisions of the War Measures Act, 1914, ordering that a transfer made after Mar. 9 of a British ship registered in Canada, or a share therein, to a person not qualified to own a British ship, shall not have any effect unless the transfer is approved by the Minister of Marine, and that any person who makes or purports to make such a transfer without this approval shall for each offence incur a penalty of a fine not exceeding \$5,000 or imprisonment not exceeding five years, or both fine and imprisonment, either on summary conviction or indictment. The order will continue during the war.

### The British Premier on the Rise in Freight Rates.

In the course of a debate in the British House of Commons recently, the Prime Minister, in dealing with the increased cost of food supplies, said,—

"The difficulties of transport and the rise in freights, has been a factor of considerable importance, but by no means the main factor, and I am not sure that an exaggerated value has not been attributed to it in some quarters. Experts in these matters are accustomed to take what is called No. 1 Northern Manitoba wheat as the standard. The price in Liverpool of that quality of wheat rose between July, 1914, and Jan., 1915, from 36s. 3d. to 57s. 11d. a quarter, in round figures 22s. Of that 22s. 18s. 6d. is to be attributed to the increased price in New York, and only 3s. 6d. to the increased freight between New York and Liverpool. In regard to the question of transport both by sea and by land, it may fairly be said that it is within the power of the Government to do something really effective to ease the situation. Dealing with the question of ships, the situation is unique and absolutely unprecedented. First of all, we have had withdrawn from the carrying service the whole of the shipping of Germany, Hungary and Austria. I do not believe there is a German ship now sailing the seas. That, of course, has had its effect. These countries possess 14% of the merchant shipping of the world. That is gone. Another fact is that the Admiralty is employing for necessary purposes, such as the transport of men, stores, munitions, and supplies, one fifth of our British tonnage, which means 10% of the whole world. These two things in themselves account for a great deal of the curtailment of the shipping industry. The shortage is also due to ships not being in the right place, but ship-owners with whom we have been in consultation maintain that when things have shaken down there will be no serious shortage of tonnage, as the process of the readjustment of routes is going steadily on. Therefore we have reason to believe that in the course of a very short time, perhaps in a few weeks, there will be an adaption of available ships to routes and necessities which ought to dominate the situation.

I have spoken of the release of 20 vessels, and now of 14, for the purpose of carrying coal. Nine vessels of considerable coaling capacity at present occupied by prisoners of war will be released from that service. Other vessels similarly employed may be released later. Steps are being taken in consultation with the Admiralty to secure the most economical employment of the ships they have chartered. We hope, by concert between the Admiralty and a small body of persons of experience and skill in the management of merchant shipping that the demand of the Admiralty for military and warlike purposes upon British shipping may be so adjusted, whenever opportunity offers, that ships will be set free for the carrying of cargoes. Another point to which a great deal of attention is paid is the acceleration of the proceedings of the prize courts, especially abroad. There has been a good deal of delay in some cases between the seizure of the ships and the ultimate decision, and we have done what we could to produce more accelerated procedure."

The Dominion Government s.s. Earl Grey, it was stated in the House of Commons recently by the Minister of Marine, was sold to the Russian Government for \$493,000. Her original cost, completed and ready for sea, was \$616,690.97.

### The Cost of Transporting Canadian Troops.

A return brought down in the House of Commons recently shows the amounts paid for the various steamships engaged in the transportation of the first contingent of Canadian troops which were sent to England last October. The Government assumed all the expense of fitting the vessels for transportation purposes, and for equipping them with food supplies, the amount on the average being about equal to the amount of the hiring. Following is a list of the vessels engaged, with the amount paid to each:—

Alaunia .....	\$65,237	Manitou .....	\$30,461
Arcadian .....	21,751	Megantic .....	36,198
Athenian .....	42,184	Monmouth .....	9,915
Audanian .....	48,928	Montezuma .....	20,342
Bermudian .....	20,184	Montreal .....	21,033
Canada .....	45,819	Royal Edward .....	45,080
Caribbean .....	14,171	Royal George .....	54,243
Cassandra .....	39,590	Ruthenia .....	17,992
Corinthian .....	17,841	Saxonia .....	69,578
Devonian (cancelled) .....	1,938	Scandinavian .....	29,440
Franconia .....	66,247	Scotian .....	25,116
Gramplan .....	26,635	Sicilian .....	17,831
Ivernia .....	26,436	Tunisian .....	25,734
Lakonia .....	22,805	Tyrolia .....	13,335
Lapland .....	39,056	Virginian .....	26,175
Laurentic .....	72,464	Zealand .....	28,964
Manhattan .....	34,142	Total .....	\$1,124,915

**A Correction.**—In Canadian Railway and Marine World's report of the Dominion Marine Association's annual meeting at Ottawa, on pg. 111 of the March issue, it was stated that the association, in conjunction with the Canadian Lake Protective Association, had voted \$750,000 to be divided between the Red Cross Society and the Belgian Relief Fund. The amount voted was \$750, and not as stated. The mistake was noticed in proof reading, but, unfortunately, was not corrected in the type.

**Steamships and the Board of Railway Commissioners' Jurisdiction.**—The bill to amend the Railway Act, which was introduced in the House of Commons recently by J. E. Armstrong, M.P., and which had for its main object the placing of steamship traffic under the Board of Railway Commissioners' jurisdiction, was dealt with by the railway committee of the House, Mar. 17, and after the Minister of Railways stated that the bill could not be proceeded with this session, on account of pressing legislation of a general character, it was withdrawn.

**British Shipping Casualties.**—The British Board of Trade returns of shipping casualties for February show that the ordinary risks were responsible for the loss of a larger number of vessels than were the risks of war. During the month, 33 vessels were lost, aggregating 34,947 net tons. Of these, 9 steamships of 12,389 tons were sunk by submarines, and one steamship of 2,605 tons was sunk by a German mine. The lives lost during the month were 97, of which six were due to losses occasioned by submarines.

**Huntsville, Lake of Bays and Lake Simcoe Navigation Co.**—The annual meeting was held at Huntsville, Ont., Feb. 25. The report is not made public, but we are officially advised that the balance in hand from the season's operations was placed to the credit of profit and loss, no dividend being declared. The directors were re-elected. The officers for the current year are C. O. Shaw, Huntsville, President; H. Foster Chaffee, Brockville, Ont., Vice President; W. J. Moore, Huntsville, General Manager and Secretary; J. W. McKee, Huntsville, Treasurer.

The Northern Construction Co. has surrendered its charter of incorporation under the Ontario Companies Act

### Grain in Store at Terminal Elevators, Interior Terminal Elevators and at Public Elevators in the East.

Week ended March 18, 1915.	Wheat, bushels.	Oats, bushels.	Barley, bushels.	Flax, bushels.	Totals, bushels.

## Telegraph, Telephone and Cable Matters.

Sir Henry M. Pellatt, Toronto, has been elected President, Dominion Telegraph Co., vice Thos. Swinyard, whose death was announced in our last issue, and Sir John Gibson was elected a director to fill the vacancy on the board. Aemilius Jarvis, Toronto, is Vice President for the current year.

O. A. Jorgenson, heretofore agent, C.P.R. Telegraphs, Port Arthur, Ont., has been appointed agent at Regina, Sask. He went to Port Arthur from Winnipeg as an operator in 1911, and was appointed local manager there in 1912. During last year, the title of local manager in connection with the company's telegraph system, was discarded in favor of that of agent.

In consequence of the merger of the Great North Western Telegraph Company and the Canadian Northern Railway telegraph interests, details of which have already been published in Canadian Railway and Marine World, the G.N.W.T. Co.'s Winnipeg office has been closed and the business transferred to the C.N.R. office. H. McConkey Superintendent, C.N. Railway telegraphs and electrical plant, is also Superintendent in charge of the outside work, G.N.W.T. Co.; J. Padington is Superintendent, Manitoba District and Manager, Winnipeg office, and B. S. Rounds is chief operator, Winnipeg.

At the recent annual meeting of the Bell Telephone Co. of Canada, C. F. Sise, President, retired, and was elected chairman of the Board. The board for the current year is as follows: C. F. Sise, Chairman; L. B. McFarlane, President; Hon. Robt. MacKay, Vice President; T. N. Vail, R. Archer, Hugh Paton, C. Cassils, Z. A. Lash, U. N. Bethell, C. F. Sise, Jr., A. J. Daves and T. Ahearn. The last two were elected in place of W. R. Driver and H. B. Thayer, resigned.

A press report from St. John's, Nfld., states that what is probably the largest and most powerful wireless telegraph station in the world, is to be erected near there. This, it is said, is to be done by the Marconi Co., under contract with the British Government. It is stated that about 50 acres of land has been acquired, that some of the material has arrived, and that work will be commenced at once, and the station be completed ready for operation in six months.

The Maritime Telegraph and Telephone Co.'s report for 1914 shows a surplus of \$2,170, compared with \$6,804 for the previous year, and a balance to the credit of surplus account of \$10,853. The total receipts were \$631,687, the net revenue being \$113,165, against \$101,527 in 1913. The operating expenses were \$216,543; maintenance and replacement, \$214,669; bond interest, \$73,576, and miscellaneous, \$13,733. At the annual meeting, Feb. 9, at Halifax, N.S., G. F. Pearson and A. MacKinlay were elected directors in place of R. E. Harris and H. R. Silver, resigned.

## Among the Express Companies.

Of the Dominion Ex. Co.'s employes, 112 have enlisted for active service during the war.

A. D. Gillies, heretofore depot agent, Canadian Ex. Co., Winnipeg, has been appointed agent at Prince Rupert, B.C., vice T. C. Chalmers resigned.

J. G. Bradley, heretofore in the Canadian Ex. Co.'s customs department at Winnipeg, has been appointed depot agent there, vice A. D. Gillies transferred.

L. G. Goodge, heretofore chief clerk to Assistant Superintendent, Dominion Ex. Co., St. John, N.B., has been appointed agent at Charlottetown, P.E.I.

The Adams Ex. Co. has been authorized to carry on its business in the Province of Quebec, with head office at Montreal, and J. W. Cook as its attorney.

The Board of Railway Commissioners has approved collection and delivery limits for the Canadian Northern and American Ex. Cos., in Fort Frances, Ont.

R. E. M. Cowie, heretofore Manager, Pacific Department, American Ex. Co., has been appointed Vice President and General Manager, Eastern Lines, vice, H. S. Julier, retired. Office New York.

The Canadian Northern Ex. Co. has closed its offices at Banning and Devlin, Ont.; Beaver, Berton, Brunkild, Homewood, Neelin, Rosebank, Underhill and Warren, Man.; Ridpath and St. Gregor, Sask., and Lavoy, Alta.

In the case of the C.P.R. against the owners of the s.s. Storstad in connection with the sinking of the s.s. Empress of Ireland last year, one of the claims which has been filed against the silver salvaged from the sunken vessel, is one of the Canadian Ex. Co., for \$1,037.

H. S. Julier, Vice President and General Manager, American Ex. Co., has retired after practically 60 years in the company's service. He commenced service in 1855 as office boy at Goderich, Ont., and in 1860 was transferred to Brantford, Ont., as clerk, being later transferred to Buffalo, N.Y., and subsequently to Cleveland, Ohio, and in 1887 to New York, as Assistant General Manager, Eastern Division, and Assistant to the President. On his retirement he was presented with a gold watch by the officials of the Eastern Division.

The Canadian Ex. Co., during February, celebrated its 50th anniversary, having been granted letters patent by the Dominion Government in Feb., 1865. The original name was the British American Express Co., which was established in the early 50's, when it operated a stage line during the winter, supplementing this with steamboat connections during the months when navigation was possible. The Canadian Ex. Co. is therefore older than the G.T.R. over which it operates, and the G.T.R. was the second railway to be opened for traffic on this continent. In 1858 a branch office was opened in Liverpool, Eng., and for several years this was the only express company with its headquarters in America, having an office in Great Britain.

The British Columbia Ex. Co. is suing the Inland Ex. Co. for \$6,900, stated to be due as freight charges on freight carried between Ashcroft and Fort George, B.C., under a contract whereby the plaintiff company was to carry mail and express matter between these points. It is stated that on account of the scarcity of express matter, the company was expected to carry farm produce, and the question has arisen as to whether 60,000 lbs. of oats can be considered as express matter. The Inland Ex. Co. is counterclaiming for \$3,700 extra freight charges stated to have been incurred owing to the refusal of the plaintiff company to continue the contract, and for a further \$5,000 as general damages. There has been considerable disagreement between these two companies since the British Columbia Ex. Co. sold a portion of its business to the Inland Ex. Co. in the latter part of 1914.

## Transportation Conventions in 1915.

April.—American Association of Passenger Traffic Officers, San Francisco, Cal.

April.—American Association of Demurrage Officers, Richmond, Va.

Apr. 28.—Association of American Railway Accounting Officers, Atlanta, Ga.

May 4-7.—Air Brake Association, Chicago, Ill.

May 12.—American Association of General Baggage Agents, Los Angeles, Cal.

May 17-19.—Railway Storekeepers' Association, Chicago, Ill.

May 17-20.—International Railway Fuel Association, Chicago, Ill.

May 19.—Association of Railway Claims Agents, Galveston, Tex.

May 19.—American Railway Association, Atlantic City, N.J.

May 18-21.—American Association of Freight Agents, Richmond, Va.

May 20-21.—American Association of Railroad Superintendents, San Francisco, Cal.

May 26-28.—Master Boiler Makers' Association, Chicago, Ill.

June 9-11.—American Railway Master Mechanics' Association, Atlantic City, N.J.

June 14-16.—Master Car Builders' Association, Atlantic City, N.J.

June 15.—Train Despatchers' Association of America, Minneapolis, Minn.

June 16.—Freight Claim Association, Chicago, Ill.

June 22-25.—Association of Railway Telegraph Superintendents, Rochester, N.Y.

June 23-25.—Association of Transportation and Car Accounting Officers, Niagara Falls, N.Y.

July.—American Railway Tool Foremen's Association.

July 14-17.—International Railway General Foremen's Association, Chicago, Ill.

Aug. 17.—International Railroad Master Blacksmiths' Association, Philadelphia, Pa.

Aug. 19, 20.—American Association of Railroad Superintendents, San Francisco, Cal.

Sept. 14-16.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.

Sept. 14-17.—Master Car and Locomotive Painters' Association of the United States and Canada, Detroit, Mich.

Sept. 21-24.—Railway Signal Association, Salt Lake City, Utah.

October.—American Association of Dining Car Superintendents.

Oct. 4, 5.—American Association of Travelling Passenger Agents, Boston, Mass.

Oct. 4-8.—American Electric Railway Association, San Francisco, Cal.

Oct. 5-7.—Railway Fire Protection Association, Chicago, Ill.

Oct. 13-15.—American Association of Railway Surgeons, Chicago, Ill.

Oct. 19-21.—Maintenance of Way and Master Painters' Association of the United States and Canada, St. Louis, Mo.

Oct. 19-21.—American Railway Bridge and Building Association, Detroit, Mich.

## Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—J. Reilly, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday each month, 8.30 p.m., except June, July, and August.

Canadian Society of Civil Engineers—C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada—C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto, 3rd Tuesday each month, except June, July, and August.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Express Traffic Association of Canada—W. H. Burr, Chairman, Toronto.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario, T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Nova Scotia Society of Engineers—A. R. McCleave, Halifax, N.S.

Quebec Transportation Club—A. F. Dion, Quebec.

Ship Masters' Association of Canada—Capt. E. Wells, 45 St. John Street, Halifax, N.S.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Western Canada Railway Club—Louis Kon, Box 1707, Winnipeg. Meetings at Winnipeg, 2nd Monday each month, except June, July, and August.

## Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

F. H. Hopkins & Co., railway and contractors' supplies, Montreal, have been appointed sole selling agents for the Dominion, for contractors' hoisting engines, etc., built by the Napanee Iron Works, Napanee, Ont.

Government Compensation for Merchant Seamen injured during hostilities, is provided by new arrangements made by the British Board of Trade. The Board is also continuing the insurance, at reduced rates, of fishing vessels against war risks.

## CANADIAN PACIFIC RAILWAY COMPANY

## ONTARIO DIVISION

## NOTICE TO CONTRACTORS.

SEALED tenders will be received by the undersigned up to noon, 10th April, 1915, for the construction of four concrete piers and two concrete abutments at Bridge 107.2, Muskoka Subdivision, over Shaw's Creek, about 7½ miles south of Bala. Forms of tender may be obtained, and plans and specifications seen at the office of the Resident Engineer, Room 510, Union Station, Toronto, or from the undersigned.

A. L. HERTZBERG, Division Engineer.  
Toronto, 20th March, 1915.

## DEPARTMENT OF THE NAVAL SERVICE.

## PATROL SERVICE.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Patrol Service," will be received up to noon on Monday, April 5th, for the charter of several vessels for Patrol Service on the Eastern Coasts of Canada during the season of summer navigation, 1915.

Vessels offered should be of the Seagoing Tug or Trawler type, and from 125 to 175 feet long, speed 9 to 10 knots, and should be in good serviceable condition in all respects.

Vessels fitted with trawlers Winches will receive prior consideration.

Owners desiring to charter vessels conforming to the above description are requested to

communicate full particulars, and if possible plans of the vessels offered.

The terms of charter are as follows:—

Owners to supply Officers and Crew, board, all stores and accept ordinary Marine Risk.

Department to pay for fuel and carry War Risk.

G. J. DESBARATS,

Deputy Minister of the Naval Service.

Department of Naval Service,

Ottawa, March 17th, 1915.

Unauthorized publication of this advertisement will not be paid for.—76848.

MARINE SUPERINTENDENT of wide experience and with college training, familiar with design and upkeep of hulls, engines and boilers, first-class certificate, desires position. Box 117, Canadian Railway and Marine World.

## *It's Weatherproof and Durable*

Wind and storm beat in vain against DU PONT FABRIKOID CURTAINS. Fabrikoid is weatherproof. Rain won't shrink it—it's **impervious to moisture**. In fact you can freely use soap and water on it, which cleans it perfectly. Dust and dirt can't cling to its

smooth surface, nor catch in cracks. Because it **doesn't crack—nor peel—nor flake**. It's sanitary, durable and rich in appearance. Yet its cost is low—its **maintenance still lower**. Economical, made in many weights, widths, patterns and colors. Write for samples and prices.

These Steel Back Brake Shoes weighed approximately twenty pounds each when put in service. When ready for the scrap heap, after long and satisfactory use, they weighed about six pounds each.

Just compare this record with that of ordinary unreinforced brake shoes. Almost invariably they go to pieces before being half worn out, and their average scrap weight is about fifteen pounds.

No argument for ordinary shoes can meet the demonstrated facts that stand behind Steel Back Brake Shoes.

Manufactured in Canada.

## Detroit Automatic Flange Lubricator

Sectional View of Lubricator Body.

### "Wear to Flanges Reduced 80 Per Cent"

SUSQUEHANNA AND NEW YORK RAILROAD COMPANY.

Office of Master Mechanic.

West Williamsport, Pa.,

January 20, 1915.

Detroit Lubricator Company,  
Detroit, U.S.A.

Gentlemen:—

"The two flange lubricators sent us for test purposes for our Locomotive No. 115 have been in continuous service since December 10th, 1914

*and they have saved their cost on this Locomotive in the time they have been used.*

"The Flanges on forward drivers were cutting so rapidly that we would have had to take Locomotive out of service for new tires, and we have kept a close record of wear to these flanges, and the cutting stopped after locomotive made two round trips (138 miles). After oilers were properly adjusted

*the wear to the flanges (natural wear) has been reduced eighty per cent.*

and we are very much pleased with the performance of your lubricators, and will use them on any Locomotive giving us flange trouble in the future.

"We used to get 14,000 mileage from new tires, but with the oilers in use I am sure we will get full service from them and will not have to remove them until tread wear causes turning.

"Would like to inform you that the flanges on these two tires were worn almost to gauge, and this gave us a very good opportunity to watch results. They gauge practically the same now as when the lubricators were applied."

Very truly yours,

H. M. MILLER,

Master Mechanic.

For full information and the inside facts about flange lubrication write for a copy of catalogue FO-81.

## Which Method

prevails in your plant? Does it take two men to do one man's work.

Why don't you replace that old antiquated tool with a new up to date

### Reece's New Screw Plate

These pictures do not exaggerate conditions as you can actually see them, if you will visit Machine Shops throughout the country.

Lessen your cost by giving your mechanics a REECE'S NEW SCREW PLATE.

**BUTTERFIELD & CO., Inc.**  
ROCK ISLAND, QUE.

## Chapman Contractors' Engines

Don't get an old fashioned antiquated Engine.

Buy a Chapman.

All working mechanism on one plate. Only 20 pieces.

Loss of time on contract work costs money. This can be prevented with a Chapman Engine. Buy an extra plate or cam box, then if anything goes wrong with one, put on the other, and in a few minutes you can have your engine running again. Only four bolts to take off. If we charged twice the price we are asking for our Engine they would then be better value than the cheapest you can buy.

## Where the Trained Man Wins—

"Last year one of the country's largest railway systems carried one hundred and ninety million passengers without a fatality."

The *Trained* man wins. In railroading especially it is absolutely necessary that the responsible positions be filled with none but the highest trained men.

Whether you are in the engineering, operating, maintenance or clerical departments, your advancement will depend largely on the thoroughness of your training. And whether you are going to be a trained man—whether you are going to advance or stand still—is a matter for *you* to decide.

If you really *want* a better job and are willing to devote a little of your spare time to getting ready, the *International Correspondence Schools* can help you. Over two hundred of the railroad systems of the United States and Canada have approved of the I.C.S. method of instruction and recommended it to their employees.

You're ambitious. You want to get ahead. Then don't turn this page until you have clipped the coupon, marked the line of work you want, and mailed it to the I.C.S. for full particulars.

Marking the coupon is simply the act of investigation—in justice to yourself you can't afford to do less—and it doesn't obligate you in the least. **Mark the Coupon NOW.**

All lessons for Canadian students are corrected at the Canadian Instruction Department in Toronto by instructors who are thoroughly familiar with conditions in Canada.

# SAFETY FIRST

The best way to educate your employes to the safety habit is by signs.

The "SAFETY FIRST" sign will be before them many times each day and warn them of the constant danger they are subject to in the course of their duties.

Enamelled iron signs, on account of the brilliancy of their colors, attract immediate attention. They never fade and are as good in ten years' time as the day they are put up.

We make to order in any colors, with any lettering or design.

We will be pleased to quote you prices and submit sketches on request.

**NOTICE.**

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signalling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

**Pay-as-You-Enter Car**

We license manufacturers and railways to build and use the pay-as-you-enter car, the patents on which are owned by us.

## Difficult Frame Welding Made Easy with Thermit

Finished Thermit Weld on Engine No. 802 of the  
Grand Trunk Pacific, Transcona, Man.

Frame Welded with Thermit by the Illinois Central,  
Centralia, Ill.

You can weld a frame quickly and economically with Thermit, whether it is broken in the splice, under the fire box, close up to the cylinder, or at any other point. It is not necessary to take the frame down, as all welds can be made with the frame in place.

No other process of welding is so quick and uniformly efficient and economical in operation as the Thermit Process.

The proof is in the fact that to-day 435 railroad shops in North America are using Thermit and returning their engines to service in from 10 to 24 hours.

We have just issued a new pamphlet of instructions for the use of Thermit in railroad shops, known as Pamphlet No. 2144. This should be in the hands of every railroad man, as it tells how and why the Thermit Process of welding will save thousands of dollars every year in repair costs. Write for it to-day.

# The Wonderful Single Service Chilled Iron Car Wheel

**M.C.B. STANDARD 725-LB. CHILLED IRON WHEEL FOR 100,000-LB. CAPACITY CARS.**

Single service means a wheel applied and allowed to run its life without any repairs whatever, such as turning.

Contrasted with multiple wear wheels, this means that no heavy investment in lathes is necessary and the maintenance expense is assured, because all Chilled Iron Wheels carry a minimum guaranteed mileage or time service.

It is a recognized fact that no other type of wheel can carry as heavy a burden as the Chilled Iron Wheel and maintain its rotundity, and the reason is that Chilled Iron will not crush or flow under heavy loads.

**THE WONDERFUL SINGLE SERVICE CHILLED IRON CAR WHEEL.**

Twenty-five Million now running.

**Association of Manufacturers of Chilled Car Wheels**  
**1214 McCormick Building, Chicago**

Representing forty-eight wheel foundries located throughout the United States and Canada. Capacity 20,000 chilled iron car wheels per day.

# Meeting One Financial Obstacle to Adequate Signal Protection

There is little doubt that there would be a tremendously greater amount of mileage protected by automatic block if first cost were the only difficulty to be encountered. The great difficulty, however, in the universal use of fixed automatic block signals is found in the continuous cost of maintenance.

The advantage in this respect of

## Simmen Automatic Block Cab Signals

is shown by the fact that none of the four roads which are operating the Simmen System have found it necessary to provide any special organization or additional labor for inspection purposes.

The reason for this is that the track and overhead installation of the Simmen System is so simple (involving no apparatus along the track except standard telephone overhead construction and simple signal rails) that the regular track and line maintenance labor is ample to care for these elements.

All operating electrical apparatus is either in the cab or in the dispatcher's office.

The cab apparatus is easily inspected when the car is in for regular inspection.

The apparatus in the dispatcher's office is readily inspected and cared for by the dispatcher, with the occasional assistance of a lineman.

This enormous comparative saving in maintenance costs is proved by the experience of the four roads on which the **Simmen System** is now, and has for some time been, standardized.

The importance of this fact in any signal installation is obvious.

# The Science of Water Treatment

The Dearborn Company was organized because of the conviction on part of its founders that a scientific handling of the water treatment question was the only solution for the steam user of the troubles constantly arising as a result of scale formation, foaming, corrosion and pitting of boiler tubes, with all the attendant injury to the boilers, loss of heating efficiency, and waste of fuel.

Periodical removal of scale is unsatisfactory since there is a constantly increasing ratio of heat loss and fuel waste—as the scale gradually forms—aside from the injury to the boilers.

The Practical Method is **Prevention** and this can be effectively done only by attacking the mineral ingredients in the water with the proper reagents, changing their nature and character and eliminating their harmful qualities.

The application of scientific knowledge is most important in the choosing of reagents. Provision must be made for the various minerals present in the water, determined by analysis, as well as for the by-products that will be formed as a result of reactions brought about. Failure to give this phase due consideration may result in more serious trouble than the first condition of the water produced.

Unscientific "dope" compounds, ineffective and often harmful, have caused steam users endless annoyance and trouble.

We'd like an opportunity to demonstrate results by our methods. Gallon samples of the water supplies for analysis constitute the first step. May we have them?

## Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY.

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

## The Parmelee Pipe Wrench "The Toothless Wonder"

### PRICE LIST C

Length Handle	Set No.	Pipe Handled	Set Complete	Extra Handle	Extra Girths
10 in.	1	3/4, 1, 1 1/4, 1 1/2 in.	\$5.00	\$2.25	3/4, 1, 1 1/4 in. \$ .75
20 in.	2	1, 1 1/4, 1 1/2, 2 in.	7.50	2.50	1, 1 1/4, 1 1/2 in. 1.00
25 in.	3	1 1/4, 2, 2 1/4, 3 in.	7.50	3.00	1 1/4, 2, 2 1/4, 3 in. 1.25

Prices on larger sizes furnished upon application

DESIGNED ESPECIALLY to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

POSITIVE GRIP instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

RATCHET-LIKE ACTION. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

CAN'T CHEW. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

CAN'T CRUSH. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

## Fuel Oil Installations on the Grand Trunk Pacific Railway.

The G.T.P. Ry. is planning to operate its newly opened line from Prince Rupert, B.C., as far east as Jasper, Alta., about 720 miles, with fuel oil, as soon as the necessary storage facilities are completed. The oil will be taken by vessel from Southern California to Prince Rupert, where large oil storage is being arranged by the oil company, as shown in the accompanying railway plan of Prince Rupert, fig. 1.

Adjoining the drydock property, there has been built an oil wharf, 80 x 150 ft., in line with section A of the drydock. On the other side of the oil wharf there are three tying piles at 75 ft. centres. Joining the wharf to the land, there is a 30 ft. wide pier, along one side of which, a timber ramp carries the five pipes shown in the lower right hand

each with a control valve, etc., as shown. Alongside the oil main, there is a 1½ in. steam pipe, with a ½ in. connection along each delivery pipe, with a valve at the end. The oil tank cars belonging to the railway company will be spotted under the delivery pipes, and when filled will be forwarded to supply fuel oil stations at Pacific, Smithers, Endako, Prince George, McBride and Jasper.

While oil has been used for locomotive fuel on other western roads for a number of years, it has not been under as extreme climatic conditions, the nearest approach being on the C.P.R., from 300 to 500 miles further south. The installations on the latter line were fully described in Canadian Railway and Marine World, Aug., 1912. Along the G.T.P.R., the temperature re-

construction, sheathed with corrugated galvanized iron, with an intervening layer of hair insulator. The smaller building is 20 ft. square and 35 ft. high, containing in the basement a receiving tank with a capacity for 8,400 imp. gals. (240 bbls.) On the ground floor level, there is a pair of 10 x 6 x 12 in. duplex pumps, with piping, etc., while elevated above on steel columns, there is a service tank, with a capacity for 21,000 imp. gals. (600 bbls.). The other building is of similar construction, but dodecagonal in form, 56 ft. across and 27 ft. high, containing a 52 ft. diam. storage tank, with a capacity for 350,000 gals. (10,000 bbls.). Both buildings rest on concrete foundations.

The unloading track as mentioned is be-

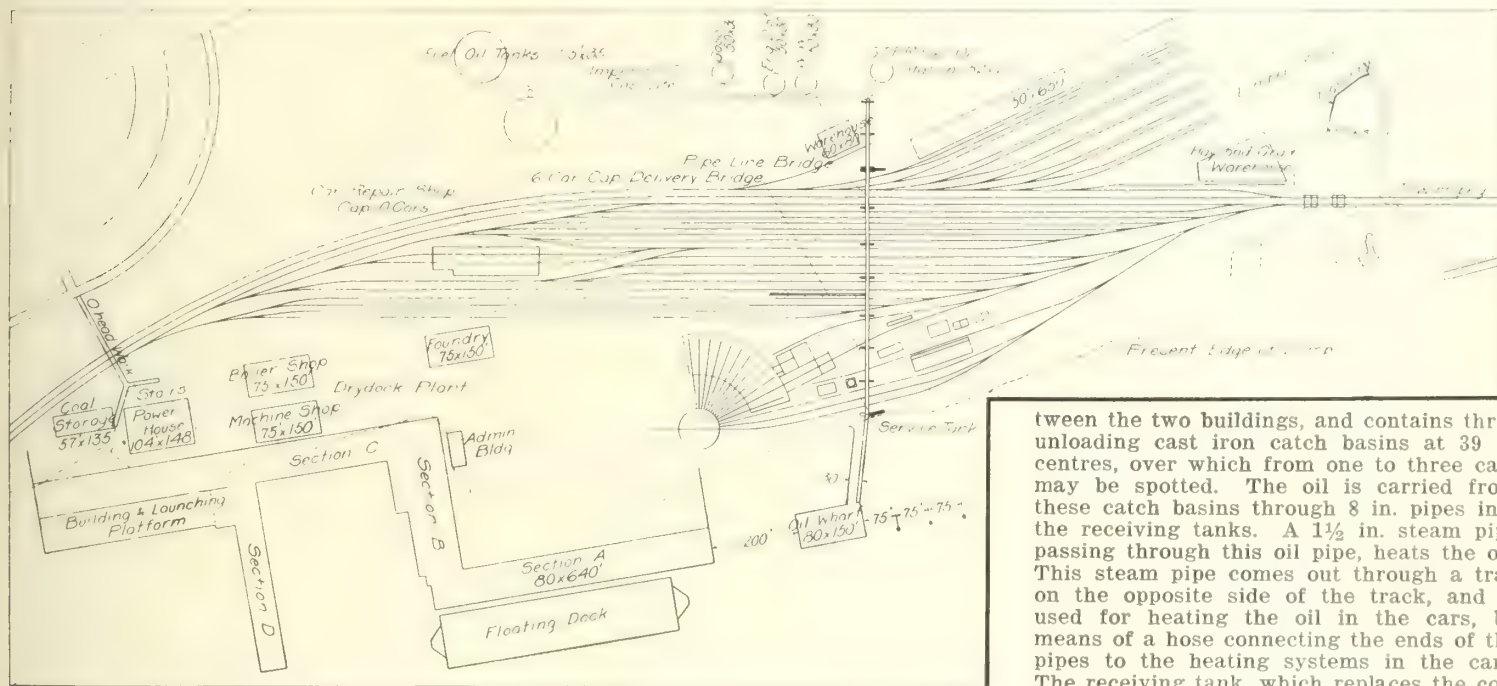

Fig. 1. Grand Trunk Pacific Railway Terminals at Prince Rupert, B. C., with Special Reference to the Oil Handling Facilities.

corner of fig. 2, to a bridge that crosses the tracks with a clearance of 22½ ft. above the rails. A cross section of this bridge is shown in the above view of the five pipes. It consists of six 74 ft., and three 83 ft. wooden through spans, 10 ft. deep between chords, and 5 ft. centre to centre of trusses. Between the trusses, there are carried three 8 in. pipes, with a 12 in. pipe on either side. Over top of the piping, there is a 3 in. flooring. Oil is taken over the bridge in these pipes to the several tanks located on the other side of the tracks.

For loading the tank cars for shipping the oil to the several divisional points, there is a delivery bridge, branching off from the pipe line bridge, with a capacity for 6 cars. This is shown in elevation in fig. 2. It consists of a timber bridge of 10 spans, 19½ ft. centres. From the left hand pipe, shown in the section of the oil bridge in the lower right hand corner of fig. 2, a 12 in. pipe leads off along the delivery bridge as shown, with 6 in. swing oil spouts at every 39 ft.,

mains around zero for weeks at a time, frequently dropping as low as 40 degs. below. California crude oil has the consistency of molasses, and cannot run or be pumped unless it is at a temperature of 60 degs. Fahr. This oil, to be delivered from the service tank to the locomotive, must be heated to at least 100 degs. Fahr., and not more than 110 degs. Fahr., as a higher temperature would cause the evaporation of the volatile constituents, thus reducing the efficiency of the oil as a fuel. From the foregoing, it is evident that the proper heating of the oil is a question of great economic importance.

Fig. 3 shows the fuel oil station design that has been developed to meet these conditions. Each fuel station is located at 400 ft. from the centre of the locomotive house, near the boiler room, from which the necessary supply of steam for heating is obtained. The station consists of two buildings on either side of an unloading tank. Both these buildings are of frame

tween the two buildings, and contains three unloading cast iron catch basins at 39 ft. centres, over which from one to three cars may be spotted. The oil is carried from these catch basins through 8 in. pipes into the receiving tanks. A 1½ in. steam pipe passing through this oil pipe, heats the oil. This steam pipe comes out through a trap on the opposite side of the track, and is used for heating the oil in the cars, by means of a hose connecting the ends of the pipes to the heating systems in the cars. The receiving tank, which replaces the concrete sump generally used, will overcome the difficulty of heating and maintaining a concrete structure, which is almost impossible to maintain water or oil tight, especially when the ground is soft as it is at McBride and Smithers.

The oil in the receiving tank is heated if necessary, by a set of steam coils placed in the centre, the temperature being maintained at a constant heat of 60 degs. Fahr. by an automatic temperature regulating device. From the receiving tank, the oil may be pumped either directly to the service tank, or to the storage tank, in either case through a 6 in. pipe, which ends in an articulated galvanized iron spout, to the extremity of which is attached a float, which keeps the outlet end from 2 to 3 ft. below the surface all the time. To the float is attached an indicator cable, which connects with an indicator in the main floor of the receiving tank building, on the walls of which are indicators for the three tanks. Each pump is capable of filling the service tank in 2 hours. Both pumps may be operated together, or either pump may shut down, allowing the other to work,

a complete system of piping and valves making the arrangement very flexible for operating.

When there are no oil cars available, oil is drawn from the storage tank and pumped directly to the service tank, an 8 in. suction line leading from the floor of central sump of the storage tank, directly under the track to the pumps. Both the inlet and outlet suction pipes, together with the steam lines passing between the buildings, are enclosed in wooden conduits. A system of steam coils with a regulating valve, is placed in the storage tank, to maintain the temperature of 60 degs. Fahr., required by the suction pipe.

A set of steam pipes with a regulating valve, giving a constant temperature of 100 to 110 degs. Fahr. is also placed in the service tank. The oil from the service tank is delivered directly through a spout to the locomotive placed on the outbound track, on the opposite side of the building from the receiving track. This spout, when not in use, is raised and protected from the weather in a recess built into the side of the building. The oil is drawn from the

order to connect the different segments together in the field by riveting. The whole bottom has a slight grade towards the centre, which is made of a shallow tank, 1 ft. deep, shop riveted, and with the top angle turned inside; to this latter the narrow ends of the segments are riveted. This arrangement allows the foundation, made of gravel and sand, to be well prepared, and rolled to a true surface after the placing of the centre part. The different segments are then placed side by side, temporarily bolted, and the riveting completed without disturbing the bottom. In case of an accident, the replacing of a part is easily accomplished by cutting the rivets in the vertical legs of the angles.

The locomotive tenders are being equipped with 3,000 gal. oil tanks, fitted with direct steam heaters. Burners are being placed at the front end of the firebox, the types to be used being the Economy and the Von Boden Ingles. The present intention is to equip each locomotive with one 3 in. burner.

The design of the oil stations was made by J. G. Legrand, M. Can. Soc. C.E., Bridge

very objectionable, especially in very cold weather. These tank cars are not provided with steam heating pipes, and the outlet being only 4 ins. and exposed to the cold weather, it takes a long time to empty the car, and it is almost impossible to empty it completely, the bottom of the car being level, which means that a great quantity of the thick oil stays inside. This quantity may amount to several hundred gallons, according to the severity of the weather, and, of course, quite a reduction in the capacity of the car, outside of having to carry this oil back and forth on the line. To obviate all the above objections, a tank car has been designed as follows

1. On account of the long haulage, the tank car has a capacity of 10,000 imp. galls. The dome is provided with an opening 18 x 36 ins., the cover being hinged and hermetically closed by means of eye bolts and hand nuts. This arrangement will allow an easy opening of the cover in any kind of weather. The opening in the dome is long enough to facilitate the spotting of the car at the oil delivery. The car is so designed that when arriving at a fuel station

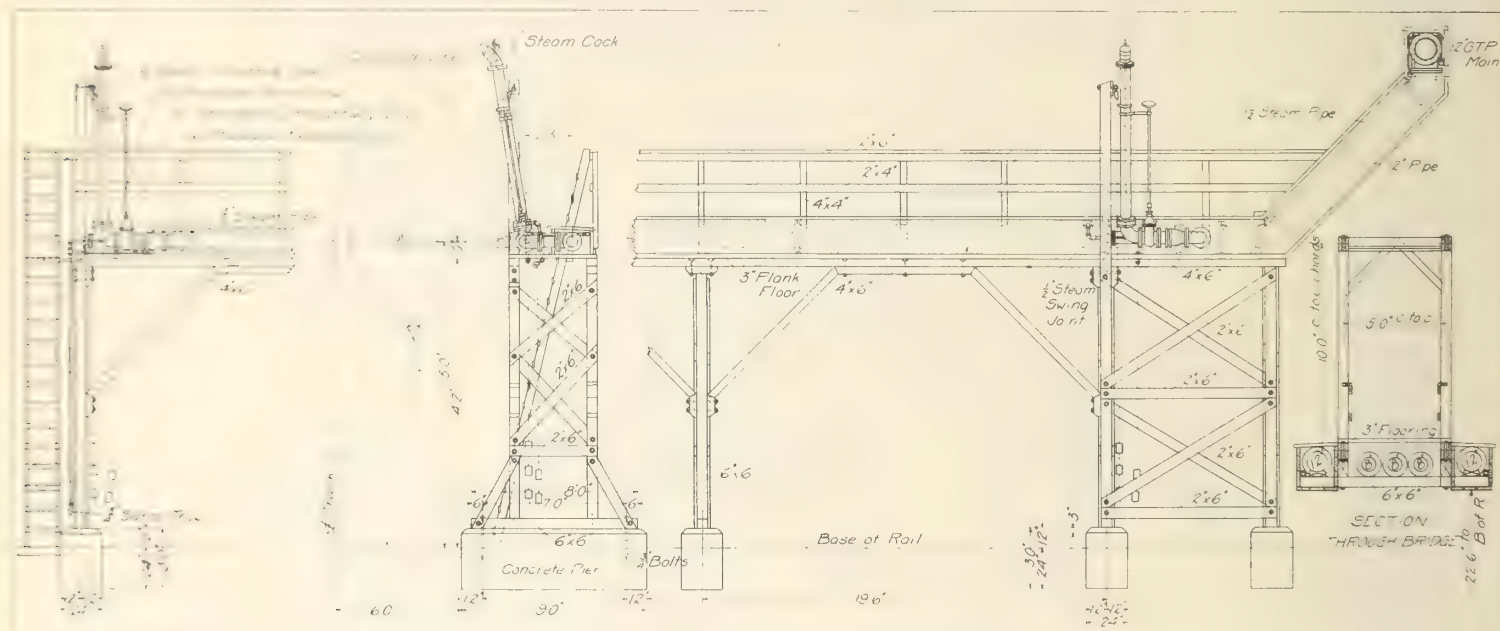

Fig. 2. Grand Trunk Pacific Railway Oil Tank Car Filling Trestle at Prince Rupert, B. C.

bottom of the tank, and in the short connecting pipe from the tank to the spout, there is a self registering pipe line measure, which indicates the amount of oil delivered to each locomotive.

The receiving and storage tanks include a new feature in the design of their bottoms. Usually, these large tanks have a bottom composed of rectangular plates with lap joints, which must be assembled and riveted in the field. The assembling and riveting of such a large bottom is very difficult, and has to be done on staging, which must later be removed while lowering the bottom to the ground. This is often the cause of deformation and rupture of rivets and plates, and the disturbance of the foundation ground, which ought to be well levelled. It is not an unusual occurrence to be obliged to raise the tank several times before water tight joints are finally obtained. Besides these difficulties it is very hard to completely clean the bottom of the tank when necessary, or to replace parts affected by rust or other causes of deterioration. To overcome all of these difficulties, the bottom of the tank is divided into segments of such a size as to be readily furnished by the mills. These segments have small angles shop riveted on them, the vertical legs of which are punched in

Engineer, G.T.P.R., initially under the general direction of B. B. Kelliher, M. Can. Soc. C.E., formerly Chief Engineer, G.T.P.R., and latterly under the direction of H. A. Woods, M. Can Soc. C.E., Assistant Chief Engineer, G.T.P.R.

All the above conveniences to handle oil properly would be offset if the proper cars to transport the oil from Prince Rupert to the different divisional points were not provided. The ordinary oil tank car which is generally used is certainly not suitable for this country, and especially for a long haul, economical handling, and a quick service such as is required on a line like the G.T. P.R. The ordinary tank is usually of too small a capacity, i.e. 8,000 U. S. galls, which would mean transportation of a comparatively heavy dead load for a light quantity of fuel. This would not be economical on a long distance. A great objection to the ordinary car also is that the valve is located about 2 ft. off the centre line, which means that in making up a train careful attention has to be taken to have the car headed the same way, which in railway practice is almost an impossibility. Another great objection to the ordinary tank car is the small opening in the dome, which is generally closed by a round cover, provided with a thread. This arrangement is

it can be spotted, heated and emptied completely, all these operations being done in the shortest possible time.

2. To solve the first condition, that is to say the spotting of the cars, which will be three at a time, the car has been provided with the outlet valve exactly in the centre, and the steam inlets for heating the car, also placed exactly on centre, one on each side of the car. In short, the car has been designed so as it can be headed either way.

3. To solve the second condition, i.e. heating, the car is provided with the piping so arranged that the steam starting from the centre will travel at once towards the two ends, and then come back to the centre around the outlet valve which is provided with a steam jacket, the condensation water being discharged on the ground through a sarco valve with ample capacity to avoid any water remaining in the pipes.

4. To solve the third condition, that is to say the complete emptying of the car, the tank is provided with a trough running longitudinally between the bolsters. This trough, 8 ins. wide, riveted to the bottom of the tank, has a semi-cylindrical bottom and a depth of 6 ins. at the outside extremity and 1 ft. in the centre. The outlet valve is riveted to this trough. Six 6 in. diameter holes and one 6 x 18 in. hole in the centre

will let the oil run through the whole length of the car into the trough. The return steam pipe is placed in the bottom of this trough, and is connected to the steam jacket of the outlet valve. With such an arrangement the oil will be heated thoroughly, and, therefore, run quickly, and the 6 in. fall of the trough towards the outlet valve will allow the car to be emptied completely.

In designing this car, the trough placed under the tank was considered in figuring the thickness of the shell of the tank, and it was found that the strength of such section was 30% stronger than similar section of tank without the trough. This allowed to make this tank with a shell of 5-16 in. throughout, except the two ends, which are 3-8 in. in thickness. The body of the car is composed of a centre sill and two body bolsters, the whole resting on trucks. The centre sill 37½ ft. in length out to out of

of the same capacity being about 44,000 lbs.

The car is provided with necessary walking planks to pass from one car to another, and a platform on the top around the dome to facilitate the operation of filling the tank.

Only 40 cars of such a design will be required to take care of the fuel oil necessary for running trains between Jasper and Prince Rupert, this allowing three cars at each of the six divisional points, while 18 empty cars are going back to Prince Rupert for filling purposes, leaving four cars to spare in case of repair or accident.

### Birthdays of Transportation Men in May.

Many happy returns of the day to:—

Jas. Bain, General Superintendent, Halifax and South Western Ry., Bridgewater, N. S., born at Pictou, N. S., May 24, 1860.

W. R. Baker, Secretary, and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25, 1852.

G. S. Cantlie, ex-General Superintendent Car Service, C.P.R., Montreal, now in military service with Canadian Overseas Forces, born at Montreal, May 2, 1867.

J. Irwin, Superintendent, District 3, Canadian Northern Ry., Dauphin, Man., born at Clinton, Ont., May 28, 1866.

S. McElroy, Trainmaster, Canadian Northern Ry., Rainy River, Ont., born at Lindsay, Ont., May 1, 1875.

J. N. Murphy, Trainmaster, C.P.R., Medicine Hat, Alta., born at Mooretown, Ont., May 10, 1879.

A. C. Shaw, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Detroit, Mich., May 12, 1865.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, General Western Agent, Canadian Government Railways, Toronto, born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M. Can. Soc. C. E., Chief Engineer of Surveys, MacKenzie, Mann & Co., Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

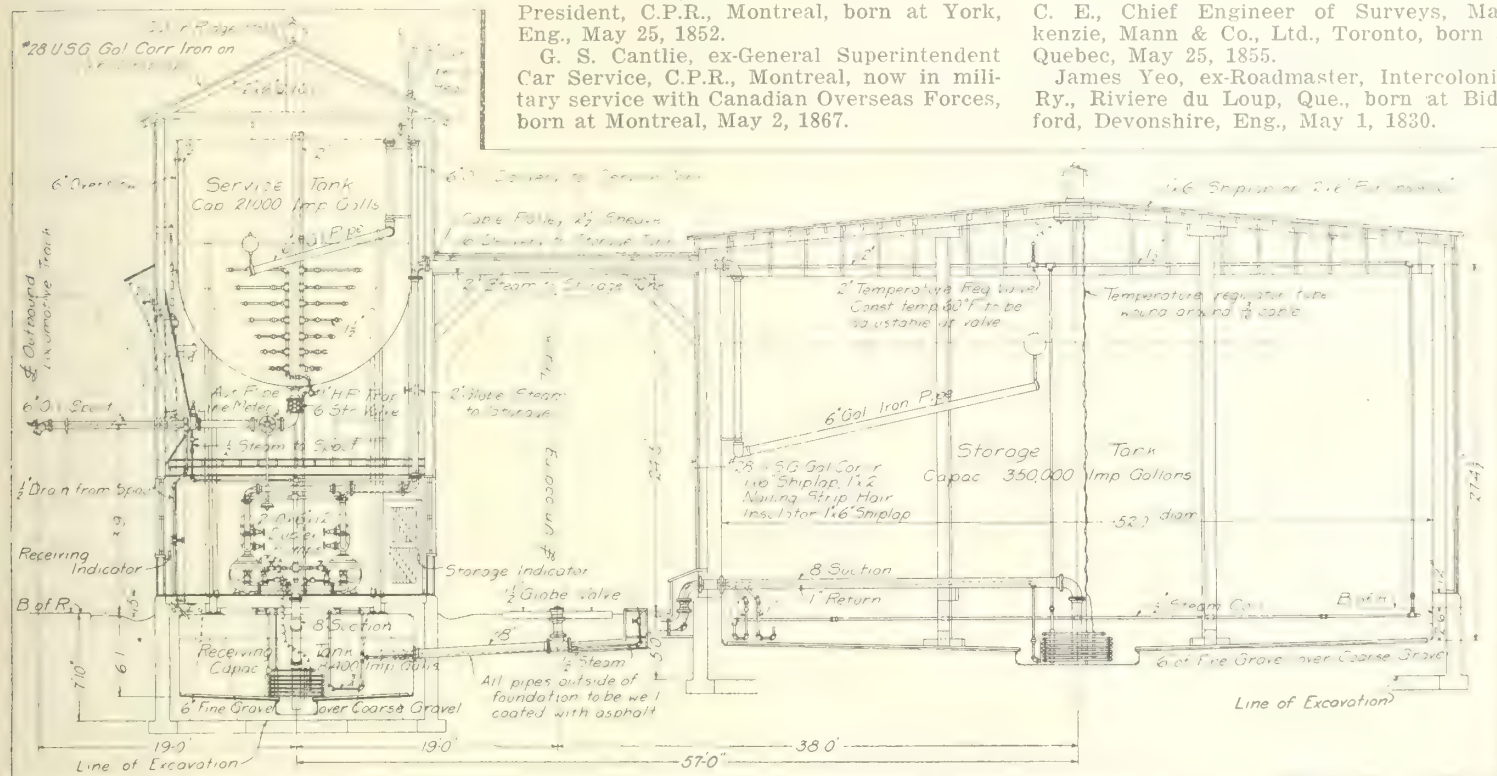

Fig. 3. Grand Trunk Pacific Railway Fuel Oil Station at Six Divisional Points.

striking plates, which means 39 ft. c. to c. of couplings, is made of two 12 in. at 40 lbs. ship building channels (Carnegie section) spaced 12½ in. back to back. The two ends of the centre sill up to the bolsters is covered top and bottom by a ½ in. cover plate. Between the bolsters, the bottom flanges of the two channels are strongly latticed together, and the top flanges are reinforced by two 8 x 3½ x ½ in. angles. The tank is strongly riveted in the centre to the sill in order to transmit any shock which might occur in shunting. The tank rests on two body bolsters. This arrangement allows free expansion from the centre towards the ends. The centre sill as a column will have a safe capacity of 458,000 lbs. (approximately 230 tons), which means a breaking capacity of more than double, which is ample to resist the ordinary impact due to shunting. The body bolsters have cover plates extended in order to act not only as splices for the main material of the centre sill, but also to be able to resist the strain due to "poling." The casting which is placed at each end of the bolster is provided with a pocket to receive the "pole."

The saving of weight due to this kind of design is about 3,500 lbs. per car, the approximate weight of an ordinary tank car

M. Donaldson, M. Can. Soc. C.E., Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, Division Engineer, G.T.P.R., Winnipeg, born at Quebec, May 13, 1862.

G. I. Evans, Superintendent, Angus Locomotive Shops, C.P.R., Montreal, born there, May, 1880.

M. A. Fullington, A.M. Can. Soc. C.E., Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, born at Johnson, Vt., May 12, 1880.

J. Graham, Assistant Roadmaster, C.P.R., North Bend, B.C., born in Ontario, May 22, 1870.

G. H. Hedge, Master Mechanic, Central Division, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

T. Henry, Passenger Traffic Manager, Canada Steamship Lines, Ltd., Montreal, born there, May 29, 1865.

W. T. Huggan, Division Accountant and District Passenger Agent, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

### Northern Pacific Railway's New Coast Line.

The new double track, low grade cutoff line of the Northern Pacific Ry. between Tacoma and Tenino, Wash., 44.3 miles, completes the reconstruction and double-tracking between Seattle, Wash., and Portland, Ore. It also gives a direct train movement through the station at Tacoma, while the old line required a reverse movement of trains. The old line was single track, with 1% grades in both directions and with 2.2 mi. of 2.2% grade ascending southward out of Tacoma. The tonnage rating southbound was 2,000 tons, and three pusher engines were required to help the full tonnage trains on the heavy grade at South Tacoma. The principal comparative features of the old and new lines are as follows:

	New Line	Old Line
Distance, miles .....	44.30	41.26
Max. grade .....	0.3%	2.20%
Max. curve .....	3°	10°
Total curvature .....	1347°	824°
Total rise and fall .....	421 ft.	1244 ft.

The Grand Trunk Ry. System has opened a new city ticket office at 687 Market St., San Francisco.

## Steam Railway Statistics for Year Ended June 30, 1914

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings, the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of the railway refer to notes on page 163. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of Railway	Mileage	Passenger Earnings	Freight Earnings	Gross Earnings	Maintenance of Way and Structures	Maintenance of Equipment	Traffic and Transportation Expenses	General Expenses	Net Earnings

## Notes to Steam Railway Statistics.

The total mileage of 30,794.54, given in the foregoing table, is the actual length of the railways being operated at June 30, 1914; but the total mileage reported as being operated by the different companies was 31,483.03, a difference of 688.49 miles. This is accounted for by the fact that various companies operate over portions of the tracks of other companies, particulars of which will be found in these notes. The total railway mileage reported at June 30, 1913, was 29,303.53, which included the following mileages omitted from the lines reported June 30, 1914: Bessemer and Barry's Bay Ry., 5 miles; Bruce Mines and Algoma Ry., 17.28 miles; Victoria Copper Co.'s Ry., 12 miles, railways which while still existing had not been operated for some years.

The following railways appear in the report for the first time: Detroit River Tunnel, 1.45 miles; Fredericton and Grand Lake Coal and Ry. Co., 35 miles; National Transcontinental Ry., 286.30 miles; Northern New Brunswick and Seaboard Ry., 19.80 miles; Roberval and Saguenay Ry., 36.80 miles.

(1) The Algoma Central and Hudson Bay Ry., and the Algoma Eastern Ry. are owned by the Lake Superior Corporation.

(2) The Atlantic, Quebec and Western Ry., and the Quebec Oriental Ry. are operated jointly.

(3) The Canadian Northern system embraces the following lines: Bay of Quinte; Brockville, Westport and Northwestern; Canadian Northern; Canadian Northern Ontario; Canadian Northern Quebec; Central Ontario; Halifax and South Western; Inverness Ry. and Coal Co.; Irondale, Bancroft and Ottawa; Quebec and Lake St. John. The Bay of Quinte operates 19.00 miles; the Canadian Northern 6.60 miles, and the Halifax and South Western 2.30 miles, under trackage rights.

(4) The Great Northern Ry. (U.S.A.) owns the following lines in Canada: Bedlington and Nelson; Brandon, Saskatchewan and Hudson Bay; Crows Nest Southern; Manitoba Great Northern; Midland Ry. of Manitoba; Nelson and Fort Sheppard; New Westminster Southern; Red Mountain; Vancouver, Victoria and Eastern Ry. and Navigation Co.; Victoria and Sidney; Victoria Terminal Ry. and Ferry Co. The Manitoba Great Northern operates 0.99 mile; the Midland of Manitoba, 69.02 miles; the Nelson and Fort Sheppard, 5.42 miles; the New Westminster Southern, 1.48 miles; and the Vancouver, Victoria and Eastern, 1.48 miles, under trackage rights.

(5) The Canada Southern and the Detroit River Tunnel are owned by the Michi-

gan Central, which in its turn is controlled by the New York Central. The N. Y. C. R. also owns the Ottawa and New York, and the St. Lawrence and Adirondack, and controls the Rutland, which owns the Rutland and Noyan. It also owns, with the C.P.R., the Toronto, Hamilton and Buffalo. The Canada Southern operates 16.76 miles under trackage rights; the Ottawa and New York, 1.94 miles, and the St. Lawrence and Adirondack, 8.50 miles, under trackage rights. The Detroit River tunnel is operated as a part of the Michigan Central, and the earnings, etc., are included with those of the Canada Southern.

(6) The Canadian Pacific operates under lease or control the following lines: Dominion Atlantic; Esquimalt and Nanaimo; Fredericton and Grand Lake Coal and Ry. Co.; Montreal and Atlantic; New Brunswick Coal and Ry. Co., and Quebec Central. The C.P.R. also owns with the New York Central, the stock of the Toronto, Hamilton and Buffalo. The C. P. R. operates 93.90 miles; and the Dominion Atlantic 14.29 miles, under trackage rights.

(7) The Carillon and Grenville, the Phillipsburg Ry. and Quarry Co.'s line, and the Pontiac and Renfrew were not operated during the year.

(8) The Grand Trunk system includes the following lines: Canada Atlantic, Montreal Province Line, Montreal and Vermont Jct., Stanstead, Shefford and Chambly and St. Clair Tunnel. The G.T.R. also owns the Grand Trunk Pacific. The G.T.R. operates 10.10 miles, and the G.T. Pacific 6.20 miles, under trackage rights. The statistics of the operation of the Magnetawan are included in the G.T.R. ones.

(9) The Hereford, and the Maine Central (Princeton branch, New Brunswick), are owned by the Maine Central.

(10) The Intercolonial and the Prince Edward Island are owned by the Dominion Government. The Intercolonial operates 40.30 miles, under trackage rights.

(11) The Massawippi Valley is owned by the Boston and Maine. It operates 2.95 miles under trackage rights.

(12) The Napierville Jct. and the Quebec, Montreal and Southern are owned by the Delaware and Hudson Co.

(13) The Nosbonsing and Nipissing, 5 miles, is included as railway mileage, but we were officially informed, Dec. 10, 1913, that the track was removed during the summer of that year. (Jan., 1914, pg. 25.)

(14) The Pere Marquette also operates over 136.78 miles under trackage rights. The P. M. operates the London and Port Stanley

under lease. The L. and P. S. R. operates 0.42 mile under trackage rights.

(15) The Toronto, Hamilton and Buffalo, which is owned jointly by the C.P.R. and the New York Central, also operates 4.36 miles under trackage rights.

(16) The Wabash does not own any main line track in Canada, but operates over 245.40 miles, which it leases from the G.T.R.

## A Novel Use of Canadian Railway and Marine World's Birthday Column.

A little over a year ago G. W. Vaux, General Agent, Union Pacific System, Chicago, and formerly General Passenger Agent, G.T.R., Montreal, took out a life assurance policy for \$5,000 in the Manufacturers Life Insurance Co., and was of course called on for proof of age. Following is an extract from a letter he wrote in this connection:

"We have a large Bible History, which has been in our family since 1873, in which appears in my mother's hand writing the entry that I was born Mar. 21, 1866. In the same volume there is entered in my hand writing the birthday of each member of my father's family and each member of my own family. Then again I enclose a page taken from Canadian Railway and Marine World for Mar. 1915, in which you will find my name included showing that I was born on Mar. 21, 1866, under the heading 'Birthdays of Transportation Men in March.' This latter information has appeared in the same publication for at least five years, probably longer. Under these circumstances, will you, if necessary, take up with the Manufacturers Life and ascertain if this information will be regarded as satisfactory proof of age."

The information Mr. Vaux gave as above was accepted as satisfactory and a certificate was issued admitting proof of age.

**Railway Lands Patented.**—Letters patent were issued during February, covering Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows,—

	Acres.
Calgary and Edmonton Ry. ....	5,698.00
Canadian Northern Ry. ....	2,880.00
Canadian Pacific Ry. ....	169.00
Edmonton, Dunvegan and British Columbia Ry. ....	12.27
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co. ....	321.00

Total ..... 8,970.27

The brick arch in locomotives is a great aid in smoke elimination, as it increases the travel of the gases, and gives them a chance to combine with the oxygen of the air before coming in contact with the comparatively cool firebox sheets.

out comparison must be added the time required to check and notify the delinquent and the time taken by him to submit his watch after he is notified. This additional time may be from one day to a week, or possibly longer, depending upon the promptness of action, the frequency of facilities for communication and the accessibility of the employe. If he has in the meantime been transferred to another division, the methods in effect on most roads require the records to pass through the files of two superintendents or other officers in charge

port" opposite which the inspector makes the entries as to rating, setting or regulating. This report is the ordinary form used for the purpose by roads generally and is furnished in the usual distinctive colors for locomotive men and trainmen. The inspector, at the end of each week, sends this report to the Superintendent of Time Service. The entries which the inspector makes on this report and the mailing of same constitute perhaps the greater part of his clerical duties imposed by this system. Of course, he makes out the certificate when the watch is examined, as required by rule 2, and the usual rating and repair cards and a weekly report showing repairs made and the nature of such repairs. He is not required to keep any records and he makes no report whatever to the superintendent or any other officer except the Superintendent of Time Service.

The Superintendent of Time Service keeps a card index file showing the watch record of each employe coming under time service regulations. Fig. 1 shows the face and fig. 2 the reverse side of the form used for this purpose. A new watch record card is made out for each employe at the beginning of the year from information furnished by superintendents, other officers and inspectors. A card is made for a new employe upon his entry into service requiring time service regulation.

It will be noted that the record card, in addition to providing space for the information required by the certificate and details as to clearing and repairing, is ruled and printed with names of the twelve months and the dates of Saturday in each of the 52 weeks. On the reverse side of the card, in the column headed "Add On," is entered the name of the superintendent or other officer by whom the man is employed, and the column headed "Strike Off," the name of the officer whose jurisdiction the employe may leave together with dates

record cards. When an employe leaves the service, either temporarily or permanently, or transfers to the territory or jurisdiction of another officer, his name is shown under the heading "Strike Out" of the form shown in fig. 3 by the officer whose service he leaves. On returning to the service or re-

delinquents, which is information of importance to all concerned.

We are aware that this method of handling time service records may be subject to objections, but experience has convinced us that such objections are more apparent than real. In any event, we think the ad-

GRAND TRUNK PACIFIC RAILWAY			
TIME SERVICE			
			Form 18-1
			Division
To SUPERINTENDENT OF TIME SERVICE, WINNIPEG, MAN.			
The following are changes on watch inspection lists for the week ending .....191....			
			(Sign here).....Head of Department
<b>STRIKE OUT.</b>			
Name	Occupation	Division	State if left service or transferred to
(Note.—The form has 7 horizontal lines here.)			
<b>ADD ON.</b>			
Name	Occupation	Division	State if new employe or transferred from
(Note.—The form has 6 horizontal lines here.)			
Heads of departments will send this report to the Superintendent of Time Service, Winnipeg, on the first day of each and every week. If no changes send "Nil" report.			

Fig. 3.—Strike Out and Add On form, size 8¼ x 10¾ inches.

porting to the officer to whom he is transferred, the officer receiving him shows his name under the heading "Add On" of the form.

Employes coming under time service regulations, whose names do not appear under the heading "Strike Out" of the weekly report from the superintendent or other

vantages far outweigh the disadvantages. We will, however, enumerate and discuss both, as we understand them, and leave it to the reader to decide the proposition for himself. The possible objections are:

1. Time consumed in transmitting reports from inspectors to headquarters and information from such reports back to officers along the line. If, in fact, this feature really resulted in more time being taken to reach delinquents, comparison being weekly, the service would not suffer thereby. However, for reasons which will appear later, it works out in practice that in most cases a delinquent is reached as quickly, and in some cases even quicker, as he is in fact (not theory) reached under other systems.

2. That before an employe can be adjudged delinquent, it is necessary to check the "Comparison Reports" of all inspectors and the "Strike Out and Add On Reports" of all officers. In answer to this, it may be said that when a check of the two reports is once made—and it requires no great amount of time to do it—the Superintendent of Time Service knows, not only the men who are delinquent, but also in most cases where they are located in the service, and can, therefore, reach them at once through the proper officers and thus avoid the delay which would otherwise be occasioned by correspondence between officers in order to notify delinquents who have transferred from the jurisdiction of one to that of another.

Objection no. 2 (if it be an objection) also applies under certain conditions, in a different manner, but to the same effect, to other systems, because under none of them is an employe forbidden to submit his watch to any inspector, other than the one to whom he is assigned, when special circumstances render it necessary or advisable for him to do so. In such cases, if the employe or the special inspector fails to notify the regular inspector before the latter makes his report (which not infrequently happens), the employe is reported delinquent and his superior officer traces him, only to find that he is not delinquent. By the one system, you start after an employe before you really know whether he is or is not delin-

GRAND TRUNK PACIFIC RAILWAY	
OFFICE OF THE SUPERINTENDENT OF TIME SERVICE	
Mr.	Winnipeg, Man., .....191....
Dear Sir:	
Following is list of men shown by you as coming under Watch Inspection Regulations, week ending.....who failed to make comparison:—	
Following men not eligible for service, account not having presented order of examination to an Inspector:—	
Total number of men shown in service:—	
Percentage delinquent:—	
Superintendent of Time Service.	

Fig. 4.—Form for Reporting Delinquency, size 8¾ x 10¾ inches.

and other details, the entries being kept up to show every time an employe enters and leaves the service and reenters, and all shifting movements from different jurisdictions.

The information called for by the reverse side of the record card is furnished each week by superintendents and other officers on the "Strike Out and Add On Form," shown in fig. 3.

On the receipt each week of the "Strike Out and Add On Report" and the "Comparison Report," the Superintendent of Time Service makes proper entry of the information contained in such reports on the watch

proper officer, should be shown on the "Comparison Report" of some one inspector—it makes no difference which one—and all names shown on that report are checked as having submitted their watches for comparison during the week ending on the date checked. Employes whose names do not appear on either report are apparently delinquent, and the Superintendent of Time Service at once calls this fact to the attention of the proper officer, using for this purpose form shown in fig. 4. It will be observed that this form calls attention to the number of men shown in service, the number delinquent and the percentage of

quent. In the order, you consult all records first and know what you are doing before you make a move.

3. The clerical help required by the Superintendent of Time Service to enable him to keep the records in the manner described. The force of this objection is largely destroyed by the fact that the one extra clerk necessary to keep the records in this way saves each month a large part of the cost of his services in the reduction, thereby made possible, of clerical work in the various offices having to do with time service regulations. The objection entirely disappears when considered from the standpoint of good service.

The proven advantages are:

1. **BETTER RECORDS.**—A large percentage of inspectors have not the proper facilities for making or keeping records. They are not, as a rule, paid any direct compensation for their services, and do not ordinarily employ extra help to look after this feature of the business. They are subject at all times to interruption by their patrons and others, and the smaller the amount of clerical work imposed upon them, the better for all concerned.

2. **RECORDS CENTRALIZED.**—This advantage becomes apparent in its mere state-

ment without further comment.

3. **GREATER PROMPTNESS.**—An inspector knowing that his reports are required at a certain time by one certain officer, whose attention is devoted solely to time service, will soon find by experience that his reports must be forwarded when due in order to escape the inevitable "call" which he would otherwise get from the officer in charge. There being really no reports of any extent for the inspector to make, there is no reason for delay on his part in forwarding such as are required.

4. **MORE RELIABILITY.**—After all, the true merit of any system is its reliability, and from this standpoint we believe this system is unequalled by any other. Time service, important as it is, is of such a nature that there is, to say the least, a tendency on the part of some officers to regard it as a detail of no great consequence. Where the local inspector reports to the superintendent or other officer along the line, such officer, while really in charge of time service in his territory, must necessarily handle it as a side issue. It generally means turning the subject over to a clerk, and if he is pressed with work and is compelled to delay something, there is a high percentage of chances that time service matters will be delayed.

## The Mechanical Life of Ties as Affected by Ballast.

By E. Stimson, Engineer Maintenance of Way, Baltimore and Ohio Railroad.

The wooden cross tie, transmitting the heavy axle loads from the rail to the ballast, is subjected to mechanical wear not only from the action of the rail on top of the tie, but also from the action on the sides and bottom of the tie of the ballast which supports it.

The most familiar causes of the deterioration which makes necessary the removal of the ties from the track are, decay, splitting, mechanical wear under the rail, spike killing, burning due to dropping coals from locomotives and damage by wrecks. While the influence of these factors is felt on all classes of track from isolated sidings to the highest type of main track, tie destruction from mechanical wear of ballast seldom occurs to any appreciable extent excepting in occasional stretches of crushed stone, or other forms of hard ballasted tracks where a soft roadbed or a sink requires continual raising of track and tamping of ties in order to maintain good track surface. The wearing away of ties by ballast, is the result of tamping the ballast under the tie and the action of the tamping tool striking the side and edge of the tie rather than the action of the tie bearing upon and working in the ballast under train loads. There is but little mechanical wear due to the tie working in the ballast.

After ties are first put into the track and tamped to surface on hard ballast, the necessity for retamping to surface and consequently the wear of the ties by ballast depends largely upon the nature of the subgrade. Good surface and subsurface drainage usually insures solid road bed where the normal bearing value of the material qualifies it for heavy loading. Where such conditions prevail, track surface is maintained with a minimum amount of tamping and the mechanical effect of the ballast on the ties is negligible. Wet cuts and fills, roadbed sinks and side hill slips produce conditions for which the track as a whole suffers. They are responsible in the majority of cases for bad surface and alignment and can therefore be said to be the underlying cause of tie deterioration from mechanical wear of ballast. Such conditions are usually local and limited in their

extent over any stretch of track and the total mileage of roadway involved composes only a small percentage of the total roadway of any railroad system. The removal of the cause, and the restoration of the stability of the roadway, in many cases involve heavy expense, for which reason the conditions are often allowed to remain, making necessary the continual employment of forces raising the track and tamping the ties to surface. Thus the roadway conditions are responsible for the excessive tamping and wearing away of the ties. As this does not involve a relatively large number of ties, and as usually the prevention is often difficult and expensive, to some extent, this excessive track maintenance and consequent tie wear from ballast will inevitably exist as long as wooden ties are used.

Ties which are removed after service in hard ballasted track are found to be pitted or indented on the bottom and sides from contact with the stone or other ballast material. These indentations in the tie are a valuable factor in holding the track in line and surface as long as they are not increased by frequent tamping. The continual tamping of the ballast under the tie soon rounds off the edges of the ties, leaving little or no flat bearing surface for support. When this happens the tie acts as a wedge and tends to force the ballast out into the cribs instead of receiving full support from it. It typifies the worst conditions; however a tie seldom becomes rounded to this extent throughout its entire length. The greatest wear occurs from 6 to 8 ins. either side of the rail and practically none directly under the rail. In track maintenance the best practice is to tamp the tie for its full bearing upon the ballast outside of the rail and for an equal distance inside of the rail. In spite of close supervision, however, this is not always done, but instead the trackman expends his efforts toward tamping up solid as near the rail as he can work with a tamping pick. This wears off the edge of the tie for some distance each side of the rail and leaves a short unworn edge directly under the rail. When a tie becomes rounded on the

bottom at the most essential tamping point and becomes difficult to maintain to surface, it is then found more economical to replace it with a new tie having a flat bottom that will necessitate less tamping. The average trackman feels little hesitancy about removing a tie for this cause when he has difficulty in keeping it tamped. Even in cases of most excessive tamping, wear from ballast does not become objectionable until the tie has been in service from 50 to 75% of what its life would be under normal conditions. The kind of ballast and kind of ties used and the standard at which a track is maintained, are all important factors in the consideration. Slag and stone, when crushed, form hard, sharp, angular fragments that appear, from observation, to be more destructive when tamped under wooden ties than gravel, burnt clay, cinders, granulated slag or other similar forms of ballast. Ballast of the last named materials has little or no effect in wearing down the sides and bottom of the ties, nor is the tamping of this kind of ballast so destructive to the ties, as the particles are smaller, generally of softer material and rounded in form. There is a perceptible difference in the resistance offered against mechanical wear by ties made from the different kinds of wood. Hard wood ties of rough texture withstand the action of the rail cutting and of excessive tamping much longer than ties of soft wood. It has been observed that these ties which are most durable under the mechanical wear of the rail also last longer under the wear of ballast, for instance—white oak, chestnut oak, black walnut, maple and beech are more suitable than yellow pine, fir, catalpa, cedar and red wood.

Here it is important to mention the extent to which some forms of ballast increase the abrasive action of the rail upon the tie. Granulated slag, gravel, cinders, chatts and other forms of ballast carrying fine gritty particles contribute largely to the rapidity of the abrasive action between the rail and the tie or between the tie plate and the tie, thus greatly accelerating the mechanical wearing away of the wood. It has been observed that the cutting of the rail into the tie is much greater where fine ballast is used than where coarse, hard ballast is used. This trouble has been largely overcome by use of flanged bottom plates which become embedded in the tie, and by plates fastened directly to the tie by lag screws, independent of the rail spiking, thus reducing the movement between the plate and tie to a minimum. However, many ties are removed from track each year because of deterioration from rail wear and a large amount of this deterioration can be assigned to the effect of the fine particles of ballast grinding under the rail.

A careful study of the wearing effect of ballast upon ties during tie removal seasons where the actual cause of deterioration under roadbed and track conditions can plainly be seen, is convincing evidence that such wear along the bottom edge only injures the ties where tamping is necessary at quite frequent intervals.

Regarding the use of treated ties where extraordinary wear by ballast is known to exist; the same rule might apply that is observed when the mechanical wear under the rail limits the life of the tie. Treatment to prevent decay does not give the tie increased resistance to abrasion, and ballast abrasion that is so severe as to wear out an untreated tie would preclude the possibility of any benefit from the use of treated ties at locations where such abrasion occurs.

The ballast has little direct effect on the mechanical life of the ties. The finer and

lighter ballasts such as gravel, cinders, granulated slag, etc., hasten the rail cutting on the top of the tie by the finer particles working under the rail. The coarser and heavier ballasts, such as crushed stone and slag, bruise and cut into the bottom and the sides of the ties largely under tamping. Comparatively few ties are destroyed from this latter cause, while many more are removed from track on account of the former.

A substantial, well drained roadbed, and a clean, hard ballast, free from fine particles and coarse enough to insure against holding water, affords the best foundation for the tie, one that will hold to a minimum the wave motion of the rail which, aided by the abrasive agent, the fine gritty bal-

last, so rapidly cuts into the ties, and one that will hold the surface of the track, eliminate the sinks and slides, pumping joints with the attendant pounding of the ties into the ballast, and lastly the excessive tamping up.

The desired roadbed condition must usually be made with the materials available, aided by tiling and trench drains. The ballast, however, may be selected. A hard, durable stone, crushed in angular fragments, in size from one inch to three inches, screened free from all dust and dirt, is the ballast that will least affect the mechanical life of the tie.

This paper was read before the American Wood Preservers' Association in Chicago recently.

## The Bridging of the St. John River Between St. Leonard, N. B., and VanBuren, Me.

An event of international importance is expected to take place on May 1, when a new gateway will be opened for traffic between Canada and the northernmost tip of the eastern United States, where the Van Buren Bridge Co. has just completed the building of its short line of railway, including a bridge over the St. John River, between the Bangor and Aroostook Rd. system in VanBuren, Maine, and the National Transcontinental Ry. and Intercolonial Ry. in St. Leonards, N.B.

The length of the new line is 1.36 miles, of which 1.19 miles is the property of the bridge company, extending from the United States bank of the St. John River to a connection with and crossing of the National Transcontinental Ry., thence to a crossing of a branch line of the C.P.R., and thence to a junction with the International Branch of the Intercolonial Ry., the two grade railway crossings being protected by electric power interlocking signals controlled from a signal tower at the N.T.R.

The river, which at this point measures from bank to bank 970 ft., is crossed by a bridge consisting of 5 single track steel riveted lattice through spans of 160 ft. each (skew 77°), supported on two concrete abutments and four concrete piers, with approach embankments thoroughly protected by riprap. The distance from base of rail to extreme high water is 9.7 ft., and to low water 45.7 ft., the range between these two water stages being 36 ft. The depth of water at normal stage in the thread of the stream varies from 15 to 20 ft. The abutments are of the usual splay-wing type, placed on concrete piles, 20 to 23 ft. long, driven with considerable resistance in a soil consisting of clay mixed with sand and gravel. The piers are built with rounded downstream ends and moulded inclined starkwaters, the bridge seat or upper of the two top courses being 8 ft. wide and 31 ft. long, and the width under the corbel course 6½ ft. The batter of the sides and downstream ends is ¾ in. per foot, and of the upstream end or starkwater 4 ins. per foot. Two of the piers are 52 ft. and the other two 48 ft. from the bottom of footing course to top of the bridge seat. The piers are each founded on from 104 to 106 spruce piles, approximately 20 ft. long below cutoff, driven in the hard, gravelly clay that underlies the bed of the stream. All piers have their bases well protected with riprap. The spans are designed for E-50 Cooper loading (2 consolidated locomotives, with 50,000 lbs. on each driving axle, followed by a trainload of 5,000 lbs. per lineal foot), equivalent to the "heavy" class loading prescribed in the specifications of the Department of Railways and Canals of Canada, and complying with the requirements of the 1911 bridge

specifications of the American Railway Engineering Association.

Perhaps the most marked feature of this work has been the rapidity of its construction, 7½ months only having elapsed from its commencement to its completion. Started in the middle of Sept., 1914, excavation and the laying of concrete were vigorously prosecuted throughout the winter, although the temperature usually hovered around zero, and at times very much lower. This was made possible by enclosing the piers in housings, heated with steam pipes and salamanders, so as to afford the concrete an opportunity to become thoroughly set prior to exposure to low temperatures. Steel erection from the Canadian shore was started in January, and followed closely on the heels of the substructure, the last pier, on the U.S. side, having been finished early in April. Through the employment of the cantilever method of erection, all risk of serious damage or interruption from a premature breakup in the river was obviated.

The principal contractors were Cyr Brothers Co. of Waterville, Me., for the substructure; the Dominion Bridge Co., Montreal, for the superstructure; Hill & Hammond, Woodstock, N.B., for the roadbed, tracklaying, ballasting, fencing and telephone line, and the General Railway Signal Company of Canada, Lachine, for the interlocking plant.

Percy R. Todd, of Bangor, Me., President of the Bangor and Aroostook Rd., is also President of the VanBuren Bridge Company; W. J. Wilgus, New York, was consulting engineer, and T. A. Lang, Resident Engineer, on the bridge construction.

The VanBuren Bridge Co. has given out the following statement: "The establishing of this route will mean a great deal to a large section of New Brunswick and Quebec, and to the portion of northern Maine known as Aroostook County, embracing an area nearly as great as the entire State of Massachusetts. New Brunswick will be benefited by having a new and direct line to the markets of central and southern New England, the distance to Boston from the timber lands, lumber mills, fisheries and pleasure resorts centring at Campbellton, on the Bay of Chaleur, being over 200 miles shorter than via the old routes through Levis and Sherbrooke. Towns and shipping points located upon the portion of the National Transcontinental Ry. between Moncton, N.B., and Levis, Que., will profit by this short line to the same New England territory, and another outlet will be offered to the products of the virgin country tributary to the recently completed National Transcontinental Ry. west of Quebec. Viewed from the other standpoint, Aroostook County will be able to tap the Cana-

dian supply of raw materials, and will be in closer touch with the grain, flour and provision supplies of the west, as the distance from Chicago to the VanBuren gateway, via the G.T.R. and the National Transcontinental Ry. is identical with the distance via the old route to the southern end of the Bangor and Aroostook system at Northern Maine Jct. The opening of the VanBuren bridge route promises much for the people of both countries, heretofore separated for some 350 miles along the International Boundary neighboring the St. John River."

Rail should be laid as early in the spring as possible, weather permitting, and should be delivered, when possible, on flat cars, the full length rails being loaded separately from the short lengths.

A camp for tourist accommodation will be operated in Jasper National Park on the line of the Grand Trunk Pacific Ry. in British Columbia next summer. It will be run on hotel lines at from \$2.50 a day up.

Sir Percy Girouard, has, according to a London cablegram, resigned as a director of Sir W. G. Armstrong Whitworth & Co., on his appointment temporarily as a major general. It is also said that he will probably resign the presidency of Armstrong Whitworth of Canada, Ltd.

The Pacific Great Eastern Equipment Co. has been incorporated under the Dominion Companies' Act, with a capital of \$3,000,000, and office in Vancouver, B.C., to purchase, hire, or otherwise acquire, or make, build or manufacture railway cars, locomotives, or other rolling stock; deal in rails, contractors' equipment, appliances, tools, etc., and to sell the same on hire or otherwise to railway companies, contractors, or others, and to carry on other enterprises germane to these objects. The provisional directors are: P. Welch, E. F. White, E. W. Kaufmann, A. H. Sperry, and D. C. Pennington, Vancouver, B.C., all of whom are associated with the Pacific Great Eastern Ry.

Hand Rails and Foot Rests on Locomotives and Tenders.—At a preliminary conference in Ottawa, April 8, between representatives of the Board of Railways Commissioners, the principal railways and the brotherhoods of locomotive engineers, locomotive firemen and enginemen, the question of hand rails on cabs of locomotives and foot rests around same at the same elevation as the running boards was discussed, but no agreement was reached, and the Board will at a sitting in Ottawa on May 4 consider the representations of all parties interested in the matter of requiring hand rails to be placed on cabs of locomotives and foot rests around same at the same elevation as the running boards; also hand rails on tenders of certain types of locomotives.

International Mercantile Marine Co.—On application of the New York Trust Co., claiming default of interest on \$52,744,000 of 4% collateral trust bonds, P. A. S. Franklin, Vice President, International Mercantile Marine Co., was appointed receiver for the company Apr. 4, by the U. S. District Court at New York. A statement issued on behalf of the bondholders' committee, intimates that it is understood that the receivership will only retain proportions directly owned by the International Mercantile Marine Co., such as the American Line and the Red Star Line, and that it will not in any way affect the so called English subsidiary companies such as the White Star, Atlantic Transport, Dominion and Leyland Lines. The operations of the main company, or of its subsidiaries will not be interfered with by the receivership.

# Railway Mechanical Methods and Devices.

## Fixture for Drilling Holes on a Diameter.

In drilling holes for bolts or studs on a large diameter on an article that is bulky, the size of the work makes the labor involved out of all proportion to the size of the holes being drilled, from the awkwardness of the article in setting up in the machine. Ordinarily, it is the custom to fix the work upon a trestle, and shift the whole member for each hole, or else, if performed on a radial drill, block the work up in some stationary position, and shift the drill arm

The smoke box door frame to be drilled is lifted on the jig by a small overhead jib crane, resting on the jig, and one of the drill heads can be centred over the stud hole diameter, and the drilling proceeded with, the frame revolving easily from point to point as required, the ball bearing making the effort required very light. The time taken when under observation on two regular jobs is as follows: drilling and tapping sixteen  $\frac{3}{4}$  in. holes, 40 mins.; drilling twenty four  $\frac{3}{4}$  in. holes, 20 mins. These times include the setting up, machining and removing.

the end of the frame. In the top of the frame and crosshead there are small wood screws, projecting about  $\frac{1}{2}$  in., by means of which the ring may be held either on the inner diameter or outer diameter, leaving most of the surface free to be operated on.

A small air operated circular saw on a table, mounted on the bench near the point where the rings are finished, was described in Canadian Railway and Marine World for Dec., 1912. This saw is used for removing the larger fins, sprue, etc., after which it is placed in the jig, just described, for final finishing.

Jig for Drilling Holes in Smoke Box Door Frame.

Jig for Holding Valve Stem Packing Rings for Filing.

to suit. For small holes, the tying up of a radial drill for light work is not economical. Likewise, on an ordinary drill, to shift the work between holes necessitates the use of two operators, one to handle the machine, and the other to assist in shifting between holes.

In the G.T.R. shops at Stratford, Ont., a convenient jig has been made for handling such jobs on a gang drill, which requires only the services of the drill hand to perform all the shiftings. It is used with great success on smoke box door frames and wheel centres, both of which have a number of holes on large diameter. The accom-

panying illustration shows the jig set up for drilling truck wheel centres the jig is slightly changed. The holding down clips for the upper member are removed, and with them the top member. Another top member, with a boss of the inside diameter of the wheel centre, the lower face of which is also channelled for a ball race, is placed in position, and the operation proceeds as before. The times observed on three occasions were as follows: drilling seven 25-32 in. holes in a cast iron wheel centre, 30 mins.; drilling twenty four 25-32 in. holes in a cast steel wheel centre, 75 mins.; and drilling twenty eight 25-32 in. holes in a cast steel wheel centre, 70 mins.

## Slotter Tools for Forked Ends.

In slotting the forked ends of rods by the usual methods, it is customary first to drill the slots with a drill of a diameter corresponding to the width to be slotted, and then run the slotting tool first along one side of the slot, and then along the other. This meant two passes for each slot. On consideration of this problem in the G.T.R. shops at Stratford, Ont., a tool was eventually developed that can handle this work in one pass, and at the same time do, if anything, a better job, as the spring of the

Slotter Tool for Forked Ends and Key Holes.

Jig for Drilling Cotter Pin Holes in Pins.

panying illustration shows the jig set up for holding smoke box door frames. It consists of a circular base casting, bolted to the drill table, in the top of which there is an annular ball race. On top of this there is a smaller circular casting, in the base of which there is a corresponding annular ball race. In the outer diameter of this top member there is a groove, into which radial tongues, bolted to the lower member, fit, the object of the latter being to prevent the upper member from tipping when loaded with the member to be drilled. The upper member is free to revolve on the balls in the raceway. From the upper member there are four radial arms of bar iron, bolted at the inner end by two cap screws to the upper member, and tied to each other by bar iron tie rods on the under side.

## Jig for Holding Valve Stem Packing Rings in the Vise.

For holding the various sizes of valve stem packing rings in the vise for trimming the fins that are left on in the casting, and for filing off the sprue defect and other small surface blemishes, the G.T.R. shops at Stratford, Ont., uses a handy little jig, that from the viewpoint of simplicity in design and general utility, leaves little to be desired. It consists of a wooden frame, as shown in the accompanying illustration, in the centre of which there is a small wooden crosshead, guided in small channels in the side legs of the frame, and actuated by a screw and hand nut passing through

tool does not enter into the task.

The accompanying illustration shows the way in which the tools are made, three tools being shown standing, with a fourth in the holder used. The tool is a formed one, machined all over, the cutting end being made the diameter of the width of the slot to be machined. It is relieved for about  $\frac{1}{2}$  in., with a straight shank as long as the depth of the work to be slotted requires. The opposite end of the tool is enlarged to fit the holder. The holder is a hollow tube, about 24 ins. long, one end of which is bored to receive a stop block. From the block face to the end is slightly under the length of the enlarged end of the tool. A knurled nut fits over the end of the holder, fastening the tool securely in the holder.

In operation the tool required is placed in the holder, and the work centred under it so that the tool is directly over one of the drill holes. The machine is then fed along the line of the slotted end or key hole, which is finished to the correct width in the one pass. A large number of sizes are kept in stock for the various widths machined.

### Jig for Drilling Cotter Holes in Pins.

The jig shown in the accompanying illustration, used in the G.T.R. shops at Stratford, Ont., is a handy contrivance for drilling in the exact position, the cotter pin holes on the ends of small pins. Instead of marking off the hole in the desired position, and then removing to a drill press for drilling the holes in a V block, this locates the hole and holds the pin for drilling.

The jig consists of a cast iron block, drilled horizontally with holes of the size of the pins to be drilled. On the upper face of the jig there is a tempered steel plate, drilled with holes the size of the cotter pin holes. It will be observed that these holes are drilled at varying distances from the near face, the distance from the near face to the near edge of the cotter pin drill hole representing the length of the pin from the head to the cotter hole. The pin to be drilled is slipped into the desired hole until the head is flush with the near face, and drilled in that position, the pin being automatically located for position and centred.

Several such jigs are in use for various sizes of pins and cotters. Each jig is stamped with the size of pins and cotter pin holes, all that the operator requires to do being to measure off the required length of the several holes. The jig shown is for 9-16 in. pins on the left and  $\frac{1}{2}$  in. pins on the right, in both cases for 5-32 in. cotter pins.

### Increasing Drill Holding Capacity of Small Drill Press.

It was desired to increase the drill holding capacity of one of the smaller drill presses in the G.T.R. shops at Stratford, Ont. This could not be done by increasing the socket hole size in the drill spindle, as it was considered that the socket in the spindle was as large as the latter could safely hold, without undue weakening. The accompanying illustration shows how this was simply accomplished. A short bar of steel, about  $\frac{3}{4}$  in. larger in diameter than the drill spindle, was bored out to a depth of about 2 ins., the diameter of the drill spindle, and this bushing slipped over the spindle end. Through both socket and spindle a key was fitted. The lower end of the socket was turned down on the outside to a slightly smaller diameter than the spindle, and a larger sized drill socket taper bored in the end, with a drift pin hole in the top. By this simple means larger drills may easily be used in drill presses designed initially for smaller sizes of drills. The capacity of the drill press would seem to be the only limit to the size of special socket that might be made for any drill.

A simple method of annealing high speed steel is to place it in a tube or pipe long enough in diameter and length to accommodate the work, both ends of the pipe being secured with a screw cap. Before screwing on the cap, place in the tube from a tablespoonful to a handful of resin, then screw on the cap and place in a furnace at the proper temperature, heat for 6 hours, and let the pipe and contents cool with the furnace to atmospheric temperature.

### A Flue Rattler.

In Canadian Railway and Marine World for Nov., 1912, the practice in vogue at the G.T.R. shops at Stratford, Ont., for safe ending boiler tubes was described in detail. With the exception of the flue rattling, the process, as then used, is pretty much the same today. In addition to the equipment then in use, a similar set of machines for handling the superheater flues has been added, but the practice with these tubes is almost identical, only on a larger scale. The flue rattlers then in use were of the elevated drum type, enclosed in wooden chambers, with water poured in on the tubes in the revolving drums to facilitate the breaking up of the scale. This arrangement, while performing the work satisfactorily, was very noisy, and largely on that

chain gear wheels which, when the drum is in lower position in the pit, engage with chains, the upper ends of which pass over a smaller chain gear on an overhead shaft. This counter shaft is driven from a central shaft, in the upper left hand corner of the illustration, which receives its power from a belt at the far end, driven from an electric motor in the far corner.

In operating, the drum is raised just above the floor level and filled with tubes, which are carried from the erecting floor on cars that will hold the full locomotive set. The doors are then closed and the drum lowered, the chains being slipped on as the drum descends. The pit is filled with water, so that the rumbling of the tubes in the rattler is deadened, and the scale removal facilitated by the presence of the water. While in operation the large sheet iron door

Socket to Hold Larger Drills than Spindle Socket Allows For.

Flue Rattler.

account, as well as to produce a machine that could be handled more expeditiously, another arrangement has been developed in the Montreal shops, and which is used at Stratford. This is shown in the accompanying illustration. The old plant was in duplicate; similarly with the new one.

The rattler drum is 5 ft. in diameter, and 20 ft. long, with outwardly swinging doors for feeding in the tubes. These doors, of which there are two, are fastened in position by pins. The rattler drum is carried on trunnions in crossheads that are guided in vertical cast iron guide frames, which descend about 8 ft. into a concrete pit. On the upper end of the guide frames there are vertical hydraulic plungers, the lower end of the piston rods in which connect with the drum crossheads. By this means the drums may be raised or lowered. On both of the trunnion shafts there are large

thrown back against the wall is lowered over the pit. A guard frame at both ends protects the moving driving chain.

Both rattlers are housed in a room at one end of the main shop, the other rattler of the pair being on the left of the one shown. The floor of this shop is paved with steel sheeting, which makes the moving of the tube trucks very easy.

**Spark Arresters for Locomotives.**—Owing to experiments and investigations now under way in connection with spark arresting device for use on locomotives burning non-coking coal the Board of Railway Commissioners has decided to await the results of the same before considering definitely the amendment of regulation 2 of general order 107 suggested in circular 141 of Jan. 25.

## Railway Development.

### Projected Lines, Surveys, Construction, Betterments, Etc.

**Alma and Jonquieres Ry.**—In the act passed recently by the Quebec Legislature, amending the act of incorporation the company is given power to operate its line by steam or electricity or "by both at the same time." The route of the projected line, for which an extension of time was granted, is also definitely described, as starting from Labarre or St. Gideon, on the Quebec and Lake St. John Ry., or some point between, to Little Discharge, thence to the Isle of Alma, to Grand Discharge, and through the townships of Sigau, Labarre, Kenogami and Jonquieres to Jonquieres, on the Q. and L. St. J. Ry., 30 miles. (April, pg. 136.)

**Athabaska and Fort Vermillion Ry.**—The route proposed to be followed by this projected railway, the construction of which has been authorized by the Alberta Legislature, will be from Athabaska to Wabiscow, then northerly to Trout Lake and Fort Vermillion, a total distance of about 300 miles. The capital stock authorized is \$1,000,000, and the company may issue bonds for \$20,000 a mile for its railway, and further sums for acquiring land and laying out terminals. (April, pg. 136.)

**Athabaska and Grand Prairie Ry.**—The Dominion Parliament has incorporated a company with this title to build a railway from the junction of the Salmon and Athabaska rivers, in Alberta, to Dunvegan and the Grand Prairie country west of Bear Lake, B.C. (See Athabaska, Grand Prairie and Peace River Ry., Feb., pg. 56.)

**Athabaska Northern Ry.**—The Dominion Parliament has granted an extension of time for the building of this projected railway from Edmonton to Athabaska Landing, Alberta. (Jan., pg. 10.)

**Bassano and Bow Valley Ry.**—A recent press report said: "The construction of the Bassano-Coronation Ry., 110 miles, will shortly be commenced by the firm of Grant Smith and McDonnell Co." We have been advised by the Grant Smith and McDonnell Co., Vancouver, that the newspaper report was the first intimation they had heard of the matter.

The project to which this item refers was originally started in 1912, when the Bassano Power and Electric Co. was organized provisionally. This company secured a franchise for the building of an electric railway in Bassano and vicinity, for which it was proposed to ask for incorporation under the title of the Bassano Power, Light and Electric Traction Co. In Oct., 1912, the project was reported to be "past history." Subsequently in 1913, the Alberta Legislature decided to grant subsidies towards the building of light railways in the Province by guarantee of bonds for \$7,000 a mile, and a charter was given the Bassano and Bow Valley Ry. Co. to build a railway from Bassano for 40 miles through the C.P. R.'s Alberta irrigation district. Nothing further was heard of the project until the company obtained power from the Legislature to operate its railway by any kind of motive power, to extend its line to Coronation, to increase its bonding power from \$14,000 to \$20,000 a mile, and to extend the time for the construction of the line. When the bill was before the Legislature it was stated that work on the mileage from Bassano to the Red Deer River, about 40 miles, would be gone on with this year. The Red Deer River would be reached at Bull Pound Creek, and the line would then proceed up the valley of that creek, crossing one of the Canadian Northern Ry. lines at Richdale, and continuing to Coronation. F. H.

Whiteside, who had charge of the passage of the bill in the Legislature, is reported to have stated that the charter had been acquired by the Grant Smith and McDonnell Co., and another press report stated that J. A. Campbell, Alberta, Manager for the same firm, had said construction gangs would be put on as early as possible in the spring, and that the grading would be rushed. (April, pg. 136.)

**British Columbia and White River Ry.**—An extension of time has been granted by the Dominion Parliament for the building of this projected railway from Bear Creek, at the mouth of Chilkat Pass, B.C., to White River, and then on to the boundary between Yukon and Alaska. (Feb., pg. 56.)

**Brule, Grand Prairie and Peace River Ry.**—The Dominion Parliament has incorporated a company with this title to build a railway from Brule Lake, Alberta, via Grand Prairie to a junction with the Pacific Great Eastern Ry. in the Peace River district, with a branch from Grand Prairie to a junction with the projected Pacific, Peace River and Athabaska Ry. near the Montagneuse River. (April, pg. 136.)

**Brule Lake Ry.**—The Alberta Legislature has incorporated a company with this title to build a railway from near Brule Lake, mileage 994 on the Grand Trunk Pacific Ry., easterly, through tps. 26 and 24, tp. 49, range 27, west, and then northeasterly through sections 19, 20 and 27, tp. 49, range 26. (Mar., pg. 94.)

**Calgary and Fernie Ry.**—The Dominion Parliament has granted an extension of time for the building of this projected railway from Calgary, Alberta, to Fernie, B.C. (Feb., pg. 56.)

**Canadian Terminal Ry.**—The route of this projected railway is from Pennfield, N.B., on the C.P.R., southwesterly to Beaver Harbor, L'Etang and Black's Harbor, eight miles. The New Brunswick Government is being asked to guarantee the bonds for \$20,000 a mile. (Mar., pg. 94.)

**Canadian Western Ry.**—An extension of time has been granted by the Dominion Parliament for the building of this projected railway from the International Boundary through Pincher Creek, Cowley and along the Old Man River Valley to the Livingstone Mountain, and thence to Calgary, Alberta, with a branch to Michel, B.C. (Feb., pg. 56.)

**Cariboo, Barkerville and Willow River Ry.**—The Minister of Railways has approved route map of this projected railway from Barkerville, at the junction of the Clearwater and North Thompson rivers, B.C., in the direction of the Willow River, for 170 miles. (May, 1913, pg. 219.)

**Central Canada Ry.**—In the Alberta Legislature, Mar. 30, the Premier stated that the provincially guaranteed bonds for the building of this line from McLennan, on the Edmonton, Dunvegan and British Columbia Ry., to the Peace River Crossing had not been sold. The company, however, upon its own initiative had built 25 miles, and was continuing the construction of the remaining 22 miles to the crossing. As it was important that this piece of line be completed, the Government asked the Legislature to authorize it to advance to the company, on the security of its bonds and the guarantee of the E. D. and B. C. Ry., out of any unappropriated funds in the hands of the Provincial Treasurer, an amount not exceeding the present provincial guarantee and not exceeding 80% of the cost of the

line, to be repaid when the bonds were sold. The formal resolution authorizing this and an act setting out the conditions were subsequently passed.

The Legislature has also authorized the company to build a line from the Alberta and Great Waterways Ry., between tps. 64 and 65, easterly to the Alberta-Saskatchewan boundary. The line will pass through a fairly well settled district, and will touch some extensive timber limits. (April, pg. 136.)

**Edmonton, Dunvegan and British Columbia Ry.**—Track laying was reported to have reached Big Smoky River, mileage 290, from Edmonton, Mar. 31. A temporary bridge is being built across the river so as to get supplies across for the completion of the 70 miles of track to Spirit River settlement. It is not proposed to start work on the permanent steel bridge across Smoky River until the winter. It is expected that track laying will be completed to the Spirit River early in the fall. The projected branch through the Grand Prairie country will start from Spirit River settlement.

The Alberta Legislature has authorized the Government to affix the provincial guarantee to bonds for \$20,000 a mile for the building of a branch through the Grand Prairie country, about 60 miles.

The Dominion Parliament has granted an extension of time for the building of the extension of the line from Spirit River, Alberta, to a junction with the Pacific Great Eastern Ry. at the Alberta-British Columbia boundary, and has authorized the building of an additional line starting from tps. 77, 78 or 79, ranges 3, 4, 5 or 6, west of the 6th meridian, through Grand Prairie district, to Jasper House, Alberta. (April, pg. 136.)

**Entwistle and Alberta Southern Ry.**—The Dominion Parliament has incorporated a company with this title to build a railway from Entwistle, Alberta, southerly to the Saskatchewan River, on the boundary between tps. 57 and 58 west of the 5th meridian, Alberta, 60 miles. (April, pg. 136.)

**Essex Terminal Ry.**—An extension of time has been granted by the Dominion Parliament for the completion of the lines authorized to be built in Windsor, Ont., and vicinity. (Nov., 1914, pg. 500.)

**Fraser Valley Terminal Ry.**—The Dominion Parliament has incorporated a company with this title to acquire, construct, maintain and operate within the municipalities of Richmond and New Westminster, B.C., railway yards, terminals, and all that is necessary for the handling of traffic of whatsoever nature; to build tunnels, viaducts and bridges, wharves, docks, workshops, powerhouses, etc., and to build railway lines not to exceed in any one case 20 miles, to connect any of its terminals with the C.P.R., the Canadian Northern Pacific Ry., or any other railway having lines in the municipalities named. The authorized capital is \$2,000,000, and the company may issue securities for \$40,000 a mile. The provisional directors are: C. F. Pretty, C. N. Pretty, T. T. Dauphinee, T. R. Pearson, J. B. Noble, Vancouver.

Application was originally made for incorporation with the title of the Vancouver Terminal Ry., with Vancouver as the centre of its operations, but owing to the opposition of the city of Vancouver, the title was changed and the location of terminals was fixed in Richmond and New Westminster municipalities. (April, pg. 137.)

**Greater Winnipeg Water District Ry.**—The Dominion Government has granted a 300 ft. right of way through all the Dominion land through which the 80 mile line passes, between St. Boniface and the Shoal Lake bay of the Lake of the Woods.

At a meeting of the Commissioners, Mar. 26, it was reported that up to Mar. 10, there had been received \$1,304.38 for passenger fares, and \$6,146.77 for freight tolls from the operation of the line, while the actual cost of train crews, rent of rolling stock, motive power and supplies had been \$3,406.94. An arrangement is being made with the railways having connection with the transfer yard at Paddington for the handling of traffic originating on the District line. (Mar., pg. 94.)

**Glengarry and Stormont Ry.**—Officials of the C.P.R., which will operate this railway running from St. Polycarpe, Que., to Cornwall, Ont., 28 miles, made a trip of inspection over it recently. The ballasting is being completed, and it is expected to have everything ready for starting operations about June 1. (Jan., pg. 10.)

**The Hudson Bay, Peace River and Pacific Ry.** Co.'s application to the Dominion Parliament for a change of name to that of the Winnipeg and Hudson Bay Ry., an extension of time for construction, and other additional powers, was withdrawn from further consideration, Mar. 25. (April, pg. 136.)

**Huntingdon and Hemmingford Ry.**—The route of this projected railway is definitely described in sec. 1, of the act passed by the Quebec Legislature recently, granting an extension of time for construction as reaching the International Boundary line where it is crossed by the Delaware and Hudson Ry. between Lacolle, Que., and Rouse's Point, N.Y. (Mar., pg. 136.)

**Kettle Valley Lines.**—The K. V. Ry. extending from Midway, B.C., on the C.P.R. Crownsnest Pass line, to Merritt, the terminus of the C.P.R. Nicola branch, which joins the main transcontinental line at Spence's Bridge, is expected to be opened for traffic in June. The mileage of the important points from Midway are: Penticton, 134 miles; Princeton, 204 miles; Merritt, 272 miles, and the distance from the latter point to Spence's Bridge is 40 miles. The opening of this line will give the C.P.R., which leases the K. V. lines, another alternative route to and from the Pacific Coast. The distance between Winnipeg and Vancouver by the new route will be 1,811 miles, against 1,484 by the main transcontinental line through Calgary and Banff, and 1,657 miles by the route through Dunmore Jct., Crownsnest, Kootenay Landing, West Robson and Revelstoke.

The line from Midway to Princeton, 204 miles, has been built by the K. V. Lines, the contractors for the section from Osprey Lake into Princeton being Guthrie, McDougall and Co., who were engaged in building the Vancouver, Victoria and Eastern Ry. in the same vicinity. From Princeton to Otter Summit, the K. V. Lines will operate over a section of the V. V. and E. Ry., which is now being ballasted. The company's original plan for an independent line from Osprey Lake to Otter Summit, 65.5 miles, as described in Canadian Railway and Marine World, Mar., 1914, pg. 80, is being held in abeyance. The section from Otter Summit to the Fraser River, 52.3 miles, is being built by the K. V. Lines, and will be operated jointly with the V. V. and E. Ry. This section, it is expected, will be completed in the autumn. The bridge across the Fraser River at Hope is reported completed, and track laying is being proceeded with to effect a junction with the C.P.R. there.

The Dominion Parliament has granted an extension of time for the building of the following branch lines: From Penticton to the International Boundary at Osoyoos Lake; from Summer Creek via Allison or Princeton to the junction of the Granite Creek with the Tulameen River; from One

Mile Creek to the Copper Mountain and Voigt mining camps, 15 miles southwest of Princeton; from Vernon, southerly by Kelowna to Penticton; from the second of the above mentioned lines northerly to Otter Summit, about 30 miles south of Merritt; from near Tulameen for about 50 miles up the Tulameen River valley from Grand Forks for 50 miles up the north fork of the Kettle River; from Midway to Hedley, and from Penticton to Nicola. (Mar., pg. 94.)

**Lake Erie and Northern Ry.**—The question of the electrification of the completed section of the line is under consideration. W. P. Kellett, who has been General Manager and Chief Engineer from the inception of the project has resigned. M. N. Todd, President, Berlin, Waterloo, Wellesley and Lake Huron Ry., (formerly Galt, Preston and Hespeler St. Ry.), has been appointed General Manager to succeed him.

The contractors for the line southerly from Brantford to Port Dover have been getting things in order to complete that section during this year. It is expected that if the Brantford-Galt section is electrified the southern section will also be operated by the same motive power. (Feb., pg. 57.)

**Medicine Hat Spur Tracks.**—The Alberta Legislature has passed an act respecting the city of Medicine Hat, which among other things confirms a bylaw authorizing the borrowing of \$11,700 for the construction of spur tracks to the industrial section of the city.

**Moncton and Northumberland Strait Ry.**—The Dominion Parliament has granted the company an extension of time for the construction of its projected lines from Buctouche to Richibucto; from Richibucto to Chatham or Loggieville; from Pains Jct., to Cape Tormentine, N.B., and from Westpoint to Coleman, P.E.I. (Jan., pg. 10.)

**North Ry.**—Replying to a question in the Senate, Mar. 31, Senator Loughheed said the Dominion Government had acquired from the company the portion of its projected railway from Montreal to the proposed junction with the National Transcontinental Railway. The agreement to take over the project was signed Dec. 23, 1914, and a cheque for \$250,000, the amount of purchase, was issued on the following day. Under the agreement the company has to settle all outstanding claims and turn over to the Department of Railways all information relative to surveys, and all field notes, plans, etc., in connection therewith, together with office furniture, etc. The company had a subsidy for the building of the line at the usual rate, and upon the regular conditions, which lapses upon the transfer to the Government. (June, 1914, pg. 266.)

**North Vancouver Island Ry.**—The Minister of Railways for British Columbia has granted an extension of time for the building of this projected railway from Rupert Arm, Quatsino Sound to Hardy Bay, Vancouver Island, under the provisions of sec. 79, chap. 19.4, Revised Statutes of British Columbia. (June, 1912, pg. 301.)

**Northern Pacific and British Columbia Ry.**—The Dominion Parliament has incorporated a company with this title to enter into arrangements with the Vancouver, Victoria and Eastern Ry. and Navigation Co., for running rights over its lines into Vancouver, and to acquire land and lay out terminals in Vancouver, New Westminster, and other points on such lines, between Huntingdon and Vancouver. (April, pg. 136.)
